This Grammar possesses the great merit of being very concise and well arranged.

FAUST von J. W. von Goethe, new edition, very neatly and accurately printed, with a Glossary, and Explanation of the most difficult Words, by the Rev. Dr. Tiarks, 12mo. cloth boards, 4*s.* 6*d.*

SCHILLER'S Lied von der Glocke, with English translation on the opposite page, new edition, handsomely printed, 12mo. fancy cloth boards, 2*s.*
This translation of Schiller's justly admired and celebrated 'Song of the Bell,' by T. J. Arnold Esq., is universally acknowledged to be the most skilful.

SCHILLER'S Wilhelm Tell, 8vo. bound in cloth, 2*s.* 6*d.*
——— Don Carlos, ditto, 4*s.*
——— Jungfrau von Orleans, ditto, 2*s.* 6*d.*
——— Geschichte der 30 jährigen Kriegs, 2 vols. 12mo. ditto, 6*s.*
GOETHE'S Egmont, ditto, 2*s.*
——— Gotz von Berlichingen, ditto, 2*s.* 6*d.*
*** The Six preceding Works are all uniformly, accurately, and neatly printed, in London, and bound in cloth boards, and lettered.

UNDINE, eine Erzählung von Baron de la Motte Fouqué, square 12mo. cloth boards, 3*s.*

WASHINGTON, par M. Guizot, reprinted from the Original French Work, accompanying the Life and Correspondence of Washington, and now first published in a detached form, 2nd and cheaper edition, handsomely bound in cloth boards, post 8vo. 3*s.* 6*d.*
"In our humble opinion, the very best thing he ever wrote."—*Quarterly Review.*

☞ D. NUTT avails himself of this opportunity to announce that he possesses facilities for procuring all NEW WORKS from the CONTINENT which he may not happen to have in stock, in the shortest possible time, and on the most favourable terms; he is also enabled to supply FOREIGN PERIODICALS with the utmost promptitude and punctuality.

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS; and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh;—for IRELAND, J. Cumming, Dublin.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 799. LONDON, SATURDAY, FEBRUARY 18, 1843. PRICE FOURPENCE, (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

TO FAMILIES, OR TO LADIES INTENDING TO TRAVEL.

A LADY, Author of a work on Education, from which some estimate of her experience and her attainments may be formed, is desirous of making a new ENGAGEMENT as RESIDENT GOVERNESS in a Family, or to ACCOMPANY ONE or TWO YOUNG LADIES in TRAVELLING, as she has been twice on the Continent, and is acquainted with the French, Italian, Spanish, and German languages.—Address B. C. D., care of the Editor of 'Bent's Literary Advertiser,' Aldine Chambers, Paternoster-row.

TO ARCHITECTS.—NOTICE is hereby given, That the Trustees appointed by Sir JOHN SOANE will meet at the Museum, No. 13, Lincoln's Inn-fields, on FRIDAY, 24th MARCH, at 3 o'clock in the afternoon precisely, to DISTRIBUTE the DIVIDENDS, which shall have accrued during the preceding year, from the sum of 5,000l. Reduced 3¼ per Cent. Bank Annuities, invested by the late Sir John Soane, among distressed Architects, and the Widows and Children of deceased Architects left in destitute or distressed circumstances.

Forms of Application may be had at the Museum, and must be filled up and delivered there, on or before Thursday, 16th March, after which day no application can be received.

ART-UNION OF LONDON.

President,
H.R.H. the Duke of Cambridge.
Vice-President,

The Most Noble the Marquis of Northampton, P.R.S.

A Finished Proof of THE SAINTS' DAY, engraved for the Subscribers of 1841, may be seen at the Office, No. 4, Trafalgar-square, Charing-cross.—Due notice will be given to every Subscriber when the impressions are ready for distribution.

The Engraving for the year 1842 is nearly completed.

The LISTS for the present year WILL CLOSE on the 31st of MARCH, and an early subscription is solicited, to enable the Committee to make advantageous arrangements.

GEO. GODWIN, F.R.S. F.S.A. } Honorary
LEWIS POCOCK, F.S.A. } Secretaries.

Office, 4, Trafalgar-square, 1st Feb. 1843.

Turner, R.A.	F. C. Lewis	Nash	Downing
Prout	D. Cox	N. Fielding	Burgess
Stephanoff	Ince	Cotman	Shepherd
Varley	Nash	Hunt	Richardson

Also a few beautiful Works of J. W. Wright.

May be viewed two days preceding, and Catalogues had.

FINE MODERN ITALIAN PRINTS.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on TUESDAY, February 28, at 1 precisely,

A COLLECTION of ENGRAVINGS, the property of a distinguished Amateur, selected with judgment at a considerable cost, comprising most of the finest specimens of Foreign and British Art in the earliest states and in the choicest condition; among them may be particularly noticed The Last Supper, by Raphael Morghen, proof, with the white plate; Portraits of Raffaelle and Fornarina, by ditto, both before any letters; Marriage of the Virgin, after Raffaelle, by Longhi, proof before letters; Madonna di S. Sisto, by Müller, fine proof; Fishery, by Woollett; Satin Gown, by Wille; Jew's Harp, Rent Day, after Wilkie; and many others of rare occurrence.

May be viewed Saturday and Monday preceding.

THE CHOICE CABINET OF COINS OF HENRY ASHLIN, ESQ. DECEASED.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on WEDNESDAY, March 1, and following day, (by order of the Executors),

THE very choice CABINET of GREEK, ROMAN, ANGLO-SAXON, and ENGLISH COINS, in Gold, Silver, and Brass, selected with great attention to rarity of type and beauty of preservation, by HENRY ASHLIN, Esq. deceased.

May be viewed two days preceding, and Catalogues had.

THE WORKS OF ABRAHAM RAIMBACH, ESQ.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on WEDNESDAY, March 15, at 1 precisely,

THE PROPERTY, in ENGRAVINGS, of that eminent English engraver,
ABRAHAM RAIMBACH, Esq., deceased,
late Corresponding Member of the French Institute, and Member of the Academy of St. Petersburgh, being chiefly the Works after Wilkie, by the excellence of which the great reputation of both Painter and Engraver has been made familiar throughout Europe. They include rare states and fine early proofs of the Rent Day, Village Politicians, Blindman's Buff, the Cut Finger, Errand Boy, Spanish Mother, Parish Beadle, and Distraining for Rent, and a Collection of Prints of the Modern French and English Schools, and some Books of Prints.

May be viewed two days preceding, and Catalogues had.

THE WORKS OF SIR ROBERT KER PORTER, DECEASED.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, in the last week in March, (By order of the Executrix),

THE ORIGINAL WORKS in OILS, by this highly distinguished Painter, comprise a fine Altar-piece, from the Apocalypse, originally designed for St. John's College, Cambridge; the original Oil Sketches of the Siege of Seringapatam and the Battle of Alexandria; a beautifully finished Picture of a Battle in the Commonwealth; also several interesting Portraits, numerous Water-colour Drawings, and Sketches of Military Subjects; Views and Costumes in Russia, the Peninsula, the East, and in South America, &c.; a Portrait, by Van Dyck, others by different masters; Proof Impressions of the Siege of Seringapatam and other Engravings after Sir Robert Ker Porter's Works; Books and Antiquities, comprising Coins, Babylonic Cylinders, &c., collected during his travels in the East; together with some small pieces of Plate and other offerings of respect presented to Sir Robert by distinguished individuals.

Further notice will be given.

SOUTHGATE'S ROOMS.

By HENRY SOUTHGATE & Co., at their Rooms, 22, Fleet-street, on WEDNESDAY, Feb. 22, at One,

THE VALUABLE AND INTERESTING COLLECTION of BOOKS, TRACTS, BALLADS, PRINTS, &c. of the late Mr. WILLIAM HONE; comprising Standard Works in Divinity, Sermons, History, and General Literature. The Ballads, &c. were collected by Mr. Hone, for the purpose of illustrating our National Manners, Customs, Superstitions, Amusements, Dresses and Popular Antiquities, more particularly as exhibited in his very amusing and popular Works, The Every Day Book, Table Book, Ancient Mysteries, Strutt's Sports, &c.: and also for his intended 'History of Parody,' the materials for which are chiefly comprised in the present Collection.—The 'Ballads pasted on the Wall,' are of very humble pretensions as regards literary merit, yet as exemplifying the manners, habits, and customs of the time in which they were written, and chronicling local occurrences and passing events of the day, omitted, or but slightly alluded to by the general historian, well merit the attention of the Antiquary, more particularly when we find that many of them have been considered worthy admission into the Collections of Percy, Evans, Ritson, and other distinguished Archæologists.

The Penny Histories, Merriments and Pieties, 'The Classics of an Age that knew of none,' were once so popular as to be printed in every large town in the kingdom, but are now no longer published. As opportunities of acquiring them but rarely occur, Messrs. Southgate beg to call attention to the present.

On FRIDAY, Feb. 24th, at their Rooms, 22, Fleet-street,

The VALUABLE LAW LIBRARY of a BARRISTER;

Comprising a Series of Reports, and a variety of Modern Popular Works on Practice and Pleading.

May be viewed, and Catalogues had.

MILLER'S CATALOGUE of CHEAP BOOKS can be obtained by every Book-buyer GRATIS and POSTAGE FREE. A New List, just published, comprises some excellent Works in HISTORY, BIOGRAPHY, and GENERAL LITERATURE, amongst which will be found the following low-priced sets of Books:—

Britton's Cathedral Churches, 300 Plates, 6 vols. medium 4to. neat, an early copy, 12l. 12s. 1833

CATALOGUE of ANCIENT and MODERN BOOKS, with prices extremely low to each, comprising numerous excellent Works from the Library of the late Most Noble Marquis of Wellesley; including a fine copy of the

Baskerville Classics, 7 vols. 4to. calf gilt, 5l. 10s.

Walpole's (Horace Lord) Works complete, his Anecdotes of Painting in England, &c. &c. with fine impressions of the Portraits, and other Engravings. 5 vols. royal 4to. calf, 4l. 4s.

Wellington's (Duke of) Dispatches, by Col. Gurwood, last edition, complete, 13 vols. 8vo. cloth, 7l. 7s.; pub. at 12l. 12s. 1838

The late Judge Littledale's Subscription Copy.

Rees's Cyclopædia, complete, 85 Parts, forming 45 vols. 4to. boards, early impressions of the fine Engravings, only 9l. 15s., cost 80 Guineas.

To which are added,

Rare and Curious Books from the Library of the late Mr. Hutchinson, &c. embracing some early printed Bibles, and other Specimens of early Typography.

A Catalogue, published Monthly, gratis, and sent post free, to all parts of the Country, on application to G. W. GREAT PIAZZA, COVENT GARDEN.

CHEAP BOOKS.—Brewster's Edinburgh Encyclopædia, a large and thick paper copy, 18 vols. royal 4to. half-cloth, clean and uncut, 244 plates, 12l. 12s. (pub. at 24l.)—Young's Lectures on Natural Philosophy and the Mechanical Arts, 2 vols. 4to. clean in boards, plates, 3l. 10s.—Aikin and Enfield's Biographical Dictionary, 10 vols. 4to. boards, 30s.—Baily on Life Annuities and Assurances, 2 vols. in 1, 8vo. calf, neat, best edition, with Appendix, 3l. 10s.—Pictorial History of England, 4 vols. royal 8vo. new, in half-russia, marbled edges, 3l. 16s.—Vitruvii Architectura, 8 vols. folio, half-bound green morocco, gilt top, 4l. 10s. plates; Utini, 1825—Peacock, Herschel, and Babbage's Examples on the Calculus, 2 vols. 8vo. half-calf, neat, 25s.—Robison's Mechanical Philosophy, 4 vols. 8vo. plates, 2l. 5s.—Swift's Works, by Sir W. Scott, 19 vols. 8vo. calf, gilt, 3l. 15s. 6d. 1814—Edinburgh Gazetteer, with the Appendix, last edition, 6 vols. 8vo. boards, 30s.—Thomson's Lectures on Inflammation, 8vo. boards, 21s.—Johnson and Steevens's Shakspeare, by Reed, 21 vols 8vo. calf, gilt, 4l. 10l.—Stewart's (Dugald) Active and Moral Powers of Man, 2 vols. 8vo. boards, 2l.—Lancet, 24 vols. in 20, half-cloth (1 vol. half-bound) 2l. 5s.—Lardner's (Dr. N.) Works, 5 vols. 4to. calf, gilt, 2l. 12s. 6d.—Poetæ Minores Græci, Gaisford, 4 vols. in 3, 8vo. boards, 2l. 5s.—Buffon's Natural History, by Wood, 20 vols. 8vo. calf, gilt, plates, 4l. 14s. 6d.—Milne on Annuities, 2 vols. 8vo. 20s.—W. HEATH, 294, Lincoln's Inn-fields, London.

NORTH BRITISH LIFE INSURANCE COMPANY, 4, New Bank-buildings, Lothbury, and 10, Pall Mall East. Established 1809. Protecting Capital 1,000,000l., fully subscribed.

His Grace the Duke of Sutherland, *President*.
Sir Peter Laurie, Alderman, *Chairman of the London Boards*.
Francis Warden, Esq. *Vice Chairman*.

The next Division of the Profits of this Company will take place in December, 1844. Prospectuses and every information may be obtained as above. JOHN KING, Actuary.

Digitized by Google

MISS MITFORD.

TO all who have taken an interest in their fate it has been well known that, for a very long time, the late Dr. Mitford owed his chief support to the literary exertions of his Daughter. During the last four years those exertions were but too frequently interrupted by the demands which his failing eyesight and declining health made upon her services, as reader and nurse; and when he died, at the advanced age of eighty-two, after a most protracted and expensive illness, it could hardly be deemed surprising that Debts of between Eight and Nine Hundred Pounds should have accumulated; the rather, that the failure of a Publisher within that period had occasioned a loss to nearly half that amount; so that, after the incessant labour of five-and-twenty years, after relinquishing her late Mother's large fortune, and three legacies left exclusively to herself, Miss Mitford is unhappily overwhelmed by embarrassments, which she had no power to prevent, which her father has left no means to defray, and to discharge which the small pension of a hundred a year that she owes to Her Majesty's bounty, is manifestly inadequate.

She was, however, preparing to meet, as best she might, at whatever sacrifice and by whatever exertion, this heavy responsibility, when some friends to whom the circumstances became known proposed a Public Subscription, for the purpose of paying debts incurred not through extravagance and wantonness, but to supply the wants of age and infirmity, and to surround with needful comforts the dying bed of a beloved Parent.

In furtherance of this design, the co-operation of those to whom the memory of the Father is endeared by old and pleasant associations, as well as of those who may take an interest in the character or the writings of the Daughter, is earnestly solicited. That which would fall with a crushing weight upon one solitary and almost destitute woman, will be but little felt when divided among the affluent and the many.

The following Noblemen and Gentlemen have kindly consented to receive Subscriptions:—

The Earl of Radnor	Admiral Dundas, M.P.
Sir Robert Throckmorton, Bart.	G. H. Elliott, Esq.
High Sheriff	C. Eyston, Esq.
Robert Palmer, Esq. M.P	E. Golding, Esq.
Philip Pusey, Esq. M.P.	Rev. W. Harness
Lord Barrington, M.P.	J. Hayward, Esq.
Charles Russell, Esq. M.P.	J. Hughes, Esq.
Lord Viscount Chelsea, M.P.	J. Kenyon, Esq.
William Seymour Blackstone, Esq. M.P.	G. May, Esq.
	W. Merry, Esq.
Sir Claudius Hunter, Bart.	Rev. H. H. Milman
Sir Henry Russell, Bart.	Thomas Moore, Esq.
J. P. Anderdon, Esq.	J. B. Monck, Esq.
J. J. Blandy, Esq.	W. Mount, Esq.
J. J. Bowles, Esq.	Dr. Pritchard Smith
Rev. H. C. Cherry	W. Smith, Esq.
H. F. Chorley, Esq.	C. Stephens, Esq.
Henry Clive, Esq.	Mr. Serjeant Talfourd
Major Court	John Walter, Esq. M.P.
G. P. Dawson, Esq.	Rev. S. W. Yates.

*** Subscriptions will also be received at the Banks of Messrs. Stephens & Co., and Messrs. Simonds & Co. Reading; Messrs. Willis & Co. Bankers, Lombard-street, and Messrs. Williams, Deacon & Co. Bankers, Birchin-lane, London.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.*

This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.

The *extra Premium* discontinued on restoration of the Assured to permanent health.

Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease.

Members of Consumptive Families assured at Equitable Rates.

Healthy Lives are assured at *Lower Rates* than at most other Offices. F. G. P. NEISON, Actuary.

ACHILLES BRITISH and FOREIGN LIFE ASSURANCE ASSOCIATION, 24, Lombard-street.

Every description of Life Assurance may be effected, upon a moderate scale of premium, either with or without participation in profits.

Endowments for Children or Widows, and immediate or deferred Annuities, granted upon fair and equitable terms.

Loans may be obtained on personal or other security by individuals assuring their lives with this Association.

Risks taken on the Lives of Master Mariners and Passengers by sea, either for the whole term of life, or for the voyage.

Applications for appointments as Agents and Medical Referees in the country, to be addressed to

EDWARD GILBERTSON, Secretary.

Prospectuses, and every other information, may be obtained by applying at the Offices, No. 24, Lombard-street, City.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of 50,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 9	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

Assurances for advances of money, as security for debts, or [illegible] for a family, when the least present outlay is required, [illegible] and comprehensive Tables of the Argus [illegible] peculiarly favourable to the assured.

Office open daily, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.
Division of Profits among the Assured.

Honorary Presidents.

Earl of Errol	Earl Somers
Earl of Courtown	Lord Viscount Falkland
Earl Leven and Melville	Lord Elphinstone
Earl of Norbury	Lord Belhaven and Stenton.
Earl of Stair	

Directors—Jas. Stuart, Esq. *Chairman.*
Hananel De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

THE ILLUSTRATED POLYTECHNIC REVIEW.

No. VII., with a Portrait of Brunelleschi, and numerous Illustrations, will contain—Fine Arts: British Institution (Second Notice), Exhibition at Rome, &c.—Science: Crosse's Acarus, Grove's Gaseous Battery, &c.—Reviews—Notices on Science, Art, Music, the Drama, &c. &c.—Price 4*d.* unstamped; 5*d.* stamped. Office, 143, Strand.

Will be published with the Magazines, on the 1st of March next, and every ensuing month,

THE SMUGGLERS:
A Chronicle of the Coast Guard.
By FRANCIS HIGGINSON, R.N.

"In Mari multa latent."—OPPIAN.

In this tale the army, the navy, the civilian, the visitor to the coast, the resident on its shores, and the inhabitant of the city, are equally interested, and will find much to be surprised at, and more to be lamented.

"A mirror said to show
Strange shadows of the present and the past."

In Monthly Parts, at 1*s.* each, containing two sheets of letter-press, with Embellishments on steel, by approved Artists.

It is particularly requested that *orders be given through a neighbouring Bookseller* by those connected with, or interested in, the service to which the story more particularly relates, as the publishers cannot forward retail copies.

Whittaker & Co. Ave Maria-lane, London; and can be had of all Booksellers.

Now ready, neatly bound in cloth, lettered, fcap. 8vo. 5*s.*

LOVE AND DUTY, and OTHER POEMS.
By THOMAS CLARKE.

"This little volume affords additional testimony to that to which we have so frequently referred of late, that the spirit of poetry is not quite dead amongst us. The simplicity and purity of nature is the shrine at which he (the author) desires to worship, and through that he looks 'up to Nature's God' with a humble and chastened spirit. We will not hesitate to express our hearty approval of many of the contents of this volume, which, upon the whole, are of a pleasing character."—*Post.*

"This is the production of a gifted mind."—*Court Gazette.*

Also, by the same Author,

A Day in May, a Poem in Six Books: uniform, 5*s.*

*** Mr. Clarke is not unsuccessful in his management of blank verse; and the following passage (46 lines from book 1st, p. 18,) may be praised for the happy arrangement of its cadence, as well as the pure and natural feelings which are uttered in it."—*Athenæum.*

"'The Day in May' is characterized by the same sweet and easy flow of versification, unostentatious simplicity of diction, and heartfelt susceptibility to beauty in all its forms—natural and moral."—*Court Gazette.*

To be had of the Author, 7, Sherbourne-court, Blandford-square; and of all Booksellers.

GRAMMARS USED AT THE PUBLIC SCHOOLS.
Just published,

GRÆCÆ GRAMMATICÆ RUDIMENTA in USUM SCHOLARUM. 4th edit. 12mo. 3*s.* 6*d.* bound.
[THE SYNTAX is in the press.]

II.

RUDIMENTA GRÆCA MINORA in USUM SCHOLARUM. 12mo. 1*s.* 6*d.* bound.

RUDIMENTA GRÆCA MINORA in USUM SCHOLARUM, editio altera ad disciplinam Etonensem, auctoris consensu accommodata. 12mo. 1*s.* 6*d.* bound.

These Editions of the 'Greek Rudiments for the Use of Schools,' consist of those parts of the former work, which are printed in larger type. The latter, with the consent of the Author, has been adapted to both systems of Conjugations; and Notes have been added by the highest authority, at Eton.

III.

LATINÆ GRAMMATICÆ RUDIMENTA, or LATIN GRAMMAR, for Use of Schools. 12mo. 3*s.* 6*d.*

This Grammar is intended to serve also as an English Latin Grammar and a Latin Exercise Book; and being based on that enjoined by the Royal Founder of very many noted Grammar Schools in England, and many of his Successors, is called KING EDWARD VIth's Latin Grammar.

It is printed in the same size as the 'Græcæ Grammaticæ Rudimenta' published by Mr. Murray, to which references are made throughout the volume.

John Murray, Albemarle-street;
And may be obtained of all Booksellers.

8, New Burlington-street, Feb. 18, 1843.

London: Simpkin, Marshall & Co. Stationers'-hall-court.

MR. JAMES'S NEW ROMANCE.

Now ready, in 3 vols. post 8vo.

FOREST DAYS.

A Romance of Old Times.
By G. P. R. JAMES, Esq.
Author of 'Morley Ernstein,' 'The Robber,' &c.
".....into this host of gallant things—this splendid pageantry of tilt and tournaments—this association of Knight and Ladye—this concentration of all that charms and fascinates us in our retrospection of olden times, has Mr. James here carried us.... Scene after scene of grand and vigorous interest succeeds each other, while village life is portrayed with such a May-day freshness that we seem to linger over the sweet odour, almost unwilling to be lured away by even the pomp of chivalry or the grandeur of baronial castle."—*Metropolitan.*

Also, lately published, Mr. James's last New Novel,
Morley Ernstein; or, Tenants of the Heart; and The Life and Times of Richard Cœur de Lion.
Saunders & Otley, Publishers, Conduit-street.

R. Cadell, Edinburgh; Houlston & Stoneman, London.

RE-ISSUE OF DR. ADAM CLARKE'S BIBLE AND COMMENTARY.

On Saturday next will be published, in imperial octavo, embracing all the learned and judicious Emendations and Corrections of the Author, Part 1. price 2s., and also Vol. I. price 21s., in cloth,

A NEW AND VERY ACCURATE EDITION OF DR. ADAM CLARKE'S COMMENTARY ON THE HOLY SCRIPTURES.

CONDITIONS OF PUBLICATION.—A Part will be published every Fortnight until the whole is completed in Sixty parts, at 2s. each; also, for the convenience of Families, an Edition in Volumes every Three Months, bound in cloth; Vols. I. and II. at 24s. each; Vols. III. to VI. at 20s. each. The work is printed so as to bind in Six Volumes—may be depended on for correctness, the Doctor having the whole ready for press a short time before he died, and in that finished state it is now presented to the public.
Persons desirous of becoming Subscribers are requested to apply to the Publisher, or to the Bookseller they are in the habit of dealing with in their own neighbourhood.
London: Published, by assignment of the Executors of Dr. ADAM CLARKE, for Thomas Tegg, 73, Cheapside.

Reduced in Price.

AN EXPOSITION of the FOUR GOSPELS, of which the Notes on those by St. MARK, St. LUKE, and St. JOHN, have never before been published. By the REV. THOMAS ADAM, B.A., Rector of Wintringham; Author of 'Private Thoughts on Religion,' &c. Edited by the REV. A. WESTOBY, M.A., Curate of Stagsden, Beds, and Chaplain to the Right Hon. the Earl of Glasgow. With a MEMOIR of the AUTHOR by the Editor. In 2 vols. 8vo. price 12s. cloth, published originally at 1l. 1s.

"Perhaps few were better fitted to write a practical experimental commentary on any part of Scriptures than this author, and the present posthumous work will be found characterised by all the best peculiarities of the author."—*Record.*
London: J. Hatchard & Son, 187, Piccadilly.

LODGE'S PEERAGE AND BARONETAGE FOR 1843.

Now ready, price One Guinea bound,

MR. LODGE'S PEERAGE AND BARONETAGE FOR 1843.

With the Arms of the Prince of Wales, from a Drawing in the possession of Her Majesty, and the Arms of the Peers, beautifully engraved. The 12th edition, thoroughly revised and corrected to the present date.
In accordance with the suggestion contained in the following letter, received from a Noble Lord, every page of the New Edition has undergone a careful examination, and the account of each Family has been authenticated by their own revision.

NOTE TO MR. LODGE.

"Lord B. presents his compliments to Mr. Lodge, and begs to assure him that he has looked over the inclosed account of his family with great attention, and finds it perfectly correct. Lord B. hopes Mr. Lodge will permit him to add, that he has never yet found so few mistakes in any publication of the kind as in his last edition, and if every Peer will carefully correct the paper which Mr. Lodge sends to him, a good and correct Peerage will at last be published."

Also, BOYLE'S COURT GUIDE for 1843; With the Addresses of the Members of both Houses of Parliament.
Saunders & Otley, Publishers, Conduit-street.

chiefly in the Counties of Durham and Northumberland; with a Stroll along the Border. With upwards of 40 highly-finished Woodcuts. Medium 8vo. 1*l.* 1*s.* cloth.

ILLUSTRATIONS

Vignette; Chevy-Chace (Title)—City of Durham; Battle of Neville's Cross; Durham Cathedral; Interior of Durham Cathedral; Monument of Old Cow—Rectory of Houghton-le-Spring—Lumley Castle—Lambton Castle—Jarrow; Bede's Chair—Hilton Castle; Bowes carrying off the Countess of Strathmore—The Lodge, Hilton Castle—Brancepeth Castle—Raby Castle—Newcastle; Drop-Machinery; Old Houses in Newcastle; Grey Street from the Theatre; Black-gate—Birthplace of Bewick; Tomb of Bewick—View of Tynemouth; Seaton-Delaval; Seaton-Delaval Chapel—Mitford Manor—Warkworth Castle; Interior of the Hermitage—Alnwick Castle; Malcolm's Cross; Monument of William the Lion—Bamborough Castle; The Pinnacles; The Farne Isles—Berwick-upon-Tweed—Norham Castle—Ford Castle—Brinkburn Priory; Gilpin in the Church; Death of the Count Keeldar—Dilston Hall; Coffins with Inscriptions; Dilston Hall Gateway; Dilston Hall Chapel.

IV.

The Rural Life of England. New edition,

medium 8vo. with Engravings on Wood by Bewick and Williams. Uniform with 'Visits to Remarkable Places.' 1*l.* 1*s.* cloth.

CONTENTS

Life of the Aristocracy—Life of the Agricultural Population—Picturesque and Moral Features of the Country—Strong Attachment of the English to Country Life—The Forests of England—Habits, Amusements, and Condition of the People; in which are introduced Two New Chapters, descriptive of the Rural Watering Places, and Education of the Rural Population.

V.

The Boy's Country Book: being the

Real Life of a Country Boy, written by HIMSELF. Exhibiting all the Amusements, Pleasures, and Pursuits of Children in the Country. Second edition, 1 vol. fcap. 8vo. with about 40 Woodcuts by S. Williams, 5*s.* cloth.

VI.

Colonisation and Christianity: a Popular

History of the Treatment of the Natives by the Europeans in all their Colonies. Post 8vo. 10*s.* 6*d.* cloth.

VII.

The Student Life of Germany. From

the Unpublished MSS. of Dr. CORNELIUS. 8vo. with 24 Wood Engravings and 7 Steel Plates, 1*l.* 1*s.* cloth.

*** This volume contains Forty of the most famous Student Songs, with the Original Music adapted to the Pianoforte.

Translated by Mary Howitt.

THE NEIGHBOURS,

A STORY OF EVERY-DAY LIFE IN SWEDEN.

By FREDERIKA BREMER. 2 vols. post 8vo. 18*s.* boards.

*** THE HOME; or, FAMILY CARES and FAMILY JOYS, by the same Authoress, translated by Mary Howitt, from the Swedish, is in the press.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, West Strand.

The Second Volume, price 25*s.* (completing the Work,) of The

BIBLE CYCLOPÆDIA, a Comprehensive

Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings; illustrated by several Hundred Woodcuts.

ARCHITECTURAL NOTES on

GERMAN CHURCHES, with Notes of a Tour in Normandy and Picardy. By the Rev. WILLIAM WHEWELL, B.D. F.R.S. Professor of Moral Philosophy, and Master of Trinity College, Cambridge. A 3rd edition, with Additions, 12*s.*

A TRANSLATION of the BOOK o.

PSALMS. By WILLIAM FRENCH, D.D., Master of Jesus College, Cambridge, and Canon of Ely; and Rev. GEORGE SKINNER, M.A., late Fellow and Tutor of Jesus College. A new edition, revised, with Critical and Philological Notes. 8vo. 12*s.*

AN INTRODUCTION to the STUDY

of CHEMICAL PHILOSOPHY; being a preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S., Professor of Chemistry in King's College, London. With numerous Illustrations, the 2nd edition, revised and much enlarged. 21*s.*

LIFE AND CORRESPONDENCE OF THE LATE

SIR ASTLEY PASTON COOPER,

Bart. From Documents bequeathed by him for the purpose. By BRANSBY B. COOPER, Esq. F.R.S. 2 vols. 8vo. with Portrait, from the Original Picture by Sir Thomas Lawrence. 21*s.*

THE LIFE AND SERVICES OF

GENERAL LORD HARRIS, G.C.B.,

during his CAMPAIGNS in AMERICA, the WEST INDIES, and INDIA. By the Right Hon. S. R. LUSHINGTON, Private Secretary to Lord Harris, and late Governor of Madras. 8vo. with an Original Portrait, 12*s.*

RECOLLECTIONS of SIBERIA, in

the Years 1840 and 1841. By C. HERBERT COTTRELL, Esq. 8vo. with Map, 12*s.*

WOMAN'S RIGHTS and DUTIES,

considered with relation to their Influence on Society, and on her own Condition. By a WOMAN. 2 vols. post 8vo. 14*s.*

WOMAN'S MISSION.

"If Women could once be made to understand their real mission in this world, and to feel their own importance and responsibility, a surprising change must immediately take place in society, giving it a higher tone and purer spirit."

The 10th edition, 3*s.* 6*d.*

A FAMILIAR HISTORY of BIRDS;

their Nature, Habits, and Instincts. By the Right Rev. EDWARD STANLEY, D.D., Lord Bishop of Norwich. 3rd edition, 2 vols. with many Engravings, 7*s.*

DOMESTICATED ANIMALS, considered

with reference to Civilization and the Arts.

WILD ANIMALS; their Nature,

Habits, and Instincts.

THE ANIMAL and VEGETABLE

PRODUCTIONS of AMERICA.

By MARY ROBERTS.

With many Illustrations, handsomely bound and gilt, 2*s.* 6*d.* each.

RECREATIONS in PHYSICAL

GEOGRAPHY; or, THE EARTH AS IT IS. By Miss R. M. ZORNLIN. New edition, with numerous Illustrations, 6*s.*

RECREATIONS in GEOLOGY; with

a Glossary of Terms. By Miss R. M. ZORNLIN. New edition, with Illustrations, 4*s.* 6*d.*

RECREATIONS in ASTRONOMY.

By the Rev. LEWIS TOMLINSON, M.A. New edition, with a Glossary, and 50 Illustrations, 4*s.* 6*d.*

RECREATIONS in CHEMISTRY.

By THOMAS GRIFFITHS, Chemical Lecturer at St. Bartholomew's Hospital. With numerous Illustrations, 4*s.* 6*d.*

The TWENTY-FIRST VOLUME, 4*s.* 6*d.*, also the ANNUAL VOLUME for 1842, 7*s.* 6*d.*, of the

SATURDAY MAGAZINE. Published

in Weekly Numbers at 1*d.*, Monthly Parts 6*d.*, Half-Yearly Volumes 4*s.* 6*d.*, and Annual Volumes at 7*s.* 6*d.* each.

A STATISTICAL COMPANION to

the POCKET BOOK, consisting of a variety of Tables and Statements from the highest official and other sources. By C. R. WELD, Secretary to the Statistical Society of London. 1*s.* stitched; or 1*s.* 6*d.* roan gilt.

London: John W. Parker, West Strand.

REVIEWS

Knitting, Netting, and Crotchet—The Baby's Wardrobe—Ladies' Hand-Book of Baby Linen—Fancy Needle-Work—Plain Needle-Work—The Nurse—The Confectioner.

It has been said that there is nothing small to the eye of philosophy, and it would appear by the titles of the batch of works now before us, that there is nothing small to the eye of literature, not even the eye of a needle. An amazing comprehensiveness is the character of the literature of the day; it shrinks from nothing, however lofty, and scorns nothing, however humble. It stretches out more hands than Briareus to handle subjects of all degrees of dignity, and has, at least, the tip of a finger for a discussion on herring-bone, or the doctrine of comfits. The wisdom of our grandmothers rested content with the needle-book. Their descendants, our fair contemporaries, insist upon having books on needles, and, in all human probability, the learned year 1843 will not come to a close without a treatise on thimbles. Great is the goddess Minerva, who teaches men to fight, and women to run,—who instructs the soldier to fell an adversary, and the sempstress to fell a seam,—by whom we not only sew but gather,—who initiates us in whipping in all its branches, and by whose grace the school-mistress simultaneously knits her stockings and her brows. Great is the goddess Minerva, inventress of binding, braiding, marking, piping, plaiting, tucking, and button-making after a thousand kinds. By her the milliner tacks and trims, and so does the statesman and the politician. She is at once the teacher of dress and of address, the dispeller of prejudice and the author of bias; the fop owes her his ruffled shirt and the scholar his unruffled hours. She is propitious to the housewife and she teazes her wool; she frowns upon the writer and he teazes his wits. The governess-general is she of the world, from ancient Athens to modern Whitechapel, whether wielding the lance or the bodkin, holding an ægis or a thimble. To Captain Sword and Captain Penn, we must add the Lady Needle, to complete the number of the ruling powers. We have sometimes suspected that the azure eye of Pallas Athena was no more than a type and figure of the exquisite eye of that fine instrument, the needle. Pallas was possibly the needle personified and deified after the mythic manner of the ancients; or the needle itself may well be taken as an image of womanly perfection, uniting usefulness with brilliancy, simplicity with acuteness, smartness with temper, and, in attraction, the peeress of the loadstone. At any rate the history of woman and the history of the needle are one. It may be supposed that our general mother hemmed the first green apron with the thorn of the rose, or the acacia; although it is with shame we trace up the origin of needle-work to the fall of man. Happy, however, had it been had glittering steel never taken any other shape, or been applied to less innocent uses. We fear even the steel-pen has some sins to answer for, but who has aught to say against the needle? If such there be, he cannot be too cautious in days like these, for not only may a thousand needles start from their cases, but a thousand pens from their inkstands to support them.

The works upon needle-work before us were evidently composed with a deep feeling of the dignity and importance of the subject. The author of 'Plain Needle-Work' eloquently remarks:—

"To become an expert needle woman should be an object of ambition to every British fair. Never is beauty and feminine grace so attractive as when engaged in the honourable discharge of household duties, and domestic cares. The records of history inform us of the high antiquity of the art of needle work, and its beautiful mysteries were amongst the earliest developments of female taste and ingenuity. As civilization increased, new wants called forth new exertions: the loom poured forth its multifarious materials, and the needle, with its accompanying implements, gave form and utility to the fabrics submitted to its operations. No one can look upon THE NEEDLE without emotion: it is a constant companion throughout the pilgrimage of life. We find it the first instrument of use placed in the hand of budding childhood, and it is found to retain its usefulness and charm even when trembling in the grasp of fast declining age. The little girl first employs it in the dressing of her doll, then she is taught its still higher use, in making up some necessary articles for a beloved brother, or a revered parent. Approaching to womanhood, additional preparation of articles of use, as ornaments for herself and others, call for its daily employment; and with what tender emotions does the glittering steel inspire the bosom, as beneath its magic touch, that which is to deck a lover, or adorn a bride, becomes visible in the charming productions of female skill and fond regard. To the adornments of the bridal bed:—the numerous preparations for an anxiously-expected little stranger, and the various comforts and conveniences of life, the service of this little instrument is indispensable. Often too is it found aiding in the preparation of gifts of friendship, the effects of benevolence, and the works of charity. Many of those articles, which minister so essentially to the solace of the afflicted, would be unknown without it; and its friendly aid does not desert us even in the dark hour of sorrow and affliction. By its aid we form the last covering which is to enwrap the body of a departed loved one, and prepare those sable habiliments, which custom has adopted as the external signs of mourning."

Plain-needle work is not to be confined to plain women. The author differs entirely from Comus, who says that—

> —coarse complexions
> And cheeks of sorry grain may serve to ply
> The sampler, and to teaze the housewife's wool,
> What needs a vermeil-tinctured cheek for that,
> Love-darting eyes and tresses like the morn?

When beauty sits down to plain work, we are next told how she ought to be armed and accommodated. The writer insists upon the plain worker seating herself in a bower, like any damsel of romance,—if she can find a bower to seat herself in. If not, she is to do without one, as we fear too many fair sempstresses in England are compelled to do:—

"We would recommend, wherever practicable, that the work table should be made of cedar, and that the windows of the working parlour should open into a garden, well supplied with odoriferous plants, the perfume of which will materially cheer the spirits of those especially whose circumstances compel them to devote the greatest portion of their time to sedentary occupations. If these advantages cannot be obtained, *at least* the room should be well ventilated, and furnished with a few cheerful plants, and a well-filled scent-jar. The beneficent Creator intended all his children, in whatever station of life they might be placed, to share in the common bounties of his providence."

"*At least* a well-filled scent-jar!" Alas for the thousands of plain-workers to whom a well-filled scent-jar is as unattainable as Belinda's box of perfumes, that breathed "all Sabæa."

The book entitled 'The Baby's Wardrobe' is full of curious and surprising intelligence. We had no conception, until we opened this fountain of knowledge, that a young gentleman of from three to five minutes old, required a wardrobe consisting of no fewer than a dozen articles! Nay more, we are told that this little human infinitessimal must have a toilette-table all to himself! This is commencing the lessons of monopoly and dandyism sufficiently early. The five-minute-arian is also to have a pin-cushion of his own, whether to be early inured to the sticking of pins in himself, or instructed in the agreeable pastime of sticking pins in his nurse or mother, the author does not inform us. The former would square pretty well with the system of Lycurgus, but the Humane Society would be called upon to prevent the latter, and indeed we think they would do well to protest against the use of pins at all in the toilette of young Englishmen under ten days old. In 'The Hand-Book of Baby Linen' we find with pleasure that the anti-pin principle is advanced intrepidly. Pins are pronounced "extremely dangerous," as everybody who has ever been stuck with one will readily agree. But (strange inconsistency of authors!) in the sequel of the same work we find instructions for the making of a baby's pin-cushion; and what is odder still, after the admission that pins are "extremely dangerous," we are told that "this article of the baby toilet is usually the preparation of *friendship* or the gift of *affection!*" The moral clearly is, that babies cannot begin too early to beware of their friends, and to suspect the "gifts of affection," even when they bear the insidious motto, "Welcome, little stranger," formed ever so prettily "of small pins."

Nothing so much contributes to delightful writing, let the subject be what it may, as the enthusiasm of the writer. The 'Hand-Book of Baby Linen' concludes in the following high strain:—"In the foregoing pages we trust we have given plain and ample instructions on a subject of *no common or fleeting interest.*" And again:—

"In making up the linen necessary for the health and comfort of the expected stranger, it is impossible not to develope some of *the most precious and ennobling feelings of the human heart.* The aid of mothers, sisters, and friends, is called into active requisition. Fathers and brothers evince an increased interest, as the anticipated event approaches, and the fond husband feels his heart beat with added quickness, as he sees each article assume its appropriate finish, and become deposited in its appointed place, till the moment redolent with hope, though chastened by an affectionate fear, shall make him the joyful parent of an infant heir of immortality."

These works on baby linen will stimulate the tailors, if there be any literary ambition amongst them. Nine of them might at least write as well as a single milliner; and surely if the frock of an infant deserves a duodecimo, a folio would not be too much for the frock of a grown man. We trust the men of the shears do not despise literary pursuits, for although the goose is certainly greater than a goose-quill, and a well-made coat is a great work, still there *is* some renown to be acquired by authorship, and we therefore presume to invoke them, as poets invoke the Muses,—"Descend, ye Nine!"

The author of 'Knitting, Netting, and Crotchet' proves by her example that subjects of this class are capable of the highest moral elevation in the hands of writers competent to grasp them. Would not the reader suppose that the following passage had been taken from one of the Bridgewater Treatises, instead of from 'Knitting, Netting, and Crotchet'?

"But we have a higher end in view, than promoting the acquisition of accomplishments, however elegant or pleasing. We wish to direct the minds of those we are thus endeavouring to interest and instruct, to *the immortal beauties of moral excellence.* These works may be made conducive, in a high degree, to the development of family affection, and the promotion to a vast extent of the purposes of genuine charity, benevolence, and friendship. But there is yet a higher kind of use to which we would apply them. We would have the young lady who is becoming expert and clever at her needle, to reflect, as the beautiful fabric grows beneath her forming hand, that her work, and the power and skill to plan and execute it, is *an emanation of the immortal mind*; of that mind, whose creative powers are a faint, but legible transcript of the omnipotent wisdom of the Deity. This

Digitized by Google

thought gives a permanency to what would in any other light, be only transitory as the summer cloud. It is omnipotent wisdom and power, which has contrived and executed all the beautiful wonders of creation; and that wisdom and power were called into activity by omnipotent love."

'The Confectioner' and 'The Nurse' are books of the same class, belonging to two series of popular treatises, entitled 'The Guide to Trade' and 'The Guide to Service.' These, as well as the tracts on needle-work, contain a great deal of practical sense and useful information, interspersed with quaint and unintentionally amusing passages. The writer on marmalades and meringues is very properly offended at the notion that any capacity is capacious enough for the capacity of a confectioner. He then tells us what a confectioner ought to be, and gives us "*the idea*" of a pastry-cook, as Bolingbroke does of a patriot-king:—

"The person adapted for this business should be neat and cleanly in his habits, of a lively and ingenious mind, have a quick conception of design, a delicate taste, with a general knowledge of architecture, mythology, and the fine arts; for they are as requisite in the construction of a pièce montée, or an allegorical subject to embellish the table, as to an architect or sculptor in the construction of an expensive building or monument. I do not mean to infer that his information must be so extensive, or that he will be required to make the tour of Italy, Rome, and Greece, to study the original masters; but let him take Nature for his guide, with a peep at the Grecian and other statues in the British Museum occasionally, if possible; and if he possess the rudiments or principles of the art of design, he cannot fail, with a little attention and perseverance, to become an adept in the higher or ornamental branches of his business."

The modest requisites of the confectioner recals to mind the speech of Lickfinger in Jonson's 'Staple of News.'

"A master-cook!—why he's the man of men,
For a professor!—he designs, he draws,
He paints, he carves, he builds, he fortifies,
Makes citadels of curious fowl and fish,
Some he dry-dishes, some moats round with broths;
Mounts marrow-bones, cuts fifty-angled custards,
Rears bulwark-pies, and for his outer works
He raiseth ramparts of immortal crust;
And teacheth all the tactics at one dinner:
What ranks, what files, to put his dishes in,
The whole art military. Then he knows
The influence of the stars upon his meats,
And all their seasons, tempers, qualities,
And so to fit his relishes and sauces,
He has nature in a pot, 'bove all the chymists,
Or airie brethren of the Rosie-cross.
He is an architect, an engineer,
A soldier, a physician, a philosopher,
A general mathematician."

'The Nurse' commences with the following entertaining catalogue of the nurse's accoutrements:—

"The stock of instruments necessary for you to possess, is easily enumerated—a pair of large scissors and a pair of small ones, a pen-knife, a good pencil, an inkstand (with ink in it) a few good pens, some sheets of writing paper, and a lavement apparatus of your own, kept in good order, and adapted for children as well as adults—these with a watch, if you can afford one, will be sufficient to set you up."

High is the standard of her moral character, but unbounded benevolence, a seraphic temper, and a stoical superiority to caprice and humour, are absolutely indispensable. Physically considered, she is to unite all the hands of Briareus with all the eyes of Argus; to be as temperate as Matthew, as honest as Aristides, and as unsleeping as Ursa Major. When employed as a priestess of Lucina, and a babe is born, she is solemnly directed to act in the manner following:—

"You will have it conveyed in the first instance, carefully wrapped in soft flannel, into another apartment, where its eyes, the shape of its nose, limbs, and the anticipated colour of its hair can be duly discussed, and the wonder and delight of those who may assist on the occasion for the first time can be expressed, without exciting the sensibilities of the anxious listener within the curtains. If there should be anything remarkable in the appearance of the child, let there be no whispering or scampering about; *do not rush upon the doctor*, but wait quietly until he makes his appearance."

As to gossip, she is to be as mute as a pupil of Pythagoras, while obstetrically engaged. Hard condition! How seldom fulfilled!

"As to ordinary news, that has been the nurse's perquisite from time immemorial, but just at this crisis the best news is no news at all. Lay it down as an absolute rule, that under the doctor the sole right of administering news or physic is vested in the nurse for the time being, and they will acquit themselves with the most credit, whose doses of either the one or the other are the fewest and the smallest."

When the following passage struck our eye we thought for a moment it was a receipt from a New Zealand cookery book.

"If you wish the baby to look particularly nice, *beat up the yolk of an egg with a little fresh butter* (*melted*) and anoint the skin with it; then wash it off with a soft sponge and a little warm water."

A little further on we are told that nurses ought not to give sick people either veal-pie or sausages! The author adds that "strange stories are told upon the continent of sausages." She might have added that in England also "strange stories" are current on the same subject.

We must conclude with the admirable directions for the period of convalescence:—

"The best books are those furnished with engravings and short stories; the various weekly penny journals, and the Pictorial Bible are among the best and most accessible—better than newspapers. The patient's conversation should at first be entirely restricted to the affectionate members of her own family. A young child, or *a faithful little dog*, ought to be the first visitors admitted. These may be followed by intimate friends or *entertaining dependants*—the groom and the gamekeeper; perhaps the barber for a country gentleman."

History of the Scottish Episcopal Church from the Revolution to the Present Time. By J. P. Lawson. Edinburgh, Gallie & Bayley.

Independent of its connexion with the two great subjects of ecclesiastical discussion which engage so large a share of public attention, the History of the Church of Scotland is interesting for the light it throws on the Revolution, long designated "glorious," but now likely to receive a more permanent and less honourable designation. At the period of that event, Episcopacy was, as it is now, more fashionable than popular in Scotland; the bishops were men of high respectability, connected with the most distinguished families; they sat in the parliament as spiritual peers, and their diocesan character was recognized by law. The landing of the Prince of Orange came upon the Scottish Church by surprise; its leaders could not comprehend the object of such a measure; but in order to prepare for any change that might ensue, they sent, with the sanction of the Privy Council, Bishop Rose to London, to wait on the English bishops, "for advice and assistance, in case that any unlucky thing might happen to occur with respect to the church." A journey from Edinburgh to London was in those days attended with difficulty and delay; and before Rose reached the metropolis, the Prince of Orange had procured the dethronement of his father-in-law and his own elevation to the throne; his favour therefore could only be obtained by a hearty recognition of his doubtful title, and Compton, Bishop of London, communicated this condition to the representative of the Scottish Church:—

"The Bishop of London now addressed himself in an almost official manner to the Bishop of Edinburgh.—'My Lord,' he said, 'you see that the King, having thrown himself upon the water, must keep himself a-swimming with one hand. The Presbyterians have joined him closely, and offer to support him; and therefore he cannot cast them off unless he could see how otherways he can be served. And the King bids me tell you that he now knows the state of Scotland much better than he did when he was in Holland; for while there he was made to believe that Scotland, generally all over, was Presbyterian, *but now he sees that the great body of the nobility and gentry are for Episcopacy*, and it is the *trading and inferior sort that are for Presbytery*. Wherefore he bids me tell you, that if you will undertake to serve him to the purpose that he is *served here in England* he will take you by the hand, *support the Church and order*, and throw off the Presbyterians.'"

Rose refused to accede to this proposition; and on his return to Scotland he, with the rest of the Scottish prelates resolved to adhere to the Stuarts. William, in consequence, decided that Episcopacy should be abolished in Scotland, and for this purpose measures were taken by the Meeting of Estates, similar in character to those which had furnished a pretext for the expulsion of James. The great crime of James was an order that his Declaration of Indulgence should be read in churches; and those who had taken up arms against him on this pretext, issued a decree that all ministers who did not read from their pulpits a proclamation commanding public prayers to be offered for King William, before a certain day, should be deprived of their benefices. This was speedily followed by an act for the abolition of prelacy; and in less than three months, payment of any rent or duty to archbishops, bishops, deans, or any others of superior dignity in the Church above Presbyters "was prohibited," and "fit persons" were appointed to receive the "teinds, rental-bells, feus, blanch or tack duties, formerly paid to bishops and others aforesaid," no provision whatever being made for the existing incumbents. Presbyterianism was thus established in Scotland; and it was not William's fault that Romanism had not similar success in Ireland, for he offered Tyrconnell a recognition of that religion, and a grant of one-third of the Irish churches to its priests, on condition of being acknowledged as sovereign.

The next measure adopted by William's government in Scotland was the issue of a commission "to purge" the universities of all who refused to subscribe the Westminster Confession of Faith. The proceedings under this admirable commentary on the Declaration, that the Prince of Orange had been invited over to secure liberty of conscience, were equally violent and unjust:—

"In no University city was this more conspicuous than in Edinburgh. Proclamation was made, and printed edicts posted, at the Cross and on the College gates; as also in Stirling, Haddington, and other provincial towns, charging the Principal and Professors of the University, and the schoolmasters of the city, county, and neighbouring counties, to appear before the committee of visitors on the 20th of August, 1690, to answer upon the points contained in the act of Parliament; also summoning and warning *all the lieges who have anything to object against the said Principal and Professors, and others*, to appear before them on the said day and place to give in *objections*. 'After an edict,' observes Arnot, 'which bespoke that the country, although it had been subjected to a revolution, had not acquired a system of liberty, nor the rudiments of justice—after an invitation so publicly thrown out by the commissioners of Parliament in a nation distracted by religious and political factions, it is not to be supposed that informers would be wanting.'"

The ejection of the Episcopal ministers was frequently resisted by the congregations, and in one instance with success:—

"Mr. Dugald Lindsay was the Episcopal minister of Glenorchy. Mr. Lindsay would not conform. Pressed by the Synod of Argyll, the noble proprietor (the Earl of Breadalbane) of the country reluctantly wrote a letter of invitation to a Presbyterian proba-

Digitized by Google

tioner in the shire of Fife, to be minister of Glenorchy. He accepted, came on the close of a week to the parish, but could find no room to receive him, or person to make him welcome. In his distress he was drove to the house of the man whom he came to supplant, and was received with a cordiality and kindness becoming a minister of the gospel. Over the whole parish there was a strong ferment. People of all ages and conditions assembled from all quarters in the churchyard on Sabbath, long before the usual hour of worship. At the appearance of the stranger, accompanied by their own pastor, there was a general murmur of indignation. Twelve armed men with drawn swords surrounded the astonished intruder. Two bagpipes sounded the *March of Death*. Unmoved by the tears and remonstrances of Mr. Lindsay, in this hostile and awful form, they proceeded with their prisoner to the boundary of the parish and of the county. There, on his bended knees, he solemnly engaged never more to enter the parish, or trouble any person for the occurrences of that day. He was allowed to depart in peace, and he kept his promise. The Synod of Argyll were incensed; time cooled their ardour; the proprietor was indulgent, Mr. Lindsay was deserving, and the people loved him. He continued in the undisturbed possession of his charge till his death, more than thirty years after the foresaid event."

While the important measure of the Union was under discussion, an order was issued to shut up all the episcopal chapels in Scotland. This was revoked after that measure was carried, and about the same time the Scottish Episcopalians adopted the Liturgy of the Anglican Church. This gave great offence to the Presbyterian party, and several ministers were fined and imprisoned for having "introduced a form of worship contrary to the purity and uniformity of the Church established by law." In 1712, an act was passed by the parliament of the United Kingdom, granting toleration to "those of the episcopal communion in that part of Great Britain called Scotland," clogged however with a penalty against such as neglected to pray in express words for "her most sacred Majesty Queen Anne, the most excellent princess Sophia, and the rest of the Royal Family." This clause was introduced because nearly all the Episcopalians of Scotland were Jacobites.

Soon after the accession of George I., twenty-five clergymen were indicted for not complying with the injunctions of the Toleration Act. The result was not a little curious and characteristic:

"Twenty-one of the accused clergymen were fined 20*l.* sterling each, one half to the informer, and the other half to the poor of the parish; but as no informer applied, the Lord Advocate about six months after prayed the Court for warrant of 10*l.* against each of them, *to be paid to his Lordship as informer*."

A very severe act was soon after passed "For making more effectual the laws appointing the oaths for the security of the government to be taken by ministers of churches and meeting-houses in Scotland." Several prosecutions followed, but the act does not seem to have been rigorously enforced. It is but fair to add, that the jealousy of the government was not without cause, for the concurrence of the Pretender was sought and obtained in the election of the Scottish bishops.

The Jacobite tendencies of the Scottish Episcopalians brought suffering on their body after the battle of Culloden, and they had little reason to hope for the sympathy of their Anglican brethren, who had been terrified into cruelty by the invasion of the Highlanders. A shocking instance of the inhumanity of the times, which is little known, deserves to be noticed. The chaplain of the High Sheriff at York, being appointed to preach before the judges who were to try the prisoners, had the indecency to take for his text,—"Moses said unto the judges of Israel, Slay ye every one his man that was joined unto Baal-Peor."—Numbers, xxv, 5. It will surprise no one to learn that the Duke of Cumberland took a very active part in the persecution of the Scottish Episcopalians:—

"The Duke of Cumberland, in his march to the North, visited all the Episcopal chapels in Forfarshire, Kincardineshire, Morayshire, and Banffshire, with military law. They were ordered to be shut up, and in many places the people were incited to destroy the seats and other furniture, and to set fire to the humble edifices. These ravages were carried into some districts of Aberdeenshire; and scarcely a week had elapsed after the battle of Culloden, before his Royal Highness had succeeded in prohibiting any congregation from assembling for divine service in which a Nonjuring clergyman officiated. The most shameful and wanton outrages were committed, and the clergy and laity were often personally maltreated and insulted. In other counties the mob did the work of the military in the North. The chapel in Cupar-Fife, in which Bishop White officiated, was assailed and gutted, and the seats, pulpit, reading desk, and communion table, burnt in the streets. On Sunday the 27th of April there was divine service in very few of the chapels in Edinburgh, and before next Sunday they were all ordered to be shut up by the Sheriff."

In 1746, a very penal statute was passed against the nonjuring episcopalians of Scotland, which, amongst other severities, declared that ordination by Scottish bishops was invalid. It must however not be forgotten, that this clause was strenuously opposed by several of the English bishops in the House of Lords, on the ground that it interfered with the rights of ordination, which were matters beyond the limits of parliamentary cognizance. During the ensuing ten years, this harsh act was enforced with a relentless vigour which not unfrequently went beyond the limits of its letter; but towards the close of the reign of George II., the persecution gradually abated, and on the accession of George III. it ceased altogether.

The English prelates appear to have forgotten the very existence of an Episcopal Church in Scotland, until it became necessary, after the close of the American war, to make some provision for the continuance of an Episcopal Church in America. Dr. Seabury, who had been chosen bishop by the episcopal clergy of the State of Connecticut, came over to England to be consecrated, but legal difficulties intervened, and he was advised to apply to the Scottish bishops. He was consecrated by them at Aberdeen, in 1784:

"'As under God,' says Bishop Seabury, in his Charge at his primary visitation, 'the Bishops of the old Episcopal Church of Scotland, which at the Revolution fell a sacrifice to the jealous apprehensions of William III., were solely the instruments of accomplishing this happy work, to them our gratitude is due. And I hope the sense of the benefit we have through their hands received will ever remain fresh in the minds of all members of our communion to the latest posterity.'"

Mr. Lawson mentions a curious circumstance, without vouching for it as a fact, but which we believe to be authentic. The founder of the Methodists was anxious to introduce Episcopacy into that branch of his church established in the United States, and he is stated to have applied to the Scotch bishop of Kilgour to consecrate the Rev. Dr. Coke, one of the few clergymen of the Church of England who had joined the Methodist body. It is further said, that this application was refused; it is indeed certain that Wesley himself took the extraordinary step of consecrating Dr. Coke and Mr. Abury, bishops of the American Episcopal Church at Bristol, in 1784. Coke was not satisfied with this consecration, for at a subsequent period he sought to be regularly appointed to the diocese of Calcutta, through the interest of Mr. Wilberforce.

On the death of the Pretender, in 1788, the Scottish Episcopalians formally gave in their adhesion to the Hanoverian dynasty, and applied for the repeal of the penal acts which had been directed against their nonjuring church. The repeal, however, was not obtained until 1792, being delayed chiefly by the opposition of Lord Chancellor Thurlow, whose vanity, it is said, had been wounded by some real or supposed neglect on the part of the Scottish delegates; and it was clogged by an offensive clause, prohibiting ministers ordained by the Scotch bishops from officiating in England. This clause was modified in 1840, and power was given to the Bishops of England and Ireland to permit the ministry of clergymen ordained in Scotland or America under certain specified conditions.

Mr. Lawson complains very strongly of the jealousy with which the Scottish Episcopalians are viewed by their Presbyterian brethren; but this is a subject into which we are not disposed to enter. Our purpose has been simply to select some of the most prominent facts in the history of a Church which maintained its existence under very trying circumstances, both of neglect and persecution.

The History of Woman in England. By Hannah Lawrance. Vol. I. Colburn.

The design of this work is not arrogantly to assert the superiority of the female sex to the male, or even querulously to contrast the two sexes, but it is simply and modestly historical, as it professes by its title to be. There has been at different periods a rage for paradoxical exaltations for womankind, nor have such essays proceeded from the hands of the softer sex only. If Madame de Gournay wrote "of the equality of men and women," the same thesis was defended by a Frenchman, in a "Discourse, Physical and Moral, wherein is to be seen the importance of clearing the mind from prejudices."* If Madame Jacquette Guillaume published her "Illustrious Ladies, wherein is proved, by good and strong reasons, that the female sex in all respects exceeds the male," and another fair writer of the same nation maintained in print "that her sex is more noble, more polite, more valiant, more learned, more virtuous, and more frugal than that of men," the same extravagance has also found advocates of the masculine gender; amongst others, Jeronimo Ruscelli, who composed a treatise with the title, "Che la Donna sia di gran unga più nobile et più degna dell' Huomo." It would be easy to extend the list of writers, chiefly women, who have, with various degrees of energy and eloquence, espoused what they called "the cause" of their sex, inveighed against its wrongs, and claimed or clamoured for its rights. The lioness being the painter, man has rarely had justice done him in this class of works, although it must be confessed he has not in all ages and climes acted towards the weaker vessel in conformity with the vaunted superiority of his moral nature. But the woman's mistake seems to consist in disputing that superiority on account of the various caprices and tyrannies that have co-existed with it, or attended its manifestations, instead of remarking the continual improvement in the position of the sex, according as man advances in knowledge and civilization; and that consequently the despotism she has had often just cause to protest against, is one of the transitory evils of society, and not so much the ascendancy of the physical in man over the spiritual in woman, as the result of the tardy developement in man himself of those moral powers in which true sovereignty alone consists. Womankind has not been the only sufferer in the slow tumultuous march of the human species from barbarism to civilization.

* This ingenious author, expecting to be written against, and being disappointed, determined to *answer himself*, which he did successfully in another work, entitled 'Of the Excellency of Men, against the Equality of the Sexes'!

Digitized by Google

We have many a time fallen victims to our own excesses and disorders. In the hardships of the long campaign between light and darkness, woman has certainly borne her part, but she has not participated in the struggles of our race, without participating likewise in its triumphs, and hence the daily increasing hopelessness of organizing a female party, or convincing any formidable mass of womanhood that they are the victims of a penal code, or labouring under any disability not imposed by Nature herself. It is curious that the only instance in history or fable of a powerful female confederation is the nation of the Amazons, whose imaginary sway was physical, not moral, contrary to all that has ever been pretended by the most ardent modern champion of the sex, with the exception of the French lady before alluded to, who claimed the superiority of woman not only in policy (where it might be admitted,) but even in the point of *valour*. But there is as little fear of a female party, upon moral principles, as of an attempt to reconstruct an Amazon empire; nor is this through the want of heads or leaders (which so often prevents the formation of parties amongst the other sex), for they labour under no want of genius or enthusiasm to agitate their question, and dispute the *mastery* of the world: it is rather that the leaders want fair armies to follow them to battle; that the war-cry, however eloquently sounded, finds no response through a thousand boudoirs; that there is no general sense of helotism in the drawing-rooms of Christendom; no female "cause," in fact, distinct from the cause of the rest of the human species. At the same time, we think there can be no finer exertion of the powers of the female mind than to reclaim against whatever she believes to be oppressive or unreasonable in the laws or usages of this or any other country affecting the condition of her sex; and we readily excuse the brilliant exaggerations into which a bold and speculative mind, thus worthily engaged, is so easily transported. Upon the same principle, we approve of more limited works, like that now before us, which simply undertakes to trace out the history of England in the female line, if we may so express ourselves, and display the influence of woman upon the institutions, the religion, the literature, and the character of the nation.

The present volume begins with the earliest records, remarkable for nothing but their barrenness, and carries down the plan of the writer to the close of the twelfth century. The homage paid in our times to the fair sex is not to be traced to whatever there may be of the ancient Briton in the modern Englishman. The author, whose industry has collected all that remains in chronicle or tradition of times so deeply buried in the past, thus describes the *state* of an ancient British queen:—

"In the laws regulating the interior arrangements of the palace, abundant proof is given of the low station occupied by the queen. While each officer of the king, down to the falconer, has his appropriated place in the hall, the king's wife occupies her solitary chamber, waited upon by a single attendant handmaid; a steward, who is to 'serve her in her chamber with meat and drink;' and a page, who 'is to convey messages between the chamber and the hall, keep the keys of her coffers, and supply the chamber;' and two or three inferior attendants.* That in this state of melancholy seclusion the queen should occasionly ask the solace of song, seems to have occurred to the law-makers as no unlikely circumstance; they therefore enact that, 'when the queen shall will a song in her chamber, let the bard sing a song respecting Camlan,' (the battle in which Arthur fell), 'and that *not loud, lest the hall be disturbed!*'—lest the amusement of the queen should interrupt that of her servants, the boisterous mead-drinkers carousing round the blazing hearth."

It is now one of the best received axioms of social life, that the wife is her husband's "better half," but the arithmetical value of the wife of an old Briton was *one-third* of that of her husband—a fraction the less complimentary inasmuch as it was fixed by law, and constituted what may be called the market price. We took our standard of woman's worth, as well as other free customs and institutions, from the Saxons and their forests.

"From the earliest period of their history, woman among the Saxons occupied a station far higher than that assigned to her among the later Britons, is proved by their laws and their usages no less than by the accounts of the later Greek and Latin historians, who remark with astonishment the lofty station maintained by the Teutonic matron compared with that assigned to women among the polished but degenerate Greeks. 'It was in Germany,' says the eloquent but accurate Michelet, 'that woman became the companion of man in his dangers, united to his destiny in life as in death. She withdrew not even from the battlefield, but watched and hovered over him—the fairy president of the combat—the fair and awful walkyriur, who bore away, as a gathered flower, the spirit of the expiring warrior;' and anxiety to prove himself worthy of her applause nerved the arm of the Saxon chieftain in many a perilous conflict, and to deck his bride in the gold and gems of southern climes launched 'the long ship' of many an adventurous pirate on the stormy ocean."

The Saxon dames mingled in the revels of their lords, which doubtless mitigated the excesses of debauchery, while on the other hand it familiarized women with scenes most revolting to the delicacy of their sex. The following extract shows how much better the Saxons used their queens than the aborigines of the country.

"Although a rude, and in the earlier periods of their history a savage people, the Saxons never excluded women from their feasts or their amusements. The queen took the place of honour in the festive hall, and presented the mead-cup to the most honoured of the guests, as the highest mark of distinction they could receive. Thus, when Beowulf entered King Hrothgar's 'mead hall,' the queen Waltheowa, 'encircled with gold, mindful of her high station, greeted the warriors in the hall,' and presented the cup, and then taking her seat beside her husband remained 'while the cup continued to flow, the song to arise, and the revelry to increase.' And thus in the monkish chronicles we read of high-born ladies presiding at splendid feasts given by them to the monarch and his numerous retinue; and lady-abbesses, too, welcoming their clerical and royal guests to the noble banquet; and thus many a rude illumination exhibits the male and female guests seated alternately round the well-covered table, engaged in conversation or listening to the songs of the minstrel."

On the subject of the Saxon convents the author has amassed a great deal of curious and pleasant information, particularly as to the influence and power exercised in those rude establishments by the women of the period. She tells us that—

"The early Saxon monasteries were distinguished by a peculiarity apparently common to them only; this was, that although establishments for men as well as women, they were mostly under the rule of a female superior. In the vicinity of the female convent another was erected for men—canons, whose duty it was to officiate at the altar and perform outdoor offices. The abbess had the supreme command, their prior depended on her choice, and was bound to regulate his conduct by her instructions."

And the two following reasons are assigned for this singular pre-eminence:—

"In the first instance, we should bear in mind that nearly all the monasteries—we might, indeed, say *all*, if we confine our attention to those founded during the seventh century—were founded by *women*, and by women of royal birth. Now with that strong feeling of respect for high rank, which, as we have seen, the Saxons possessed, it must have been less repugnant to their notions of fitness that the lady-abbess, of royal descent, should rule the priory of canons as well as her own sisterhood, than that she, the daughter, or sister, perhaps, of the reigning monarch, should submit to the sway of the mere freeman, or, it might be, actually of him whose parents had been bondslaves. But a more weighty reason may probably be found in the superior fitness of the high-born Saxon women for conventual rule, which, after all, was but domestic rule, exercised in a wider sphere, than of the men, who, though equally high-born, had been trained up to consider war and the chase as their sole occupations."

Many particulars are related of the famous Abbey of Whitby, founded by the Lady Hilda. The first convent erected by Hilda consisted exclusively of women, but that of Hartlepool, and afterwards that of Whitby, included canons as well as nuns. Bede extols the latter institution as a school of divinity of the first order, and relates that it sent forth no fewer than six missionaries, who proved the excellence of Hilda's teaching by obtaining the then more laborious than splendid office of Christian bishop.

The ladies of the Saxon convents were not unknown to literary fame. There even still remains the work of a fair recluse of those distant times which Miss Lawrance describes as "an unaffected narrative of the lives of two worthy men—St. Willibald and St. Wunebald—containing a minute, and often *naïve* description of a pilgrimage through Asia Minor, to the Holy Land, at the beginning of the eighth century." She gives several extracts from this antique tour, which justify her commendations of "the earliest literary composition of an Englishwoman." The history of the young Alfred affords Miss Lawrance a striking illustration of the power of female influence, wisely and fondly exerted. The mind of that celebrated monarch first opened to the fascinations of an illuminated volume of Saxon poetry and the still more engaging art of a kindly stepmother. Judith was a bright exception to the ordinary rule of novercal administrations. It will probably be found that such exceptions are not so rare as proverbially supposed, the reason being that the very prejudice against stepmothers has the effect of checking, in multitudes of women placed in that trying relation, the tendencies to neglectful or inhuman conduct.

The notices of the female character during the Saxon age are almost entirely confined to the narrow circle of royal personages, the Elfridas, Gunildas, and Edithas. The author has made the most of her materials, but they are lamentably meagre. With the following remarks she closes this part of her subject, and passes on to the Norman revolution and its results:—

"With the two Edithas, sisters in beauty, in royal state, and almost in misfortune, the first portion of our view of female society in England closes. And looking at the mournful details of public and domestic sorrows which the lives of these later Saxon queens present to us, we may well doubt whether Norman domination, crushing as it was, could bring severer sufferings to the noble and high-born women of the land, than did the misgovernment, the intrigues, the foreign invasions, and the sanguinary domestic feuds and assassinations of the last century of Saxon power. Whatever were the popular rights—whatever were the rights conceded to women, by Saxon jurisprudence, and they were important—the turbulence, the lawlessness of this later period, rendered them well-nigh nugatory. The right of the strong hand was the only law recognized by the Leofrics, the Algars, the Godwins, of that day; and as vainly might the wife and mother of kings, as the poor tiller of the ground, demand justice or seek redress from those whose will was the sole law."

The history of woman under the Norman sway is for a long period scarcely less barren and circumscribed than during the previous period. A Maude or an Adelais succeeds to an Editha,

* One of these is her candle-bearer: the reader will smile at his valuable perquisites; for they were "all the tops he should *bite off* the candles, also the broken bread, and fragments that fall over the queen's dish."

Digitized by Google

and we have still the records of palaces and the chronicles of queens—no general picture of the women of the country—so hard it is to preserve the memory of large classes of our species, while the tide of ages often leaves the monuments of eminent individuals standing. Miss Lawrance has diligently collected and agreeably combined whatever has been transmitted to us by old chroniclers of the two queens of Henry the First, of Constance la Gentil, and the Lady Alice de Condé of Horncastle. Curious extracts are given from the 'Bestiarius' of Philip de Than, a zoological manual in rhyme, written expressly for Queen Adelais, in the Anglo-Norman tongue. The work of Gaimar on early British history, also in rhyme, was produced under the encouraging auspices of Constance la Gentil. The voyage of St. Brandan, which Miss Lawrance has the merit of having been the first to introduce to the modern public, in her 'Historical Memoirs of the Queens of England,' was composed at the "mild command" of the royal Adelais. The author critically remarks that—

"The voyage of St. Brandan first taught the writers in the vernacular tongue how pleasant a poem might be made of the adventures of one individual, instead of a lengthened catalogue of descriptions of animals, or a rhyming chronicle of kings. And even to the metrical chronicler this graceful poem suggested some improvements; and in the best of these extant, composed certainly not many years after the '*Roman du Rou*,' of Wace, we discover an ease, a spirit, and a *naïve* simplicity in the narrative, that renders the story of the dukes of Normandy right pleasant reading."

Our information is much more extensive respecting the Anglo-Norman than as to the Saxon monasteries. The history of woman down to the close of the twelfth century is very little more than an account of her conventual life or her royal state: we see her as the præcentrix, leading the choir—the cellaress, presiding over the refectory—or as the queen, or great lady of the court, patronizing the trouvère, or inspiring the troubadour. But where are the ancestresses of the great body of the people of England? Were there no women in the Anglo-Norman age but the recluse in the cell and the queen upon the throne? From the scantiness of historical memorials as to the sex in general, it might almost be inferred that the whole English nation of this day might trace itself in the female line up to a royal Maude or Elinor, for we must acquit the convents of any participation in our origin. After relating the story of Gilbert de Plumpton, in the reign of the second Henry, Miss Lawrance observes—

"It were greatly to be wished that more of these characteristic stories had been recorded; but the chroniclers of the 12th century, chiefly occupied in detailing the particulars of the civil wars of Stephen's reign, or the subsequent contests of Plantagenet with the ecclesiastical power, seldom turn aside from pursuing their narrative of public events to introduce those episodes, which often, far more than incidents connected with political history, illustrate the character and manners of the period. For this reason, we have scarcely a passing notice that could enable us to ascertain the condition, the occupations, or the habits of the female class immediately below the nobility. This class was, however, unquestionably small; for during this unsettled period the number of inferior landholders was limited, and the wealthy traders in the cities, who, during the three following centuries, rivalled the noble in wealth and splendour, had scarcely as yet appeared."

We have some few glimpses of the women employed as embroiderers, makers of "orfrays," and, we grieve to add, as clippers of the silver coinage of the realm. Beyond this all is darkness, as complete as that which broods over the ladies of Nineveh or Babylon. The author, whose industry and zeal seem to have left no source of information unexplored, acknowledges this melancholy truth at the close of the volume:—

"Even more scanty is our information respecting women of the lower class. These are seldom alluded to; but the entries in the 'Boulden Book' exhibit, as we have seen, the general respect paid to the 'housewife.' From passing remarks in the chronicles of this period, we find, too, that among the lower class, women were the general medical advisers,—at least of those whose distance from the convent prevented their obtaining that advice which the nun, and the lady-abbess herself, were always ready to afford. In too many instances, however, these women professed to cure by the more questionable agency of charms and spells; and we find that, down to even a later period, the potent 'Runic rhyme' was still muttered by many a village crone, while her list of remedies boasted a far higher antiquity than those of the convent infirmary,—since the vervain of classical celebrity, and the rue and mistletoe of Druidical use, were numbered among them.* * Little can be known, too, of the village maiden of these early times. Although she doubtless took her part in agricultural labour, she certainly never performed those heavy and toilsome services which women in France and Scotland, even in the present day, perform. In the rude illuminations of this, and the preceding century, which exhibit rural occupations, we constantly find men engaged in the various out-door employments; and, when females are seen, they are either tending the huge cauldron-shaped pot that swings from the crook over the log-fire, or holding the primitive distaff in one hand, while the other is occupied in twirling the thread. Indeed, the very term, appropriated from Saxon times to the unmarried woman, 'spinster,' in itself bears witness to the easy and feminine duties which were chiefly required during these ages at female hands."

Life in Mexico, during a Residence of Two Years in that Country. By Madame C—— de la B——. Part II.

[Concluding Notice.]

An amusing account is given in these letters of the manner in which Good Friday is kept in Mexico. An air of the ludicrous is thrown over the whole ceremonies, and this not maliciously, but inevitably, by the plain recital of some of the circumstances. The sacred music employed on this penitential occasion was made up of airs, to which Madame Calderon had seen Ducrow's horses dance, and tunes resembling 'Kitty Clover:' whimsical, too, is the following anecdote:—

"We were told an anecdote concerning Simon the Cyrenian, which is not bad. A man was taken up in one of the villages as a vagrant, and desired by the justice to give an account of himself—to explain why he was always wandering about, and had no employment. The man, with the greatest indignation, replied—'No employment! I am a *substitute Cyrenian* at Coyohuacan in the Holy Week!' That is to say, he was to be substituted in the Cyrenian's place, should anything occur to prevent that individual from representing the character."

Our gleanings would not be completed without they gave some idea of the life of the Mexicans at their country-houses. The following fragments make a *repose* not unwelcome, after the brilliancy of some of the former letters:—

"San Bartolo is a small, scattered Indian village, with a church, and is remarkable for a beautiful spring of water, that jets cold and clear from the hard rock, as if Moses had but just smote it; for its superb tall pine trees, for the good looks and cleanness of the Indian women, who are for ever washing their long hair in the innumerable clear streamlets formed by the spring; and for a view of Mexico, which is particularly favourable, owing to the thick, dark screen of pine-wood in the foreground, and the distinct view of the Laguna. Our dinner was carried by Indians, who had trotted off with it at day-dawn, but who had taken the wrong road, and did not arrive till long after us. We dined under the pine trees by the side of the stream, but surrounded by crowds of gaping Indians, in too close vicinity to be agreeable. Some of the young women were remarkably handsome, with the most beautiful teeth imaginable, laughing and talking in their native tongue at a great rate, as they were washing in the brooks, some their hair and others their clothes. The men looked as dirty as Indians generally do, and by no means on a level with these handsome damsels, who are so much superior to the common race of Indians near Mexico, that one would think they had some intermixture of Spanish blood in their veins. A sister of the woman who takes charge of the hacienda where we live, is one of the most beautiful creatures I ever beheld. Large eyes, with long dark lashes, black hair, nearly touching the ground, teeth like snow, a dark but glowing complexion, a superb figure, with fine arms and hands, and small, beautifully-formed feet. She is only nineteen. Such beauties as these startle one every now and then in some remote village. She belongs, no doubt, to the *mestizos*—the descendants of whites and Indians, the handsomest race in Mexico."

The passion of the Indians for fireworks seems only one degree less strong than their love for flowers. "When you give a penny to an Indian child," says Madame Calderon, "it trots off to buy crackers, as another would to buy candy."

Adventures with robbers and housebreakers figure largely among the incidents of the *villeggiatura*, but these we are content to hand over to the melo-dramatists. A harmless costume figure is quite piquant enough, by way of shade and discord, to the sunshine and harmony of San Angel:—

"We saw a horribly ugly man to-day, and were told he was a *lobo*, the name given here to the *Zambos*, who are the most frightful human beings that can be seen. La Guera Rodriguez told us, that on an estate of hers, one woman of that race was in the habit of attending church, and that she was so fearfully hideous, the priest had been obliged to desire her to remain at home, because she distracted the attention of the congregation!"

One sketch more, and we shall have done with ruralizing in Mexico:—

"If you wish to hear how we pass our time, you must know that we generally rise about six, and go out into the orchard and stroll about, or sit down with a book in a pleasant arbour at the end of one of the walks, which is surrounded by rose-bushes, and has a little stream of water running past it. Nor do we ever enter the orchard unarmed with a long pole, for its entrance is guarded by a flock of angry geese, hissing like the many-headed Hydra that watched over the golden apples of the Hesperides. At eight we breakfast, and by nine the sun is already powerful enough to prevent us from leaving the house. We therefore sit down to read or write, and do occasionally take a game at billiards. C——n generally rides to Mexico, but if not, goes up to the azotea with a book, or writes in his study until four o'clock, when we dine. After dinner, we walk into the village, if we have any attendant esquire, if not, we go to the azotea and see the sun set behind the volcanoes, or walk in the garden till it is dark, and then sit down in front of the house, and look at the lights in Mexico. Then we have tea or chocolate—and the candles are lighted—and the last Indian workman has gone off to his village—and the house is barred in, and we sit down to read, or write, or talk, or sometimes we play billiards by lamp-light. And then, indeed, the silence and the solitude make us feel as if the world were completely shut out. I never experienced such perfect stillness. Even the barking of a dog sounds like an event. Therefore, expect no amusing letters from this place; for though we are very comfortable, there are no incidents to relate. The Indians come in the morning to drink pulque (which, by the way, I think excellent, and shall find it very difficult to live without!) a little child from the village brings us some bouquets of flowers, which the Indians have a pretty way of arranging in a pine-apple, or pyramidal form; the Chinese cook, with his little slits of eyes, passes by with meat and fruit, which he has been buying at the market of San Angel; the prior saunters in to see how we are—a chance visitor comes on horseback from Mexico, with a long sword by his side, as if he were going to fight the Saracens. And excepting

Digitized by Google

that a padre came last Sunday and said mass to us in the pretty little chapel of the hacienda, which saved us the trouble of going down to the village, and, moreover, took chocolate with us afterwards, there has been nothing to vary the usual routine of our country life."

On the whole, we must be excused for suspecting that the world of balls, operas, *tertulias*, and bull-fights, was more to Madame Calderon's taste than the delights of the village. At all events her book contains few more gaily-coloured passages than those depicting the *fête* at San Augustin: *e. g.* the following glimpse at the ball:

"There were people of all classes; *modistes* and carpenters, shop-boys, tailors, hatters, and hosiers, mingled with all the *haut ton* of Mexico. Every shop-boy considered himself entitled to dance with every lady, and no lady considered herself as having a right to refuse him, and then to dance with another person. The Señora de ——, a most high-bred and dignified person, danced with a stable-boy in a jacket and without gloves, and he appeared particularly gratified at the extraordinary opportunity thus afforded him of holding her white gloves in his brown paws. These fellows naturally select the first ladies as their partners, and, strange as it may seem, there is nothing in their behaviour that the most fastidious can complain of. They are perfectly polite, quiet and well conducted; and what is more remarkable, go through a quadrille as well as their neighbours. The ball was quietness itself, until near the end, when the wind-instruments were suddenly seized with a fit of economy, the time they were paid for having probably expired, and stopped short in the midst of a waltz; upon which the gentlemen waltzers shouted '*Viento! Viento!*' at the full extent of their voices, clapping their hands, refusing to dance, and entirely drowning the sound of some little jingling guitars which were patiently twanging on, until the hired sons of Æolus had to resume their labours. * * On the third night of the fête, C——n and I having left the ball-room about ten o'clock, walked out in the direction of the copper-tables which filled the middle of the square, and were covered with awnings. It is a sight that, once seen, can never be forgotten. Nothing but the pencil of Hogarth, or the pen of Boz, could do justice to the various groups there assembled. It was a gambling *fête-champêtre*, conducted on the most liberal scale. On each table were great mountains of copper, with an occasional sprinkling of silver. There was a profusion of evergreens, small tin lamps dripping with oil, and sloping tallow candles shedding grease upon the board. Little ragged boys, acting as waiters, were busily engaged in handing round pulque and chia in cracked tumblers. There was, moreover, an agreeable tinkling produced from several guitars, and even the bankers condescended to amuse their guests with soothing strains. The general dress of the company consisted of a single blanket, gracefully disposed in folds about the person; so as to show various glimpses of a bronze skin. To this some added a pair of Mexican pantaloons, and some a shirt of a doubtful colour. There were many with large hats, most of which had crowns or parts of crowns, but all affording free entrance to the fresh air. Generally speaking, however, the head was uncovered, or covered only with its native thatching of long, bushy, tangled black hair. This might be out of compliment to the ladies, of whom there were several, and who ought in politeness to have been mentioned first. Nothing could be simpler than their costume, consisting of a very dirty and extremely torn chemise, with short sleeves, a shorter petticoat, and a pair of shoes, generally of dirty satin: also a reboso, and the long hair hanging down as Eve's golden locks may have done in Paradise. 'They call this place a Paradise,' a Spanish soldier wrote to his father; 'and so I think it is, it is so full of *Adams*.'"

Lest our readers should suppose that the Spanish ambassadress is a mere she-Pepys, delighting solely in prattle and fine clothes, we are bound to advert to the healthy and circumstantial accounts, contained in her letters, of the prisons, hospitals, and charitable institutions of the metropolis.

"In the midst of the revolution, we were amused by a very peaceful sight—all the nurses belonging to the *Cuna*, or Foundling Hospital, coming from the different villages to receive their monthly wages. Amongst the many charitable institutions in Mexico, there appears to me (in spite of the many prejudices existing against such institutions), none more useful than this. These otherwise unfortunate children, the offspring of abject poverty or guilt, are left at the gate of the establishment, where they are received without any questions being asked; and from that moment, they are protected and cared for, by the best and noblest families in the country. The members of the society consist of the first persons in Mexico, male and female. The men furnish the money; the women give their time and attention. There is no fixed number of members, and amongst them are the ladies in whose house we now live. The *President* is the Dowager Marquesa de Vivanco. When the child has been about a month in the *Cuna*, it is sent, with an Indian nurse, to one of the villages near Mexico. If sick or feeble, it remains in the house, under the more immediate inspection of the society. These nurses have a *fadora*, a responsible person, who lives in the village, and answers for their good conduct. Each nurse is paid four dollars per month, a sufficient sum to induce any poor Indian, with a family, to add one to her stock. Each lady of the society has a certain number under her peculiar care, and gives their clothes, which are poor enough, but according to the *village fashion*. The child thus put out to nurse, is brought back to the *Cuna* when weaned, and remains under the charge of the society for life; but of the hundreds and tens of hundreds that have passed through their hands, scarcely one has been left to grow up in the *Cuna*. They are constantly adopted by respectable persons, who, according to their inclination or abilities, bring them up either as favoured servants, or as their own children; and the condition of a '*huerfano*,' an orphan, as a child from the hospital is always called, is perfectly upon a level with that of the most petted child of the house. The nurses in the *Cuna* are paid eight dollars per month."

We will now pay a visit to the Cuna itself:

"At the door, where there are a porter and his wife, the babies are now given in. Formerly they were put in at the *reja*, at the window of the porter's lodge; but this had to be given up, in consequence of the tricks played by boys or idle persons, who put in dogs, cats, or dead animals. As we were going up stairs, we heard an old woman singing a cheerful ditty in an awfully cracked voice, and as we got a full view of her before she could see us, we saw a clean, old body sitting, sewing, and singing, while a baby, rolling on the floor in a state of perfect ecstacy, was keeping up a sort of crowing duet with her. She seemed delighted to see these ladies, who belong to the *Junta*, and led us into a large hall, where a score of nurses and babies were performing a symphony of singing, hushing, crying, lullabying, and other nursery music. All along the room were little green painted beds, and both nurses and babies looked clean and healthy. The ——s knew every baby and nurse and directress by name. Some of the babies were remarkably pretty, and when we had admired them sufficiently, we were taken into the next hall, occupied by little girls, of two, three, and four years old. They were all seated on little mats at the foot of their small green beds, a regiment of the finest and healthiest children possible; a directress in the room sewing. At our entrance, they all jumped up simultaneously and surrounded us with the noisiest expressions of delight. One told me in a confidential whisper, that 'Manuelita had thumped her own head, and had a pain in it;' but I could not see that Manuelita seemed to be suffering any acute agonies, for she made more noise than any of them. One little girl sidled up to me, and said in a most insinuating voice '*Me llevas tu?*' 'Will you take me away with you?'—for even at this early age they begin to have a glimmering idea, that those whom the ladies choose from amongst them are peculiarly favoured. We stayed some time with them, and admired their healthy, happy, and well-fed appearance, and then proceeded to the apartment of the boys; all little things of the same age, sitting ranged in a row like senators in congress, and strange to say, much quieter and graver than the female babies; but this must have been from shyness, for before we came away we saw them romping in great style. The directresses seem good respectable women, and kind to the children, who, as I mentioned before, are almost all taken away and brought up by rich people before they have time to know that there is anything peculiar or unfortunate in their situation. After this adoption, they are completely on a level with the other children of the family—an equal portion is left them, and although their condition is never made a secret of, they frequently marry as well as their adopted brothers and sisters."

The following anecdote of a *ci-devant* Mexican celebrity, the Viceroy Revillagigedo, will probably be acceptable, and may add to the list of cases of inquisitorial shrewdness, already so splendidly enriched with instances drawn from the annals of Austrian *espionnage* and French police:—

"A lady of fortune, owing to some combination of circumstances, found herself in difficulties, and in immediate want of a small sum of money. Don —— being her *compadre*, and a respectable merchant, she went to him to state her necessities, and offered him a case of valuable jewels as a security for repayment, provided he would advance her eight hundred dollars. He agreed, and the bargain was concluded without any written document, the lady depositing her jewels and receiving the sum. At the end of a few months, her temporary difficulties being ended, she went to her *compadre's* house to repay the money, and receive back her jewels. The man readily received the money, but declared to his astonished *comadre*, that as to the jewels, he had never heard of them, and that no such transaction had taken place. The Señora, indignant at the merchant's treachery, instantly repaired to the palace of the vice-king, hoping for justice from this Western Solomon, though unable to conceive how it could be obtained. She was instantly received by Revillagigedo, who listened attentively to her account of the circumstances. 'Had you no witnesses?' said the count. 'None,' replied she. 'Did no servant pass in or out during the transaction?' 'No one.' The viceroy reflected a moment. 'Does your compadre smoke?' 'No, sir,' said the lady, astonished at this irrelevant question, and perhaps the more so, as the count's aversion to smoking was so well known, that none of his smoking subjects ventured to approach him without having taken every precaution to deaden any odour of the fragrant weed which might lurk about their clothes or person. 'Does he take snuff?' said the viceroy. 'Yes, your Excellency,' said his visitor, who probably feared that for once his Excellency's wits were wool-gathering. 'That is sufficient,' said the viceroy; 'retire into the adjoining chamber and *keep quiet*—your jewels shall be restored.' His Excellency then despatched a messenger for the merchant, who immediately presented himself. 'I have sent for you,' said the viceroy, 'that we may talk over some matters in which your mercantile knowledge may be of use to the state.' The merchant was overwhelmed with gratitude and joy; while the viceroy entered into conversation with him upon various affairs connected with his profession. Suddenly the viceroy put his hand first in one pocket, then in the other, with the air of a man who has mislaid something. 'Ah!' said he, 'my snuff-box. Excuse me for a moment while I go to fetch it from the next room.' 'Sir!' said the merchant, 'permit me to have the honour of offering my box to your Excellency.' His Excellency received it as if mechanically, holding it in his hand and talking, till pretexting some business he went out, and calling an officer, desired him to, take that snuff-box to the merchant's house, asking his wife as from him, by that token, to deliver to the bearer a case of jewels which he had there. The viceroy returned to the apartment where he had left his flattered guest, and remained in conversation with him until the officer returned, and requesting private speech of the viceroy, delivered to him a jewel-case which he had received from the merchant's wife. Revillagigedo then returned to his fair complainant, and under pretence of showing her some rooms in the palace, led her into one, where amongst many objects of value, the jewel-case stood open. No sooner had she cast her eyes upon it than she started forward in joy and amazement. The viceroy requested her to wait there a little longer, and returned to his other guest. 'Now,' said he, 'before going further, I wish to hear the truth concerning another affair in which you are interested. Are you acquainted with the Señora de ——?' Intimately, sir—she is my *comadre*.'

Digitized by Google

'Did you lend her eight hundred dollars at such a date?' 'I did.' 'Did she give you a case of jewels in pledge?' 'Never,' said the merchant, vehemently. 'The money was lent without any security; merely an act of friendship, and she has invented a story concerning some jewels, which has not the slightest foundation.' In vain the viceroy begged him to reflect, and not, by adding falsehood to treachery, force him to take measures of severity. The merchant with oaths persisted in his denial. The viceroy left the room suddenly, and returned with the jewel-case in his hand; at which unexpected apparition the astonished merchant changed colour, and entirely lost his presence of mind. The viceroy ordered him from his presence, with a severe rebuke for his falsehood and treachery, and an order never again to enter the palace. At the same time he commanded him to send him, the next morning, eight hundred dollars with five hundred more; which he did, and which were, by the viceroy's order, distributed amongst the hospitals. His Excellency is said to have added a severe reprimand to the lady, for having made a bargain without writing."

The details of the breaking-up of Madame Calderon's Mexican establishment, her leave-takings of hospitable and social friends, and her journey northward to the regions whence this book emanated, we must leave untouched. It is hardly in the course of events, that one who has written so pleasantly as our authoress should not write again; and we desire nothing better than further opportunities of cultivating her acquaintance.

A Collection of Old English Customs, and Curious Bequests and Charities, extracted from the Reports made by the Commissioners for Enquiring into Charities in England and Wales. By H. Edwards. Nichols & Son.

In one of the smartest volumes published within the last dozen years—appropriately enough called 'Crotchet Castle,' the author describes an inquisition before the Charity Commissioners. The hero—the Rev. Dr. Folliott—is interrupted at his breakfast by a messenger, who informs him that the Charity Commissioners request his presence at the inn.

"'The Charity Commissioners!' exclaimed the reverend gentleman, 'who on earth are they?' The messenger could not inform him, and the reverend gentleman took his hat and stick, and proceeded to the inn. On entering the best parlour, he saw three well-dressed and bulky gentlemen sitting at a table, and a fourth officiating as clerk, with an open book before him, and a pen in his hand. The churchwardens, who had been also summoned, were already in attendance. The chief commissioner politely requested the Rev. Dr. Folliott to be seated, and after the usual meteorological preliminaries had been settled by a resolution, *nem., con.* that it was a fine day but very hot, the chief commissioner stated, that in virtue of the commission of Parliament, which they had the honour to hold, they were now to inquire into the state of the public charities of this village.

"*Rev. Dr. Folliott.*—The state of the public charities, sir, is exceedingly simple. There are none. The charities here are all private, and so private, that I for one know nothing of them.

"*First Commissioner.*—We have been informed, sir, that there is an annual rent charged on the land of Hautbois, for the endowment and repair of an almshouse.

"*Rev. Dr. Folliott.*—Hautbois! Hautbois!

"*First Commissioner.*—The manorial farm of Hautbois, now occupied by Farmer Seedling, is charged with the endowment and maintenance of an almshouse.

"*Rev. Dr. Folliott (to the Churchwarden.)*—How is this, Mr. Bluenose?

"*First Churchwarden.*—I really do not know, sir. What say you, Mr. Appletwig?

"*Mr. Appletwig (parish-clerk and schoolmaster; an old man.)*—I do remember, gentlemen, to have been informed, that there did stand, at the end of the village, a ruined cottage, which had once been an almshouse, which was endowed and maintained, by an annual revenue of a mark and a half, or one pound sterling, charged some centuries on the farm of Hautbois; but the means, by the progress of time, having become inadequate to the end, the almshouse tumbled to pieces.

"*First Commissioner.*—But this is a right which cannot be abrogated by desuetude, and the sum of one pound per annum is still chargeable for charitable purposes on the manorial farm of Hautbois.

"*Rev. Dr. Folliott.*—Very well, sir.

"*Mr. Appletwig.*—But sir, the one pound per annum is still received by the parish, but was long ago, by an unanimous vote in open vestry, given to the minister.

"*The Three Commissioners (und voce.)*—The minister!

"*First Commissioner.*—This is an unjustifiable proceeding.

"*Second Commissioner.*—A misappropriation of a public fund.

"*Third Commissioner.*—A flagrant perversion of a charitable donation.

"*Rev. Dr. Folliott.*—God bless my soul, gentlemen! I know nothing of this matter. How is this, Mr. Bluenose? Do I receive this one pound per annum?

"*First Churchwarden.*—Really, sir, I know no more about it than you do.

"*Mr. Appletwig.*—You certainly receive it, sir. It was voted to one of your predecessors. Farmer Seedling lumps it in with his tithes.

"*First Commissioner.*—Lumps it in, sir! Lump in a charitable donation!

"*Second and Third Commissioner.*—Oh-oh-oh-h-h!

"*First Commissioner.*—Reverend sir, and gentlemen, officers of this parish, we are under the necessity of admonishing you that this is a most improper proceeding; and you are hereby duly admonished accordingly. Make a record, Mr. Milky.

"*Mr. Milky (writing).*—The clergyman and churchwardens of the village of Hm-m-m-m- gravely admonished. Hm-m-m-m.

"*Rev. Dr. Folliott.*—Is that all, gentlemen?

"*The Commissioners.*—That is all, sir; and we wish you a good morning.

"*Rev. Dr. Folliott.*—A very good morning to you, gentlemen.—'What in the name of all that is wonderful, Mr. Bluenose,' said the Reverend Doctor Folliott, as he walked out of the inn, 'what in the name of all that is wonderful, can those fellows mean? They have come here in a chaise and four, to make a fuss about a pound per annum, which, after all, they leave as it was: I wonder who pays them for their trouble, and how much.'"

The truth of this sketch may be illustrated by a multitude of instances from Mr. Edwards's compilation,—by the bequest of the Vicar of Sidney, "of *5s.* per annum payable out of an estate called Glasp, for ringing a peal on Christmas eve about midnight;"—by an ancient payment made by the chamberlain of the corporation of Stafford, of an annual sum of *6s.* at Christmas for purchasing of plums, to be distributed among the inhabitants of certain old houses in the liberty of Forebridge," &c. Yet no one will deny that an investigation into the state of the national charities was urgently called for, and has been productive of good. It is one part of the abuse of the system, that the money's worth of bequests is often interpreted literally, and not in the spirit of the donor, according to the increased value of the sum at the present day; and thus a charity, originally named at a mark or a noble, is still considered a mark or a noble, though the shillings have become pounds, and ought so to be interpreted. It is the apparent smallness of many of the charities that makes many investigations appear frivolous and valueless. But into this part of the question, or into any of the numerous others incidental to it, the policy of charities, the abuse of them, the pernicious effect which certain persons ascribe to them, it is not our present business to enter. Mr. Edwards has here skimmed part of the cream from the labyrinthine volumes, and we have only to offer a few samples for the amusement of the general reader. Before we proceed to do so, perhaps we may be allowed to inquire, whether that digest or index to the Charity Commissioners' Reports, which Mr. Arthur Buller was appointed to execute before his appointment as Crown Advocate in Ceylon, is still in progress by any other hand. It is desirable that it should be, unless these voluminous "blue-books" are to remain comparatively useless. Without a good classed catalogue, they are practically so, like the valuable contents of the British Museum.

Many charitable bequests exist for the purpose of giving the poor some little festivity at Christmas. Thus certain poor people of Burnham are provided with a dinner and a *proper* quantity of good ale, tobacco and snuff. Every poor person of the parish of Piddle Henton, in Devonshire, to the amount of 300, receives, on old Christmas-day, a pound of bread, a pint of ale, and a mince pie. But very often the testator's gifts of beef and plum-pudding have been converted into money gifts, generally lower in value. Thus the dinner at Bridgenorth has been changed into a presentation of 1*s.* 1½*d.* to each person. Red and white herrings are given away abundantly in Lent.

"Before the inclosure, the tenant of the Abbey Farm in this parish (Swaffham Bulbeck) during those years in which the open field land was under tillage, used to give a slice of cake and a glass of ale to all parishioners who applied for it. Every third year the land was depastured, and the gift consequently interrupted. An acre in the open field was known by the name of Plum Cake Acre."

This custom is like that of St. Cross, near Winchester, where every wayfarer may demand a slice of bread and glass of ale, subject to being put in the stocks if he be found within the parish twenty-four hours after, which some of our readers may remember, though Mr. Edwards does not appear to have done so.

Examples of the provision made by the charitable for clothing, may next follow those relating to food.

"A small piece of ground, being a rood or thereabouts, in this parish, (Stockton-in-the-Forest, Yorkshire), called Petticoat Hole, the property of Mrs. Ware, of York, is held subject to an ancient custom of providing a petticoat yearly for a poor woman of Stockton, selected by the owner of the land. The piece of ground was formerly separated from the contiguous land, but is now thrown into one field, with a fourteen-acre close adjoining, belonging to Mrs. Ware, and let therewith. Mrs. Ware supplies a blue serge gown in lieu of a petticoat every winter, to a poor woman of Stockton."

The Rev. Francis Gisburne invested 13,500*l.* in the purchase of 16,167*l.* 3*l.* per cent., as a fund to provide flannel and coarse woollen cloth for the poor of one hundred rectories, which he named.

One of the most extensive and useful charities is that flowing from the benevolence of Nathaniel Lord Crewe, Bishop of Durham. By his will, dated 24th June, 1720, he made numerous bequests to the Universities, to the ministers of various churches, for the education and clothing of the poor of many places, for the support of schools in Bamborough Castle, and other various acts of charity to the poor and distressed of that neighbourhood. But the most interesting feature of his charity is that portion relative to shipwrecks:—

"The situation of Bamburgh Castle upon an exposed and dangerous coast, has also induced the trustees to adopt every expedient in their power for preventing shipwrecks, and for saving the lives and property of persons who are cast upon those shores. The manor of Bamburgh, and a considerable part of the trust estate, is situated on the coast of a bay formed by Holy Island and North Sunderland Point, which are distant from each other about eight miles. This bay is fully exposed to the north-east wind, which is frequently very tempestuous, and the danger to the navigation is much increased by the numerous islands, which extend several miles, the nearest being about two miles from the shore. The accidents which often occurred on this inclement coast attracted the notice of the trustees, and principally induced them to make Bamburgh Castle a place of occasional residence. And to further facilitate their good intentions, Dr. John Sharp, one of the trustees, by indenture of bargain and sale, bearing date 18th November, 1778, granted certain premises, of the annual value of 40*l.* 17*s.*, and by will, dated 17th of April, 1792, bequeathed stock, producing 69*l.* per annum (all of which he vested in the trustees of Lord Crewe's charity), for and towards the reparations, amendment and support of the great tower of Bamburgh Castle, and in such part or parts thereof, and in such order and form, as he directed, more particularly to keep in repair the conductor, from the gold point above the said tower to the bottom of the well, and the

Digitized by Google

chain which hung down into the said well, the roof and chimnies of the great tower, the windows of the tower, the fire-proof work in the ceilings of such tower, the great clock in the south turret, the well machine, bath, pumps, troughs, cisterns, water-pipes, and drains, and to uphold the said tower and furniture, in such manner as the said trustees should direct, for ever. The sunken rocks and shifting sands of this coast had long been a terror to the mariners; and the thought of this induced Dr. Sharp to fit up the great tower for the reception of suffering seamen, and property, which might be rescued from the fury of the ocean. The trustees have ready in the castle such implements as are required to give assistance to stranded vessels; a nine-pounder is placed at the bottom of the great tower, which gives signals to ships in distress, and in case of wreck, announces the same to the custom-house officers, and their servants, who hasten to prevent the wreck being plundered. A constant watch is kept at the top of the great tower, whence signals are also made to the fishermen of Holy Island, as soon as any vessel is discovered to be in distress, when the fishermen immediately put off to its assistance, and the signals are so regulated as to point out the particular direction in which the vessel lies; and this is partly indicated by flags by day, and rockets at night. Owing to the size and fury of the breakers, it is generally impossible for boats to put off from the mainland in a severe storm, but such difficulty occurs but rarely in putting off from Holy Island. In addition to these arrangements for mariners in distress, men on horseback constantly patrole the coast, a distance of eight miles, from sunset to sunrise, every stormy night. Whenever a case of shipwreck occurs, it is their duty to forward intelligence to the castle without delay, and, as a further inducement to this, premiums are often given for the earliest notice of such distress. During the continuance of fogs, which are frequent and sudden, a gun is fired at short intervals. By these means, many lives are saved, and an asylum is offered to shipwrecked persons in the castle. The trustees also covenant with the tenants of the estate, that they shall furnish carts, horses and men, in proportion to their respective farms, to protect and bring away whatever can be saved from the wrecks. There are likewise the necessary tackle and instruments kept for raising vessels which have sunk, and whatever goods may be saved are deposited in the castle. The bodies of those who are lost, are decently interred at the expense of this charity,—in fact, to sailors on that perilous coast Bamburgh Castle is what the convent of St. Bernard is to travellers in the Alps."

Another noble bequest, of a comprehensive and truly catholic spirit, and worthy of quotation, is, that of the Rev. William Hanbury, rector of the Church of Langton. He left funds for the following objects, to benefit his parish:

"To establish schools for ever.
"The founding &c. an organ for ever.
"Provide beef for Church Langton poor.
"Beef for ever.
"Provide for a public library.
"Provide for a picture gallery.
"Provide a printing office.
"Provide an hospital at Church Langton.
"Establish professorships of Grammar, Music, Botany, Mathematics, Antiquity, and of Poetry.

"In the final or explanatory deed, it was witnessed that the trustees named by the founder, were to defer building of lodgings, &c. for the respective professors, &c. when the income was sufficient for their salaries, but to keep it accumulating until it should bring in 10,000*l*. a year, at the rate of 4*l*. per cent. At a certain period, a grand and stately church should be built at Church Langton, with proper stalls for the trustees, professors, &c., as grand an organ as could be made, a peal of twelve bells at the least, with chimes, chandeliers, ornaments, painted windows, table and altar-piece of the finest marble, paintings by the best master then living, &c. The church was to be Gothic, built as much like a cathedral as possible. No less than three steeples, the tallest of which should be not less than one hundred yards high, and every becoming dignity and ornament added. 100,000*l*. were to be expended on this fabric; and, that completed, another should be built, which should be named the Temple of Religion and Virtue. A noble museum was to be erected. These being effected, proper lodgings, &c. for the professors, schools, hospital, printing office, &c. were to be finished, and the founder was desirous if it could be contrived to make the whole of these buildings form a square of two hundred yards on each side, &c."

Our space will only permit us to add a few more examples of a miscellaneous character:—

"*Parson's Horse Money.*

"There is an ancient payment of 3*s*. 4*d*. as the value of a pound of pepper, made out of the chapellands, as due to the occupier of a certain farm in Yapham, for taking care of the parson's horse, which he is bound to do whenever the parson goes there to do duty."

"*Bequest of Beans and Barley, to get free of a Chancery Suit.*

"By indenture, dated February, 1663, Ann Watts, in consideration that a suit in Chancery against her should cease, and be withdrawn, did covenant and grant that she should pay to the churchwardens and overseers of the town of Thorpe yearly, on Good Friday, one seam of beans, and one seam of barley, of good and merchantable corn, at the church porch, to be distributed amongst the poor of the same town, at the discretion of the churchwardens and overseers, with power of distress on the impropriate parsonage of Thorpe or the lands thereof, in default. The Commissioners report that for a number of years past no beans or barley have been furnished to the poor, the charity having been distributed in money."

"*Encouragement of Archery, Pastime, and Healthful Recreations.*

"The church tablet states that, in the year 1570, Catharine Hanson gave the Common Acre for the recreation of the inhabitants of the town, and that the corporation built four tenements upon it. It appears from the Corporation Minute Book, that in the reign of Queen Elizabeth a lease of the Common Acre was granted for twenty-one years to William Gold, at the rent of four shillings, on condition *that he should keep a pair of butts for men to shoot at, and permit all persons to take their pastime there.* This ground is now used as a place of recreation for the inhabitants of the town. No profit is derived from it."

"*Bequest to awaken Sleepers, and whip Dogs out of Church.*

"Amongst other directions mentioned in the deed of feoffment, 23rd August, 1659, whereby Richard Dovey, of Farmcote, granted certain premises to John Sanders, and others, viz. cottages or buildings, over and adjoining the churchyard and churchyard gates of the parish church of Claverley, is to place in some room of the said cottages, and to pay yearly the sum of 8*s*. to a poor man of that parish who should undertake to awaken sleepers, and to whip out dogs from the church of Claverley during divine service."

Charities, for like purposes, apply to the parish of Trysull (Staffordshire), and Peterchurch (Herefordshire).

The singular charity, founded by Richard Watts, of Rochester, for travellers, not "being rogues or proctors," mentioned in the 'Excursion to Rochester' (*Athen.* No. 784), is not noticed by the compiler of this volume.

We could have wished that there had been dates to all the examples. Mr. Edwards appears to have inserted only those he readily found in the Reports. We know not whether others could be supplied, but we regret their absence, because the interest of many a custom depends greatly upon its date.

OUR LIBRARY TABLE.

Turning and Mechanical Manipulation, by C. Holtzapffel, Vol. I.—The Messrs. Holtzapffel are well known as ingenious and extensive manufacturers of lathes, tools, &c., and no doubt a work on Turning by so experienced a person as Mr. C. Holtzapffel, will be found useful by all engaged in constructive mechanics, and interesting to the amateur. It is to be completed in five volumes: this, the first, relates to materials from the vegetable, animal, and mineral kingdom, their differences, and the various modes of preserving and working them; and is extensively illustrated with woodcuts. Five volumes, we confess, appeared to us, at first, somewhat disproportioned to the subject; but when we saw the careful and elaborate manner in which it had been treated, and remembered how extensively the lathe is used; that its aid is called in on great and on small occasions, from the dial of a watch or the top of a snuff-box to a steam engine, and considered how many arts are collaterally connected with it, our wonder ceased.

The Pictorial Museum of Animated Nature, with Five Thousand Woodcuts. Part I.—There seems no good reason why the use of woodcuts should be restricted to a solitary purpose. In their nature like type, they should be used like type, and applied as often as needful. A publisher produces a set of cuts in illustration of one subject; but a little consideration would almost always suggest how they might be profitably reproduced in another form. Wherever a pictorial illustration can be introduced, it is far more explanatory and precise than any amount of verbal description; and we should like to see it repeated whenever it may be called for. Why do not publishers establish an exchange for casts of woodcuts? It would be easy to make stipulations that the casts should not be used in any way likely to injure the property for which they were originally created. Many novel combinations might thus be effected, and the public would obtain works like the present, which could only have been produced at the price on a similar principle to that we have indicated. From their numerous publications, the Penny Cyclopædia, Penny Magazine, &c., Messrs. Knight have here collected together the illustrations of Natural History, and applied them to the production of the cheap work before us. So far as the pictures are concerned, the idea is a happy one, and well realized. The work ought to be in every nursery; and will be a table book for every humble family in the kingdom that can afford a shilling a month for its purchase. The cuts are well printed on good paper. The size of the page, that of an ordinary page of music. Two pages filled wholly with cuts, alternate with two of letter-press. The cuts are so good, and the work so cheap, that we shall not allow the text to qualify our recommendation. Yet, we must confess that, looking at the promise and the performance in this matter, the latter seems something like a joke. "The reader," says the introduction, "finds in the text a description of the animal, its structure, its habits, its localities, its use; not *given in a dry and repulsive form, but with that simplicity* which may furnish just conceptions to all, but *especially to the young*, of the wonders and beauties of God's creation." So much for the promise. We take the fourth paragraph of the first column to illustrate the performance. "The dentition of the Felidæ is very characteristic. The incisors are very small, six above and six below; the canines are of enormous size and strength; the false molars are sharp and compressed; above there are two on each side—the first small, the second long and conical. This is followed by the laniary molar (*carnassière*), which is bicuspid, with an inner blunt tubercle: behind the laniary is a very minute tuberculous molar, but this is wanting in the lower jaw, and the laniary is bicuspid. Dental formula (see figures 10, 11, 12.) Incisors $\frac{6}{6}$, canines $\frac{1-1}{1-1}$, molars $\frac{4-4}{3-4}$." Now, we think that this description is given not only "in a dry and repulsive form"—"especially to the young," but that it will be positively unintelligible to them. Not one syllable has been said in explanation of incisors, canines, molars, false or otherwise, tubercles, &c. We turned to the Penny Cyclopædia, thinking the text must have been reprinted verbatim by mistake. No such thing: it appears to be a new compilation. Now, as a *popular* description, "especially for the young," it is truly absurd; but as we have said before, the value of the book, as a picture-book, is great, without its accompanying letter-press.

On the Moral and Political Discipline of the Jesuits —[*Lettres écrites à un Provincial*], by Blaise Pascal. To this edition of the 'Lettres Provinciales,' (lately issued by Messrs. Didot, as one of their series of French Classics,) is prefixed an Éloge of the celebrated author, by M. Bordas-Demoulin, which obtained the prize last year at the French Academy. The volume is further enriched by an essay on the style and writings of Pascal, by M. F. de Neufchateau. The whole will be read with interest by the student of the French language, independent of the subject

Digitized by Google

matter of the work; for though the 'Lettres' were written two hundred years ago, he will not fail to be struck by the freshness of the style—scarcely a word or a phrase occurs that has become obsolete.

ROYAL ACADEMY.

Sir Richard Westmacott's Lectures on Sculpture.

On Monday evening, the 13th inst., Sir Richard Westmacott, the Professor of Sculpture, commenced his course of lectures at the Royal Academy. As on former occasions, his remarks were frequently illustrated by the exhibition of plaster casts and drawings. After some observations on the duties of the professor, and the manner in which he proposed to treat his subject, so as to render his discourse instructive and useful to the student, he proceeded to give a definition of the art, and afterwards to enter into its history.

The elementary principles of sculpture and painting (Sir Richard observed) are the same; the same rules are prescribed for the acquisition of a correct view of nature, both as respects character and the harmonious combination of parts. But the application of these principles differs materially in the subsequent practice of these arts. The sculptor cannot imbue his mind too strongly with the antique examples, nor should his attention be diverted from them at any period of its practice. It is equally necessary for the painter to retain and recur to the fine forms of the antique, but he must forget the statue. Sculpture and Painting address the imagination through the same organs; but as in this address through opposite materials very different sensations are proposed, the selection, therefore, of the objects or subjects for imitation should be carefully attended to. The powers of the sculptor are limited, while those of the painter are indefinite. He can recede or advance; he may employ all the machinery of perspective, chiaroscuro, or colour,—in fact, every vehicle within his grasp,—to assist in the great object of his endeavour, which is illusion. The sculptor, on the other hand, is circumscribed by his material; few accessories are permitted him; his art is positive and determinate. Even in basso-relievo, the greatest licence which can be allowed in sculpture, the attempt at two planes has never been satisfactorily accomplished.

But illusion is not wholly beyond the reach of the sculptor: the charm of harmony acts so powerfully on the mind, that, by the concentrated unity of the parts, and by a judicious concealment of the mechanism of his art, he may awake the sympathies of the spectator, until he yields to its influence. The sculptor, it is true, cannot produce the varied enjoyment offered by the painter; but in the power of embodying any passion, separately considered, he has advantages over the painter from the variety of points in which his subject (unless it be a work in relievo) may be viewed.

We frequently find that different persons see nature through a different medium; and, consequently, vary materially in their transcripts from the same objects; trusting to the impression of their imagination rather than in considering character, or applying the principles in their imitation of nature which they were presumed to have acquired in the antique school: a defect which generally leads to *manner*. It may be asked what this word implies; and why that convention of the Greeks, which in the modern sense would be called *manner*, is, by the learned in Art, called *style*.

Style is the product of a decree; not established by one man, but by an aggregate of talent. It is founded upon nature; and though its elements may not be met with in perfection in any one individual, they are to be produced by compounding the forms which nature supplies, into all the varieties of character which are the best adapted to, and the most in harmony with, the several purposes designed; whether the object is the expression of majesty, of beauty in its various characters of strength, or of activity. Style must not be confounded with treatment, which has a discriminate application, and must be understood to refer to the appropriate *conduct* of subjects of each class, and not to that distinguishing quality solely, which is found to pervade works of most opposite character, as in the Discobolus by Myron, the Fighting and Dying Gladiators, Fauns, Heroes, Mercury and his class, Hercules, and Apollo. The three first statues, as the Discobolus and the Fighting and Dying Gladiators, are quite distinct, as far as the style of school is considered; but each possesses qualities common to all as belonging to a class; at the same time it becomes a question, and will be a subject for future inquiry, how far the two latter belong to the first.

The Discobolus of Myron is the representation of a man trained for a particular purpose; therefore the treatment appropriate to it, and all statues belonging to the class of Athletæ, as boxers and wrestlers, is marked by a squareness and compactness of form; by the divisions of the body and limbs being decided; the parts large in their masses; the bones well marked; the joints clean and defined; and no fat nor unnecessary fleshiness; and the belly especially rather compressed;—great attention will be found to be paid to the head; the hair is arranged in a close order, the forehead compact, the brows well defined, and a general clearness of feature throughout. The ears in statues of this class are small, crisp, and well set.

The Fighting Gladiator, as it is usually called, but more properly by Mr. Fuseli, the Warrior of Agasias, differs in some particulars of its treatment from the above-mentioned statue. There is a greater quantity of small parts than seems to be agreeable to the class of Athletæ in general; but it has at the same time certain qualities which may be noticed in the Discobolus, particularly in the head, and in the disposition of the parts, and in the proportions so well adapted to agile exercises. My opinion upon the Dying Gladiator, and my reasons for excluding that statue from the class of Athletæ, I shall offer at a more advanced period of my lectures.

The characteristics of the treatment appropriate to Fauns, are a round, healthy fulness of parts, but without fat. The muscles should be tendinous and knotty; the belly not flat and compressed as in statues of Athletæ, but inclining to roundness; and this character should pervade even the features of the face.

The forms applied by the ancient sculptors to the Hero class, differ again materially from those used in Athletæ. Here beauty, breadth, and strength are united. He must appear with the powers of a god, without that distinctive quality which makes him, in the ideal treatment of parts, his equal; he must be a mortal; and his nature must appear to demand repose after exertion; I cannot, perhaps, offer to your notice an example which more fully illustrates this than the statue of Theseus in the Elgin collection.

Mercury, though assimilating much in the character of the head with the Athlete, is distinct in the general form, and may be placed between the Athlete and the Hero. The Professor proceeded to contrast the characteristics of the messenger of the gods with those of the Hercules, and subjects in which physical power was chiefly developed. In Mercury, he observed, we are struck with the arched breast, the rather narrow hips, and the light and clean forms of the legs and arms, which denote that precise degree of strength combined with elasticity which is compatible with youthful manly beauty. Whilst the inflexibility of the neck, the powerful breast, and the massive shoulders, the head small, with crisped hair, the solid features, a steady firmness in repose, and a powerful display of muscles in action, distinguish the Herculean class.

The object of the Professor in offering these sketches of the several distinctions of classes was to render academical studies useful in future practice, and to impress upon the student the necessity of discrimination and careful consideration of character in working from nature. The forms which characterize all the above classes were not dictated by caprice or false conception, but were justly, as well as beautifully, adapted to their several purposes; and each, though perfectly distinct in treatment, was great in style.

Manner, as opposed to style, arises from a peculiar and distorted view of nature; the result of a defect in, or too often from the absence of, education. A constant communication, therefore, with the antique, is the surest preventive against peculiarities in action, proportion, or expression, which a too frequent recurrence to favourite individual models might insensibly induce.

Equally to be guarded against with *manner*, and to which it is allied, is that of becoming mere imitators; a fault even of worse character, and more directly prejudicial to progression. It returns art as it were upon itself, and, keeping it in this respect in a continual state of infancy, errors and theories, which accident or other causes have brought into existence, are thus reproduced till art loses all its life and energy, and becomes vapid and imbecile.

Speaking of the error of adapting art to the prevailing taste of the day, Sir Richard remarked, that a moment's reflection would show that systems so founded have no existence beyond their own time, or when the temporary ascendency of local influence or fashion have passed away. The decline of art from the death of Augustus to Adrian, supplies a powerful example of the effect produced by such causes amongst the ancients; and in modern times it may be strikingly exemplified in the works of Bernini and his followers; in the prevailing taste of the French school even up to a very late period, and, with very few exceptions, of Rysbrack and Roubiliac.

By reasoning as you proceed in your practice, you will find Nature a bountiful mistress, and that ideas, infinite and original as her beauties are various, will disclose themselves which lie concealed from superficial observers. By reflection, you will not only be able early to distinguish false from true character, but acquire a proper confidence in your own powers, and learn that a departure from the accepted course to excellence, has proved as vain as it has been delusive.

In the Arts, but in Sculpture more especially, the necessity of a standard whereby the artist could not only regulate his forms, but apply his mind to the most effective mode of expressing the images presented to it in masses, consistently with the limited nature of his materials and circumscribed sphere of their application, appears to have occupied the attention of the Greeks at a very early age, and to have been constantly exercised by them throughout the best periods of Art.

The distinct properties of forms, and their application to the several offices or purposes for which they were designed, being established upon nature, and obvious to the common sense and common feelings of mankind, left no doubt—admitted of no appeal—and a principle thus based upon truth, became with them immutably fixed. Fashion usurped no tyrannical sway: no love of mere novelty was allowed to exercise its baneful influence. The wisdom of the Greeks—and it was the cause of the progress in Art with them—consisted not in endeavouring to find out *new* systems, but in communicating the utmost degree of perfection to those which already were established; and no artist could hope to raise himself

Digitized by Google

to notice, by any new theories, or by departing from the admitted rules of Art.

The Fine Arts in Greece, and in almost every other country in which monuments are found, appear to have had an independent origin; but their history, even in Greece, is involved in the greatest obscurity. With few exceptions, until the 30th Olympiad, or 650 B.C., when a more mature system in Art became evident—(and the artists accommodated themselves to the progress of science and of civil institutions)—the state of that country affords little information either to the antiquary, the historian, or the artist.

But although the Arts sprung almost everywhere out of the same causes, their progress was advanced or obstructed in a great measure by the character of the political institutions of the several countries.

If wealth, long periods of peace, and at the same time, constant practice in Sculpture, could have operated in bringing this art to perfection, no country was more happily circumstanced than Egypt. But restricted by their government, a consolidated hierarchy, their attachment to consecrated ideal forms prescribed models from which no artist could safely depart. The same character of features may be traced, with few exceptions, through all their works; and we see the same unvaried style of composition from the commencement of their art until its extinction. The effect of these restrictive laws is strongly instanced in the personification of their deities and kings. They were not permitted to avail themselves of those advantages, which the practice of embalming constantly offered them, for the examination of the construction of the human body; and we therefore find their figures eminently deficient in anatomical correctness. It may be presumed, from the science and skill displayed in their representations of animals, that the same restriction was not extended to representations in this branch of Art. As examples of the ability with which this class of subjects was treated, it will be sufficient to refer to the two lions in front of the Fountain of the Termini at Rome, a sphinx which is at Dresden, and the lions presented by Lord Prudhoe to the British Museum. These works are remarkable for expression, and they display also considerable anatomical knowledge. The latter, indeed, exhibit a degree of truth, and grandeur of form, equal to anything we find in that branch of Art by the Greeks; and they are strong proofs that that pure, simple, and consistent principle on which the power of nature rests, was sensibly felt by their artists, and acted upon, when they were not cramped by rules prescribed by their priests, and which it was a species of sacrilege to transgress.

No country possesses more perfect specimens of Egyptian art than are to be seen in the British Museum; and we are indebted to the late Dr. Young for much valuable information and elucidation on this subject.

From the concurrent hieroglyphical representations contained within the orbs or shields expressing symbols of their deities, and the names and titles of their kings, we may ascertain the dates of several monuments. The fact of the statue of black granite in the British Museum, discovered by Mr. Salt near the vocal statue of Memnon, having names and titles sculptured on several parts, and being similar in other respects to that Colossus, leads us to the belief that it is the representation of that king; and that consequently we may fix the date of the work at the period assigned to Memnon, namely, at 1700 B.C.

A specimen of early Egyptian art may be seen in the statue of the young Memnon (as it is generally called) in the British Museum. There is a sweetness of expression in the head, and a breadth and simplicity throughout the whole of this work, which make us deeply lament the trammels by which their artists were confined, and which prevented them from giving a fuller developement to the feeling which evidently only wanted opportunity to display itself in works of great beauty.

We occasionally find great beauty and sharpness of workmanship in the sculptures of Egypt, even when the hardest stones are employed. The lions before alluded to in the British Museum, display the artist's skill in producing a soft and undulating surface in a very hard and almost intractable material; and which is the more surprising as we have no reason to believe the Egyptians had any very extended knowledge of metals, nor of the mode of tempering iron instruments to adapt them to such difficult and trying work.

The head of a sphinx, probably of the same age, still existing at Thebes, is spoken of also as a work of admirable execution. It is of colossal dimensions, being seventeen feet in length, and fourteen in height. Their knowledge of basso-relievo was considerable; and a greater degree of intelligence and attention was displayed in such subjects, both as to form and in the articulation of the joints, than in their detached statues. This is very observable in their kneeling figures, in which the oblique muscles, those of the abdomen, and the pressure of the gastrocnemii, or muscles of the calves of the legs, against the lateral muscles of the thigh, show much knowledge and careful study of nature.

The Professor here made a few general observations on the character of Egyptian art at different periods. Of its infancy, he truly remarked, we have no power of judging; its history is lost in the impenetrable darkness of antiquity. It has usually been classed into three periods; but that attachment to consecrated forms directed by the priesthood, was at no time entirely departed from; and the same Ethiopic features may be traced through all their works; and, with few exceptions, the same unvaried compositions will be observed from their commencement until their fall.

The first period has been dated from the age of the Pyramids or Obelisks to Cambyses, comprising 1,500 or 2,000 years; during which works were produced of extraordinary diligence in execution, though varying in several instances in the workmanship; in no respect, however, are they found to depart from the general forms prescribed in the configuration of their deities.

From the period of the conquest of Egypt by Cambyses, and under the successors of Alexander, the same care and attention do not appear to have been observed, nor was the same regard paid to the choice of material.

The subsequent period, or that from the extinction of the Ptolemaic dynasty to the reign of Adrian, can scarcely be styled one of indigenous art. The only distinctions, we observe, during this period are, the more or less careful execution; the forms and taste were the same. The Professor here described the character of the first period of Egyptian art. The first thing we observe is the want of articulation in the joints; the hands and feet are without markings; all is straight and elongated, and even the little toe extended to an equal length with the others. The eyes are flat, and project as far out as the superior bone of the orbit; the ears are placed high, the lobe being on a level with the eyes; the nose is flattened, and the lips are thick. Another peculiarity of the earlier period of art is, the flatness of their works in relief.

Towards the 6th century B.C., the style both of sculpture and of architecture became debased. Euergetes II. erected several temples, but the majesty of Egyptian architecture was lost in the exuberance of ornament, which, as may be exemplified in Greece and Italy, always accompanied the decline of the arts; and their downfall from that period does not appear to have been for one moment arrested.

Of the Etruscans many and conflicting opinions have been offered, and their origin is still uncertain. I shall, however, adopt the generally received opinion, and consider them as a people of Pelasgian origin.

Their first emigration from the Peloponnesus, is generally stated at 1,200 years B.C.; that during the interval of the second emigration other colonies had settled in Etruria, and had brought other fables and legends, is highly probable.

The general character of Art introduced by the first settlement is, however, tolerably distinct. In the heads of their figures the eyes will be found to be angular, the countenance rude and ill-formed, the fingers and toes long; the feet ill-placed; and but little attention was paid to proportion. The advantages which this people enjoyed from a long period of peace, at the time when Greece was a prey to frequent revolutions, was favourable to their cultivation of the Arts; but left as they were to their own rude conceptions, they appear to have made little progress in them.

The gem now to be seen in the King of Prussia's collection, and which was formerly in the possession of the Baron Stosch, commemorating the event of the Argive league against the Thebans, is the oldest known to exist. It is generally considered to be a specimen of the Art of that age.

An example of the latter part of this period may be seen in the basso-relievo of Leucothea, in the Villa Albani, in which there is much similarity in the erect position, parallel lines, flat and angular drawn-up eye, to the Egyptian manner; whilst the treatment of the hair and other parts of the composition, remind us much of the early Grecian coins.

That the Etruscans were assisted in their progress towards good taste by the second emigration, which is placed at 600 B.C., is highly probable. There is a marked distinction at this period in Etruscan art—a greater knowledge of, and attention to, grouping and expression; and the subjects of their chisel were chiefly selected from Grecian fable.

In the second epoch of Etruscan art, so much of the early Greek character was mixed with it, that the most skilful antiquary is often at a loss to distinguish them; indeed, the whole may be considered as a class. There is, however, a distinction: the rude forms and short proportions of the earlier school were now changed to the opposite extreme; there was no grace, but attempts at musculation and expression were carried to excess.

This artificial manner may be seen in their relievi. We have few statues well authenticated; but their intagli are safe guides, and that of Tydeus, of which the execution cannot be surpassed, is a good specimen. Another distinctive mark of the period may be observed in the draperies. The dresses are tight to the waist, and are bound. An example of art of the early part of this period may be seen in a marble formerly in the collection of the late Mr. Blundel, at Ince. It represents, most probably, a lawgiver or king. There is great breadth in the treatment of the upper part of this figure. Another specimen of the kind may be seen at the British Museum, in a small statue of a recumbent priest; in which may be distinguished all the peculiarities of its class. This statue is of bronze.

In the third period, if it may be so termed, their sculpture is wholly undistinguishable from early Greek art. With respect to their divinities, and particularly in the heads, we find scarcely any departure from the consecrated forms of the Greeks.

This style or character of art continued until Etruria lost her liberty, and became amalgamated with the rapidly growing empire of Rome.

ROYAL ACADEMY.

Professor Cockerell's Lectures on Architecture.

LECTURE V.

THE love of fine Art, and the lively discussion of its principles, which occupied the wits and the courts of Italy in the 15th and 16th centuries, employed the solitary reflections of literary philosophers in the 18th; and in 1730, Baumgarten suggested the title of æsthetics, by which these studies have been designated ever since, and many works remarkable for ingenious criticism, learning, and taste, have resulted. These may be ranked in two classes. The first resolves the questions of taste directly into an original law of our nature, implying senses by which the qualities of beauty and sublimity are perceived and felt as their appropriate objects; it is this species of hypotheses to which artists and amateurs chiefly resort. The second class of hypotheses arises from the opposite view of the subject; resisting the idea of any new and peculiar sense distinct from the common principles of our nature, this class supposes some one known and acknowledged principle or affection of the mind to be the foundation of all the emotions we receive from the objects of taste, and resolves them into some more general law of our intellectual or moral constitution. Thus Socrates and Hume, and others, resolve them into our sense of utility—Aristotle and St. Augustine, into order and design—Diderot and Allison into relation and association. But though in such discussions we recognize many truths, the partiality of individual views renders them often dangerous.

> When a philosopher can find
> Some fav'rite system to his mind,
> In every point to make it fit,
> He'll force all nature to submit.

Language itself fails in defining those phenomena which elude ordinary observation, and even when it

Digitized by Google

approaches definition, the measure of quantity, and quality, and circumstance, can alone be adjusted by the magician Genius.

The æsthetical principles of Architecture, as handed to us from the Greeks by Vitruvius, concur with the notions of ancient philosophy, and have not been controverted by the modern; and though subjected of late years to some rude attacks, they have never been superseded, and we can follow no better text-book in the consideration of our subject. Those principles apply to every style and invention of Architecture which the world has hitherto known; they belong to our physical and intellectual nature, and will never change but with an alteration in these.

When the works of Vitruvius were first discovered, they were accounted a revelation to the craft, and called "divine" by Sulpitius, the first translator; and, nearly two hundred years after, Perrault, in his translation, calls them "a very singular piece, and an inestimable treasure in the opinion of the learned." Eighteen translations, in forty-one editions, are enumerated to this day. In 1807 the philologist Schneider republished Vitruvius. "My whole scope," says he, "has been to purify the text, so as to enable men learned in Art to reconstruct and understand the theories of Vitruvius, hitherto obscured by interpolations and vicious translations." But he detracts from the merit of his work by a severity of criticism, as uncandid as it is derogatory to the character of his author. He declines his apology, as "writing neither as an accomplished philosopher, an eloquent rhetorician, nor as an expert grammarian, but as an architect, laying down rules useful to those who build." He calls his language obsoleto and plebeian, accuses him of pride and envy, and rates him as a morose, inept, infirm old man, querulous and vulgar. But Schneider was the less justified in such treatment, as being weak upon those points in which his author was most strong, for he says, "on architectural subjects, or that which has to do with the subtleties of the art, and the questions and disputes concerning them, I neither could nor would have anything to say." So that the science has received no direct advantage from the labours of Schneider, and yet how much was to be done might be understood by ten discoveries in confirmation of the theories of Vitruvius, made within a few years, and chiefly by Englishmen, cited by the Professor in his previous course on the Literature of the Art. Such discoveries suggested the desirableness of a new English edition of Vitruvius, as highly honourable and useful to this country. The last, by Mr. Gwilt, is a very useful one.

The slanders of Schneider had been adopted in this country with little honour to the parties, and no advantage to Architecture. Vitruvius remained the father of our art, and was entitled to our respect, as the text-book of our studies.

Having been appointed surveyor to the warlike engines and stores of the empire by Augustus, Vitruvius was endowed with leisure; and very probably was instructed to collate the Greek authors on our art, whom he enumerates, and who were collected and deposited in the magnificent library instituted at that period. He appears then with singular advantage as transmitting the well digested and received principles of the greatest masters who had thought and written on architecture, to modern times; and the principles thus derived directly from the Greeks merit our closest attention.

But a few preliminary observations on external forms, in detail and in general, were to be made. The universality of certain primordial forms in all styles, favours the notion of innate ideas, the cube, the sphere, the ellypsoid in solids; the lozenge, the wave, cymarecta, and cymareversa, the serpentine, the ovalo, the spiral, the volute, gradation or diminution of forms, are common to the art of all times and people.

The pyramid is universal, from the compressed to the acute. Such is the charm of the pediment, that "in heaven, where we may not suppose it to rain," says Cicero, "the pediment will surely be found;" so in mountains, trees, and fixed bodies, in which the laws of statics are observed, the pyramid prevails; except in those forms in which dynamics demand a different structure. The pyramidal inclination of the sides of buildings observed in Egyptian, Hindoo, Gothic, and Mexican Architecture, has, by the happy discoveries of late years, been proved to exist in Greece also; and the inclination of the axis of the columns at the sides of temples (enjoined by Vitruvius, lib. iii. c. 3, long disputed,) is now beyond all doubt, and the pyramidal inclination to building is proved to be an universal principle.

Gradation of columnar forms, as in the limbs of animals, and in vegetable productions, is universally approved; the cylinder, the leg of an elephant, are justly repudiated: "small by degrees, and beautifully less," has been denied by an eminent critic (P. Knight), "because," says he, "the same is large by degrees, and beautifully bigger;" but however smart the reply, it does not controvert the principle. It is, however, to be observed, that such forms should diminish *from the eye*, as a column does above the horizon, and the leg of a chair or table below it.

The Doric cymatium, the cymareversa, the ovalo, the cavetto, or hollow, are all calculated to express strength, as robust, and appearing to sustain. The Lesbian cymatium, the cymarecta, in all its varieties, has not the same purpose, (namely, to sustain,) and is suited to the more elegant orders. The principle of the application of mouldings for beauty, is the opposition of the curved to the straight surfaces, as well for light and shade as form; and the proportions and oppositions of such forms constitute the art of profile—a most difficult grace of architecture; for by this, that variety of form and grace may be given which the primary architectural masses and proportions do not admit of. . Variety in the *details of sculpture and profile is essential* to the relief of that rigorous geometrical order, which the larger features of architectural composition impose: in all the arts, and even in architecture, variety is an all-important principle, provided the masses are undisturbed. Shakspeare describes Cleopatra as chiefly admirable for this quality:

> Age cannot wither her, nor custom stale
> Her infinite variety.

The Greek profile in general (more particularly in the Parthenon) is incalculably superior to any other in gradation, quantity, delicacy, and expression, and should be the student's constant study. It was the observation of the human, animal, and vegetable forms, by the sculptors of Greece, which gave them that acknowledged superiority. The enrichment of these with homogeneous ornament, was no less remarkable, and deserves an especial treatise. In fact, the elements of Architecture, in the orders and their profile, constitute the peculiar excellence of Greek Architecture, which, as we have seen in history, did not extend to the composite and voluminous combinations which subsequent ages adopted.

Having thus adverted to individual forms as applied to detail, the Professor remarked upon general forms, as applied to the composition of buildings. The observations already offered upon the ancient system of building "in large stones and costly stones, even great stones," doubtless contributed much to the universal adoption of horizontal forms of building. But this tendency, thus imposed by the mechanical construction, seems also to have been an abstract principle of taste, which was consulted best by the contrast of the long horizontal form, with the (generally) vertical outline of the country in which they were employed. When the traveller, passing through a mountainous region of rugged outline, discovers through some gap the horizon of an extended plain, or of the ocean, a sublime sensation is experienced. In such a country the rocks and mountains afford elevations compared with which the works of man are insignificant. The temple is planted on the precipitous eminence, and it attains at once the elevation of St. Peter's or St. Paul's. So placed, the Doric members should be massive, simple, and few; the parts broad; it seems to have grown spontaneously from its rocky bed, and to partake in its monolithic masses of the stony aboriginal material on which it is established. Its horizontal outline and regularity of order are admirably calculated to contrast with the surrounding scenery of vertical and irregular forms.

On the other hand, when the road winds through interminable plains, the traveller recognizes the sublime in the contrast of vertical forms of architecture; for this reason, it may be presumed, the Babylonians in the plains of Assyria, proposed to "build a city and a *tower* whose top may reach unto the heavens." In the flats of Venice, in the Netherlands, in the champains of France and England, especially in the low lands of Lincolnshire and the North, the spire and the tower are found to be the effective and all-sufficient means of obtaining that sublime which man desires in Architecture—that conglomerate composition of small stones which a man may carry up a ladder on his back, are in character with the style and the manner of building.

But, recurring to the theory of the art, we find that Vitruvius (lib. i. c. 11,) lays down six principles: order, as addressing the understanding; disposition, as addressing the eye; proportion; symmetry; consistency; and distribution, or economy.

Order, as evincing design, whether geometrical or moral, affects the mind with the sentiment of sublime. Whoever considers the movements of the planets, and understands the laws of their velocities, the curves which they describe, the relations of the periods of their revolutions and their distances, will find himself wrapt in a sublime pleasure, and will recognize a divine beauty of order; but if he turns his contemplation to the fixed stars, in which he can trace no order, and which appear to be disposed fortuitously, the same pleasure is by no means felt.

When a curve is formed by a certain rule and a constant law, as the semicircular vault and the apsis at the end of a church, both which shall be concentric, a great satisfaction is experienced; if these are elliptical, the rule and law is less easily understood; but much more, if eccentric segments are employed, the want of that uniformity is felt, and a kind of violence is done to the eye and understanding. So the rhomboid, and much more the trapezium, displease by their anomalous and unequal angles. No predetermined counsel, order, or industry are evinced, and the essential sense of order is dissatisfied.

If the philosopher finds any natural production—a stone, or a root—assuming the regularity of a geometrical form, he judges it worthy of a place in his museum: such is the love of order. Individuals in a mob have neither force nor effect, but ranged in regimental order they acquire a new quality. So trees planted in avenue have, in many situations, an effect superior to the forest. The desire of imparting variety to his work, often misleads the architect from this important principle of his art; forgetting that his building is to derive its chief effect from the contrast of its regularity and order with the surrounding irregular objects and scenery, he seeks, too often, to make his own building his picture, and to engraft upon it that variety which the scenery ought to supply. Thence picturesque architecture, which has diverted the student from the ancient principles, universal amongst the old masters. Succession and repetition of impression by parity of objects, by regularity and order, the isometrical colonnade or Gothic arches of the nave, or equidistant windows along an unbroken front, have more energy and effect than all the varieties of such features that can be contrived. The surrounding irregularities make order tell by their contrast.

Vanbrugh was remarkable for this quality, and he knew at the same time how, by the composition of his parts, to produce, from certain points of view, the utmost variety of combination and picturesqueness, while, from others, the whole was perfectly regular.

Perrault observed order rigidly, as did Wren; while by the cotemporary fashionable architects amongst the Italians it was totally abandoned, as may be remarked in the front of St. Peter's, and in the works of Bernini, Borromini, and Maderno. Columns in groups, or at irregular distances, broken entablatures, for the sake of a repetition of profiles, curvilinear fronts, and such scenery as belongs to painting, established the novelty of picturesque architecture—a solecism in art, and a contradiction in terms, unless by combinations from certain points of view as above.

If we call to mind the fact, that the greatest architectural efforts have usually followed periods of political and moral disorder, we may recognize in such works that natural love of order, which revolutions and tumults have denied. Certain it is, that after a long period of civil tranquillity, architectural efforts, especially of regular order, have ceased to be fashionable, and the picturesque or the irregular is resorted to as a change.

Disposition or composition of the various features

Digitized by Google

of an architectural work, is the second principle laid down by Vitruvius. It consists, says he, of the idea of the ichnography; the idea of the orthography, or elevation; and the idea of the scenography, or view in perspective, taken on the angle. "These," continues he, "are the result of thought and invention; thought, full of attention, application, and vigilance, accompanied with *delight*; and invention, which is a solution of difficult problems by new applications seized with *promptitude*."

Thus he proceeds as Nature does: putting the purpose or the plan *first*, to which the figure of the object adapts itself *secondly*, and thus each composition displays peculiar features; and the appearance of his buildings would be as various as their purposes; whereas modern architects often reverse the method, and they constrain the plan to a preconceived orthography. How otherwise is it that we recognize the master the moment we see his work? The orthography ever the same, and the plan adapting itself as it can: so we commonly put the cart before the horse.

But the exact conception of the ultimate effect of the building, the realization of the prophetic vision of the architect, are of extreme difficulty, and subject to lamentable disappointment. They can be attained only by great knowledge of perspective, and by careful models; and the greatest masters have been most remarkable for their reliance on such means.

"The architect," says Wren, "ought, above all things, to be well skilled in perspective, for everything that appears well in orthography may not be good in the model, especially when there are many angles and projectures; and everything that is good in model may not be so when built, because a model is seen from other stations and distances than the eye sees the building. But this will hold universally true, that whatsoever is good in perspective, and will hold so in all the principal views, whether direct or oblique, will be as good in great; if this only caution be observed, that regard be had to *the distance of the eye in the principal stations.*"

In this last particular the methods of the different masters have varied materially. For instance, Vanbrugh always supposed himself at a distance of 500 to 1000 feet from his buildings; consequently his sky line and contour are well studied, but his details wholly neglected, and the pleasing effect of his buildings lessens in approaching them; whereas Adams supposed himself from 50 to 100 feet only from his buildings; consequently they have no contour from a distance, but are full of elaborate detail on the approach.

The visual angle, extending at most to 45°, should be carefully applied to the points of distance; and the scale of the drawing or study should be correctly adjusted to this distance, so that no misconception should arise. A study for a building to be seen at 100 feet distance only, will be on a large scale, and occupy the whole height of the paper; whereas, seen at 500 feet, it may be only one-fourth that size.

The Greeks were consummate masters of this branch of optics, as we should doubtless have known had Aristotle's work on Taste been preserved to us. The terms synoptic and eusynoptic correspond with the points of view which all their arrangements were calculated to afford.

The Parthenon and the Temple of Jupiter Olympius—indeed, almost all the great temples—were approached on the angle, the peribolus and the propylea by which they were inclosed, concealing great part of them, until they could be contemplated to the utmost advantage from a synoptical point of view. The plans of Palmyra and Balbec, and those of Rome, preserved to us by Palladio, are lessons, in these respects, demanding the most careful attention.

It is obvious that Street Architecture, being seen chiefly in flank, should be treated otherwise than buildings at right angles with the point of view, as triumphal arches, or terminations to the vista.

In the fifteenth and sixteenth centuries perspective delineation became a new art in the hands of Lombardi, Bramante, Peruzzi, Raphael, and lastly the renowned Pozzi; and though Vitruvius assures us that in the fifth century B.C. Agatharcus wrote a treatise upon Perspective, it is probable that the ancients never arrived at the skill attained by those masters.

But perspective calculation applied to Architecture, and the adjustment to the point of view, was undoubtedly better understood practically by the ancients than ourselves, as their remains abundantly prove. The vista which shortens the length and discloses the end at once—the exposure of the entire object staring from a distance as well as near—the placing colossal objects in colossal places, are all modern mistakes. The Temple at Luxor, the colonnade at Palmyra, are deflected in angles, so that the bounds are concealed, the successive columns disclose themselves by degrees, and the length seems interminable. The Temple is partially hidden, and excites the imagination from the promise of its roof, entablature, and capitals, until it is permitted to be seen in its overwhelming majesty.

The Columns of Trajan and Antonine are placed in confined positions, and the effect is tenfold.

Palladio was remarkable for the adjustment of his building to the position, of which the Town Hall at Vicenza is one of the most remarkable examples; and the surprise and admiration of the traveller who has known that building only in the orthographic engravings can never be forgotten.

Vignola is said to have made his studies of his buildings at the points of view from which only they could be seen.

It is quite certain that Sir W. Chambers was less master of this part of his art than of many others. Any one visiting the front of Somerset House, in the Strand, is satisfied with its scale and sufficiency in all respects; but when he enters the spacious quadrangle, and looks on the back of the same building, he experiences some disappointment; he finds the scale too small for the size of the quadrangle: but much more, when he observes the same proportions from the opposite side of the river, he deplores their littleness and want of mass and feature, the petty dome in the centre, and the confusion of chimney shafts which disfigure the roof. Had Vanbrugh disposed the river front, we should have seen those chimney shafts united in towers; the whole outline or sky-line would have been marked and varied with emphatic features, suited to the scale of the river and the majestic position given to the building.

"It is the part of a wise man," says Alberti, "to have the idea of his work well fixed in his imagination. The ancients, therefore, not only by perspectives, but by models of the whole, and of parts, submitted their works to practised men before they laid a stone. Such models should not, however, be pretty toys, in which delicacy of workmanship draws the attention from the merit of the design. Finally," continues Alberti, "when the model satisfies the architects and practised judges, I recommend that there should be no hurry to begin, but if possible time should be allowed that the conceit of the design may cool; when, having laid aside the natural overweening affection for your own production, you may judge more justly of its effect. Time discloses many counsels for the advantage of our undertakings; and many defects, which at first escaped attention, at length become apparent." Scamozzi used to say, that pretty little models were like pretty little birds, no one could tell whether they were masculine or feminine; but if made large, you might then discern which was an eagle and which a crow.

Vitruvius, lib. vi. c. 11, and lib. iii. c. 111, refers to optical effects.

Proportion is the third principle set forth by Vitruvius, the most difficult and the most precious to the architect, and no less a golden rule in his art than in that of the arithmetician. Symmetry, which is the fourth principle of our author, is, by a vulgarism, often mistaken for proportion; but the etymology defines its meaning, as correspondence or parity of parts on either side a centre; at most it may signify proportion of aliquot parts. No part of Architecture has occupied the speculations of the ingenious more than proportion, and those who have not found the analogy of the human form, as set forth by Vitruvius from the Greeks, sufficient, have endeavoured to find a more certain analogy in the laws of musical sounds: Blondel, Ouvrard and others, may be consulted on this point.

To the artist observer of the proportions and forms of animal nature, the Greek analogy seems to develope the science of proportion in the comparison of animals of the same genus, but of various species, sufficiently to show that beauty resides in inequalities; the measure of those inequalities is, indeed, not so easily defined; but the establishment of the fact may help the architect to some valuable conclusions.

Thus, if we divide the human profile, the forehead, the nose, the upper lip, and the chin, into equal parts, we have ugliness: the profile of the Apollo presents these parts in *inequalities*, and upon the nice variety of these beauty depends.

The satyrus, or baboon, is ugly, compared with the man: amongst many other reasons, for this, especially to the architect, that his proportions approach equalities. The baboon is six heads high; his arms equal the entire length of his body and legs; the subdivisions of the arm, the hand, the fore-arm, and the os humeri, are nearly equal; so also the foot, the leg, and the thigh. If these proportions are compared with the human form divine, in which they are all in different and unequal lengths, the cause of beauty will be at once apparent. The human figure is eight heads high, and is inscribed by Vitruvius in a square, whereas the baboon is inscribed in a figure of less beauty, namely, a parallelogram of 6 by 11, such is the length of his arms. Thus, again, if we inquire why the ass is so inferior to the horse, we shall find the same answers. The one is little more than 2 heads to the shoulder, while the horse is 2½; the ears of the ass approach equality with the head or neck. The scapula to the os humeri, in the ass, 4 to 5, in the horse is 4 to 6; the metacarpus to the radius 3 to 5 in the ass, is 2½ to 5 in the horse.

The Professor exhibited drawings in illustration of these remarks, and stated, that the same relations applied to vegetable nature, and that beauty there, also, would be found to reside in inequalities; and he proceeded to show, that orthographic equalities in the vertical features of Architecture, both in the divisions of floors and orders, and in details, were always evidences of the decline of taste. In Greek profile it would be found universally, that inequalities constituted their charm; in the Roman they were not so nicely observed; in the Byzantine, the plain and moulded surfaces approached equalities. So in Gothic architecture, the period of the thirteenth was far superior to any other in this respect; of which the transept of Beverley Minster, and the order of Salisbury Cathedral were beautiful illustrations. So in every other architecture, and in forms of all kinds. In fact, from the long and the short, the dactyle and spondee, hexameter and pentameter, sapphics and iambics, the very term εὐρυθμία (proportion), used by the Greeks, was derived.

Under the fifth head, Consistency, lib. i. c. 2, Vitruvius tells us, that circumstance, custom, or fitness, and Nature are to guide us. Temples to Jupiter Cœlus, the sun and moon, are to be hypethral, because these divinities are known to us by their continual presence night and day. Doric temples are to be erected to Minerva, Mars, and Hercules, on account of their masculine character; Corinthian is proper to Venus, Flora, Proserpine, &c.; Ionic, as the medium order, is applicable to Juno, Diana, and Bacchus: all these, says he, bear an *analogy* to the dispositions of the deities.

Again, in lib. iii. c. 1, he says, "the design of temples depends on symmetry, the rules of which architects should be most careful to observe; symmetry arises from proportion, which the Greeks call ἀναλογία." He then proceeds to describe the proportions of the human figure in detail, and remarks its correspondence with the geometrical figures, the square and the circle: even the measures used in buildings, the digit, the palm, the foot, the cubit, called by the Greeks τέλειος, prove the analogy of architecture (continues he) with the human proportions.

In lib. iv. c. 1, Vitruvius describes the origin of the Doric, Ionic, and Corinthian orders, as derived from the proportions of the man, the matron, and the damsel, by analogy; and although these analogies have been regarded by some as fanciful, their æsthetical propriety is more intelligible to the artist, than their definition by language to the logical reader. For instance, the ancient Doric, from five to six diameters in height, though low in its proportions, assumes a dignity in its concentrated strength and solidity, its rapid diminution, and its wide-spreading cap, which no one who has viewed it at Pæstum and at Corinth can ever forget.

Digitized by Google

When Homer describes Priam as identifying the Grecian leaders from the walls of Troy, he is made to inquire of Helen,—

> What's he whose arms lie scattered on the plain;
> *Broad is his breast, his shoulders larger spread,*
> Though great Atrides overtops his head?

Had Homer (always a painter) confined his description to the stoutness and the shortness of Ulysses, we should have been at a loss for his heroic dignity; he might have been a tub or an alderman, but the "broad shoulders and his spreading breast" imply the rapid diminution of the waist, and the same healthful and vigorous character through every limb; and Ulysses stands before us in all the energy of the Grecian hero—

> Though some of larger stature tread the green,
> *None match his grandeur and exalted mien!*

no such peculiarity is attributed to "the great Atrides;" the tall is not compatible with this rapid diminution: whenever these qualities, therefore, are affected, as in the Parthenon, the temple at Nemea, or in the Roman Doric, the upper diameter bears a larger proportion to the lower. So in the matronal or the medium proportion the gradation of form is much smaller; and in the juvenile Apollo or the young damsel the diminution of the limbs is still less observable; and the Ionic or the Corinthian are proportioned accordingly. In the details the same analogy is observed; the mouth, the eye, and the features of the Hercules are as susceptible of delicacy as the Doric echinus is of its small fillets and its fine contour.

The matronal or medium demands a sober ornament, and the Corinthian all the young elegance which the acanthus and the graceful Lesbian profile can communicate.

Thus the tall, the short, and the slender, are all types of proportion in their proper places; their *excess* makes them the awkward and ungainly, the clumsy and shapeless, and the thin or meagre; and there is no other course by which they can be rightly embodied, than by the careful and intelligent observation of those types, as exhibited in the works of Nature—in the animal and vegetable kingdoms.

In this respect taste, like wit, consists in discovering resemblances and unexpected congruities.

The history of the works of genius illustrates abundantly the reference to analogy in the science as well as in the art of architecture. Smeaton, in his work on the Light-House at Eddystone, after describing the former ones, and showing their defects, proceeds to explain his original conception of that celebrated work. "On this occasion," says Smeaton, "the natural figure of the waist or bole of a large spreading oak presented itself to my imagination. Its top, when full of leaves, is subject to a very great impulse from the agitation of violent winds; yet partly by its elasticity, and partly by the natural strength arising from its figure, it resists them all, even for ages. It is rare that we hear of such a tree being torn up by the roots. Let us now consider its particular figure. Connected with its roots, which lie hid below ground, it rises from the surface thereof with a large swelling base, which at the height of one diameter is generally reduced by an elegant curve, concave to the eye, to a diameter less by at least one-third, and sometimes to half, of its original base. From thence its taper diminishing more slow, its sides by degrees come into a perpendicular, and for some height form a cylinder. Now, we can hardly doubt but that every section of the tree is nearly of an equal strength in proportion to what it has to resist; and were we to lop off its principal boughs, and expose it in that state to a rapid current of water, we should find it as much capable of resisting the action of the heavier fluid, when divested of the greatest part of its clothing, as it was that of the lighter when all its spreading ornaments were exposed to the fury of the wind. And hence we may derive an idea of what the proper shape of a column of the greatest stability ought to be, to resist the action of external violence, where the quantity of matter is given whereof it is to be composed."

Sir C. Wren has given another fine example of this kind of analogy. In the vast practice which the fifty churches of this metropolis and the examination of all the authorities which he had occasion to consult had given him, he reflected that the hollow spire which he had seen or built in so many varieties was after all but an infirm structure; and he sought that model which should enable him to impart to it the utmost solidity and duration. Simple was the original from which he adopted his idea. He found that the delicate shell called turretella, though extremely long, and liable to fracture from its base to its apex, by the action of the water amidst the rocks, was rendered impregnable by the central column, or newel, round which the spiral turned. Therefore, in his spire of St. Bride's, he establishes the columella in the centre, round which he forms a spiral staircase to the top, issuing on stages of arched apertures: thus giving us (if not the most beautiful) certainly the most remarkable and enduring of any spire hitherto erected.

One more instance equally remarkable may be given. When Brunelleschi was charged with the erection of the dome of Sta. Maria, at Florence, of nearly equal diameter with that of the Pantheon, but at more than twice its height from the pavement, upon a base raised on piers, and by no means of the strength and cohesion of the original model, the Pantheon, it was apparent that in giving it the same solidity, the weight would be insupportable on such a foundation. How was this object to be accomplished? Brunelleschi was an observer of all Nature's productions, and he reflected that the bones of animals, especially of birds, possessed solidity without weight, by the double crust and hollow within. But above all, he remarked that the dome which completes the architecture of the human form divine was constructed with a double plate, connected by the light and fibrous, but firm walls of the hollow cancelli, so that strength and lightness were combined in the utmost degree. Brunelleschi followed this model in his dome of Sta. Maria (in the manner displayed in a large section exhibited); and the traveller now ascends to the lantern between the two crusts or plates forming the inner and the outer domes.

Michael Angelo adopted this contrivance in the dome of St. Peter's; and almost all the subsequent domes are upon the same idea.

The Professor pointed out these instances of analogy as sufficient to show that the architect might thus avail himself of the whole range of Nature's works; and that the universe furnished him the inexhaustible models from which his inventions might be drawn.

FEMALE CHARACTERS IN 'KING JOHN.'

Present acting of The Lady Constance, Queen Elinor, The Lady Blanch and Lady Faulconbridge; by Miss Helen Faucit, Miss Ellis, Miss Fairbrother, and Mrs. Selby.

More interesting even than Mrs. Siddons's estimate of the character of Constance itself, are her observations on the difficulties which its personation presents to the actress, and the means which she herself so earnestly studied and applied, to overcome them. These observations, and these efforts, while they well deserve the attention and zealous emulation of every aspirant to the representation of this arduous part, no less demand the serious consideration of every one who shall venture to criticise the performance. Let the personation of Constance be attempted by whomsoever it may, the critic should ever bear in mind these memorable words from the pen of her deceased representative:—"Her gorgeous affliction, if such an expression is allowable, is of so sublime and so intense a character, that the personation of its grandeur with the utterance of its rapid and astonishing eloquence, almost overwhelms the mind that meditates its realization, and utterly exhausts the frame which endeavours to express its agitations."—It is, then, under a deep impression of the arduousness of this character, even to the most gifted and experienced performer, and of the indulgence especially due to every young actress to whose lot it falls to assume a part so lofty, so interesting, and so difficult, that we shall offer a few remarks on the acting of the lady who now fills it on the boards of Drury Lane, and who may fairly be regarded at present as the sole representative of Shakespeare's Lady Constance on the metropolitan stage.

What strikes us first of all in Miss Helen Faucit's personation, is, her clear and perfect conception that *feeling*, not *pride*, is the mainspring of the character; that the dignity of bearing natural to and inseparable from it, and which the advantage of a tall, graceful figure enables this actress to maintain with little effort, is at the same time an easy, unconscious dignity, quite different from that air of self-importance, that acting of majesty, which has been mistakenly ascribed to it by those who have attributed to the heroine an ambitious nature. She makes us feel throughout, not only the depth, the tenderness, and the poetry of the maternal affection, dwelling in a vivid fancy and a glowing heart; but is ever true to that "constant, loving, noble nature," which is not more sensitive to insult from her foes and falsehood from her friends, then it is ever ready to welcome with fresh gratitude and confidence the return of better feelings in any who have injured her.

That intimate association, in short, of gracefulness with force, and of tenderness with dignity, which this lady has so happily displayed in other leading characters of Shakespeare, is her especial qualification for this arduous part—the most arduous, we believe, of all the Shakespearian female characters—for this plain reason, that while it is one of those exhibiting the highest order of powers, the range of emotions included in it is the widest, and the alternations, the fluctuations between the height of virtuous indignation and contempt, and the softest depth of tenderness, are the most sudden and the most extreme. The principle of contrast, in fact—that great element of the romantic drama, as of all romantic art—which Shakespeare delighted to employ, not only in opposing one character to another, but in developing each character individually, is carried to the highest pitch by the trials to which the course of the dramatic incident subjects the very sensitive, passionate, and poetic—the noble and vigorous nature of Constance.

Here, again, we turn, for an illustration, to Mrs. Siddons's performance of the part. It seems well established, by the concurring testimony of all who preserve distinct recollections of her acting, that on a general estimate of her tragic powers, it was in gracefully commanding *force* that she so wonderfully excelled, and in the expression of *tenderness* that she was often felt to be deficient,—a defect which must have been especially apparent in her personation of those Shakespearian characters wherein exquisite feeling is combined with extraordinary vigour. It has not surprised us, therefore, in conversing with persons on whose judgment and candour we can rely, and who have repeatedly witnessed the great actress's representation of the Lady Constance, to find that in the passages of melting tenderness which abound in the part, a want of adequate expression was very sensibly felt. Majestic and terrible, then, as her performance of the indignant scenes undoubtedly was, yet it must have failed, for want of sufficient contrast, to derive all that startling boldness of relief which the dramatist himself has given to those electric passages.

Labouring, too, under the misconception already pointed out, as to the essential qualities of the character, it would be but natural that, in the scenes where Constance and her son stand alone, deserted and betrayed, amid their treacherous friends and their triumphant enemies, Mrs. Siddons, properly making the impulse of resentful scorn the immediate spring of her vituperation, should have failed to clear its expression wholly from her brow in those passages wherein the action requires her to turn it upon her child. We think it one of the most notable merits in the representation of the part by the lady who now personates it, that so far from letting the indignant excitement cast for one moment the slightest shade upon her brow or harshness into her tone when turning to the child, she follows undeviatingly the poet's indication; and, in like manner as he has made the first effusion poured out by Constance on hearing her abandonment, one of maternal grief and tenderness only, so amidst her subsequent bursts of indignant reproach and fiery denunciation, in every look and word which the present actress addresses to Arthur, the afflicted mother seems to find relief from those effusions of bitterness, as repugnant to her nature as they are withering in their power, by melting into double tenderness over the beauties and misfortunes of her child.

This, we repeat, seems to us to be one of the very happiest features in Miss Faucit's personation of the Lady Constance. Thus it is, for example, that in the first scene with Elinor, she renders with such perfect truth and beauty the exquisitely characteristic passage:—

> His grandam's wrongs, and not his mother's shames,

Digitized by Google

Draw those heaven-moving pearls from his poor eyes,
Which heaven shall take in nature of a fee;
Ay, with these crystal beads heaven shall be bribed
To do him justice, and revenge on you.

Again, in her scene with Salisbury, where Constance is informed of the peace made between the two kings, and where the emotions that agitate her are deeper and more conflicting, we can conceive nothing in acting, or in reality, more exquisitely touching than the expression which she gives to the passage,

But thou art fair, and at thy birth, dear boy, &c.

The faltering pauses, more eloquent than the finest declamation, must have gone directly, not only to every mother's heart, but to every heart present, alive to any touch of sympathy. Indescribably sweet, too, in her utterance, are the words,—

Of Nature's gifts thou may'st with lilies boast,
And with the half-blown rose.

In those brief accents she breathes to us all the inmost soul of Constance, the idolizing mother, delicately sensitive and richly imaginative. Nor can anything be more beautiful in itself, or more true to nature and to the poet, than the graceful fondness with which, after throwing herself on the ground in the climax of her grief, she looks up and raises her hand to play with the ringlets of her boy as he stands drooping over her.

We must speak rather more at large of Miss Faucit's acting in the following scene, the most difficult of all in so difficult a part. Undoubtedly, the dramatist conceived of his heroine as of one endowed with the most vigorous as well as exquisite physical powers. Only such a person could rise to the adequate expression of that towering sublimity of virtuous invective and religious invocation which was indispensable to this part of his dramatic purpose. Equally certain it seems to be, that these solemnly appealing and witheringly scornful passages, demanding, above all things, the display of what is commonly meant by *tragic force*, were the most successful parts of Mrs. Siddons's personation of the Lady Constance. Not having had the advantage of witnessing those majestic efforts of the great actress, we are not enabled to compare the force of delivery shown in those particular sentences by Mrs. Siddons and by the present actress respectively. But we *have* the means of comparing the force of execution in the present performer with what we conceive that the part absolutely demands, and in that view we find her personation adequate. The force which Shakespeare exhibits in the eloquence of Constance, is not the hard force of an arrogant, imperious termagant, such as we see in his Queen Elinor, but the *elastic* force that springs from a mind and person having all the vigour of a character at once so intellectual, so poetical, and so essentially feminine as that of Constance. To the expression of this highest and most genuine *tragic force*, we repeat that Miss Faucit shows her powers to be not only fully equal, but peculiarly adapted. She has that truest histrionic strength, which consists in an ample share of physical power in the ordinary sense, combined with exquisite modulation of tone and flexibility of feature,—by turns the firm and the variable expressiveness of figure, voice, and eye. We say this after much attentive study of her acting, especially in her Shakespearian parts; and as regards the performance of the Lady Constance in particular, however perfect Mrs. Siddons may have been in certain other Shakespearian characters, as Lady Macbeth, &c., yet, considering her very decided deficiency in tenderness, we cannot hesitate to regard the present personation of the heroine of 'King John' as truer to that spirit of bold and beautiful contrast which, we have already observed, is in the very essence of its developement, as it is in that of the whole Shakespearian drama.

Thus it is that the caressing of her boy, while seated on the ground, according to the true Shakespearian conception of the part, at once deepens the impression of the preceding words and action which make that sublime enthronement of her grief, and gives bolder effect to her majestically indignant contradiction of the French king's speech in glorification of that "blessed day,"—

A wicked day and not a holy-day, &c.:

and yet more to the personal invective against Philip,

You have beguiled me with a counterfeit
Resembling majesty, &c.

And in like manner her action and tone, in bending down to clasp her son, with the words—

And our oppression hath made up this league!

while they speak all the beautiful nature of Constance, make us the more strikingly and sublimely feel its energy when, as if drawing from her child's embrace the strongest stimulus of which the wronged and sorrowing mother is susceptible, she rises, as it were, to more than the natural height of her noble figure, and lifts high her hands to heaven in the majestic appeal—

Arm, arm, you heavens, against these perjured kings, &c.

It is this exaltation of the figure—this aspiring heavenward of the whole look, and tone, and gesture,—that gives, and can alone give, adequate effect to the flashes of scorn that burst, in her glances and her accents, upon the despicable and devoted head of Austria, when he interrupts her invocation, in its highest fervour, with those very characteristic words of his, "Lady Constance, peace!" This it is, as given by the present actress, that makes her piercing and scorching reproaches seem to be drawn down like the forked lightnings from above, searing and blasting where they strike, and sharpened to their utmost keenness by the practical sarcasm which she finds in the bodily aspect worn by the object of her indignation—in the "lion's hide" upon "those recreant limbs." This, in all the part, is the passage most requiring the display of physical energy—yet of an energy richly and variously modulated, as remote as possible from monotonous loudness and vehemence. Miss Faucit, in her whole manner of rendering this passage, shows how well she comprehends this distinction. By the fluctuating look and intonation—by the hesitating pauses, at a loss for expressions adequate to the intensity of her unwonted bitterness, and giving keener force to the expressions when they come—she makes us exquisitely feel the stung spirit of injured, betrayed, and insulted confidence and tenderness, more terrible and blighting far than that of mere exasperated pride.

And after this climax of her indignation, when the legate appears, as if sent from heaven in answer to her call, most affectingly and impressively beautiful, to our minds, is the expression of the noble nature of the heroine, which her representative gives to the kneeling appeals which Constance makes to the virtuous and religious feelings of the dauphin. Already, in speaking of Mrs. Siddons's acting of the part, we have fully expressed our opinion as to the true reading of this important passage. We have here only to add, that Miss Faucit gives that reading, as it seems to us, with admirable effect; delivering, especially, with all that noble and generous fervour which, we conceive, belongs to it, the unanswerable answer to Blanch—

That which upholdeth him that thee upholds,
His honour; oh, thine honour, Lewis, thine honour!

It is to be regretted, that owing to the suppression, in the acting play, of that part of the dialogue which immediately follows, the last words of Constance in this scene—

O fair return of banished majesty!

the crowning expression of her trusting, grateful, forgiving spirit, are nearly drowned in their delivery by the too hasty noise and bustle on the stage, of breaking up the royal conference.

We shall not attempt to speak in detail of this lady's acting in the terrible despairing scene. She renders its anguish-born poetry with a delicacy of expression yet more overpowering than its force. The looks, and tones, and gestures of a performance like this, are not things to be described, but to be seen and heard, felt and wept over. For our own part, long shall we be haunted by those accents, now piercingly, now softly thrilling—now enamoured of Death, now rushing back to the sweet and agonizing remembrance of her child, now hurrying forward to anticipate the chasing of "the native beauty from his cheek," till her last lingering ray of hope expires, and reason totters on the verge of frenzy. All these emotions are rendered to us by the actress, in all their varied beauty and their trembling intensity. In the concluding exclamation—

O Lord! my boy! my Arthur! my fair son!
My life! my joy! my food! my all the world;
My widow-comfort, and my sorrow's cure!

Her voice, it is true, rises almost into a scream: what, however, we would ask, are the whole three lines in themselves, but one long scream of intensest agony? The immediate effect upon the feelings of the auditor is doubtless painful, as the shrieking accents are to his ear; yet both are necessary to the full dramatic force and beauty of the passage. The woes of Constance and her son are to be visited in retributive justice on their oppressors; and to sustain our interest vividly through that subsequent portion of the drama, it was requisite that the affliction of the bereaved mother should be brought home to us in its darkest and most heart-rending extreme. The poet, therefore, conducts her through every stage of desperate grief—the yearning for death—the longing for madness—the constant craving for the presence of the boy whose image "walks up and down with her"—till this last fixed idea finally seizes, burningly and burstingly, on her brain, and consigns her, not to insanity, which, as she says, might have made her "forget her son," but to a torturing frenzy, hopeless and mortal. Of this her final state on earth, Shakespeare gives us one awful glimpse, one harrowing strain, then mercifully hurries her from our sight and hearing. An exclamation like this, then, let us repeat, in justice to the actress, can only have its due effect from being delivered, not with the harmonious modulation of tone appropriate to even the most impassioned words of Constance while her self-possession yet remains to her, but rather like the death-shriek of a spirit violently parting.

Among the other omissions in acting we have to regret that of the lines spoken by King Philip in the middle of this scene—

Oh, what love I note
In the fair multitude of those her hairs!
Where but by chance a silver drop hath fallen,
Even to that drop ten thousand wiry friends
Do glue themselves in sociable grief,
Like true, inseparable, faithful loves,
Sticking together in calamity!

These are wanted, not only for the purpose to which Shakespeare ever so diligently attended—to relieve the feelings and attention of the auditor, by breaking the continuity of the heroine's effusions of despair—but also to give double effect to those effusions, by the impression which the exquisite poetry of that passage shows to be made by her careless affliction, even upon the not over-feeling personages about her. The dry, cold words which are left in Philip's mouth,

Bind up your tresses,

are a terrible falling-off. The suppression is an injury to the actress, no less than to the heroine.

Small a space as *Queen Elinor* occupies in the dialogue of this piece, it is important to mark the clear indications which every line of it assigned to her affords us, of the character as conceived by the dramatist. Here, indeed, we have arrogance and unscrupulous love of power personified; and, accordingly, her vehemence in repelling the charge of usurpation against herself and John, is proportioned to the clear consciousness which she betrays of the justice of the imputation. In her violent altercation with Constance she makes up for the inferiority of her eloquence to that of her rival, by boldness of assertion and fierceness of reproach. Her sentences are brief, but each one of them speaks a volume respecting her own predominant qualities; and her vituperation, it must be owned, is truly imperial,—

Thou monstrous slanderer of heaven and earth!

is her answer to the beautiful words of Constance on the weeping of her son,—

His grandam's wrongs, and not his mother's shames,
Draw these heaven-moving pearls from his poor eyes, &c.

But more thoroughly are the whole heart and conscience of the speaker betrayed in the exclamation—

Out, insolent! thy bastard shall be king,
That thou may'st be a queen and check the world!

a speech most forcibly characteristic of the woman whose own youthful gallantries had given such public scandal, divorcing her from her first royal husband, and who in age had shown, that her chief solicitude, to have John a king rather than Arthur, was, that she herself, ruling his political councils, might really "be a queen and check the world."

And here let us point out the art which the dramatist has used, to cast the greatest possible improbability upon the charge of conjugal infidelity brought against the Lady Constance by her insolent oppressor, no less than upon that of unlawful ambition. The striking resemblance of her son to her deceased husband is placed repeatedly before us. King Philip, especially, in his address to John upon their first meeting, says, pointing to Arthur:—

Look here upon thy brother Geffrey's face:

Digitized by Google

These eyes, these brows, were moulded out of his;
This little abstract doth contain that large
Which died in Geffrey; and the hand of time
Shall draw this brief into as huge a volume.

Here, then, is strong countenance for Constance's own allegation in answer to Elinor:—

My bed was ever to thy son as true
As thine was to thy husband; and this boy,
Liker in feature to his father Geffrey,
Than thou and John in manners, being as like
As rain to water, or devil to his dam.

Nor, considering the well-established character of Elinor, as a wife, and the bitterness of her slander, can we help holding Constance excusable for retorting:—

My boy a bastard! By my soul, I think
His father never was so true begot;
It cannot be, an if thou wert his mother.

We find it the more necessary to cite these sentences of Constance, because they are not heard upon the stage. The constant omission, in modern acting, of the most characteristic passages in this dialogue between her and "the mother-queen," cramps exceedingly the developement which the dramatist, in this place, has clearly, though rapidly, made of the respective moral character and position of the two personages; and has contributed to establish the prevalent notion of this scene, as a mere piece of *scolding* between two angry rivals.

The nature of the moral tie between Elinor and John—a bond much more of common interest than of affection—contrasts, finely, throughout the piece, with the mutual tenderness between Constance and her son. The "little prince" desires not greatness at all; and his mother desires it only for his sake. Elinor and John love power equally for its own sake: but as for personal affection, the mother-queen loves the greatness of her son chiefly for the sway which it secures to herself; while John betrays no spark of filial, any more than he does of any other attachment. He loves everybody, even his royal mother, just after the fashion that he so vehemently protests he *loves* Hubert—that is, exactly so far as he can *use* them. Thus, in his exclamation upon hearing of Elinor's death:—

My mother dead!
How wildly then walks my estate in France!

we find the langunge, not of affection, but of sheer self-interest. Elinor, indeed, is shown here, as in history, to have been John's political genius, infusing such spirit and sagacity as had found their way into his councils; and accordingly, in the course of righteous retribution which forms the sequel of the play, the death of Elinor by the hand of Heaven is made by the dramatist to follow immediately upon that brought upon Constance by maternal anguish and despair—

The Lady Constance in a frenzy died
Three days before.

"My mother dead!" is the exclamation we find John still repeating. Feeling the sole stay of his mean and cowardly spirit to be thus struck from him at the moment when he needed it the most, we find his resolutions thenceforward utterly paralyzed; we see him staggering on from one personal and political meanness to another; abandoning wholly to his "valiant kinsman Faulconbridge" "the ordering of this present time;" and dying at last, in spite of all that kinsman's eloquent exhortations, not like a brother of Cœur-de-Lion, with harness on his back, but like a craven plunderer of monastic treasuries, with poison in his stomach.

Although, from the subordinate space which this character occupies in the drama, we are aware that it can seldom fall into the hands of a first-rate performer, yet it is plain, that the actress who undertakes to personate Queen Elinor should be as *imperial looking* as possible. Heiress to a sovereign duchy, married successively to the two most powerful monarchs of the age—Louis the Seventh, of France, and Henry the Second, of England—and now brought before us in the drama as directing the councils of her royal son—the habit no less than the love of command should be expressed in her every look and tone, as well as in all the rest of her demeanour. No approach to tenderness should be heard in her accent, or read upon her brow. She should present to us that very impersonation of pride and love of sway—that *conscious* self-importance—somewhat of that "acting of majesty," as we have said before, which both critic and performer have too frequently attributed to Constance herself; although they should have seen that the most palpable dramatic propriety required the natural dignity of person and rank in the mother of Arthur to stand out very clearly distinguished from the arrogant dignity of her intriguing and ambitious rival. The lady (Miss Ellis) who now enacts this part at Drury Lane, though manifestly very young to represent a character so decidedly aged, sustains it respectably. One error which she commits as regards the business of the stage, we will point out, because it seems to us to be at once evident and easy of correction. In the scene immediately following Arthur's capture, the dramatist, it will be remembered, makes Elinor take Arthur aside, as if to leave John at liberty to confer with Hubert about the disposal of the young prince's person. And from John's words to Hubert—"Throw thine eyes on *yon* young boy"—it is plain that the boy is meant to be taken aside to some distance on the stage. The glance of the king's eye towards him, even at the farthest corner of the stage, Shakespeare evidently and naturally thought would be regarded as intelligible enough to so confidential a servant as Hubert, even though John's desire of getting Arthur into his power had not been pretty notorious. But in the present acting, the queen-mother does not really go *aside* at all. She remains in the front of the stage, almost in the middle of it, and so near to John and Hubert, that it is difficult to conceive of their talking together in ever so low a whisper without their being overheard by Arthur himself. To this palpable improbability is added one yet more painful to the eye and mind of the auditor. Instead of alternately bending and raising her figure, as if diverting the child's attention with some light and varied conversation, Elinor's representative remains stooping over him, and he looking up to her, in one unvaried posture, during the very considerable time occupied by the conference between Hubert and his master. There are some matters relative to arrangement and grouping on the stage, respecting which, perhaps, the auditor is better situated for judging than the manager himself. The case before us seems to be one of these, and deserving attention, since the defective arrangement here complained of can so easily be remedied, and, while it is continued, mars one of the most effective scenes of his own acting.

The Lady Blanch, occupying still less space in the piece than Queen Elinor, is one of those subordinate characters, as they are commonly called, which nevertheless demand very graceful and judicious acting. The part is in itself so slight, and yet so elegant, that we cannot help regretting to see such interest as the poet has given to it abridged by omissions in acting. The leaving out, indeed, of the beautifully descriptive lines—

If lusty love should go in quest of beauty,
Where should he find it fairer than in Blanch?
If zealous love should go in search of virtue,
Where should he find it purer than in Blanch?
If love ambitious sought a match of birth,
Whose veins bound richer blood than Lady Blanch?

is one of those curtailments which, we suppose, the necessities of the stage, as regards time, now render indispensable: but we can hardly admit any such plea as an excuse for omitting the short pathetic speech of Blanch herself, when her heart is torn asunder, as it were, by the fresh rupture which takes place between her husband's party and her uncle's, even on her bridal day:—

The sun's o'ercast with blood. Fair day, adieu!
Which is the side that I must go withal?
I am with both: each army hath a hand;
And in their rage, I having hold of both,
They whirl asunder, and dismember me.
Husband, I cannot pray that thou may'st win;
Uncle, I needs must pray that thou may'st lose;
Father, I may not wish the fortune thine;
Grandam, I will not wish thy wishes thrive;
Whoever wins, on that side shall I lose;
Assured loss, before the match be played!
Lewis. Lady, with me,—with me thy fortune lies.
Blanch. There where my fortune lives, there my life dies!

To suppress this passage, is to destroy the chief point of tragic interest about the character of Blanch, which consists in vividly showing her as the victim, in her torn feelings, of the triumph of political over domestic considerations.

Miss Fairbrother is playing what is left of this part *prettily;* that is, she *looks* pretty in it, for she cannot look otherwise. It would be well, however, if she could so far imagine herself to be the high-blooded "daughter of Spain," as to throw more dignity into her air and her delivery—that same graceful majesty in *carrying the head* is so very, very hard to acquire.

As for the few sentences that have to be spoken in "Lady Faulconbridge," they are delivered, perhaps, as adequately by Mrs. Selby as they would be by any other lady. We will only venture to suggest, that, in any case, the dramatist's conception of Philip Faulconbridge's mother, must have been of a lady whose personal charms might at some time have done honour to the choice of Richard Cœur-de-Lion. We say this, be it well observed, without in the least presuming to raise the delicate question as to how far the present Lady Faulconbridge fulfils this condition. It is just one of those points whereupon each auditor must be left to judge for himself.

OUR WEEKLY GOSSIP.

We beg to call the attention of all lovers of English literature to an advertisement in this day's paper. By this it will be seen that the authoress of 'Our Village' stands in need of the helping hand which it is always so pleasant to hold out to those who have delighted our leisure, and done our hearts good by their writings. It appears that, after a life of filial devotion, literary labour, and pecuniary sacrifice, Miss Mitford finds herself, on the death of her parent, burdened with obligations, which no exertions of her own could liquidate, without privations even painful to contemplate. We believe that simply to state these facts, is to spare her from them. Few have made so many far-away friends as Miss Mitford, and now is the time for all whom her healthy and amiable spirit has soothed in moments of weariness or vexation—whose national pride her engaging pictures of English rural life have gratified—to show that they remember and are grateful.

An important protection to literary property from foreign piracies is about to be extended by the new Customs Act, passed last session (5 & 6 Victoriæ, c. 47.), which comes into operation in the United Kingdom and West Indies on the 1st of April next, and in North America and the Mauritius on the 5th of July. In order, however, to carry this law into effect, it is necessary that the Commissioners of the Customs be immediately furnished with lists of copyrights still subsisting. Authors, owners of copyrights, and publishers should bear in mind, that, unless they comply with this regulation of the act, they will be excluded from the benefit of it. As this condition may not be generally known in the literary world, and every publicity ought to be given to it, we print here the clauses of the act:—

24, "And be it enacted, that from and after the said 1st day of April, 1843, all books wherein the copyright shall be subsisting, first composed, or written, or printed in the United Kingdom, and printed or reprinted in any other country, shall be and the same are hereby absolutely prohibited to be imported into the United Kingdom.

25, "Provided always, and be it enacted, that no such book shall be prohibited to be imported, *unless the proprietor of such copyright, or his agent, shall give notice in writing to the Commissioners of Customs that such copyright subsists*, and in such notice shall state when such copyright shall expire, and the said Commissioners of Customs shall cause to be made, and to be publicly exposed at the several ports of the United Kingdom from time to time, printed lists of the works respecting which such notice shall have been duly given, and of which such copyright shall not have expired."

It is needless to perplex the authorities at the custom houses with the titles of any books but such as are actually pirated, or are likely to be pirated abroad. The lists should be arranged alphabetically under the name of the author, to facilitate reference.

The *Falmouth Packet* announces that intelligence has been received from Captain Sir J. Ross, who has penetrated the Antarctic circle to 71° 40′, surveyed the coast discovered by him along its western boundary, and proceeded to do the same along the eastern line.—*The Times* (Friday) mentions that Lieutenant M'Murdo, of the *Terror*, has arrived in town from this expedition, which he left at the Falkland Islands all well, and in the highest spirits. He reports that Captain Ross had triumphantly accomplished every object for which the expedition was undertaken, and that the government at home, sensible of this, had left it entirely to Captain Ross's discretion, as to his returning home at once or remaining out for a longer period, for the purpose of exploring other objects of interest in this hitherto imperfectly known portion of our globe; that Captain Ross has made choice of the former, and that we may therefore expect the expedition home early in May. Lieutenant M'Murdo

Digitized by Google

also states, that in consequence of the excellent discipline observed on board the *Erebus* and *Terror*, and the great care and attention paid to the health of their respective crews, the expedition had lost but four men since leaving England; namely, one blown overboard in a gale at the Cape, another from some constitutional disease, and the other two from natural causes. Lieutenant M'Murdo is also the bearer of several specimens of grapes and seeds, collected at the Falkland Islands and various other places in the southern hemisphere.

Among the more interesting of the few announcements of new works which we have lately seen, are 'The Life of Addison,' by Lucy Aikin—'Arts, Antiquities and Chronology of Ancient Egypt,' by C. H. Wathen—and a 'Monasticon Scoticanum;' in reference to which it has been truly observed, that, while England rejoices in the labours of Dodsworth and Dugdale, Ireland in those of Archdall, and almost every country of Europe possesses some faithful record of those structures which the piety, of the men of elder days upreared, Scotland alone has no Monasticon.

At a meeting of the Metropolitan Improvement Society, on Thursday last, it was announced that the new Commission appointed by Sir R. Peel had commenced its inquiries, but had determined for the present to confine its attention to the question of the Thames Embankment. It was resolved to summon a meeting of the general committee for Wednesday next, to discuss this branch of the subject, and to consider how the object of the Commission and the public could be promoted by the efforts of the Society.

The papers mention that the sub-committee met last week to inspect Mr. Joseph's full-sized model of the statue of Sir David Wilkie, with which they expressed themselves well satisfied. They subsequently and unanimously voted the sum of 50*l.* to purchase a piece of plate for Mr. Peter Cunningham, the Secretary, in acknowledgment of his services. —They also announce the decease of Mrs. Seyffarth, better known as Miss Louisa Sharpe, whose exquisitely-finished costume-pieces were long an attraction at the Water-Colour Exhibition. After her marriage with a foreign Professor, Mrs. Seyffarth resided, we believe, principally abroad. Her death took place at Dresden on the 28th of January.

It is mentioned in the *Allgemeine Zeitung* that Lessing's celebrated picture of 'Huss before the Council of Kostnitz,' has been purchased at the price of 8000 thalers, for the gallery of Frankfort on the Maine; which has lately been enriched by many valuable works of art, and bids fair soon to become an excellent collection. We wish that some of our Town Councils would follow so worthy an example.

The *Kunstblatt* informs us that Schnorr, the distinguished German painter, has, together with his assistants, completed in three months six fresco paintings, each twenty feet long; and that another artist (Hess) employs thirty or forty assistants in the same art.

Mr. M'Culloch has been elected a Foreign Associate of the Institute of France, in the department of the *Académie des Sciences Morales et Politiques*, in the room of M. Simonde de Sismondi: M. Rayer, a member of the Academy of Sciences, in the place of the late M. Morel de Vindi: and the vacancy created in the Medical Section of the Academy by the death of M. Double, has been filled up by the election into that body of M. Andral.—The Minister of Public Instruction has bestowed a yearly pension of 1000 francs on M. Desgranges, a learned Orientalist, who has been for upwards of thirty years devoted to the study of Sanscrit, and whose elaborate grammar of that language is, at present, preparing at the Royal Press.—Speaking of Oriental literature, we may also mention, that the sale of the late Baron Silvestre de Sacy's valuable library, rich in Arabic, Persian, Turkish, and Syriac manuscripts, will commence on the 18th of April next, and that the first part of the catalogue, preceded by M. Daunou's notice on the life and works of the celebrated Orientalist, is just published.

At a meeting of the Royal Academy, on Friday (the 10th), Sir W. C. Ross was elected an Academician, in the room of Sir Francis Chantrey; Mr. J. Willmore an Associate Engraver; and Mr. H. Timbrell a Travelling Student.

It appears, from Mr. Lumley's *programme*, issued since our last, that Sig. Fornasari *is* coming—we presume, to replace Tamburini. Our correspondent of last week, in an explanatory communication, has forwarded some particulars of the career and recent performances of this artist, which cannot fail to be welcome. According to his obliging note,—

Signor Fornasari was engaged at the Teatro Regio at Turin during last winter, and at the beautiful Teatro Communale at Modena last spring, where he opened the season with Mercadante's 'I Normanni a Parigi,' sustaining the part of *Ordamante;* the tenor Pasini and Clara Novello sustaining those of *Odone* and *Berta*. He since appeared as *Belisario* and *Marino Faliero*. During last autumn he was at Trieste, and is now again at Turin, where he opened the season in the character of *Enrico*, in Coccia's 'Caterina di Guisa.' The news will soon arrive of his appearance in Mercadante's new opera, 'Il Reggente,' in which he will appear with Salvi, Ottavia Malvani, and Isabella Tadini.

This last young lady, we may add, is the Miss Trotter who appeared at the London concerts some seasons ago, as the pupil of Rubini.—To return to Mr. Lumley's announcement; neither Signora Brambilla, nor Signora Buccini, is set down in the authentic list; and the only lady announced, capable of discharging the important duties of a *contralto* is a Signora Ali, of whom we have never heard. However, the question is, perhaps, of less consequence, since the management will have Madame Albertazzi and Mrs. A. Shaw to choose between, should the new lady not succeed. A second *soprano* seems to be more urgently wanted; and, on the whole, the operatic engagements are on a more parsimonious scale than any we remember for the last nine years. Two operas, strange to our ears, are promised to vary the repertory of familiar pieces, and Donnizetti's most recent manufactures. These are, Paer's 'Camilla' and Herold's 'Zampa'—one of the few French musical dramas which has been Italianized with much success, since even Rossini's 'Guillaume Tell' has hardly taken root in Italy. We look forward with great expectation to the announced work by Sig. Costa. The *ballet* is to be more than usually strong,—Taglioni, Fanny Elssler, Cerito, Adele Dumilatre: these are brave names for those who care about *pirouettes* and pantomime: and we are to have a new gipsy story—'La Esmeralda'—and a new faery pageant—'La Naiade'—so that all lovers of the dance may have good reason to wish the Ides of March were come! The Opera House too, we have been told, has been painted and beautified *a little*.

A Letter from Constantinople, quoted in *The Times*, mentions that the Italian Opera company had been introduced into the Seraglio of the Sultana Validé, to perform the opera of *Belisario*, in the apartment newly fitted up as a theatre. "The Sultana and all the ladies took their seats, each with an opera-book in her hand, for the text, having been translated into Turkish, is now printed. The ladies listened very earnestly during the performance, and perused the books with great attention. The sympathy of one was strongly excited by the appearance of the blind Belisarius, and she became so moved by the representation of his distress, that she started up suddenly, and with expressions of pity threw a purse full of gold to him. This is the first time that any representation of this kind ever took place in the Seraglio, or that male footsteps were allowed to pass within this boundary."

The French papers announce that Victor Hugo's new play, 'Les Burgraves,' will be produced at the *Comédie Française* early in next month.—From Madrid, we hear of the enthusiastic success which has attended the production in that capital of a comedy by M. Martinez de la Rosa, entitled 'El Español en Venecia, o la Cabeza Encantado' ('The Spaniard in Venice, or the Enchanted Head').—The name of the illustrious refugee was given as that of the author, amid the shouts of the audience, "prolonged," say the accounts, "for upwards of a quarter of an hour."

A medal has lately been struck by the Austrian artist, Herr Cesar, at Rome, in honour of the celebrated mineralogist, Mohr. On one side is the profile of the mineralogist, on the other an open book with the four crystalline formations as taught by Mohr, and the bird of Minerva above it. A crown of oak, laurel and thorn, represents the merit and fame as well as the labour, and frequently the reward, attendant on all who tread the path of science and of truth. The legend "fecit saxa loqui" is imitated from the famed "Se saxa loquuntur in Salzburg."

A society has recently been formed at Wörgl, in the Tyrol, for excavating a spot where the old Roman town of Mascinacum is supposed to have stood.—The continental papers mention the discovery of a great quantity of old Roman silver coins in the Island of Gothland: that many Roman antiquities have been dug up near Utrecht: and that two small marble columns have lately been discovered in the ruins of Tusculum, with an inscription in old Latin, relating to a donation, at the consecration of a temple, from one of the family to which the celebrated Camillus belonged.

The length and interest of our Reports of the Lectures at the Royal Academy will, we are sure, excuse us for deferring till next week the Reports of the Asiatic and some other of the Societies.

BRITISH INSTITUTION, PALL-MALL.
The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS is OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1s.: Catalogue, 1s.
WILLIAM BARNARD, Keeper.

SCIENTIFIC AND LITERARY

GEOGRAPHICAL SOCIETY.

Feb. 13.—W. R. Hamilton, Esq. in the chair. The first part of a paper by Mr. Schomburgk, 'On the River Takotu, in British Guayana' was read. We reserve our report till the next meeting of the Society, when the reading of it will be concluded.

HORTICULTURAL SOCIETY.—*Feb.* 7.—J. Bateman, Esq., in the chair. Mrs. Hill, J. Gray, and R. C. Griffith, Esqs., were elected Fellows. Sir G. Staunton, Bt. exhibited portions of the stem of the Sugar Cane, from plants grown in a stove, where many attained 20 ft. in height; the specimens appeared to contain a full proportion of sugar. From Mrs. Lawrence, a collection of Orchidaceous plants, containing the beautiful butterfly plant, pure white, and of an elegant form; *Huntleya violacea*, a rare plant, bearing a curiously-shaped flower of a deep violet colour; *Zygopetalum crinitum*, having the violet markings of the labellum studded with glandular hairs of the same colour: a Knightian medal was awarded. From Mr. Beck, a collection of plants in slate pots, consisting of Epacrises, an Erica, *Coronilla glauca*, and several Hyacinths: the appearance of these plants, the former so difficult to preserve in health at this season, proves how erroneous were the assertions made, that plants would not grow in any material which was not porous. Mr. Beck, also exhibited slate boxes, some of them taken to pieces to show the close manner in which they might be packed: as the parts are secured together by screws this is easily effected. To the bottoms of the larger boxes brass rollers are affixed instead of iron, which usually stain where they are placed. From W. H. Storey, Esq., an *Erica sebana*, covered with light green drooping flowers, from which the dark brown stamens protrude in a remarkable manner. From Messrs. Veitch, a plant of the new *Tropæolum azureum*, bearing an abundance of its blue flowers, which were considerably darker than when exhibited at a previous meeting, and it is not improbable that as the plants acquire strength, the blossoms also will become of a deeper tint. Messrs. Veitch also exhibited *Stenorhynchus australis*, a terrestrial Orchidaceous plant, bearing spikes of singular light brick-red flowers. From Mr. Lee, well-bloomed specimens of *Pelargonium colleyanum*, and *album multiflorum*; the latter a variety of no excellence as a florist's flower, but the best kind for early forcing: a certificate was awarded for it. From Mr. Gaines, a well-bloomed specimen of *Camellia tricolor*, for which a certificate was awarded. From Mr. Cuthill, a seedling Camellia with red flowers, said to have been raised from seed obtained at Canton. Mr. A. Toward, gr. to H.R.H. the Duchess of Gloucester, exhibited a leaf fork, used at Bagshot Park: the tines are made of locust-wood, shod with iron, which renders it lighter than those wholly formed of that metal; from its size it is also capable of lifting a great quantity of leaves. From the Gardens of the Society, a collection of plants, amongst which were a handsome Acacia, called *A. rubida*, bearing long racemes of yellow balls of flowers, and remarkable for retaining longer than other kinds the two-fold character of its leaves, some being simple, others compound, upon the same branch: although not of so dwarf a habit as *A. verniciflua*, exhibited at the last meeting, it might nevertheless with

Digitized by Google

judicious pruning be kept within the limits of a small greenhouse. *Scuticaria Steelii*, a pretty species, with thong-like leaves and fragrant flowers, found in Demerara; *Dendrobium discolor*, producing a raceme of dingy flowers with singularly twisted segments; *Spiranthes cernua*, one of the terrestrial Orchidaceæ which abound in Mexico and Guatemala, with curious wax-like flowers, worthy of cultivation on account of its unusual appearance, as well as for the facility with which it may be grown, and the time it continues in bloom; *Lycaste lanifera*, lately introduced by Mr. Hartweg, with pale green flowers; *Begonia vitifolia*, not a showy species, but valuable for blooming at this period.

LINNEAN SOCIETY.—*Feb.* 7.—E. Forster, Esq., in the chair. E. Forbes, Esq. was elected a Fellow. The Rev. Mr. Hinckes exhibited a specimen of *Neottia gemmipara*, procured from Castletown near Bantry Bay, where this plant was originally found by Mr. J. Drummond, and on whose authority it was admitted into the Irish Flora. The original specimen from Sir J. E. Smith's herbarium, was also exhibited. The plant of Mr. Hinckes was much longer in the stem, and the flowers less crowded than that from Smith's herbarium. The roots agree with the description and drawing of Mr. Drummond. A note from Mr. Hinckes accompanied the specimen, in which he stated his conviction that this rare plant was still an inhabitant of Ireland. Mr. A. H. Hassall finished the reading of his paper on the reproduction of the Confervæ. The structure of the last family of Vancher, the Prolifera, was considered, also that of the branched Confervæ. Their mode of reproduction, and many of the phenomena exhibited by the reproductive granules, or zoospores, of this class of plants, were described.

MEDICO-BOTANICAL SOCIETY.—*Feb.* 8.—Earl Stanhope in the chair.—Dr. Houlton read a communication on the *Artemisia absinthium*.

Some Remarks by Mr. Lukin on the sweet acorns of Portugal were afterwards read.—The sweet acorns are the fruit of the ayinheira—the *Quercus ilex* of Linnæus. It is a tall tree, very frequent in the forests south of the Tagus, but rarely found north of that river. It is extensively planted in the oak woods of the Alemtejo, for the hogs, which are driven in large herds into the woods, to fatten on the fruit. There are two other trees, quite distinct in character, which produce sweet acorns, and are found in the same woods, but are not frequent.—1. *Quercus rotundifolia*, of Lamarck.—2. *Quercus ballota*, of Des Fontaines. Brotero, in his 'Flora Lusitaniæ,' considers both these as varieties of the former. They are smaller trees; all three are evergreen, and the fruit so similar, that it is difficult to distinguish them without seeing the leaves. These acorns, roasted like chesnuts, are served up with the dessert in Spain and Portugal. They are much eaten, when roasted, by the peasants. That this custom of eating acorns is of some antiquity, may be seen by referring to a very humorous letter in Don Quixote, in which Cervantes represents Theresa Panza as sending a peck of ballotas to the Duchess, in acknowledgment of the hospitable reception her husband Sancho had met with at the castle.

MEETINGS FOR THE ENSUING WEEK.

Mon. Statistical Society, 8.
— Institute of British Architects, 8.—'On Church Building,' by G. Godwin.—'A Description of the Walhalla, recently erected from the designs of Von Klenze, translated from the German,' by J. Woolley.
— Royal Academy, 8.—Sculpture.
Tues. Horticultural Society, 2.
— Institution of Civil Engineers, 8.—'Account of Experiments on the Comparative Strength of Solid and Hollow Axles,' by J. O. York.—'Description of the American Engine 'Philadelphia,' used on the Birmingham and Gloucester Railway,' by G. D. Bishopp.—'Description of Lieut. Rankine's Spring Contractor, for suiting the action of the Spring of Railway Carriages to variable loads.'
— Linnean Society, 8.
— Electrical Society, 8.
— Chemical Society, 8.
Wed. Geological Society, half-past 8.
Society of Arts, 8.—Mr. Day 'On Ventilation, &c. by a new system.'—Mr. Inekes 'On his Patent Furnace.'
— Medico-Botanical Society, 8.
Thurs. Royal Society, half-past 8.
— Royal Society of Literature, 4.
— Royal Academy, 8.—Painting.
— Numismatic Society, 7.
— Society of Antiquaries, 8.
Fri. Royal Institution, half-past 8.—Dr. Carpenter 'On Cells, as the chief instruments of Animal and Vegetable Functions.'
— Philological Society, 8.

FINE ARTS

BRITISH INSTITUTION.

THE "statistics" of this Exhibition give four hundred and thirty-one pictures presented to the public, and *four hundred and sixty* returned. To imagine half a thousand works inferior to the majority of those here displayed, is to conjure up visions of pretension and inferiority so disheartening as to shake the firmest critical nerves. There are no contributions this year from Mr. Turner—none from Mr. M'Clise; but Mr. Patten has sent his *Hymen burning the Arrows of Cupid*; Mr. Hollins, his *Juliet and County Paris*; Mr. Howard, his *Aaron staying the Plague*; Mr. Haydon, his *Curtius*; Mr. Brigstocke, his *Alnaschar*; Mr. Danby, his *Tempe*; and there are life-size compositions from Shakspeare and Scott, by Messrs. Von Holst and Goodrich,—to say nothing of a *Hagar* by Mr. Stevens—from which it may be augured that Ambition is not asleep. And yet, alas! on looking at the manner in which she approaches the desired goal, we are compelled to admit that her gait is rather like

> —the motion of a drunken man,
> Who steps sedately, just to show he can,

than the well-assured step of one unwearied in enterprise, and hopeful as to its result.

No. 1 of the Catalogue is Mr. E. Landseer's *Not so easily caught*—a reynard musing over a trap, in which a simpler quadruped has found his fate. We have had many better specimens of our artist's peculiar genius, and many worse; since here is the appearance, at least, of greater solidity than some of his recent superficial, but exquisitely-textured works present. Hard by hangs Mr. Stark's *Lammas Meadow* (No. 2), one of its painter's best *pollard* landscapes. No. 5, Mr. Egg's *Scene from the Devil on Two Sticks*, deserves mention, as a clever thing in its way. The faces are arch, the costumes pretty—but better than faces or costumes, is the quantity of light in the picture. The artist, we should divine, has been looking at the works of De Hooghe. We have already adverted to the great scene from *King Henry the Sixth* (17), by that most unequal of our clever men, Mr. Von Holst. After the success of his last year's 'Ginevra,' the present piece of backsliding is doubly provoking. Here Mr. Von Holst displays all the faults of his old melo-dramatic style, and more than his old proportion of those lurid and leaden tones of colour, which have no part in flesh and blood, be the human emotions ever so solemn and tragical. Perhaps he has here tasked himself beyond his powers, since the Middle Room contains a fancy head, the *Water Witch* (168), which is almost as charming after its kind, as the haunting mermaid's song in poor Weber's 'Oberon.'

In No. 18 the public encounters its old favourite, Mr. Etty, in a new character—as a landscape painter. The scene is the Thames—the time, evening—the figures, men bathing from a boat. Slovenly as is this little sketch, which, indeed, might almost have been rubbed in by the elbow, not hand, of the designer;—it caught our eye by the perfect tranquillity of its repose; and on returning to it, we could not but earnestly regret that its artist should so presume on his knowledge of colour, as to hold himself absolved from the hand-work, which would have made this picture permanently attractive to the few, though for the many it be lost amid the yellows and greens of the Exhibition Room. By the way, we are sorry to see that one of our cleverest landscape painters, Mr. Lee, is yielding to these seductive gaietics. His taste tended, formerly, too exclusively towards the cloudy and sombre: now, emancipated from this, he riots in crude gold and emerald tints, which no time can tame into a moderate harmony: *vide* his *Scenery on the Borders of Dartmoor* (31), see also his *Avenue, Shobrooke Park* (45). In the latter, however, the anatomy of his trees is too admirable and masterly not to deserve hearty praise. From this digression we must return to another picture of *Bathers* (34), by Mr. Etty. Here we have our painter on his own domain again, revelling in rich carnations, pearly shadows,

> Love-darting eyes and tresses like the morn.

The knight must be a St. Anthony in mail, who could pass unmoved on his way, if he chanced to peep through parted boughs at these nymphs of the fountain. There is no contemporary colourist who can evoke so strong a spell; and in this lies Etty's strength. In his *Sketch for a large Picture of Christ blessing the Children* (40), he reveals his weakness—overdoes the peculiarities of the Venetian school, but without indicating its excellencies. Cagliari and Tintoretto were not spiritualists; but the one could compose, as the 'Marriage of Cana' familiarly attests; and the other draw, as all who remember the startling picture of St. Mark and the Slave in the Gallery at Venice, will admit.

The strength of England—in more senses than one—is typified in Mr. E. W. Cooke's *View at the Mouth of the Thames* (39). This is an admirable marine picture of one of the most animating scenes to be found in the world. So brightly astir are air and water, that the work might have been painted according to the practice of Van Goyen (we believe), who is said to have gone out to sea in all weathers, and to have dashed in his effects from life on shipboard. Mr. Cooke has obviously his eyes fixed upon future fame as well as present profit, by the careful finish he bestows on his works.

A second admirable marine landscape which we cannot but mention here, as another of "our jewels," is Mr. Creswick's *Rocks at the Land's End* (387). Nothing can be wider apart than the manner of these pictures. In Mr. Cooke's we have distance behind distance, each indicated by its rising sail, or that wreath of smoke, which, say what the poets will, has a picturesque of its own, to the eye as well as to the mind;—in Mr. Creswick's, the last bleak rocks of England, and, beyond, an all but illimitable horizon of rippling green waters, suggesting the power and vastness of Nature's barrier, as emphatically as the other scene to which we have adverted intimates Man's activity. We have not often seen a more poetical picture than Mr. Creswick's; and rejoice in it the more, because it shows him resolved to widen his ground, and not to restrict himself to the peculiar class of subjects, or palette of tints, by the dexterous employment of which he won his reputation.

There are few of our domestic painters who keep so constantly near excellence, without reaching it, as Mr. Redgrave. The cause of this, as we have often observed, is timidity of hand, the inevitable result of imperfect education, since expression is rarely wanting. Here, for instance, in the picture of *Bad News from Sea* (42), the story is simply and naturally told, the composition unforced, and the picture carefully painted, but the effect is feeble and unsatisfactory. Whether it be from a like want of sound elementary study—a knowledge of principles—we are not prepared to say, since the subject affords less opportunity for judging, but the clever picture we shall next notice, Mr. Morton's *Jew Merchant* (46), is, with all its cleverness, a partial failure. At all events, we could not but fancy it more like some fine-looking old man masquerading as an Israelite, than one of the itinerants belonging to the people, whose dignity of beard and brow is intermingled with characteristics less amiable and engaging.

Our next marginal notes on the catalogue are opposite to the *Welsh Guides* (61) of Mr. Collins, and to Mr. Charles Landseer's *Dying Warrior* (66): both fair specimens—we dare not add more—of their artists' peculiar powers. Mr. Elmore's *Window in Rome during the Carnival* (67) is a dainty piece of painted coxcombry, worthy a better place than the *break-back* position to which it has been abased. We then come to Mr. Frith's *Duel Scene from Twelfth Night* (69), which, with all its clever points of "favour and prettiness," is not Shakspearian, else would not Viola wear a look which reminded us involuntarily of Master Slender. He is more at home with *Dolly Varden* (83), whom he has caught at that critical moment when she was tripping home through the wood, dressed in her best, admiring the bracelet on her pretty arm, but the arm itself still more. In fact, as we have elsewhere said, coquetry is his *forte*.

We must pass another beautiful landscape by Mr. Creswick (103), *The Way across the River*, and Mr. Stone's pair of female heads—an insipid *Helena* (107) and a meretricious *Nourmahal* (108)—with merely a hearty expression of vexation at Mr. Stone's perversity in returning again and again to the paltrinesses of the *boudoir* school, that we may give a few words concerning one of the gems of the Exhibition—Mr. Goodall's *Rustic Music, Brittany*, (114). In some important requisites this is a great advance on any work by this promising young artist. Finish he had

Digitized by Google

before, but to this he has added brightness of tone and dexterity of hand. The central group on the steps, of girls and children listening to the *vielle*, and admiring the uncouth dance, which keeps time to the wiry drone of the instrument, is capitally painted. But then the composition might have been improved: the group to the left seems to us to want connexion with the main subject, and the figures are not clear of that worm-like meagreness, which was a drawback even to some of Wilkie's best compositions.

We have seen better landscapes by Mr. Stanfield than his *View of the Islands of Ischia and Procida* (120), though there is something to admire in all his works. Having said this, and pointed to a graceful group of *Neapolitans Gipsying in a Wood* (138), by Mr. Severn, as a pretty cabinet picture, we will leave the other pictures in the Middle and South Rooms for a future notice.

MUSIC AND THE DRAMA

DRURY LANE.—If to pain and perplex were the end and aim of tragedy, Mr. Browning's poetic melodrama, called 'A Blot on the 'Scutcheon,' would be worthy of admiration, for it is a very puzzling and unpleasant piece of business. The plot is plain enough, but the acts and feelings of the characters are inscrutable and abhorrent, and their language is as strange as their proceedings. The subject is of Spanish nature in an English guise—revenge for a stain on the honour of an ancient and noble house being the main passion. *Lord Tresham* is as proud and fierce as a Castilian, and as jealous of "a blot on the 'scutcheon" of his family. In the first scene, *Earl Mertoun*, a gallant youth, "noble among the noblest," appears, a suitor to *Lord Tresham* for his sister's hand; in the next, he enters her chamber-window at midnight, a cherished lover. The brother learns his sister's shame, and accuses her before her kindred of the double baseness of inveigling an honourable lover while harbouring a paramour: yet she is silent, although a word would have averted the catastrophe that follows. *Lord Tresham* waylays the nocturnal visitor; they cross swords, and the lover falls mortally wounded, though he had revealed himself as *Earl Mertoun*. The slayer, who but the moment before spurned his adversary as a "miscreant," now repents: he seeks his sister's chamber, to whom he imparts the horrible tidings; she blesses him and dies; and he dies also. A few of the audience laughed, others were shocked, and many applauded; but it is impossible that such a drama should live, even if it were artfully constructed, which this is not. The acting of Mr. Phelps and Miss Helen Faucit, as the brother and sister, and Mr. Anderson as the lover, though not faultless, was powerful and effective. The farce that followed, 'A Thumping Legacy'—which, from the neatness and ingenuity of the contrivances to produce comic situations, we guess to be a translation from the French—was the more amusing for the foregone horrors; and very droll Keeley is as an innocent cockney, who has been decoyed out to Corsica for the purpose of perpetuating a family feud, and is kept in a constant state of terror and dismay by the alternatives presented to his choice of killing and being killed.

COVENT GARDEN.—This theatre, on Monday, was disgraced by a scene of uproar and confusion, caused by the attempt of a person named Gregory, understood to be the editor of the *Satirist* weekly paper, to personate the character of Hamlet; his pretensions to take so prominent a position resting on some celebrity acquired as the principal member of a corps of amateurs calling themselves the "Shaksperians." The indignation of the audience burst forth on his entrance in loud yells and execrations; interspersed with epithets fitted only to the vilest of the vile, and mingled with shouts of applause from a party of his supporters: the individual thus assailed stood unflinching, and, the clamour continuing, he proceeded with imperturbable coolness to enact the part in dumb show. He attempted to address the audience, but this only redoubled the fury of the storm; even Mr. Bartley, who came forward in the absence of Mr. Bunn, could with difficulty get a hearing: the opposition becoming more fierce and determined as the performance continued, Mr. Bartley very properly dropped the curtain in the middle of the second act.

ST. JAMES'S THEATRE.—*French Plays.*—The repertory of Madame Albert is precisely that section of the French dramatic library which least interests us: consisting of feeble sentimental comedy, or vapid farce, in which costume is half the fun. In the former she is distanced by Mdlle. Plessy, because of her beauty,—in the latter by Mdlle. Déjazet by reason of her wit. Hence, on Monday evening, while we gave full credit to her cleverness and womanliness as an actress, we were thoroughly tired by 'L'Ami Grandet,' and 'La Meunière de Marly.' The first is anything but agreeable as a comedy. It is true that a certain poetical justice is administered in the shape of a strong and *finishing* lesson to coquetry, but then the physician is a bore, little better bred or entitled to interfere between lady and lover, than the 'Voisin Raymond' of Paul de Kock's clever but vulgar novel:—while one of the artifices employed at his instance, is so gross and unmanly that we must think meanly of the woman, who, after having been so cruelly practised upon, could retain any lurking fondness for the man who, however great the provocation, had exposed her to misconstruction and insult. Though 'L'Ami Grandet' be neatly written, it is still tiresome: and the only antidote to the tediousness of its dialogue, was to be found in the face and demeanour of M. Cartigny, who had imitated (so we fancied) M. Samson of the *Théâtre Français* so closely, as to have even made up his features for that clever actor's whimsical expression. A few nights more, and Madame Albert must cede her place to the pouting, the prettiness, and the incomparable costumes of Mademoiselle Plessy.

MISCELLANEA

Lotteries—Little-goes—Sweeps—Nationals—Polypicnics—Ham, Tongue, and Twelfth-Cake 'Distributions.'—We have this week to add to our catalogue Mr. Boys' "*Distribution*," by which he proposes to raise 12,000 guineas. This, Mr. Boys honestly sets forth, "is essentially and professedly *a trading*, with a view *to individual profit*;" and he further states, that he enters into it in "*self-defence*." We have, therefore, only to class the project among those things which the law declares to be "public nuisances," and to express our regret, that tradesmen should be driven, by the illegal proceedings of others, to have recourse to such desperate expedients. We fear, too, that the provincial dealers find these lotteries necessary, or profitable; for we have seen an advertisement of a "West-Riding Art-Union," which also is acknowledged to be a "commercial speculation;" and we read of an association in Scotland for the purchase, and distribution by "ballot," of engravings, the subscription to which is five shillings. The journals of the week also make mention of a scheme for a grand national "Book Distribution;" each subscriber, of course, to have the "full value" of his guinea in books at, as Mr. Boys significantly says, "the usual publishing price," while whole libraries of 1000 and 2000 volumes are to form the prizes: and we are promised the particulars of a "Distribution" of "Cutlery," and of a "Furniture Distribution," which just now, among the humbler classes, occupy a good deal of attention. And these things, in a country which has denounced all lotteries as immoral and illegal, and sacrificed half a million annually of revenue rather than tolerate them!—a country which in this, and in other self-sacrifices, has set an example to the world, which though slowly, the world, we believe, is disposed to follow—for the *Leipsic Gazette* of last week announces that the Austrian government is about to adopt measures for restricting the lottery system, as a preliminary step *to its total abolition*. Yet England is not only to be demoralized by its own pestilent race of gamblers, but foreigners are to come here and traffic on our credulity. Every season, our readers must have observed advertisements, instructing them to whom to apply at Hamburg for tickets in the continental lotteries; this year we observe that the parties have grown bolder, and ventured to give an address in London; and the following appeared this week in the *Post*,—

"DISPOSAL of the magnificent HOTEL BYRON, on the Lake of Geneva, by shares, value 1,200,000 francs. This princely residence, together with other houses, vineyards, &c., is to be sold *in shares*, according to a plan, prospectus of which may be had ——— Strand; ——— Regent Street. Shares, 15*s.* each. *The drawing* will take place on the 1st of September, 1843."

But we are told that these things are not illegal. By whom? The *Post*?—which last week observed:—

"*Art-Unions.*—The public may not be aware that every subscriber to either of the Art-Unions is liable, by act of Parliament, to a penalty of 20*l.* which can be enforced by any common informer."

By the *Morning Herald*, which has, we are informed, given a like hint to its readers? No, it is by the schemers themselves! We do not choose to enter into controversy with such parties—as Lord Brougham says, in his reply to M. de Tocqueville, we are "very far indeed from desiring to imitate" their "abusive and unbecoming style." But respecting the law on this subject, a few words may not be without use. We will acknowledge at once that we are no lawyers; but it surely needs no professional study to assert, that all schemes by which prizes are distributed by lot are lotteries; and as we have shown by quotation from the several acts of Parliament (*ante*, p. 117) the law declares that all lotteries are "*public nuisances*," and that all persons "*convicted of setting up or keeping*" lotteries or little-goes, whether to be decided "*by dice, lots, cards, balls, or other numbers or figures, or any other way*," [can words be more comprehensive?] shall forfeit 500*l.*; and that all who "*therein shall adventure*," &c. shall be subject to penalties set forth in the act, and if they cannot pay them they are to be sent "to the common gaol of the county, for any time not exceeding six months."

And now a few words in conclusion respecting "the *proof of The Lattice*." Mrs. Parkes stated that she had "compared a print of *The Mantilla* with *a proof of The Lattice*," on which Mr. Moon forwarded to us a letter from Mr. Lloyd, wherein Mr. Lloyd asserted that the statement was "a *pure fabrication*, such a thing as the latter never having been in existence, a proof of *The Lattice* never having been either sold, advertised, or even *printed*." The italics are his own. Mrs. Parkes forthwith settled the point conclusively, by *producing* to us a proof of *The Lattice*. Still, we understand, there are persons who affect to believe that we must be in error. There is no error, and there shall be no error; and therefore we have resolved to exhibit at our office in Wellington Street, between 12 and 3 o'clock on Monday and Tuesday, a *Proof* (known by the open letters,) of *The Mantilla*, published in 1838, dedicated to Sir G. Villiers, by "his much obliged servant, F. G. Moon"—a *Print* (with the letters coloured)—and the *Proof* (with open letters), under the name of *The Lattice*, published in 1842, "by &c. servants, the Proprietors."

Splendid Meteor.—A little after 8 in the evening of Sunday the 5th a meteor passed over a considerable part of the north of the county of Nottingham. Its course was from the N.W. It greatly resembled a large body of fire of a blood red colour, assuming various shapes. Its apparent height was trifling, but its velocity could not be less than 50 or 60 miles a minute. In its course it was seen by numbers at a distance from each other, yet those who observed it, although so many miles asunder, fancied it fell within a short distance.—*Nottingham Journal.*

Julia Cæsarea.—The following is an extract from a letter written from Algiers by an artillery officer, and communicated to the Academy of Belles Lettres. "I have just spent some days amidst the ruins of Julia Cæsarea. I have some right to give that name to the modern Cherchell, since I have been the first to discover four inscriptions bearing the name of that ancient city. I have found many other less important inscriptions. Would that I could also place under your eyes the admirable Corinthian capital, the granite pillars, and the ancient tombs—the fellows of the *Kebor Roumiæ*, and, like it, no doubt, of Numidian origin. The English traveller Shaw mentions the gigantic wall of three leagues circuit which formed the enclosure of Cæsarea, but he says nothing of the period of its construction. I think that the erection of this wall must be referred to the second occupation of Africa by the Romans, when ancient civilization shed its first light on these shores. 'Many persons, reckless of the lessons of history, begin to appreciate the ancients when they find that our engineers have nothing better to do than to fortify themselves behind walls raised by engineers who lived fourteen centuries ago. The old part of this city also bears witness to the power of the Romans.'"

TO CORRESPONDENTS.—An Amateur—A. B. C.—C. de C.—M. N.—received.

POPULAR WORKS for the SEASON,

PUBLISHED BY

CRADOCK & CO. 48, PATERNOSTER-ROW, LONDON.

THE NEW LIBRARY OF USEFUL KNOWLEDGE.

*** Each Number of this popular series of Works contains 64 closely-printed pages, in foolscap 8vo., on fine paper, with a Vignette Frontispiece and ornamental wrapper, price only 6*d.*; a subject is, in all cases, complete in one number.

THE STUDY of BOTANY: a Familiar Introduction to that fascinating Science. (*Just published*). Price 6*d.*

THE FLOWER GARDENER'S MANUAL; containing Practical Instructions for the Cultivation and Management of Shrubs and Flowers, adapted to English Gardens. 6*d.*

THE KITCHEN GARDENER'S MANUAL; containing Practical Instructions for the Cultivation and Management of Culinary Vegetables and Herbs, adapted either to small or large Gardens. Price 6*d.*

THE FRUIT GARDENER'S MANUAL and GREENHOUSE COMPANION; containing Practical Instructions for the Cultivation and Management of Fruit Trees and Fruit-bearing Shrubs, with Directions for the Conservatory and Hothouse, adapted to small or large Gardens. Price 6*d.*

THE FARM and THE GARDEN; an Account of every Vegetable Production cultivated for the Table by the Plough and the Spade. Price 6*d.*

VEGETABLE PHYSIOLOGY; a Treatise intended to Explain, in a Concise and Lucid manner, the Structure and Functions of Plants, with a View to render the Study interesting and practically useful. Price 6*d.*

*** To the lovers of the Garden the above six works will be found extremely useful, perhaps much more so than books of greater pretence, and of five or six times their cost.

DOMESTIC ANIMALS: Instructions for the Management of Milch Cows, Pigs, Poultry, Ducks, Geese, Turkeys, Guinea Fowls, Pigeons, Rabbits, Bees, &c. Price 6*d.*

THE HORSE; its Habits, Diseases, and Mode of Treatment explained; with Advice to Purchasers, and Practical Directions for its Management in the Stable and on the Road. Price 6*d.*

DOMESTIC BREWING, a Hand-book for Families; containing the most simple and economical processes for ensuring a wholesome beverage, together with the most approved methods of making British Wines. Price 6*d.*

ENGLISH COOKERY; containing Practical Directions for Dressing Family Dinners, and every Useful Information required by the English Cook. Price 6*d.*

PRESERVING, PICKLING, and CONFECTIONARY, for the Use of Families; including Directions for making Pastry, Cakes, Jellies, and elegant Trifles for the Dessert, &c. Price 6*d.*

THE MOTHER'S MEDICAL ADVISER, on the Diseases and Management of Children. With Recipes. 6*d.*

THE PHYSIOLOGY of HEALTH; being a View of some of the more Important Functions of the Human Body, with Directions for the Management of Health. Price 6*d.*

THE CHRISTIAN RELIGION; an Account of every Sect, its Origin, Progress, Tenets of Belief, and Rites and Ceremonies, accurately described. Price 6*d.*

AUSTRALIA, VAN DIEMAN'S LAND, and NEW ZEALAND: their History and Present State, and Instructions for Emigrants. With a Map. Price 6*d.*

CHINA, AS IT WAS, and AS IT IS; with a glance at the Tea and Opium Trades. To which is added, the Terms of the Peace just concluded, and an Account of the Five Ports opened to British Trade. Price 6*d.*

THE STEAM ENGINE familiarly Described, with a Brief Account of its History and Uses. With numerous Engravings. Price 6*d.*

COTTON from the POD to the FACTORY. A Popular View of the Natural and Domestic History of the plant; the adaptation and improvement of the raw material; with the Rise and Progress of the Cotton Factory to its present state of perfection, and Improvement in Dyeing and Bleaching. Price 6*d.*

A WEEK in LONDON, or how to View the Metropolis with all its National Establishments, Public Buildings, Exhibitions, &c., in Seven Days; with a Vignette Map of London. Price 6*d.*

THE YOUNG MAN'S MENTOR, on his Entrance into Life; with Rules for his General Conduct after Leaving School. Price 6*d.*

GEOLOGY; a Clear and Concise Introduction to a Knowledge of the Principal Facts of that Interesting and Popular Science. Price 6*d.*

Useful Works for the Garden, the Farm, the Veterinary Surgeon, the Housekeeper, &c.

THE GARDENER'S MANUAL, containing Practical Instructions for the Cultivation and Management of the Flower, the Fruit, and the Kitchen Garden, with the Hothouse, Greenhouse, and Conservatory, adapted to either small or large Gardens. New edition, in foolscap 8vo. price 2*s.* cloth lettered.

NEW AND ENLARGED EDITIONS OF CLATER'S POPULAR WORKS,

By W. YOUATT, Esq., Author of 'The Horse,' 'Cattle,' &c. And W. C. SPOONER, Esq., Veterinary Surgeon.

CLATER'S EVERY MAN HIS OWN FARRIER; containing the Causes, Symptoms, and most approved Methods of Cure of the Diseases of Horses and Dogs. By FRANCIS CLATER, and his son, JOHN CLATER. The 28th edition, edited and enlarged, with a fine Frontispiece and Vignette. Price 6*s.* cloth boards.

CLATER'S EVERY MAN HIS OWN CATTLE DOCTOR; containing the Causes, Symptoms, and Treatment of all the Diseases incident to Oxen, Sheep, Swine, Poultry, and Rabbits. By FRANCIS CLATER. The 9th edition, in 12mo., edited, revised, and almost re-written, with a fine Frontispiece and Vignette. Price 6*s.* cloth boards.

CRADOCK & CO.'s USEFUL WORKS—continued.

THE COMPLETE GRAZIER; or, Farmer's and Cattle-Breeder's and Dealer's Assistant. Comprising every Thing Useful to the Farmer, the Country Gentleman, the Land Steward, and all interested in the Management of Land, Horses, Cattle, Sheep, Swine, Poultry, &c., being a "Complete Body of British Husbandry," in its present Improved Practice, in a thick vol. 8vo. of nearly 700 pages, with numerous Embellishments of Cattle, Horses, Sheep, Pigs, Farm Implements, &c. The 7th edition, edited, and nearly re-written, by the popular Author of 'The Horse.' Price 17*s.* cloth lettered.

THE HOUSEKEEPER'S MANUAL, containing Practical Directions in English Cookery, Preserving, Pickling, Confectionery, Pastry, Cakes, Jellies, and Bread Making; Domestic Brewing, and British Wine Making of every description; for the use of small or large Families. New edition, in foolscap 8vo. price 2*s.* cloth lettered.

ORANGE, LEMON, CITRON, and SHADDOCK TREES, Olive Trees; Arabian, Catalonian, and Azore Jessamine Plants; some choice Italian Vines, bearing a large black grape, called Uva Troggia; Italian Cypress Trees, and Double Roman Tube-rose Roots.—J. BUTLER has just received his Second Importation of these Trees and Plants from Genoa, which may be seen at 155, Regent-street, London. Persons sending from the Country can have them forwarded to any part. The prices of Orange Trees are from 10*s.* to 30*s.* each. Also fresh Seltzer Water from the Rhine every fortnight.

PATRONIZED BY PRINCE ALBERT.

TO SKATERS.—SAFETY CAPES, 15*s.*, and SKATING GUARDS, for Learners, 7*s.* 6*d.* may be seen at the ALBION CLOTH COMPANY'S, Assembly Rooms, George-street, Edinburgh; and at G. A. CAPE'S, Tailor, No. 11, Old Bond-street, London. PARENTS are especially invited to inspect them before their boys venture, which they *will* do, on weak ice. No wearer of the Safety Cape can be drowned. Christmas, 1842.

H. WALKER'S NEEDLES (by authority the Queen's Own), with the new large eyes, are easily threaded, even by blind persons, and work with great ease, having improved points, temper, and finish. The labels are correct likenesses of Her Majesty and His Royal Highness Prince Albert, in relief, on coloured grounds. H. Walker's improved fish hooks, steel pens, hooks and eyes are recommended. For the home trade neat packages of needles or pens, from 1*s.* to 10*s.* value, can be sent free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value. Every quality, &c. for shipping. H. WALKER, Manufacturer to the Queen, 20, MAIDEN-LANE, WOOD-STREET, London.

PLATE ENGRAVED on REASONABLE TERMS.—J. PAYNE begs to inform the Nobility and Gentry that he has removed from 22, Fleet-street, to 16, Great Castle-street, Regent-street, where he will continue to engrave Silver and Plated Spoons and Forks, Table Knives, &c. with Crest or Cypher, in a superior manner, at 3*s.* per dozen. Waiters, Tea Sets, and other articles of plate engraved with Arms or Crest at equally reduced prices. Joshua Payne has engraved plate for several members of the Royal Family and many of the Nobility, specimens of which may be seen at his house, 16, Great Castle-street (one door from Regent-street), near the Polytechnic Institution.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and Name, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 1*s.* 6*d.* per quire: no charge for the die. Wafers from the die, 1*s.* per 100, or 6*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of onvelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY Terms: 3*l.* 3*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

KEENE'S PATENT MARBLE CEMENT.—This cement, which exceeds every other in hardness, is intended for interior uses, where strength and despatch in execution are required. From the smoothness of its surface, it is an advantageous substitute for wood in its application to skirtings, architrave, mouldings, &c., as it resists the action of fire, and keeps back vermin.

The coarse qualities form a paving not distinguishable from stone in colour and hardness, but of one-third the price. The best white quality takes a brilliant polish, and the scagliola made from this cement has a peculiar richness of colouring. The imitations produced in it of Florentine and other Mosaics, encaustic tiles, &c., for ornamental paving, are unequalled in their effect and moderate cost.

Keene's Cement has been applied with success for the altars of Catholic and other churches both in England and Ireland; and to its use in the Royal palaces, and Government buildings, besides numerous public and private works, the patentees can refer with confidence.

Patentees and Sole Manufacturers, J. B. WHITE & SONS, MILLBANK-STREET, WESTMINSTER.

Agents for its sale are appointed in the principal cities of the United Kingdom.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, Crests, &c. for book plates, in their proper HERALDIC COLOURS, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 3*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 7*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their Warehouses,

EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN,

or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*,, 14*s.* 12*s.*, and 8*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large, and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting books, Bibles and Prayers, gold and silver pencil-cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

KINAHAN'S L.L. WHISKY, WINE, and FOREIGN SPIRIT STORES, 25, KING WILLIAM-STREET, STRAND.—Messrs. Kinahan & Co. of Dublin, beg to call the attention of the Public to the above Establishment, where they can be supplied in any quantity with those choice Wines and Spirits for which their Dublin house has been so long celebrated. KINAHAN'S L.L. WHISKY (six years old) is well known to be the purest and most wholesome spirit ever imported. Prime Gin, Brandy, Rum, &c.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s.	*d.*		*s.*	*d.*
Table Spoons and Forks, per doz.	16	6	Mustard Spoon	0	6
Dessert ditto, ditto	12	6	Tea Spoons, per dozen	5	6
Fish Knives	5	6	Gravy Spoons	3	6
Soup Ladles	6	6	Salt ditto	0	6
Sauce Ladles	1		Sugar Tongs	1	0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 35*s.*; a best Gothic border 30-inch Japan tray, 12*s.*; a dozen ivory table knives, 11*s.*; dessert ditto, 9*s.*; a pair of carvers, 4*s.* 6*d.* A Palmer's Candle Lamp, bronze or lacquered, 9*s.*; a solar ditto, to burn common oil without smoke or smell, 25*s.*; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1*s.* each; best ivory-handle razors, 3*s.* 6*d.* per pair.

41 and 42, Barbican, and at 16 Norton Folgate.

INFLUENZA, COUGHS, AND COLDS.

SIMCO'S ESSENCE of LINSEED is the most efficacious remedy ever discovered for the relief of persons suffering from Influenza; the two first doses generally arrest the progress of this distressing complaint, and a little perseverance completely removes it. Children's Coughs, as well as recent ones in adults, will be removed by a few doses (frequently by the first), and asthmatic persons, who previously had not been able to lie down in bed, have received the utmost benefit from the use of it. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate-street Without, London, and all Medicine Vendors, in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.—This is an efficient White Powder for the Teeth, solely prepared from *Oriental Herbs* of the most *delightful odour*, and of sovereign virtue for *strengthening, preserving, and thoroughly cleansing the Teeth.* It eradicates *Tartar* from the Teeth, removes *spots of incipient decay, polishes* and *preserves* the enamel—to which it gives a *pearl-like whiteness*; and, above all, from its *disinfecting* properties, gives SWEETNESS TO THE BREATH. As an *anti-scorbutic*, the *gums* also share in its transcendant powers. *Scurvy* is eradicated from them, a healthy action and redness are induced, that offer to the notice of the medical practitioner the most indubitable signs of their *healthful state.* Price 2*s.* 9*d.* per box, duty included.

☞ NOTICE—The Name and Address of the Proprietors, *A. ROWLAND & SON, 20, HATTON GARDEN, LONDON,* are engraved on the Government Stamp, which is pasted on each. Be sure to ask for "ROWLAND'S ODONTO." Sold by Chemists and Perfumers.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years: he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON.

To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off, a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.* and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

13, *Great Marlborough-street, Feb.* 18, 1843.

MR. COLBURN'S NEW PUBLICATIONS.

NARRATIVE OF
A VOYAGE ROUND THE WORLD,

Performed in HER MAJESTY'S SHIP 'SULPHUR,'

During the Years 1836–1842.

By CAPT. SIR EDWARD BELCHER, C.B. F.R.A.S. F.G.S. &c.

COMMANDER OF THE EXPEDITION.

UNDER THE AUTHORITY OF THE LORDS COMMISSIONERS OF THE ADMIRALTY.

In 2 vols. 8vo. with upwards of 40 Illustrations, price 36*s.* bound.

"There has been no work of such importance to all interested in nautical and geographical discovery, as Sir Edward Belcher's Narrative, since Captains King and Fitzroy's Voyage in the *Adventure* and *Beagle*. To place the services of the *Sulphur* and the intelligent officers and crew under the author's command properly before the public, would require considerable scope; but the following list of some of the places visited will assure the reader that such an immense field of observation has seldom been presented to him; and for so large a portion of it—Central America—it can scarcely be equalled in attraction:—Valparaiso, Panama, Realejo, Libertad, the Sandwich Islands, Port Etches, Port Mulgrave, Sitka, or New Archangel, in Norfolk Sound; San Francisco, the River Sacramento, Monterey, San Blas, Acapulco, Morro Ayuca, the Gulf of Papagayo, the Lake of Managua, Tepitapa, the Cocos, Callao, Parta, Guayaquil, Fonseca, Nicoya, Pueblo Nueva, Bais Honda, Bodega, San Francisco, Santa Barbara, San Pedro, San Juan, San Diego, San Quentin, San Bartholomeo, the Gulf of Magdalena, Cape San Lucas, Mazatlan, the Isles of Sorocco and Clarion, the Marquesas, Port Anna Maria, Nuhuhiva, Bow Island, Tahiti, Huakeine, Raratonga, Vavao (Tonga Group), Nukulav (Feejees), Tama (New Hebrides), Port Carteret (New Ireland), Britannia Island, New Guinea, Arimoa, Jobie, Pigeon Island (Dampier's Straits), Bouro, Amboina, Macassar, Great Solombo, Pulo Kumpal, Sincapore, China (where an active part was taken in the recent war), Malacca, Penang, Sumatra, Ceylon, Seychelles, Madagascar, St. Helena, Ascension, the Cape, &c. &c."

II.

THE THIRD VOLUME OF

LETTERS OF MARY, QUEEN OF SCOTS,

ILLUSTRATIVE OF HER PERSONAL HISTORY. Now first published from the Originals.

Edited by AGNES STRICKLAND,

Authoress of 'Lives of the Queens of England,' &c. 10*s.* 6*d.* bound.

"This is undoubtedly the most valuable, and by far the most interesting, work, illustrative of the life and character of Mary Stuart, ever given to the world.—*Edinburgh Ev. Post.*

III.

FREDERICK THE GREAT: HIS COURT AND TIMES.

Edited by THOMAS CAMPBELL, Esq.

The THIRD and FOURTH VOLUMES, COMPLETING the WORK.

"This Life of the Great Frederick will become a standard work in the libraries of England."—*Scotsman.*

IV.

THE HISTORY OF WOMAN IN ENGLAND,

AND HER INFLUENCE ON SOCIETY AND LITERATURE.

By MISS LAWRANCE,

Authoress of 'Historical Memoirs of the Queens of England from the Twelfth to the Sixteenth Century.' 1 vol. small 8vo. with Illustrations, 10*s.* 6*d.* bound.

"A work of universal interest to the reading world of all nations. The history and the claims of woman have never, till now, been undertaken in a wise and right spirit."
Naval and Military Gazette.

The following are nearly ready:

V.

HISTORY OF THE HOUSE OF COMMONS.

From the Convention Parliament of 1688-9 to the Passing of the Reform Bill in 1832.

By WM. CHARLES TOWNSHEND, Esq. M.A.

Recorder of Macclesfield. In 8vo.

VI.

THE HISTORY OF OUR OWN TIMES.

BY THE AUTHOR OF

'Frederick the Great, his Court and Times.'

Handsomely printed in small 8vo.

POPULAR NEW NOVELS,

Now ready at all the Libraries.

I.

THE MONEY-LENDER.

By MRS. GORE,

Authoress of 'Mothers and Daughters,' 'Mrs. Armytage,' &c. 3 vols.

II.

THE TUFT-HUNTER.

By LORD WILLIAM LENNOX.

3 vols.

"The interest of this novel is admirably kept up. Some of the comic scenes are worthy of Hook's pen."—*Age.*

III.

ADAM BROWN, THE MERCHANT.

By HORACE SMITH, Esq.

Author of 'Brambletye House,' &c. 3 vols.

"The public will place this work in the very first rank of our author's productions."
Weekly Chronicle.

IV.

THE KING'S SON:

A ROMANCE OF ENGLISH HISTORY.

Edited by MRS. HOFLAND,

Authoress of 'The Czarina,' &c. 3 vols. (Just ready.)

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

☞ *Orders received by all Booksellers.*

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS; and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh:—for IRELAND, J. Cumming, Dublin.

Digitized by Google

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 800. LONDON, SATURDAY, FEBRUARY 25, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. Baudry, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 26fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[James Holmes, Took's Court, Chancery Lane.]

VOLTAIC ELECTRICITY.—Professor DANIELL will commence his LECTURES on CURRENT AFFINITY and its Associated Forces, on MONDAY, February 27, at 3 P.M. To be continued on Tuesdays, Thursdays, Fridays, and Mondays, to the end of the Course.—For particulars apply at the Secretary's Office.

JOHN LONSDALE, Principal.

King's College, London, Feb. 18, 1843.

GEOLOGY.—A COURSE of EIGHT LECTURES will be delivered in the THEATRE of the MARYLEBONE INSTITUTION, 17, Edward-street, Portman-square, by CHARLES LYELL, Esq. F.R.S., to commence on TUESDAY, March 7, at 3 o'clock, and to continue on each succeeding Friday and Tuesday till the 21st of March. Tickets, 1l. 1s. for the Course. Tickets and Syllabuses to be obtained at the Marylebone Institution, and at Mr. Murray's, 50, Albemarle-street.

HOMŒOPATHY.—A COURSE of FIVE POPULAR LECTURES on the above Science will be delivered by JOHN EPPS, M.D., at the Western Literary and Scientific Institution, Leicester-square, to commence on FRIDAY, March 3rd, at Eight in the Evening, and each succeeding Friday. Tickets may be had at the Institution on the nights of Lecture, and at Mr. George N. Epps', Homœopathic Chemist, 112, Great Russell-street, Bloomsbury, 1s. single Lecture; 3s. the Course.—The entrance to the Theatre is in Princes-street.

ACADEMICAL DEGREES.—Gentlemen of LITERARY or SCIENTIFIC PURSUITS, MINISTERS, or Others properly qualified, desirous of GRADUATING, may RECEIVE EFFICIENT ASSISTANCE from the Advertiser.—Address (pre-paid), stating qualifications, to M. D., 15, Tottenham-court New-road.

A LADY, having just completed an Engagement of two years as RESIDENT GOVERNESS, is desirous of ENTERING a NOBLEMAN'S or GENTLEMAN'S FAMILY in the same capacity. Her course of instruction comprises English, French (which she speaks as a Parisienne), Writing, Arithmetic, Geography, with the Use of the Globes; Music, and Elementary Lessons in Dancing. Having filled a situation in Paris, she would be equally happy to engage with a family residing there, as in England. A situation in an Establishment for Young Ladies of high respectability would not be objected to in France or in England.—Address to U., 122, Sloane-street, Chelsea.

TO FAMILIES, OR TO LADIES INTENDING TO TRAVEL.

A LADY, Author of a work on Education, from which some estimate of her experience and her attainments may be formed, is desirous of making a new ENGAGEMENT as RESIDENT GOVERNESS in a Family, or to ACCOMPANY ONE or TWO YOUNG LADIES in TRAVELLING, as she has been twice on the Continent, and is acquainted with the French, Italian, Spanish, and German languages.—Address B. C. D., care of the Editor of 'Bent's Literary Advertiser,' Aldine Chambers, Paternoster-row.

THE GERMAN LANGUAGE in DRESDEN.—PROF. HUGHES, of the Royal Military Academy, Dresden, who has for upwards of thirty years resided in Germany, receives into his house and family (all of whose members, himself excepted, are Germans,) a few YOUNG GENTLEMEN, not under 16 years of age, who wish to become masters of the German language, for the acquirement of which with a good accent that capital affords such great facilities. His house is situated in Anton's Platz, near the New Post Office. For terms and other particulars apply (post paid) to Mr. Nutt, German Bookseller, 156, Fleet-street; or to Mr. Highley, Medical Bookseller and Publisher, 32, Fleet-street. The most respectable references will be given.

NATIONAL PAINTING.—TO BE DISPOSED OF, the Original finished Study of the DEATH OF NELSON, by A. W. Davis, Esq., (from which the large picture in Greenwich Hospital was painted), containing faithful Portraits of the Officers who were present at the time. Dimensions, 4 feet by 3 feet. May be viewed from 12 till 4, on application to Mr. C. F. James, 32, Edward-street, Portman-square.

LONDON LIBRARY, 49, PALL MALL.—Patron, HIS ROYAL HIGHNESS PRINCE ALBERT.—The Library is open for the issue of books to Subscribers, every day except Sunday, from 11 to 6 o'clock. The Committee have the pleasure to state that they have engaged a third room on the same premises, which will enable them shortly to open a Reading Room for the use of the Subscribers. The first Supplement to the Catalogue is also now in the press: it will contain about 4000 vols. in addition to the previous collection, making a total in the Library of above 17,000 vols., and will be published before the end of March.

Catalogues, Rules, and Regulations, &c. may always be had at the Library.

By order of the Committee,
J. G. COCHRANE, Secretary and Librarian.

LOVELL REEVE begs respectfully to invite the attention of Amateurs to his COLLECTION of EXOTIC SHELLS, now newly assorted, at very reduced prices. Gentlemen residing in the Country may have Specimens forwarded, named and priced, to make selection from at their leisure.

On the 1st of March will be published, price 10s. coloured, (size, Quarto,) No. II. of the

CONCHOLOGIA ICONICA: to include Drawings and Descriptions of every known Species of Shells, British and Foreign. No. III. on the 1st of April.

Lovell Reeve, Bookseller and Naturalist, 8, King William-street, Strand.

ORNAMENTS for the DRAWING-ROOM, Library, and Dining-room, in Italian Alabaster, Marble, Bronze, and Derbyshire Spar, consisting of Groups, Figures, Vases, Inkstands, Candlesticks, Tables, Obelisks, Watchstands, Paper-weights, &c., imported and manufactured by J. TENNANT (late Mawe), 149, STRAND.

STUDENTS in GEOLOGY, MINERALOGY, or CONCHOLOGY, can be supplied with an extensive assortment of SHELLS, MINERALS, and FOSSILS, or with Elementary Collections, carefully arranged and described, at 2, 5, 10, 20, to 50 Guineas each; together with Geological Models, Maps, Hammers, Books, Blowpipes, &c., by J. Tennant, Mineralogist to Her Majesty, 149, Strand.

RARE AND CHOICE BOOKS.

W. POTTER respectfully announces to the Literary world, that for several years he has issued a Monthly List of SECOND-HAND BOOKS, and that a very considerable portion of the most rare and curious Works, disposed of at the London Sales, are almost daily passing through his hands. His present List (Part 67) for March, being chiefly of an *uncommon, curious, or interesting character*; a Selection from the Libraries of the Marquis Wellesley, Sir Joseph Littledale, and Mr. Machell Stace, including a FINE and CHOICE ASSEMBLAGE of FACETIÆ ELEGANTIÆ SELECTÆ, EARLY ITALIAN, FRENCH, and ENGLISH NOVELLA and ROMANCE, &c. all in very fine condition. The List can be had *gratis* on application at 12, BEAR-STREET, LEICESTER-SQUARE. It will also be found appended to the present Monthly Part of the *Athenæum*.

W. POTTER HAS ALSO ON SALE

A COLLECTION of ANTIQUE GEMS, etched after the manner of Rembrandt, by Worlidge, on 182 Plates, with the additional ones of the larger Hercules and Medusa's head. Fine impressions, 4to. blue morocco extra, joints and gilt leaves, 4l. 10s. 1763

The above very choice copy cost its late Proprietor 9l., and the original cost was 25l. unbound.

ANCIENT COSTUME.—Choix de Costumes, Civiles et Militaires, des Peuples de l'Antiquité, leurs Instrumens de Musique, leur Meubles, et les Décorations Intérieures de leurs Maisons, d'après les Monumens Antiques, avec un texte tiré des Anciens Auteurs, dessinées, gravées, etc. par N. X. Willemin. 180 fine Plates, 2 vols. folio, calf gilt, marbled leaves, 4l. 14s. 6d. Paris, 1798

ANTICHE STATUE GRECHE e ROMANE, che nell' Anti-sala della Libreria di San Marco, e in altri luoghi publici di Vinezia si trovano, Eugini Zanetti disegnarona. 100 fine Plates, choice impressions, 2 vols. atlas folio, half-bound russia, gilt, 4l. 14s. 6d. Venezia, 1740-53

In this beautiful work every page of text is surrounded by a finely engraved classical border, each border of a different design, besides a large number of miniature Engravings.

BOTANY.—Le Botanique de J. J. Rousseau, ornée de 65 Planches, en couleurs d'après les peintures de T. P. Redouté, imp. 4to. bds. 3l. 3s. 1805

This splendid work is finely printed on vellum paper, and the publishing price at Paris 330 francs. The above copy cost its late owner 7l. 7s.

MUSEO PIO CLEMENTINO, Statue, Bassi Relievi, &c. con descrizzione VISCONTI.—MUSEO CHIARAMONTE.—ICONOGRAFIA GRÆCÆ ROMANÆ, with numerous Engravings: together, 13 vols. 8vo. bound in 12, new half calf extra, the leaves gilt, 6l. 15s. Milano, 1818-30-30

MUSEUM CAPITOLINUM, cum animadversiones J. Bottarii; with 284 fine large Plates of Statues, representing Emperors, Philosophers, Orators, Poets, the Dying Gladiator, Egyptian Deities, &c. 3 vols. folio, vellum, 2l. 12s. Rome, 1750

NIOBE.—Fabroni Dissertation sur les Statues appartenantes à la Fable de Niobe, with 18 fine large Plates, folio, neat, 18s. Florence, 1779

VASARI (Giov.) VITE de PITTORI, SCULTORI, e ARCHITETI, illustratur con Note, numerous Portraits, the most complete edition, 16 vols. 8vo. new, in calf, very neat, 6l. 6s. Milan, 1807-11

"In all investigations of Art, this work must form the substratum of our inquiries. It is a manual from which the greatest pleasure and information will be derived. Living just at the termination of its triumphant and palmy age, he preserved those materials for a History of Art, which, had he delayed his labours but a little later, must have perished."—*Quarterly Rev.*

Also the following Works relative to the CITY of LONDON.

HUNTER'S HISTORY of LONDON and its Environs; with an Historical Record of every important event from its Origin. Large Maps and Plates, large paper copy, 2 thick vols. 4to. calf extra, 1l. 18s.; published at Twelve Guineas unbound. 1811

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1s. An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at Metcalfe's Sole Establishment, 130 B, Oxford-street.

Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on TUESDAY, February 28, at 1 precisely,

A COLLECTION of ENGRAVINGS, the property of a distinguished Amateur, selected with judgment at a considerable cost, comprising most of the finest specimens of Foreign and British Art in the earliest states and in the choicest condition; among them may be particularly noticed The Last Supper, by Raphael Morghen, proof, with the white plate; Portraits of Raffaelle and Fornarina, by ditto, both before any letters; Marriage of the Virgin, after Raffaelle, by Longhi, proof before letters; Madonna di S. Sisto, by Müller, fine proof; Fishery, by Woollett; Satin Gown, by Wille; Jew's Harp, Rent Day, after Wilkie; and many others of rare occurrence.

May be viewed Saturday and Monday preceding.

THE WORKS OF ABRAHAM RAIMBACH, ESQ.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on WEDNESDAY, March 15, at 1 precisely,

THE PROPERTY, in ENGRAVINGS, of that eminent English engraver,

ABRAHAM RAIMBACH, Esq., deceased,

late Corresponding Member of the French Institute, and Member of the Academy of St. Petersburgh, being chiefly the Works after Wilkie, by the excellence of which the great reputation of both Painter and Engraver has been made familiar throughout Europe. They include rare states and fine early proofs of the Rent Day, Village Politicians, Blindman's Buff, the Cut Finger, Errand Boy, Spanish Mother, Parish Beadle, and Distraining for Rent, and a Collection of Prints of the Modern French and English Schools, and some Books of Prints.

May be viewed two days preceding, and Catalogues had.

THE WORKS OF SIR ROBERT KER PORTER, DECEASED.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on SATURDAY, April 1, (By order of the Executrix),

THE ORIGINAL WORKS in OILS, by this highly distinguished Painter, comprise a fine Altar-piece, from the Apocalypse, originally designed for St. John's College, Cambridge; the original Oil Sketches of the Siege of Seringapatam and the Battle of Alexandria; a beautifully finished Picture of a Battle in the Commonwealth; also several interesting Portraits, numerous Water-colour Drawings, and Sketches of Military Subjects; Views and Costumes in Russia, the Peninsula, the East, and in South America, &c.; a Portrait, by Van Dyck, others by different masters; Proof Impressions of the Siege of Seringapatam and other Engravings after Sir Robert Ker Porter's Works; Books and Antiquities, comprising Coins, Babylonic Cylinders, &c., collected during his travels in the East; together with some small pieces of Plate and other offerings of respect presented to Sir Robert by distinguished individuals.

Further notice will be given.

THE ORIGINAL WORKS,

And EXQUISITE COPIES IN OIL AND WATER COLOURS OF F. W. WILKINS, ESQ. DECEASED.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on SATURDAY, April 1st, at 1 precisely,

By order of the Executors,

THE ENTIRE COLLECTION of the Works left by that most distinguished Copyist in Water Colours, F. W. WILKINS, Esq., deceased;

whose peculiar talent in transferring to Water Colours, with all the power of Oils, the Works of the great Painters, has given him a reputation unrivalled. The copies, in most instances the size of the originals, are from the most celebrated and favourite Works of

L. da Vinci	Carracci	Titian	V. Dyck
Raffaelle	A. Sacchi	Velasquez	Teniers
S. del Piombo	C. Dolce	Murillo	Sir Joshua
A. del Sarto	Guido	Rubens	West.

Also some Original Pictures in Oil, and a few by Old Masters.

May be viewed two days preceding, and Catalogues had.

THE SCOTTISH PEASANT'S FIRESIDE: a Series of Tales and Sketches illustrating the Character of the Peasantry of Scotland.

By ALEXANDER BETHUNE, Labourer.

Mr. Bethune's former volume was thus noticed by *The Athenæum*—"It is the perfect propriety of his taste, no less than the thorough intimacy with the unobtrusive subjects he treats of, which gives Mr. Bethune's little book a great charm in our eyes." The work was reviewed in terms equally favourable by *The Spectator*, *Tait's Magazine*, *Chambers' Journal*, and other Periodicals.

A. & C. Black, Edinburgh; Longman & Co. London.

ELEMENTS of UNIVERSAL HISTORY, on a New and Systematic Plan; from the Earliest Times to the Treaty of Vienna. To which is added, a Summary of the Leading Events since that Period. For the Use of Schools and of Private Students. By H. WHITE, B.A., Trinity College, Cambridge.

This work is divided into three parts, corresponding with Ancient, Middle, and Modern History, and again subdivided into centuries, so that the various events are presented in the order of time; while it is so arranged that the annals of each country may be read consecutively. To guide the researches of the Student, the work contains numerous synoptical tables, with sketches of literature, antiquities, and manners at the great chronological epochs.

Oliver & Boyd, Edinburgh; Simpkin, Marshall & Co. London.

MECHANICAL PHILOSOPHY,

And its APPLICATION to the ARTS,

BEING THE THIRD PART OF

THE POPULAR CYCLOPÆDIA OF NATURAL SCIENCE.

By DR. W. B. CARPENTER,

Author of 'Principles of General and Comparative Physiology.'

The design of the Publishers in the present undertaking, has been to produce a connected series of Treatises upon the principal departments of Natural Science, founded upon such knowledge as every person of ordinary capacity possesses.

The high position in the scientific world of the gentleman to whom its execution has been confided, affords the best guarantee that the whole work will be completed in a manner worthy of its importance; and the Publishers refer, with much satisfaction, to the Treatises on VEGETABLE PHYSIOLOGY and BOTANY, already published.

It is intended that the following Treatises shall be produced during the present year, viz.:—

Part III. MECHANICAL PHILOSOPHY, and its APPLICATION to the ARTS, on February 28th.
IV. ASTRONOMY, with its PRACTICAL APPLICATIONS, on April 29th.
V. ANIMAL PHYSIOLOGY, Part I., July 31st.
VI. ANIMAL PHYSIOLOGY, Part II., September 30th.
VII. HYDROSTATICS, December 30th.

*** The attention of all parties engaged in Education is respectfully requested to this work.

Published by W. S. ORR & Co. London;

W. & R. CHAMBERS, Edinburgh; and W. CURRY, Jun. & Co. Dublin; of whom detailed Prospectuses may be obtained.

On the 1st of April will appear, price 3*s.* 6*d.* full coloured, Part I. of

A NEW EDITION OF

BETTS'S FAMILY ATLAS.

To be completed in FOURTEEN MONTHLY PARTS, each containing Four single or Two double Sheet Maps, and embracing ALL PARTS OF THE KNOWN WORLD.

The Proprietor has much satisfaction in appearing before the Public with a NEW EDITION of a work which has already elicited for him much public and private commendation, and of thus affording (he trusts to many individuals) the opportunity of supplying themselves with a valuable work at a very reasonable price, and on a plan which is found most convenient by a large portion of the community.

The present Edition will possess the advantage of the introduction of several new and very important Maps, and the whole work having also undergone a thorough revision, every new and important discovery and settlement will be found carefully introduced. The Maps of ENGLAND, WALES, SCOTLAND, and IRELAND, are on an unusually large scale, accurately showing the various lines of RAILROAD, the Turnpike and principal Cross Roads, Rivers, Canals, &c. (that of England and Wales alone embracing no fewer than 6,900 names.) The Maps of the BRITISH COLONIES are also on a large scale; and, as a whole, the Proprietor feels satisfied that the work will be found fully to support the character it has obtained, and he confidently anticipates even a larger share of patronage than on its first appearance. Extracts from a few Literary Notices of the former Edition are subjoined:—

"This work is correctly described in its title—it is a Good Family Atlas; compiled with care, executed with great beauty, and sold at a moderate price; and we observe that creditable exertion has been made to bring down the information to the latest moment."—*Athenæum.*

"This is a very elegant book of maps, the whole of which appear to have been got up with great care, and to be exceedingly accurate: they are printed from steel plates, and are remarkably clear....Mr. Betts deserves the thanks of the public for the manner in which he has executed his labours."—*Times.*

"Independently of these claims to notice, the cheapness of the work, and its elegance of appearance, must insure its popularity."—*Morning Herald.*

"In this, the expense of the old and elaborate, as well as the errors of the hasty and superficial, are happily avoided, and the *Family Atlas* is worthy of its name."—*Atlas.*

"The work is a valuable one: we have tested its accuracy in districts as familiar to us as the face of a country possibly can be, and we feel ourselves quite secure in recommending it to all who wish to supply themselves with a *first-rate Atlas.*"—*Conservative Journal.*

FOR THE USE OF

SCHOOLS, PRIVATE STUDENTS, ARTISTS, AND MECHANICS.

It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics these little works will be particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

I.

Fourth Edition,

A SYSTEM

OF

POPULAR GEOMETRY;

Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading truths and great principles.

By George Darley, A.B.

Price 4*s.* 6*d.* cloth.

II.

New Edition, (just published,)

COMPANION

TO THE

POPULAR GEOMETRY;

In which the Elements of Abstract Science are familiarized, illustrated, and rendered practically useful to the various purposes of life, with numerous Cuts.

By George Darley, A.B.

Price 4*s.* 6*d.* cloth.

III.

Third Edition,

A SYSTEM

OF

POPULAR ALGEBRA;

WITH

A Section on PROPORTIONS and PROGRESSIONS.

By George Darley, A.B.

Price 4*s.* 6*d.*

IV.

Second Edition,

A SYSTEM

OF

POPULAR TRIGONOMETRY,

Both Plane and Spherical;

With POPULAR TREATISES on LOGARITHMS, and the Application of Algebra to Geometry.

By George Darley, A.B.

Price 3*s.* 6*d.* cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, article 'Mechanics.'*

Modern School Books and Atlases.

I.

In small 8vo. price 8s. 6d. cloth lettered,

THE EARTH: its Physical Condition and most Remarkable Phenomena. By W. M. HIGGINS. Illustrated by 10 coloured Engravings by Felix Blunt.

II.

In small 8vo. price 4s. 6d. cloth lettered,

LESSONS on ASTRONOMY. By Robert Mudie. A new and improved edition, illustrated by Felix Blunt.

III.

JOHNSON'S DICTIONARY of the ENGLISH LANGUAGE, with Walker's Pronunciation of all Difficult or Doubtful Words. Price 2s. 6d. roan lettered, and 3s. embossed roan.

IV.

ROWBOTHAM'S PRONOUNCING DICTIONARY of the FRENCH and ENGLISH, and ENGLISH and FRENCH LANGUAGES. A diamond pocket edition, price 5s. 6d. embossed roan, and 6s. 6d. morocco.

V.

A PRACTICAL GRAMMAR of the GERMAN LANGUAGE. By Dr. Peithman. 4s. cl. lettered.

VI.

A PRACTICAL GRAMMAR of the FRENCH LANGUAGE. By Dr. Peithman. 2nd edition. Price 5s. cloth lettered.

VII.

A PRACTICAL GRAMMAR of the LATIN LANGUAGE. By Dr. Peithman. 2nd edition. Price 3s. cloth lettered.

These works, although comparatively unknown in schools, have procured their authors a high reputation amongst scholars and private teachers, by whom they are chiefly used.

VIII.

PINNOCK'S IMPROVED EDITION of MURRAY'S ABRIDGED ENGLISH GRAMMAR, with numerous Exercises. Accompanied with Questions for Examination, and Explanatory Notes. 18th thousand. Price 1s. 6d. cloth lettered.

IX.

In small 4to. price 8s. 6d. cloth, gilt edges, 2nd edition,

DRAWING and PAINTING in WATER COLOURS; being a Continuation to the Elements of Drawing and Perspective in Chambers's Educational Course. By the Author of that Treatise.

X.

In 18mo. price 1s. cloth lettered, a 4th edition of

THE CHILD'S ARITHMETIC: a Manual of Instruction for the Nursery and Infant Schools.

☞ The object of this little work is to convey a knowledge of Numbers to Children. The style of language and objects presented for computation have, therefore, been rendered suitable and attractive to the infant comprehension; and will, it is hoped, supply a useful addition to the class of initiatory Text Books.

XI.

In royal 18mo. price 1s. 6d. cl. lettered, a new edition of

WALL'S GRAMMATICAL SPELLING BOOK; intended to facilitate the simultaneous acquisition of Orthography and Grammar.

Dower's Atlases.

I.

In royal 4to. price 1l. 1s., half-bound roan, for Schools; or for the Library, 25s. half-bound russia,

A GENERAL ATLAS of MODERN GEOGRAPHY, comprised in 50 Maps, full coloured, and a view of the comparative Height of Mountains and Length of Rivers coloured, so as to indicate the quarters of the world in which they occur, with a copious Consulting Index of many thousand Places, with their Latitude and Longitude.

II.

In royal 8vo. price 12s. half-bound and coloured,

A SCHOOL ATLAS of MODERN GEOGRAPHY, containing 36 Maps of the Hemispheres, Quarters of the Globe, and the chief Countries, with a copious Consulting Index.

III.

In royal 8vo. price 7s. 6d. half-bound and coloured,

THE MINOR SCHOOL ATLAS, containing 21 Maps of the Hemispheres, Quarters, and the more important Countries and Provinces in the World, with a Consulting Index of many thousand Names.

IV.

In royal 8vo. price 5s. half-bound and coloured,

A SHORT ATLAS of MODERN GEOGRAPHY, containing 12 Maps of the Hemispheres, Quarters of the World, and Countries and Provinces suited for the Young to be first acquainted with.

☞ The above Atlases will be found to recommend themselves to the Heads of Schools and Families, by their fulness of *detail*, as well as by the care and accuracy with which they have been prepared, and from time to time revised with Modern Geographical discovery; and as compared with similar, the price will be found much lower.

WM. S. ORR & Co. Amen-corner, Paternoster-row.

IMPORTANT NEW WORKS

PREPARING FOR PUBLICATION.

1.

On March 31st, in 8vo., price 2s. 6d., PART I. of

A CYCLOPÆDIA OF

BIBLICAL LITERATURE,

By JOHN KITTO, Editor of 'The Pictorial Bible,' &c.

Assisted by numerous able Scholars and Divines, both of this country and the continent.

The design of the Editor is to produce an original work, which within reasonable limits, and at a moderate price, shall present a comprehensive digest of all the information considered necessary in a Work of this description, and embracing the results of those modern researches in Biblical Literature and Science with which it is so important that English Readers should be acquainted.

The Work will be printed in double columns, in a clear and distinct type, and will appear in monthly parts, each of which will be embellished either with a highly-finished Engraving on Steel, or with a Map. The volume will also be profusely illustrated with Wood Engravings, representing Landscapes, Buildings, Monuments, Plants, Animals, Illustrations of Manners and Customs, and whatever can be more clearly displayed by pictorial than by written description, or by which the written text may be in any degree elucidated.

2.

On March 31st, price 6s., PART I. of

A NEW EDITION OF

BLACK'S GENERAL ATLAS OF THE WORLD.

TO BE COMPLETED IN EIGHT MONTHLY PARTS.

Comprehending Sixty-one Folio Maps, engraved on Steel in the first style of the art, by SIDNEY HALL, HUGHES, and others, with Geographical Descriptions, Statistical Tables, and an Index of all the Names occurring in the several Maps, amounting to upwards of 50,000, with their Latitude and Longitude, and the number of the Map in which they will be found.

To the present edition have been added a NEW MAP OF INDIA on a large scale, with the scene of the recent warlike operations West of the Indus; MAPS OF CHINA, NEW ZEALAND, VAN DIEMEN'S LAND, WESTERN AUSTRALIA, SWAN RIVER, and NEW SOUTH WALES. For the accommodation of the readers of Ancient and Scripture History, there have also been added, TWO MAPS OF THE WORLD AS KNOWN TO THE ANCIENTS, MAPS OF THE TRAVELS OF ST. PAUL and LOWER EGYPT, while important improvements have also been made on the MAP OF PALESTINE.

The Work having been revised and corrected throughout, the Publishers are satisfied that in every respect it is accommodated to the present advanced state of geographical research, and whether on the ground of accuracy, beauty of execution, or cheapness, they invite a comparison with any other work of the class.

3.

On March 31st, price 3s., Part I. of

A NEW EDITION OF

A SYSTEM OF UNIVERSAL GEOGRAPHY.

Founded on the Works of MALTE-BRUN and BALBI.

To be completed in Ten Monthly Parts.

This Work having now received the general approbation of the Press, as one of the most comprehensive and best compiled Systems of Geography in the English language, the Publishers are induced to bring out the new and improved Edition in a form which renders it accessible to all classes.

The Volume embraces a Historical Sketch of the Progress of Geographical Discovery, the Principles of Mathematical and Physical Geography, and a complete Description, from the most recent sources, of all the Countries in the World, with numerous Statistical Tables, and an alphabetical Index of 12,000 names.

"Executed with masterly ability."—*Atlas.* "The most complete existing book upon geography in one volume. We strongly recommend it as a book of reference."—*Examiner.* "One of the most comprehensive and best compiled books of the class ever published."—*Britannia.* "The task of reducing, within just limits, the somewhat prolix eloquence of the learned Dane has been ably executed by the Editor of this volume, which, though we have styled it an abridgment, yet extends to more than 1000 closely printed pages. It has an index also which contains more names than are to be found in most Gazetteers."....."A work the careful elaboration of which is equal to its utility."—*Athenæum.*

ADAM & CHARLES BLACK, Edinburgh;
LONGMAN, BROWN, GREEN, & LONGMANS, London;
and sold by all Booksellers.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, West Strand.

A SYSTEM of LOGIC, Ratiocinative and Inductive; being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. 2 vols. 8vo.

The PHYSIOLOGICAL ANATOMY and PHYSIOLOGY of MAN; with numerous Original Illustrations. By R. B. TODD, M.D. F.R.S. and W. BOWMAN, F.R.S., of King's College, London. To be completed in Three Parts. Part I. price 7s.

AN INTRODUCTION to the STUDY of CHEMICAL PHILOSOPHY; being a preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S. Professor of Chemistry in King's College, London. With numerous Illustrations, the 2nd edition, revised and much enlarged. 21s.

LIFE AND CORRESPONDENCE OF THE LATE

SIR ASTLEY PASTON COOPER, Bart. From Documents bequeathed by him for the purpose. By BRANSBY B. COOPER, Esq. F.R.S. 2 vols. 8vo. with Portrait, from the Original Picture by Sir Thomas Lawrence. 21s.

Complete in 2 vols. price 2l. 10s., and illustrated by several Hundred Woodcuts, The

BIBLE CYCLOPÆDIA, a Comprehensive Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings.

A GRAMMAR of VOCAL MUSIC, for the Use of Public Schools and Classes of Adults. Founded on the Method of WILHEM, and adapted to English use under the Sanction of the Committee of Council on Education. By JOHN HULLAH. Royal 8vo. 7s. bound.

The GRAMMAR of VOCAL MUSIC is, in its plan and general details, the same work as the Manual of Wilhem's Method of Teaching Singing; but the Words of the Songs are, for the most part, different, and more particularly fitted for the use of Adult Classes; considerable additions also have been made both to the theoretical and practical portions.

Also,

ILLUSTRATIONS to HULLAH'S VOCAL GRAMMAR. (Size 2 feet 8 by 2 feet 6.) The Set of Thirty, price 2l.

Published by Authority.

OFFICIAL INFORMATION ON CHARITIES.

DIGESTS of the REPORTS made by the COMMISSIONERS of INQUIRY into CHARITIES,

Containing Analytical Digests of Returns of Charities for Distribution amongst the Poor—Digests of Grammar Schools—Schools not Classical—and of Charities for Education not attached to Endowed Schools. Arranged in Counties from the Returns presented to both Houses of Parliament, by Command of Her Majesty, and issued in a detached form with a view to Local Circulation, at the following prices:—

LONDON, SATURDAY, FEBRUARY 25, 1843.

REVIEWS

Narrative of a Voyage round the World, including Details of the Naval Operations in China, &c. from 1836 *to* 1842. By Capt. Sir Edward Belcher, R.N. 2 vols. Colburn.

Not a little new light would be thrown on the progress of science, and of mercantile enterprize; on the revolutions which the steam engine and other inventions have caused in nautical affairs, and on the increasing intercourse of mankind in general, if some one, having access to the original documents, and otherwise well qualified, were to draw up and publish an historical memoir of the surveys executed under the direction of the hydrographical department of the Admiralty, from its unlucky commencement with the old age and obstinacy of Dalrymple, to its complete and vigorous developement at the present day. The India House, too, might add something to the materials here pointed out; so that the name of Horsburgh might occupy its proper place in the history of human progress, and a little of that honour be given to a real benefactor of mankind, which is in general so lavishly bestowed on mere heroes by position. An historical sketch of this kind would be not merely instructive; it would be far more entertaining than might be at first suspected. It would show how curiosity, like love, grows by that it feeds on; how, as knowledge advances, one inquiry leads to another. The motives to each successive survey, and the instructions continually calling for greater accuracy, or directing attention to a larger variety of phenomena, would be often found curiously characteristic of the period to which they belonged. Nautical surveyors would be the greatest gainers by such a history; they would gather from it a little of the philosophy of their profession, and would learn to look at their work more critically.

But again, a general professional history of our nautical surveys would have another advantage, which is not altogether without its weight, since it would frequently serve as a supplement to, or perhaps as an apology for, such narratives as that now presented to the public by Sir Edward Belcher. Here we have an account of a six years' voyage round the world, and through eighty degrees of latitude, which contains no greater amount of novel or interesting information than might have been reasonably expected from a six weeks' tour under any single parallel. Prefixed to the work, we find the hydrographer's instructions, enjoining observations of all kinds on land, sky, and ocean; and directing attention to several disputed questions. These, we dare say, have been settled satisfactorily by Sir Edward Belcher. We are willing to suppose that he has laboured with success as well as diligence to attain the specific object of his mission; but he thought, doubtless, that the additions which he had made to our intimate knowledge of the globe, were of too austere a flavour for the general taste; he has therefore, forsooth, consigned the kernel of his information to the presses of the Admiralty, and has given the shell—light, dry, and empty—to the public. His volumes have the disadvantage of naturally suggesting a comparison with those of Captain Fitzroy, to whose labours he succeeded, and the former are as remarkable for their meagreness as the latter for their overflowing abundance. Yet the narrative of the *Sulphur's* voyage is published under the patronage of the Admiralty; that of the *Beagle* had no such encouragement. The highest patronage, it is obvious, will soon lose its value when it grows capricious; and why the Admiralty should lend their especial sanction to a work cut on the vulgar popular pattern, and containing no scientific details, is beyond our comprehension.

In September, 1835, the *Sulphur* was commissioned by Capt. Beechey, for the purpose of continuing the survey of the Western Coasts of America from Chili northwards. Capt. Beechey invalided at Valparaiso in the following year, when our author was appointed to succeed him, and hastened to join his ship by the direct route of the West Indies, crossing the Isthmus from Chagres to Panama. Our author's description of the places visited by him, is in general neither copious nor vivid; but since, nevertheless, the tide of human activity, or in other words, since the current of steam, now sets steadily towards Panama, we shall make room for the following brief notice of this town.

"Panama was formerly a place of some note, but shortly after the visit of Ulloa, about a century ago, may be said to have arrived at its zenith. The remains of the buildings evince wealth, and afford some idea of the extent to which they hoped to carry their improvements. But they are now fast falling into decay. The port is seldom visited by vessels of any size, and the fortifications, which originally were admirably constructed, are rapidly following the fate of the houses. The population is chiefly a mixed race: few Spaniards are to be found. One Englishman, and the American consular agent, comprise all the society we met. This doubtless will change the instant the steam navigation is in force. Inns and lodging-houses must then arise for the accommodation of those pursuing this route. There is every facility for erecting a substantial pier, and improving the inner anchorage, which must follow the arrival of the steamers, unless they still submit to the miserable landing at the seaport gate, which is as filthy as it is inconvenient."

It took much time to explore the coasts from Peru to the Russian possessions, and to examine the reputed harbours lying between those limits; but for us it will be sufficient to glance at a few points which politics or natural circumstances have rendered interesting. We must begin with calling attention to the following sentence of our author's instructions: "As the terminal point of your whole survey to the northward, the magnificent mountain of St. Elias may be named; and its exact position and height should therefore be determined." This mountain, which far overtops all others in the vicinity of the polar circle (its estimated elevation is about 11,000 feet), and which rises but a short distance from the sea-shore, was seen to advantage by our author, as may be collected from the following passage.

"Towards the evening it cleared up, and we were treated with a most splendid picture of St. Elias and all the neighbouring peaks, in full beauty, not a vapour near them. Each range is in itself an object worthy of the pencil, but with the stupendous, proud St. Elias towering above all, they dwindled into mere hillocks, or into a most splendid base on which to place his saintship. Although Vancouver describes St. Elias as 'in regions of eternal snow,' yet his edges, to the very summit, present a few black wrinkles, and the depth of snow does not, even in the drifts, appear to be very deep."

But what avails these vague expressions and turgid admiration? If Sir E. Belcher determined, as he gives us reason to suppose, the height and position of Mount St. Elias, why has he not made known these results in the volumes which he has published under the patronage of the Admiralty? He exhibits the Russians at Sitka in a favourable light; they have fortified their town, maintain a well-stored naval arsenal, and have built one fine vessel. The coast in their vicinity is far more populous than might be conjectured from its aspect; thousands of natives may be collected in a short time, and more than once they have threatened the Russian fortress. A party of the native chiefs paid a visit to the *Sulphur*, and exhibited in their dress a curious illustration of the influence of fashion, and of the back-currents, as we may say, in the stream of commerce, resulting from it. "Most of the helmet party wore ermine skins, tied loosely about them, which were purchased at the factory, and are imported from Siberia for traffic with the natives." One would suppose that importing ermine skins into the north-western coasts of America, was like carrying coals to Newcastle; but the superiority of the Siberian ermine is so conspicuous, that the chiefs always prefer it. In like manner, perhaps, we may be one day importing into China japanned goods, china ware, papier-maché ornaments, and sweetmeats.

How different from the Russian fortress at Sitka, with its narrow portcullis entrance and watchful sentinels, is the English factory on the Columbia, in the disputed territory of Oregon! Fort Vancouver, as this factory is named, stands about eighty miles in a straight line from the mouth of the Columbia.

"It stands, says our author, about three hundred yards within the northern edge of the river; is a picketed enclosure three hundred yards square, the pickets being eighteen feet high, composed of roughly-split pine logs. No particular attention to strength has been paid in its construction. It is furnished with three gates, two of which are invariably open by day. The houses of residence, as well as storehouses of the company, are within this enclosure, forming two squares. No guard is observed. The trading store is open during working hours, and any increase of number amongst the Indians would not excite uneasiness on the part of the officers. Such was my impression: and conversation, short of putting the direct question, confirmed it. To the westward are situated, without the palisades, at a distance of a quarter of a mile, the hospital and houses of the Canadian establishment, forming a complete village. All is apparently defenceless; although when turned out every man will be found with a well-tried rifle and couteau de chasse, or other efficient means of defence; and their partners are efficient helpmates, in the literal sense of the phrase. Yet, comparing this spot with Sitka and other places, it speaks volumes for the discipline to which the Indians have been reduced, as well as for the *content* with which all the tribes are evidently embued. As to the appellation of Fort Vancouver, it is clearly a misnomer; no Fort Vancouver exists; it is merely the mercantile post of the Hudson's Bay Company."

We purposely abstain from discussing the disputed claims to the Oregon territory, and shall only observe, that the English residents at the factory seem to live on good terms with all their neighbours, save the go-ahead squatters from the United States, a class of men always ready to assert rights, but who never acknowledge obligations. Most of the factors marry Indian squaws, and the women of the factory are in general ignorant of the language of their husbands. Slavery, it appears, exists among the natives of the north-west coasts of America, and, according to our author, the sacrifice of slaves is a common mode of bravado among them. "If a chief wishes to insult another, he sacrifices to him a certain number of slaves. It would be loss of stamp if the opponent failed in dispatching an equal number, but generally a larger number answers the insult. This may continue till they have expended their stock, when they possibly come to personal attack, assisted by their allies of the tribe." South of the Columbia River, the native tribes appear to grow more formidable. They are mixed with and incited by the red men exiled from the United States; near the Mexican borders they possess also countless droves of horses, and with an equestrian life easily acquire predatory habits.

On the northern confines of California our author successfully explored the Rio Sacra-

Digitized by Google

mento, which he ascended about 150 miles, and found to be a fine stream, flowing through a rich level country, covered with immense timber, and liable to inundation in the rainy season. Wild grapes in great abundance overhung the smaller trees. It is observed by our author, that "probably no part of Western America can produce timber of the dimensions grown in the regions of the Colombia, and the northern confines of California. Among the drift trees on the banks of the California, we measured one 174 feet in length, by 20 feet in circumference." We are assured, by an unexceptionable authority, that in the pine forests of California there are trees to be seen 300 feet in height; and if the height of the tree may be judged of from the magnitude of its cones, we can attest that the above estimate is certainly not excessive.

We now follow our author to the Sandwich Islands, which he visited in the first instance at a period of great excitement, but as his feelings seem to have caught the general contagion, we cannot adopt his opinions respecting the present state of that interesting group without some qualification. Two Catholic missionaries having arrived at those islands, the king, at the instigation of the resident Protestant missionary, forcibly expelled them, and sent them in a British vessel to the coasts of California. Our author's interference was required to prevent the recurrence of similar acts of tyranny. Under these circumstances, it is not surprising that he should speak in harsh terms of missionary rule. These religious teachers, it appears, have thought proper to put a stop to all labour not required by themselves, and maintain so strict a discipline, that "no slavery under the sun deserves to be so severely questioned as that of the Sandwich Islands." Our author adds:—

"What idea can the chiefs have of the amelioration they were to experience from a change of religion? How can these islands rise in the scale of importance, if the climate and amazing fertility of soil which has been bestowed on them, is not to be made available? What have the missionaries done for them? This question is beyond my powers of reply. But I can safely assert that, in the years 1826-7, above eighty sail of whale ships, as well as traders, entered the port of Honululu; and that number was, I understood, present at one time. At this moment it is almost deserted. And, instead of the thriving plantations, which at that period promised well, we have now a great increase of spirit shops. Formerly the streets were clean and quiet, and it was rare to notice a native intoxicated. They indulged freely in aquatic exercises, ablutions, &c., and were apparently free, happy, and cheerful; but a miserable contrast remains; they are now chapfallen and miserable."

It can hardly be doubted that the missionaries in the Sandwich Islands have gone to work with narrow-minded views and an ascetic temper. On the other hand, it is hardly credible that among so many European residents, they should have been able to accomplish all the mischief which is ascribed to them. To excuse the warmth with which he discusses these topics, our author reminds us of the fact, that the flag of the Sandwich Islands is quartered with that of Great Britain. This is truly a novel and heraldic ground of reasoning, but it serves to convince us, nevertheless, that the domestic policy of the unhappy King of the Sandwich Islands vibrates between the impulses of missionaries and commanders of men of war, and that he is thus prevented from evincing any energy or adhering to any uniform system of conduct. The evil of imperious advisers, in uniform, whom every wind may bring, is severely felt in all the islands of the Pacific Ocean. In consequence, our author observes, on his arrival at Tahiti, "I expected, as an old acquaintance, to have met a cordial reception from the Queen, but I subsequently learned that she had been so much harassed by threats of vengeance from various nations, that she hardly knew whether I had not come to make some new demand for satisfaction." But an opportunity for his interference soon presented itself. The Queen of the Society Islands has an ill-conducted husband, some of whose irregularities were brought under our author's notice. The latter advised legal proceedings, attended at the trial, then arrested the course of the law, and was satisfied with launching a cold thunderbolt at the delinquent in a speech. Now mark the consequence:—

"I was much surprised, on the day following, by a visit from the consul, who, to my astonishment, informed me that he was the bearer of a message from the queen, intreating my stay until the May meeting, (on the Wednesday following,) as the king, in a fit of intoxication, had treated the queen in a most brutal manner, in the high road; having attempted to kill her with a stone. Being foiled by her female retinue, and two young men who were passing, he had seized her by her hair, and had it not been for those about, doubtless would have destroyed her. The queen fled to the house of a cooper, where she was concealed. It appears that he had fallen from his horse in a fit of intoxication, and she had rushed to his assistance with all the warmth of affection, which was thus repaid. On his return to the house, he destroyed all her presents of dresses, bonnets, ornaments, &c., and attempted to fire the house. It was the professed intention of the queen 'to move for a divorce, and that he be returned to Huaheine.' The consul immediately took the queen under his protection, and having requested my interference, I assured her that four days' delay was important to me, but if she would *assure me* of her determination to rid herself of such a dangerous and detestable character, and immediately summon the judges, I would not only wait, but also convey him to his island (Huaheine). To my utter astonishment, the consul informed me the day following, that she had forgiven him, and returned, thanking me in the warmest terms for my attention."

It is obviously unwise to exert in such affairs a power which is but temporary and short lived. The *Sulphur* might have conveyed the Queen's consort to Huaheine, but what could have prevented a canoe from carrying him back again to Tahiti? As to the improvement of Tahiti, our author's testimony is brief, obscure, and unsatisfactory. He merely says:—

"With respect to the present condition of the Tahitans, it is my decided opinion, that with the introduction of dress, the peculiar religious feeling which I noticed in 1826 has vanished. They were then simple in the extreme; they are now comparatively civilized. The introduction of foreigners has broken down the legal barrier which restrained them."

Raratonga, the scene of the late Mr. Williams's exertions, is the island in which the work of the missionaries appears to the greatest advantage. Unmolested by mercantile adventurers, or runaway seamen, they here show themselves animated by a gentler spirit. Here they encourage industry, which they elsewhere depress. The following passage gives a pleasing outline of their progress:—

"With all the difficulties incident to missionary progress, one is not a little surprised to meet, not only with the conveniences, but also the comforts, of a well-furnished house. These are principally native, but the result of missionary instructions; care having been taken to teach them useful arts. They manufacture tables, chairs, and sofas, with cane bottoms, fit for any of the middling classes in England. These form an article of export to Tahiti, and a pair of their arm-chairs grace my cabin. The wood of the Tamanu, from which they are manufactured, may vie with Honduras mahogany in beauty, and is far superior in durability. Four very neat stone cottages were just completed, having two good rooms each; these are intended for the students in the college about to be built where Mr. Buzacott's house now stands. In the present school-room, where they have also a printing-press, I was shown the production of one of the native scholars, being a manuscript copy of the New Testament, in progress, the writing clear and intelligible, the scholar a native missionary, probably to be forwarded to some island where Christianity is unknown. The church is an extensive wood and plaster building, capable of accommodating about one thousand persons; it occupies one side of the road, and the native school the opposite."

But here, again, we have an instance of injudicious and uncalled-for interference:—

"It is to be hoped that this island may be spared the introduction of foreign settlers as at Tahiti and Oahu; for when that commences, adieu to peace and prosperity! I used my best efforts to alarm the chief, as well as Mr. Buzacott, in order to induce them to watch this point jealously; and I trust with effect. A very judicious code of port regulations is printed, and a copy furnished to every vessel on arrival; non-compliance excludes communication. Deserters find no refuge. Spirits are prohibited; and order at night is insured by preventing any foreigner remaining on shore after dark."

It is manifest that the Chief of Raratonga has no power to exclude foreign settlers from his island. If one commander of a man-of-war urges him to exclude strangers, perhaps the next who arrives will mulct him for so doing. Besides, it is strange that our author should find that foreign settlers are an evil in the Society Islands, while they are an advantage in the Sandwich Islands. In speaking of the latter, he deeply laments that they are no longer the favourite resort of the South Sea whalers, the most demoralizing of all visitors. He likewise denounces, in strong terms, the prevalent belief that the rapid decrease of population throughout the Islands generally, is due to the intercourse with Europeans. But this fact is incontestably established; from Pitcairn's Island to New Zealand, wherever Europeans land and maintain an intercourse, a blight seems to fall on the native population, who rapidly and uniformly diminish. As yet we have met with no sufficient explanation of this remarkable phenomenon, for we cannot believe, with Dr. Dieffenbach, that blankets and potatoes are the causes of the mortality which continually thins the ranks of the New Zealanders.

At the Tonga Islands again, we hear too little of the natives, and too much of their teachers. Our readers may recollect, that about a year ago, the commander of an English sloop-of-war was killed on one of these islands, while attacking a fort occupied by the heathen opponents of the missionaries. In reference to these transactions our author says:—

"Upon the subject of this '*religious war*,' in Tonga—(or better perhaps known as Tonga-taboo)—and in which Mr. Thomas appears to take a strong interest, I am much inclined to believe that its origin proceeds from a *harshness in making Christians*, instead of inducing them to become so by persuasion. The punishments for offences against a *forced* religion, by a people not long converted, are dealt too unmercifully—are indeed so severe, that we were informed some of the women died under them, and that they were only induced, by the interference of one of our ships of war, to adopt milder measures. It was openly asserted that *three and a half inch rope* has been used to inflict punishment on women!"

With justice does he add, that "savages are not to be broken in like wild horses." Respecting the Marquesas Islands, we find nothing that is new or valuable in our author's volumes, although he has appended some additional details respecting that group, in consequence of the steps taken by the French to colonize them. A letter has recently appeared in one of the daily papers, stating that the chief curiosities of the Island of Nuhahiva (which our author visited) are, a tree a hundred and ten feet in diameter in the middle of the island, and a well of water which has the property of intoxicating. These certainly deserve to be called curiosities, and we wonder how they could have escaped the notice

Digitized by Google

of one whose business was inquiry and exploration. The fountain alone would be worth the expenses of a war; it would be invaluable for the supply of the navy. Crews sailing on temperance principles might get drunk with its water, and save their consciences; those bound by no pledges might save their rum. The following, in reference to the Feejee Islands, is, we believe, a very highly coloured picture of the truth:—

"The sequel will hardly be credited, yet it is beyond doubt: cannibalism to a frighful degree still prevails amongst this people, and, as it would seem, almost as one of their highest enjoyments. The victims of this ferocious slaughter were regularly prepared, being baked, packed, and distributed in portions to the various towns which furnished warriors, according to their exploits; and they were feasted on with a degree of savage barbarity nearly incredible! They imagine that they increase in bravery, by eating their valorous enemy. This Garingaria is a noted cannibal, and it is asserted that he killed one of his wives and ate her. This he denied, and accounted for her death (which took place violently by his order) on other grounds. He did not attempt a denial of his acts at Banga, nor did Phillips. These occurrences are of late date. I am told they threw one or more of the heads (which they do not eat) into the missionary's compound. The population of the Feejees are very tall, far above the height of any other nation I have seen. Of five men assembled in my tent, none were under six feet two inches. It was rather an awkward subject to tax Garingaria with in his own house, and solely attended by his own dependent, our interpreter; but he took it very quietly, and observed that he cared not for human flesh, unless it was that of his enemy, and taken in battle. When he used this expression, I could not help thinking that his lips were sympathetically in motion, and that I had better not make myself too hostile. I therefore bid him good evening."

The *Sulphur* passed along the coasts of the New Hebrides, New Ireland, and New Guinea, on her way to Amboyna; but our acquaintance with these countries is not improved by our author's volumes, and here, therefore, with the scientific character of the voyage, we might be justified in terminating our remarks. The part which our author took in the naval operations preparatory to the taking of Canton, is already known to the public. He surveyed the channels, piloted the ships, and led on the tars to scale the batteries. We shall not, however, fight all our battles o'er again, and can only admit the following characteristic account of Chinese negotiation:—

"I was then despatched with a flag of truce to Napier's Fort, accompanied by Mr. Morrison, interpreter and secretary to the plenipotentiary. The flag of truce made use of on this occasion, was a large white silk flag, captured at First Bar Fort, and possibly recognised by some of the runaways here. After delivering the despatch, the mandarin in command agreed to give up the fort next day, if I would permit him 'to make plenty of bobbery,' 'and not put that plum in the gun.' I told him, as I should probably have the job, that I would not trouble him, provided he ran away in time."

Our author subsequently captured the official button of a mandarin, who earnestly begged for its restoration. The poor Chinaman's entreaties seem to have excited some mirth among the British officers; but, if we mistake not, the mandarins of the western isles are quite as proud of their buttons, and as well inclined to a little "bobbery" as those of the middle kingdom. We must not omit, that appended to our author's volumes is an 'Essay on the Regions of Vegetation,' by R. B. Hinds, Esq., the surgeon of the expedition; which essay, whatever may be its merits, seems to have no particular connexion with the voyage of the *Sulphur*, but to serve only to make up the measure of the work now published, under the patronage of the Admiralty.

Griselda, a Dramatic Poem—[*Griseldis, Dramatisches Gedicht*]. By Frederick Halm. Vienna, Gérold.

The "patient Grizzle," in spite of her Italian birth, is no alien to England; we possess a kind of property in her fame, in virtue of its early celebration by Chaucer. Her appearance, therefore, as the subject of a play which has been admired by the Vienna public, supplied more than one motive for curiosity. We felt some anxiety to see how the charming old tale had fared in the playwright's hands; and were glad, at the same time, to learn what kind of works now prosper on a stage to which Körner's early success gave a German reputation.

The tale of 'Griselda' will not be allowed, by one class of poetical antiquarians at least, to betray much of the so-called spirit of chivalry, although it is thoroughly imbued with the character of a feudal age. Others may insist, on the contrary, that it really discovers one of the strongest features of the system, which its panegyrists usually leave unnoticed. The homage due to woman was restricted to those of gentle birth. It was a condescension in the Marquess of Saluzzo to take to wife the child of a humble vassal, which no submission could adequately repay. The indignities to which she was exposed were palliated by the mean estate of the victim; and it would seem natural for her to endure what might have roused a noble lady to rebellion. During her years of probation, Griselda is less a wife than a bondwoman, and all that she suffers is supposed to be fully repaid by the kind of enfranchisement which the husband graciously extends to her at last. There was nothing in this to offend the feelings of the time. Chivalry reserved its sympathies for the well-born: its humanity did not include amongst its objects those plebeian natures, who might deem themselves honoured if their sufferings advanced the reputation, or even ministered to the amusement of the noble. They were as little regarded as the fishes which the girls in Boccaccio's tale catch and fling on the table, to make sport for the royal guest. They died painfully, but the sovereign found pleasure in their struggles—*per la mensa guizzavano . . . di che il rè aveva maraviglioso piacere.*

But it is this very merciless treatment, passing the measure of womanly endurance, that so beautifully unfolds the miracle of Griselda's patience. It required such a trial to display its singleness and perfection: to show to all times a wonder of resignation—the unapproachable idea of feminine meekness and self-sacrifice. It is not a thing of degree; it is unnatural, impossible: no woman—wife or mother—could so endure; but take one scruple away from its perfection, and the improbability becomes hateful: a single expression of impatience or resentment would make all the rest seem monstrous. In Griselda's absolute patience, we behold a kind of supernatural vision, endowed with gentleness which does not belong to this world; and almost lose sight of the cruelty of her persecutor in the glory of resignation which plays around her.

This, however, is not the opinion of Herr Halm, who has had the courage to make a thoroughly modernized version of the old legend. Attempts of this kind are rarely successful, and to render them pleasing is one of the highest efforts of genius; a feebler hand, that ventures to reform the genuine creation of an earlier age, either distorts or destroys it. The character of the story may have been a good reason why it should not have been taken for a modern play, but will not excuse any one for maiming and melo-dramatizing it. A common tale is common property, and all Europe has been brought up in the faith of the true "Griseldis."

Instead of Saluzzo, the scene is laid at King Arthur's court; and Percival of Wales, the cruel husband, a kind of Orson, is one of the paladins. After an absence of three years he suddenly appears at a royal festival: the ladies whose charms he formerly despised, and Queen Guenever, a haughty malicious woman, taunt him into a confession of his marriage with Griselda, the daughter of Cedric, a poor charcoal burner, near his castle in Wales; and their scoffs at length provoke him into the assertion, that if each had her deserts, Griselda would occupy the throne, and the Queen render homage to her. This is a mortal affront, and swords are drawn to avenge the Queen, when the King interposes. The offender has the choice of kneeling to beg the Queen's pardon, and own his boast a false one, or proving the virtue of his wife by the trials which Guenever prescribes. If she endure these, the Queen engages to kneel at her feet, and proclaim her the most perfect wife in Britain. The husband, too proud to yield, and too rugged to care much for the suffering of the woman, on whose constancy and affections he relies, chooses the latter alternative. The exposition of this contrivance, and the show of Arthur's court, take up nearly a third of the play.

The author deals with names and places as boldly as with the tale itself. Percival, attended by Tristram and Gawain, who are to be his accomplices in tormenting Griselda, hastens back to *Pendennis, in Wales*, situated on *the banks of the Trent*, whither Guenever and her train are to follow. King Arthur, who seems to disapprove of the proceeding, resolves, on the pretext of hunting in the *adjacent forest of Stafford*, to appear, and prevent the extremity of the trial. We now, for the first time, see Griselda, awaiting her husband's return with anxious forebodings, and lamenting the estrangement of her father; who is mortally offended with her, both because she has refrained from taking his part in a quarrel caused by Percival's haughtiness, and because she has refused to leave the bed of her husband, when dangerously wounded, to receive the last breath of her mother. In the midst of her sad reflections, Percival arrives, and she flies to embrace him:—

Griseldis. Percival!
Again I hold thee! Wert so long away:
Three endless days! nor thought the while of me,
When courting beauties yonder:—was it so?
Thou didst me not this wrong? But never more
I'll have thee leave me. So! but kiss me, then.
How has the glow of sunshine browned thy cheek!
Oh, I am well, so well, upon thy bosom!
My Percival, my lord, my shield, my husband!
Percival. Griseldis, pr'ythee see—
Gris. And what thy absence
Has missed—but think! Our Athelstan, brave boy,
Across the hall, without the leading strings,
Without once stumbling, strode the urchin on,
Till ancient Allan nearly cried for joy!
And, only think! my dovelings all are fledged.
And I have had sorrow, too; been sad to death;
Not for thy absence only—other things
Have vexed and wounded me. But shew me, now,
How thou hast thought of mother and of child,
And what fine present thou hast brought us back
From the King's palace? Nothing! so—forgotten?
Fie! naughty husband!
Perc. Look around, Griseldis:
These guests I bring thee home. Go, bid them welcome;
Brave knights, companions of the Table Round,
And honoured friends of mine. Dost hear, Griseldis?
Gris. I saw but him!—forgive me, worthy sirs.

The passionate affection, and almost childish vivacity, which the author has thus attempted to pourtray, seem inappropriate to a character by which Griselda's sufferings are sustained. The trial begins abruptly. She is informed that the King, offended by the marriage, demands that the offspring of it shall be delivered into his hands. Let the reader judge which is more becoming to the miracle of patience, the following burst of passion, with which Griselda receives the proposal, or Chaucer's:—

Ever in one so patient was she,
That she no chere made of hevinesse,
But kisseth her childe, and after gan him blesse.

Digitized by Google

Save this she praied him, if that he might,
Her little sone he would in earth grave,
His tender limmes, delicate to sight,
Fro foules and fro noysome beasts to save.

Here is the dramatist's version :—

Gris. Thou jestest, Percival; thou wouldst but cheat me,
I know, for very mirth: thou canst not look
With eyes unblinking, fixed on mine the while—
Try if thou canst. Thy glance escapes me still,
And thy lip quivers:—now it smiles! Go, go,
And coin some better trick: this frights me not.
Perc. 'Tis thou that art deceived; my words are true.
And these (*pointing to knights*) are bearers of the Monarch's will,
And sent to act his absolute commands.
Gris. And you are they will rob me of my boy?
Fie! go, and mask you first, that folk may fear you:
Hobgoblin shakes the chain before he comes;
The werewolf howls when snuffing infants' blood—
Aye, my good sirs, ye play the kobold ill
In knightly weed, and girt with golden spurs.

But when persuaded that her husband really demands the sacrifice, her first reply is a defiance :—

'Tis mine, as well as thine! I'll keep the child,
If thou wilt yield it. 'Tis my very blood!
I bore it at my heart; I gave it birth;
I fed it at my breast; these eyes have watched,
With silent joy, its happy growth of life;
And on its little head my future lies!
And must a stranger's humour tear it from me,
And rob my babe of true love's guardianship?
(*after a pause, more rapidly.*)
Your sovereign has no right to take my boy;
He knows him not—is wroth that he was born;
Hates him, perhaps, and if he claims him thus—
Answer me, sirs—what would he with my babe?
Both silent? Speak! What would he with my child?
Tristram. Fear not: the King is merciful and just.
Gawain. The lord commands—the vassal must obey:
His orders we have learned, but not his will.
Gris. You shall not thus evade me! On your brows,
And in your coward looks, I see it writ.
The King would slay him.—Can he? yea, he will!
And would ye ravish my sweet child for this?
Part child and mother? Take my eyesight first.
Try it, ye bloody slayers! venture on!
And snatch him, if you can, from his sweet dreams,
Ere you have stretched me lifeless at his side,
Or shed his blood, ere mine has first been drained!
Forsaken babe, thy father shields thee not!
I dare it—I—a woman—but a mother!

After this earnest declaration, the spectator is hardly prepared for the sequel, when she is reminded that the choice lies between the child and her husband's life :—

Gris. Thou forfeit to the ban: and the King's wrath
Aimed at thy life?
Perc. 'Tis even so, Griseldis.
Gris. (*incxpressively*) Then take the child away.
Perc. Thou wilt resist
No more, but givest thine infant up?
Gris. I must.
Perc. The victory's mine. Sir Gawain, take the child.
Gris. (*hastily follows him towards the room where the child is sleeping*) Hold!—take him!—stay!—I cannot!—God of Heaven!
Perc. Griseldis, come to me!
(*She falls at his feet.*)

This is the most dramatic scene throughout the play: however it may affect the reader, he will hardly, we think, discover in it any trace of the *patience* of Griselda, or admire the author's judgment in making the good Tristram and a gentle Knight of the Round Table abettors of Percival's brutality. The latter, it is true, now repents of his wager; but although he despises himself, as well he may, he cannot endure the shame of kneeling to Guenever; but rather proceeds to inflict the next blow on his innocent wife. Her repudiation, by order of the King, who intends him to marry Morgain Le Fay, Arthur's sister, is announced to the assembled vassals; and the poor Griselda is turned nameless, and all but naked, from her husband's door, nearly as in the old story, with this exception, that the incidents of years are in the drama presented in the compass of a single day. It appears that the author respects the unity of time (as vulgarly understood) more than the oneness of character or fable, and thus loses some of the most touching incidents of both. We have, in the parting scene, however, a closer adherence to the original tale, although it is sorely diluted, and a first glimpse of the patience of Griselda :—

Gris. My lord and master,
When thou didst bring me from that hovel-home
To thy proud castle, wedding might with want,
And low degree with honour and with highness,
And richly dowering with thy noble love
The collier's needy child, as bloomed my fortune
Like sudden flowers that open in a night,
E'en then my inmost heart spoke warningly.
"My fortune lives no longer than the flower,
And once full-blown, 'twill fade by eventide."
Therefore, submissive to my Fate's decree,
Not as a gift I kept thy proffered love,
But as a loan, though Love paid interest for it,
Too easily recalled, as once 'twas given.
Now, warned by thee, the term of payment's come,
I will not be remiss. So take again
All that thy hand enriched me with: take back
Nobility's proud trappings, title's sound,
Power, place, magnificence, and all the glitter
Thou lovedst to shed so lavishly upon me!
Yet this alone, reluctant, with pressed heart,
Do I restore thee too; my dearest treasure,
The gift unparagoned of thy dear grace,
This ring, the pledge and symbol of a love
That joined us once, and in that juncture blest.
It was my all,—so, take it back: and now,
Helpless, and poor, and naked I depart,
As when thou hadst me, helpless, poor, and naked.
Perc. All that thou brought'st me hither may'st thou take;
Nor more nor less.
Gris. My Lord! you know yourself
How from my father's shed you bore me forth;
A paltry woollen gown and one poor smock
I brought you. There will need no sumpter mule
To take these mean possessions hence with me.
Perc. Take then thy woollen gown and smock, and go.
Gris. I shall, my lord! What other wealth I had,
When for the castle I exchanged the hut,—
Youth's cheerful mood, the flower of Innocence,
That fearless spirit rich in hopeful trust—
For these I gave thee, I have had sweet joys,
And the dear after-bliss of memory.
Yet for one thing thou art my debtor still,
In that I leave thee all my true love here;
And as my hand thy ring's impression keeps,
So shall my soul retain thine image dear.
Perc. Each word she utters is a pointed dart,
And those sad looks cut through me like a sword.
—Set forth, Griseldis, for thy time is out.

She departs, after invoking a blessing on Percival's head, to seek refuge in her father's hovel. The old man aggravates her sufferings by his harsh reception; he has not forgotten the offence she gave him for her husband's sake. Meanwhile Guenever arrives, and is amazed to learn that Griselda has so far endured the proof. Percival, overcome by contrition, entreats that the trial may end; but still refuses to rescue his victim by humbling himself to Guenever, who demands one trial more. She will not yield unless Griselda consents to give up her own life for that of the man who has misused her. Percival, feigning to be pursued, flies to the cottage, and is concealed by Griselda; and when Guenever arrives with her knights, demanding his life, she offers her own in its stead, and will not even redeem that of her blind father, who is instantly seized, by betraying her husband. Guenever owns to her followers that she is vanquished. The last sacrifice here imagined by the dramatist exceeds any in the legend; and we think it is not happily invented, as it follows too closely the father's severity to his daughter.

The last act displays Griselda's triumph; as, expecting to be led to death with Cedric, she is received by Arthur in the midst of his court, and fondly embraced by her husband, while Guenever, kneeling, confesses her to be the pearl of wifehood. From this point we lose all sight of the true legend. The woman who has borne and forgiven all, while she thought it a real sacrifice to love, is wounded at the heart when she discovers the wilfulness of the trial. The triumph of her virtue, and her husband's passionate excuses, alike fail to reconcile her :—

Gris. My heart was thine; thou ne'er hast known it,—never!
And in thy hand it breaks! Thus could'st thou play
With its pure ardour; boast and plume thyself
With its true faith and free self-sacrifice?
Thou never lovedst me—no! 'Tis vanished all,
That glad illusion which was Being's bliss;
My Paradise to fragments falls away,
And a bare desert, joyless, stares upon me!
I cannot journey with thee hand in hand,
When heart has turned from heart: the charm's dissolved!
* * * *
Perc. And wilt thou shun me? wilt abandon me?
Mine art thou. Mine! Who dares to steal thee from me?
I hold thee here: who dares to tear thee hence?
Who breaks the vow of truth which thou hast sworn me?
Gris. Thyself! 'Tis thou hast torn this bond of love!
We must be parted, Percival,—we must!
Grant me but leave to keep my boy awhile,
Till the small remnant of my days is full,
For well I know my time is near the close;
And as the swallow, parting, southward flies,
So homeward struggles the life-wearied soul.
Then shalt thou take him as my latest gift,
Direct him on the path of knightly honour,
And on his head my injuries expiate.
But flourish thou, in fresh exulting life;
A stately tree, becrowned with honour's rays:
And should the conquering power of favoured love
Entwine around thy heart a second band,
O let no dark suggestions e'er beguile thee
To lay for her such trying snares again,
For love bestows itself on love alone!
(*She goes slowly out, followed by her father.*)

This, we think, is not less inconsistent with the rest of the play than at variance with the original story. Halm's Griselda is no example of patience at all; the author's design has apparently been to represent her as a martyr to love, and in this he has been far from successful. No woman with such a quick sense of the worthiness of love could have preserved to the last moment the delusion of Percival's attachment. It must have disappeared when he drove her with ignominy from his doors. She has endured too much, or not enough; and leaves us, at last, under contending feelings, that the author has vainly desired to reconcile. In place of his attempt to infuse a new motive into the tale, we hold by the simplicity and greater poetical truth of the ancient legend, and prefer its happier close. One feels that such impossible trials deserve an unimaginable reward; and that, if a broken heart was to be the only end of all this suffering, it is pity that it did not break earlier. So that we must say the play has given us a Griselda in which every peculiar feature of the original is lost, and in their place a something is left, too hard for easy belief, and yet deprived of the charm that made belief easy. Of the other characters it is unnecessary to say anything.

Herr Halm's style is ambitious, and yet vapid; nor has he, as may have been seen, much poetical wealth to compensate for the want of simplicity. The language seems a kind of parody of the Græcism which crept into Goethe's later style, and which is sorely misplaced in a romantic drama. On the whole, we expected to have found more merit in a work which has been successful in Germany, and is, we understand, admired by readers of German in this country: and we should lament the state of the Vienna stage, if such are its choicest novelties. But Herr Halm is a young writer, and, it is to be hoped, not the best of his day.

A Memoir of Ireland, Native and Saxon. By Daniel O'Connell, M.P. Dublin and London, Dolman.

A life of active political excitement, highly cultivated powers of passionate declamation, and habits of rapid composition, formed in the hurry of political strife, are so inconsistent with the patient research and tranquil reflection required in a historian, that we were somewhat startled when we saw this work announced for publication. Had the author retired from active life, and turned to literature as a new source of excitement, to cheer the hours of solitude, and supply the wants of a mind which can find rest only in variety of occupation, we should still have doubted the possibility of his acquiring the calmness necessary to exercise a deliberate judgment on disputed facts; but a work written while the author is still the head and front of extensive agitation, amid all the excitement of feverish discussion, could only have been, and in fact only is, a large political pamphlet. Mr. O'Connell has, in fact, done little more than publish the extracts from Irish history, which he had entered in his commonplace-book as materials for speeches, and added to them a few words of fervid comment, such as would have brought cheers from an audience, but are not likely to produce approbation or assent in the

Digitized by Google

closet. Charles Fox used to say, that whatever read well as an essay, could never have been effective as a speech; but the converse is still more true: the composition most likely to be effective as a popular harangue, has the least possible chance of success as an historical memoir.

The very title of the present work shows a want of caution and calmness unworthy of the writer: it is entitled 'A Memoir of Ireland, Native and Saxon;' but of "Native Ireland" it scarcely says anything; and of "Saxon Ireland," it of course says nothing, because such an Ireland never had existence. The first invaders of Ireland from this side of the channel were the Norman barons, who were not one whit less odious to the Saxon population of this country than they were to the native Irish. A popular blunder may safely be repeated to catch a popular cheer; but a book is not to be judged by the same laws as a speech; and it is therefore no venial literary sin to stamp on the title-page a vulgar error, and an appeal to popular prejudice.

So far as this volume has an object, it may be regarded as an argument for the repeal of the Union, derived from historical proofs of English misgovernment. The evidence, however, leads directly to an opposite conclusion, and irresistibly proves that most of the evils have arisen from the Union having been too long delayed, and finally left incomplete. Instead of being united to England, Ireland was garrisoned for England, first by a territorial aristocracy of race, and then by a territorial aristocracy of religion, precisely similar to that of the Turks in Greece. That aristocracy was responsible to no earthly power for the exercise or abuse of its authority: when menaced with inquiry by England, it threatened to throw itself on the Irish people; and the mere threat produced the revocation of Wood's patent, the cession of free trade, and the independence of the Irish parliament: a parliament, be it remembered, that represented not the Irish nation but the Irish ascendancy. On the other hand, that ascendancy could always command the aid of British money and British cannon, to stifle Irish complaints and crush Irish resistance. England lavished wealth and blood to insure the success of its garrisoning ascendancy at the close both of the seventeenth and eighteenth centuries; while the Irish aristocracy reaped all the benefit of the consequent confiscations. Had Ireland been fully, fairly, and completely united to England, like Wales or Scotland, the misgovernment under which the country has suffered would, to a great extent, have been impossible. Nor would difference of religion have produced such an impediment as many suppose. During the whole of the last century, the penal code was scarcely felt as an inconvenience by the Catholics of England, whilst there was not a single link in the entire chain which was not felt as a practical inconvenience in Ireland.

A complete union would have given Ireland the full benefit of English law, which it never yet has had. Now there is no Irish statute differing from an English statute on an analogous subject, in which the whole of the difference is not a clear gain to the irresponsibility of the ascendancy, and consequently to inevitable misgovernment. Mr. O'Connell indisputably proves that Ireland ought not to be treated as a province: it must therefore either be treated as an integral part of Britain, or as an independent nation. There is no other alternative; and every one who supports differential laws for Ireland, whether from pride, fanaticism, desire to monopolize power, or to monopolize pelf, is not less a repealer than Mr. O'Connell himself.

This is neither the time nor the place to argue the question of the Repeal of the Union on political grounds: it comes before us purely as a literary question, namely, whether Mr. O'Connell has made out an historical case against the English connexion with Ireland. We hold that he does make out a very strong case against such a connexion as consists merely in the maintenance of an army of occupation—for the Protestant ascendancy was nothing else; but we also hold that he makes out a much stronger case for such an intimate connexion as would amount to a complete identification of the two countries.

Mr. O'Connell nowhere explains what he precisely means by a repeal of the Union, which is still to preserve a connexion between the two islands. Is Ireland to be again garrisoned by the old ascendancy, or is some new English interest to be devised for a new career of misgovernment? To talk of "the golden and unonerous link of the Crown," may be very well for a patriotic ode or a popular speech, but in a grave memoir, such as this before us professes to be, is sheer nonsense. The succession to the Crown itself is a parliamentary title. English and Irish parliaments may come to very different conclusions respecting that title; they did so before, and the difference led to a sanguinary and expensive civil war. The two parliaments might differ on a question of Regency; they did so before, and but for the recovery of George III., would have thrown the empire into confusion. They might, and at the present moment they undoubtedly would, differ in their recommendation of responsible ministers to the Crown, and thus exhibit to the world the spectacle of two hostile cabinets in a united empire; they very nearly did so before, and it was only a lavish system of bribery, which has no parallel in the history of corruption, that enabled the English cabinet to break down the Irish opposition. The history of these transactions is not unknown to Mr. O'Connell, and had he fairly taken them into consideration, he would have modified the conclusion which he has drawn from his premises.

It is so difficult to discuss any question of Irish history without being drawn into the forbidden ground of party politics, that we should scarcely have noticed this work, but for the importance which attaches to the name of the author. We feel at a loss, because no great question has ever yet been settled in Ireland; when any such has arisen, it was got rid of by some temporary expedient; the difficulty was adjourned, but not solved, and left to swell the accumulating mass of anomalies bequeathed to a perplexed and overburthened posterity. Laws in Ireland had but a provisional existence; their duration was contingent on some political millennium, predicted by fanatics, and credited by blockheads; until the arrival of which it was deemed useless to attempt the permanent settlement of anything. It was even boasted by legislators, that three-fourths of the statute book would be a dead letter when the conversion of the Irish from popery should be effected. We have had too much of this legislation for fanciful millenniums; and Mr. O'Connell is just adopting an error of the same kind, when he adjourns the consideration of the many great questions, still unsettled in Ireland, until his dream of Repeal is accomplished.

We cannot praise this work for either its literature or its logic, but we must do justice to the vigour of its style and the sincerity of its sentiments; it is an honest book; the writer feels and means what he says. The perusal of it has led us to wish for a work of a very different kind; we should gladly see Mr. O'Connell's Memoirs of his own Life and Times. His habits of life, his natural temperament, and his quick sense of wrong, unfit him for the patient inquiry and calm judgment necessary to collect and organize historical evidence; but these very qualities would give force and vigour to the personal narrative of one who has acted, suffered, and triumphed as much in a single life, as a whole generation of ordinary politicians.

Borgia: a Tragedy. By T. Worley, Esq.—*John of Hapsburg: a Tragedy.* By R. Lewis, Esq.—*Oliver Cromwell: a Drama.* By W. Leatham, Esq.—*Waltheof: a Tragedy.* By F. Worsley, Esq.

THERE seems no other way of accounting for the extraordinary fertility of the present day in tragic dramas, than by the prevalence of national distress. As a good distress is indispensable to a tragedy, so a great distress, and particularly a public distress, may act as a general incentive to tragic genius, and set a thousand minds in search of the sources of horror and pity. Tragedies were never so abundant as just now: they are actually as plenty as blackberries in August, and it is twenty to one that any given gentleman in a black coat has "commanded tears to stream" in his time, whether the tears have, or have not, obeyed his mandate. The ancient satirist pronounced his whole nation a comedy; ours is rather a tragedy, with an occasional dash of farce in it, like the grave-digger's scene in Hamlet. Though we are nick-named merry England, Melpomene has twenty times more sway over us than her sister Thalia, and from the Land's End to John-o'-Groat's nobody now laughs or causeth to laugh, save only Punch. The truth, we fear, is, that there is more sorrow than joy upon this side Styx. 'Il Penseroso' is some twenty lines longer than 'L'Allegro,' and who knows but that Milton would have abridged the ode to mirth still more, had he lived in these tragic days. With the tears of merchants, however, or of country gentlemen, we have nought to do: we are only concerned about the "tears of the Muses," and certainly Melpomene has but too good cause to weep for the decline and fall of her once "gorgeous" kingdom. The "pall" is indeed a garb only too appropriate to the modern state of tragedy, which nevertheless continues not unfaithfully to "present—Thebes"! We think we hear the Muse renewing the moan she made of old by the lips of Spenser—

> "My part it is and my professed skill,
> The stage with tragic buskins to adorn,
> And fill the scene with plaints and outcries shrill
> Of wretched persons to misfortunes born;
> But none more tragic matter can I find
> Than this of men deprived of sense and mind."

Whether by the description "of men deprived of sense and mind," Melpomene means to indicate the tragic writers, we shall not determine; but the cap would fit a few of the number. Again, she bitterly complaineth:

> "I, that in true tragedies am skilled,
> The floure of wit find nought to busy me!
> Therefore I mourne and pitifully mone,
> Because that mourning matter I have none."

The dearth of "mourning matter" is a serious affair to the tragic muse. Burns tells us, that "man is *made* to mourn;" but here are half a dozen bards in buskins, who have not made us shed one tear. Tears are fortunately not so plentiful as tragedies, or we should be in no slight danger of a general deluge, and in the depressed state of the shipping interest, it might not be so easy to provide ourselves with an ark of safety. Our tragic poets are like the pagan priests, calling for rain in a general drought, but not a drop will fall for all their supplications, the clouds only answering the true prophet, as the heart only melts for a Sophocles or a Shakspeare. Perhaps the self-same cause that disposes so large a cohort of our numerous poetic legion to wear the buskin, would account for the prevalent disinclination to weep at their bidding. It may be the unusual demand

Digitized by Google

for tears in real life that makes the supply so deficient for theatrical purposes. We remember when there was brine enough to be had in Drury Lane or Covent Garden to float a seventy-four, and now we have a dozen of tragedies whose combined hydraulic power would hardly raise water enough to float a cock-boat. The "common cry" is no longer heard in the play-house; and if there be any *crying* grievances, they are not those of imaginary heroes and tragedy-queens, as they were wont to be. The public is somewhat in the condition of the Judge's crier, who could not cry on a certain day, because his wife died. We should be disposed to number our tragedies amongst our grievances, but they are certainly not crying ones to the public, whatever they may be to their publishers, who must sometimes be deeply affected, beyond a question. The publisher is the worst practical critic of dramatic performances. The finest of tragedies makes him rub his hands with glee, while a vile one, that sets the rest of the world laughing, is sure to turn his eyes into fountains.

The preceding remarks are not intended to be applied equally to all the productions now before us; nor do we mean to speak disrespectfully of any of the number, or to deny the majority of them credit as poems of dramatic form. A tragedy, however, must be something more than a dialogue in verse, or a series of conversations upon some mournful or exalted subject partitioned into acts and scenes. In all the late compositions under the name, we seek in vain for the intensity of action and passion, without which there is no tragic poetry. The necessity for this intensity is a main argument for the preservation of the dramatic unities. To few writers is it given to break that law with impunity, although there is nothing more common than to respect it without success. The author of 'Cromwell' pays so little reverence to unity of time, that he spreads out his subject over the whole interval, from 1643 to 1658,—why, we know not, except to avail himself of the deaths of Hampden and Charles, as well as that of his hero; or, as the writer himself expresses it, to include "the chief incidents which designate the age of Cromwell." The selection of one great incident, with minor occurrences grouped around it, would have been a discreeter choice. Upon Mr. Leatham's principle, we do not see why he might not give us the reign of Elizabeth in a tragedy, or dramatize that of George III., so as to have the benefit of Margaret Nicholson and Wilkes, Madame D'Arblay and Horne Tooke, Lords Chatham, Bute, and Thurlow, with the shade of Junius, or the Cock Lane ghost for the shilling galleries. A writer cannot have a more dangerous model than himself. 'Cromwell' is a sequel to the drama of 'Strafford' by the same hand, and the writer tells us that "following the little tragedy before mentioned, he has occasionally appropriated, wherever history has laid it down, the precise language of some of the most remarkable men who ever figured on the world's stage." How faithfully he has copied historical records will appear by one instance out of many, the address of Lambert offering the Protectorship:

Lambert. Sir! the late Parliament is now dissolved;
The exigency of the times requires
A strong and stable government—we pray
Your Excellency, in the joint behalf
Of the army and of the three *nations*,
To accept the office of Protector,
Or Chief Magistrate of the Commonwealth,
Under a constitution newly made
By the councils of *Army* and of State.

But is this principle a sound one? is tragical effect best produced by literal adherence to the recorded language of historical characters? Decidedly not. The great dramatists have not worked upon this principle. They never versified history and called it tragedy; not at the same time neglecting to avail themselves of remarkable thoughts and expressions, ascribed by chroniclers to illustrious persons. Had Shakspeare followed such a course, he never would have made, as he did, an Antony, an Ulysses, a Timon, and a Wolsey of his own. His histories were tragedies, but his tragedies were not mere histories. It seems now to be forgotten, that a tragedy is, or ought to be, a poem; and being a poem, it utterly repudiates a mere reproduction of the scenes of life. The material must put on the ideal; facts, events, characters, language, sentiment, must undergo a spiritualizing and exalting process. The seeds of epic poetry are scattered through Tacitus and Livy; but what art could transform the Annals or the Decads into epic poems? Even where the sentiment and diction of the historian are the most sublime and gorgeous, the poet must adopt them sparingly. This is evident from the example of Milton, who might easily have conducted his entire dialogue in the magnificent language of the Scriptures, which lay in tempting profusion before him.

To pass to another point suggested by the batch of plays under review, it strikes us that one source of the general inefficiency of modern dramatic writers, is the indistinctness of purpose with which they write. They halt between two courses, whether to write for the stage or for the closet, and the force lost in such indecision renders their performances unmeet to stand either trial. This arises, we are aware, from the importance which the reading public has attained. There was a time when dramas were written only to be played, and then there arose a singleness of design which gave a writer the energy essential to success. There was nothing but action in his thoughts; he never sought poetic effects apart from the movement of his story; although he scattered flowers as he went with a most liberal hand. Now we have plays to be played, or not, as fortune may decree. If the manager and the public approve, the word drama appears fearlessly upon the title-page. If rejected as a drama by either jurisdiction, the work is announced as a dramatic poem. The truth, perhaps, often is, that it has failed in the first character, because the author has had the second in view, and has contemplated, throughout, taking sanctuary in the closet from the disasters of the play-house. The reason in general is, that if a play miscarries on the stage, it must therefore be sure of success as a "dramatic poem;" something like the logic of him who, having written a tragedy that was damned, concluded immediately that his forte was comedy. The author of 'John of Hapsburg' commits no such absurdity; he frankly tells us, that he wrote expressly for the theatre, and although the rejected of a manager, he tenders his play to the reader merely as "an acting one." To prove that his design was not to produce a dramatic poem, Mr. Lewis confesses, that "there will be found few merely poetical passages, nor any descriptions of scenery, or even of character and manners, that could be dispensed with." This sounds a little strange, and leads us to suspect, that the writer considers "poetical passages" essential to a dramatic poem, but rather blots upon a play intended to be played. We do not like the idea of a tragedy produced upon the least-possible-poetry principle; but whether the nakedness of 'John of Hapsburg' is the result of real penury, or an over-rigid economy of wealth, we shall offer no opinion. However, that there is better taste shown in abstaining from "poetical passages," than in overlaying a drama with them, without regard to the general effect, there can be no question; and in this respect we have also to commend the play of 'Borgia,' by Mr. Worley. Of this tragedy, the heroine is the atrocious Lucretia Borgia, whose crimes had been previously dramatized by M. Victor Hugo. The design of the English writer is to draw that line between the horrible and the revolting, which, though hard to hit, is peremptorily required by the laws of tragedy, at least in this country; and he has certainly made his demon some shades less black than she was painted by Hugo. Allowing for the enfeebling effect of the conscious following in the wake of another dramatist, and one of so much power, the play before us displays considerable energy, and has the merit of a concentrated interest, although of a painful kind. There are occasionally some eloquent passages,—for example, a speech of Gubetta, the minister of Lucretia Borgia, where, alluding to his mistress, he thus exclaims:—

O woman, woman!
How art thou charg'd with a brief energy,
That, like the sudden cannon, in one blaze
Spends all it owns of strength! Couldst only hold
The topmost of thy pace through life's whole course,
Which of us might match with thee? But, the strength
Suiting not with the speed, first flagging comes,
Next weariness, and then the absolute pause;
And so the sturdy tortoise gains the goal,
While the hare slumbers at the distance-post.

But, on the other hand, scenes requiring the utmost earnestness and intensity of thought and language are spoiled by vague and commonplace declaration. What, for instance, can be more trite and shallow than the soliloquy of Lucretia Borgia over the body of the poisoned Maffio?—

In how deep
A well of mystery dost thou lie, oh, Death!
Of whom we cannot answer, if thou art
Our end or our beginning! Being our end
We are not worth to think of,—but mere flesh
Differing from other flesh only in this,
That we are doomed to a worse sepulchre:
The flesh of beasts becomes the food of man,
The flesh of man becomes the food of worms,
And which the nobler is needs no deciding.
Or art thou but a dark and earthy tunnel
Leading to light beyond? Then to the light
Of what life dost thou lead? Not life eternal,—
For that which hath one end must needs have two;
The infinite is not father'd of the finite.
Can it be, things have souls that have not reason?
But reason hath its lodging in the brain,
For when the brain is injur'd so is reason,
And man, that hath not reason, is more bestial
Than the half-reasoning beast, that hath no soul
Allow'd of our cold creed.

However, we are disposed to be particularly lenient towards Mr. Worley, on account of one stroke of originality, which places him, in our opinion, decidedly above his brother dramatists, namely, the circumstance that his tragedy is in but three acts!

The Tuft Hunter. By Lord William Lennox. 3 vols. Colburn.

THIS is an amusing book—a very amusing book. We are not, we hope, given to extravagant laudation, but there are scenes in 'The Tuft Hunter' quite equal to Walter Scott; others again of wit, humour, and pathos which Hood himself has never surpassed. It is a work of infinite variety; and quite original—in its way. Every scene recals and rivals some scene in another tale; and there are few novels, good, bad, or indifferent, published within the last twenty years, of which the writer does not occasionally remind us, and with which he does not challenge a comparison. In short, nothing great or small seems to have escaped his observation.

Our readers will, perhaps, expect some proof of this. Let them then compare Sir Charles Callendar's death (i. p. 20, Tuft Hunter) with the account of Edie Ochiltree listening to the news of Steenie Mucklebackit's fate (Antiquary) —or the description of Vavasour's apartment, beginning—

"The room had a comfortable though not a lively appearance. It was hung with tapestry, which the looms of Arras had produced in the sixteenth century. The bed was of a dark and faded green, wrought to correspond with the tapestry. The large showy stuff-bottomed chairs, with black ebony backs,

Digitized by Google

were embroidered after the same pattern," &c.—(*Tuft Hunter*, vol. i. p. 69).

—with Scott's account of the green room at Monkbarns, beginning

"The apartment had a comfortable, though not a lively appearance. It was hung with tapestry, which the looms of Arras had produced in the sixteenth century. * * The bed was of a dark and faded green, wrought to correspond with the tapestry. * * The large and heavy stuff-bottomed chairs, with black ebony backs, were embroidered upon the same pattern," &c.—(*Antiquary.*)

But we could refer to a dozen like examples, in which the writer may be compared to Sir Walter. In proof, however, of the extent of his daring, other and less familiar examples may be more acceptable.

"What a contrast is a country breakfast to that wretched languid affair of heavy eyes and aching limbs, nauseated palates and jaded spirits, a London breakfast during the season. When the cups that cheer but not inebriate are swallowed mechanically, the dainties even from the hands of a *cordon bleu*, are thrust away untasted. The statesman, worn out after the excitement of his speech, &c. &c. will each or all bear witness that a London breakfast in the season is a joyless repast."

Tuft Hunter, vol. ii. p. 7.

"A London breakfast in the season is a wretched, languid thing—an affair of heavy eyes and aching limbs, nauseated palates, and jaded spirits. The cups "that cheer but not inebriate," are swallowed mechanically—the dainties from even a Ude's master hand are thrust away untasted. * * The statesman, worn out after the excitement of his speech, &c. &c. will each and all bear witness that a London breakfast in the season is a wretched languid thing."

The Lion, vol. ii. p. 57.

The scene at the opera (pp. 123, 4, 5, 6, 7, 8, Vol. ii. of 'The Tuft Hunter') may, also, be compared with a like scene in the novel which has yielded the above parallel. But Lord William dares comparison with Thomas Hood and 'Tylney Hall,' as the following fragment will sufficiently indicate:—

"The coroner's inquest being justly considered as one of the most important and valuable institutions of our country, its functions in the provinces are commonly delegated to the most obtuse and ignorant members of the community! The rich and the intelligent have always influence enough to evade its duties; so that the "crowner's quest law" generally devolves upon some dozen dunder-headed boobies, who serve habitually as jurymen for the parish in which they may happen to reside. They follow implicitly their leader, the foreman; who as implicitly follows his leader, the coroner; the latter personage being usually a perfect Dogberry, furnished with a few technical terms and legal distinctions, which enable him to decide between Accidental Death, Found Drowned, Wilful Murder, Justifiable Homicide, and Felo de se. Whether Mr. Quillet, the official functionary of Ravensbrook, belonged to this class, will be seen by the proceedings."

The Tuft Hunter, vol. ii. p. 238.

"The coroner's inquest, involving an inquiry into the cause of any sudden termination of life, is justly considered as one of our most important and valuable institutions, and accordingly its functions are commonly delegated to the most obtuse and ignorant members of our community. The rich and the intelligent have influence or tact enough to elude its duties, so that the inquisition generally devolves on some dozen of loggerheaded individuals who serve habitually as jurymen for the parish in which they may happen to reside. They follow, as implicitly as a flock of sheep, the lead of their foreman, whose opinion goes in the wake of the coroner's, like a boat in tow of a ship. The latter personage himself is sometimes little better than a Dogberry, furnished with a few technical terms and legal distinctions which enable him to direct the random records of Visitations of God, Found Drowned, Wilful Murder, and Felo de se. Whether the official functionary of —— belonged to this class will be seen by the evidence," &c.

Tylney Hall, vol. iii. p. 83.

This is but the beginning of a scene. Enough, however, has been quoted to justify what we have said, that Lord William Lennox is a bold man, who does not fear comparison, no, not with Sir Walter himself, nor with Thomas Hood, nor, we imagine, with Sir E. Bulwer, nor Mr. James, nor Mrs. Hall, nor Lady Blessington, nor Horace Smith; and that 'The Tuft Hunter' is an extraordinary work—a very extraordinary work—and quite original—in its way.

A Dictionary of Derivations; or, an Introduction to Etymology. By Robert Sullivan, Esq., A.M. Holdsworth.

This little work is professedly compiled for the use of young persons, and the design is to trace many of our English vocables to a classical, and especially a Latin original: thereby proving "not only the utility, but the necessity of an acquaintance with Latin to every one who wishes to acquire a correct and critical knowledge of English." The *Dictionary* consists chiefly of those words which have been indirectly derived from the Latin through the medium either of the French or of other languages, and whose etymologies are not at first sight apparent; such as *friar* from *frater*, through the French *frère*. A second part is called *Easier Etymologies*, and consists of those English and French words, whose Latin synonymes are spelt in nearly the same way. This is followed by exercises for dictation.

We should be glad to find etymology made a part of elementary instruction in our schools; for there is nothing repulsive in the study, and it would be of more service in forming a philologist than years of painful toil through cumbrous grammars and lexicons. It may be considered as a modern science, for the learning of our scholars, till very lately, being almost exclusively confined to the dead languages, all their derivations were given from some very fanciful similarities between the Latin or Greek and its corresponding English word. Who does not now smile at old Schrevelius' derivations, such as *a cloud* from Ἀχλυς; *heart*, from καρδία. And yet Johnson's etymologies are in many instances scarcely less absurd. Mr. Sullivan's remark on the subject that in his dictionary "the etymological information scarcely ever amounts to more than a French or Latin word *par parenthèse*," does not go sufficiently far; his derivations are not only imperfect, but often erroneous. His ignorance of any Teutonic language often led him to assign a French or Latin origin to a genuine Anglo-Saxon word.

We think a like objection holds against this *Dictionary of Derivations*, wherein many words of pure Saxon origin are deduced from the Latin or Greek, and erroneously. Such as *burgh* from the Greek πύργος; *earth* from ἔρα; *folk*, from the Latin *vulgus*; *wool* from the Latin *vellus*; *work*, from ἔργον; *young* from the Latin *juvenis*; and others, in some of which the resemblance to their classical synonymes is but accidental; and even where the words are undoubtedly consanguineous, as *wool* and *vellus*, yet when we know that the German has *wolle* for the same idea, we shall hardly hesitate to pronounce the German, and not the Latin, to have been the type of the English. That many Latin, Greek, German, and even Sanscrit words have had the same origin is now universally admitted; but that does not prove one to be the parent of another; nor is there in many instances more reason to assign the Greek or Latin than the Sanscrit for the origin of some of the above-quoted words; but when we find these words exist in the German and old Saxon dialects, and know that the Anglo-Saxon was the root of the English language, and that it reached its present stage of existence by borrowing French and Latin words to increase its own stock, surely we shall not hesitate to give the precedence to a German extraction; and we should pause before we gave assent to Mr. Sullivan's remark, that "we are indebted to the language of the Romans for far the greater portion of our vocabulary."

The Anglo-Saxon tongue, though scarcely to be considered in the light of old English, is yet the stock upon which all changes and improvements have been engrafted, in order to produce the language which we now speak. This branch of the Teutonic family was perhaps the earliest spoken European language that was employed in the services of literature. Alfred exerted all his energies, and used all his influence to make the study of his native tongue universal throughout his own dominions, and so far as it lay in one man's power, he succeeded; but his successors, mostly under the yoke of a foreign hierarchy, and sunk deep into sloth or superstition, neglected to nourish the tree which he had planted, and which had already, under the care of his fostering hand, produced good fruit.

During the age preceding the Norman settlement, the Saxon had degenerated into a barbarous jargon, unfit for the higher purposes of literature; in fact, we possess but few writings in the language of this period except some rude chronicles composed in (what was then called) *rime*; a peculiarity of verse, it must be observed, very different from the modern *rhyme*, for it did not employ like sounding syllables at the end of certain lines; indeed, it is somewhat difficult to discover in what these *rimes* were distinguished from prose, as they do not appear to have been measured off into a definite number of syllables: perhaps, after all, the only difference is a greater pomp and dignity of style, producing what in the present day would be called poetical prose. There was, however, one distinguishing characteristic which marked the Saxon poetry, which is almost, if not entirely, unknown to modern metre; and this was *alliteration*, or the repetition of the same letter at the beginning of two or more words in the same line, which letter serves as the initial in the marking word of the next line. This peculiarity, which, indeed, would seem to be fully as defensible as that of rhyming endings, is by no means unpleasant when skilfully executed, and even a modern ear soon becomes accustomed to it. The best, or rather the only complete, work in English written with *alliteration*, is Piers Plowman's Vision, of the time of Edward the Third. The following lines will be sufficient to give some idea of this ancient embellishment of verse.

Peter, quod the priest, tho' I can no pardon fynde,
But do wel, and have wel, and God shall have thy soule;
But do yll, and have yll, hope thou none other,
But after thy death's day the devil shall have thy soule.

These lines, which are not ornamented by rhyme, and which do not possess any discoverable metre, produce a species of rhythm sufficient to distinguish them from prose.

The laws of alliteration were often exceedingly complex; and it is very possible, that to some such law, of whose nature we are at present ignorant, many of the Anglo-Saxon *rimes* owe their prosodial character. Alliterative verse was common to most of the Celtic and Gothic nations, and was, moreover, peculiar to their literature. Rhyme would appear to have been the invention of the Norman minstrels, and was unknown in England before the Conquest. The earliest instance we have of it is in a few lines of the Saxon chronicle commemorative of the death of William the Conqueror.

Such was the condition of the Anglo-Saxon language and literature in England during the eleventh century; and the subsequent introduction of the Norman French among the higher classes at first, and afterwards among the whole people, is very distinctly marked. The connexion between the two nations was first formed in the time of Ethelred, whose second wife was a Norman princess, and who, when expelled from his kingdom by the Danes, took refuge at the court of her brother, Duke Richard. During the troubled state of England that followed the reign of this imbecile monarch, his children were brought up in the family of their Norman uncle; and when Edward the Confessor (one of them), at length regained his father's throne, all his feelings and sympathies were with that people among whom his education and habits had been formed: his confidants and dependents were all Norman: himself was considered by his subjects in the light of a foreigner, and chief of the Norman party, which had now arisen and become so numerous and powerful, as for a time completely to crush the opposing or the Saxon faction (at the head of which stood the great Earl Godwin), and even to drive its chiefs into exile.

At this period the manners and language at Edward's court were altogether French, and the court itself was as Norman in its tone and fashion, as subsequently during the thraldom of the two Williams. On the death of Edward, his party lost so much

Digitized by Google

ground, that Harold, the son of Earl Godwin, had sufficient influence with the Wittenagemote, or great Council, to be called by them to the throne, to the exclusion of the late king's family. But the Saxon party could not retain its ascendancy, and was for ever dissolved by the victory of Hastings, when Duke William, who was now the acknowledged head of the Normans, both in France and England, added the crown of the Saxon kings to his continental possessions. In fact, the accession of William should rather be viewed as the complete and final triumph of one political faction over another, than as the invasion and subjugation of the whole nation by a foreign power.

But greatly as Edward was disliked by his Saxon subjects, he possessed many advantages which William had not: though a foreigner by education and feelings, he was an Englishman by birth and family, and his title was never disputed: his throne was his inheritance, and his dominions his birthright. William, on the contrary, notwithstanding his victory and coronation, was yet only a Norman Chieftain, and as such, taking advantage of the vast powers naturally invested in a military leader, who has cut his way with his sword, he treated England as a conquered province, and rode roughshod over the people. Regarding Saxons of all ranks as foes to his person and traitors to his government, he took care to fill all offices of trust and honour with his own countrymen. The great vassals of the crown, and the ecclesiastical dignitaries were all Frenchmen; and the two parties in England now assumed the form of a Norman nobility and a Saxon commonality. The Normans lived in their strongholds, secluded from the *serfs* and *villains* around them; while the Saxons shrunk from any intercourse with their lords, and hated them as foreign tyrants and conquerors.

While thus separated from each other, no mixture of language could take place. But this state of things could not last long; the foreigners would in a few generations become naturalized, and as soon as they looked upon England as their native country, would treat their inferiors with somewhat less hauteur; while these, considering their lords as fellow-countrymen, would throw aside their fear and hatred; and as intercourse became more and more frequent, the want of a common language began to be felt.

It has been asserted, that the English language was "the work of the foreigners, who, endeavouring to speak the Saxon, naturally mixed it with the vocables and metamorphosed it by the imposition of the grammatical forms of their own language. In other words, it must have been the Normans that broke down the Saxon into English."

The chief argument brought in support of this opinion, arises from the circumstance of the English language having dropped the Teutonic mode of inflections in its grammatical forms, and having assumed the French peculiarity of particles and auxiliaries; which circumstance, it is argued, would not exist in the mouth of a Saxon. Now, although it is certain that the English has retained very few inflections, yet the unmixed Saxon of the eleventh and twelfth centuries, before the English language had any existence, had itself adopted, to a great extent, particles and auxiliaries in the place of inflections, and, indeed, they were common to most European dialects of that age, and by no means peculiar to the Norman French.

But, on the other hand, without laying any great stress on the *à priori* argument, how much more probable it is that the Saxons should try to imitate their superiors, than the Normans those whom they looked upon as rude churls! Let us attend to the internal evidence (the strongest of all) afforded by the structure of the language itself, and we find that ideas of every-day life, which men are in constant use of, are expressed, even to the present day, by genuine Saxon words, whereas words of French extraction are almost entirely used to express what may be called extraordinary ideas, either abstract, and not of frequent occurrence, and of whose form, consequently, men are not so tenacious, or such as may be supposed to have been peculiar to the Norman or upper classes; as, for instance, terms of war and of the law. And although, in numberless cases, words, though of French origin, appear in a Saxon shape, it will not be easy to discover any example of the converse. Indeed, this was the fate of nearly all Norman words introduced into the English during the earliest stages of its existence. The writers of the thirteenth and fourteenth centuries afford abundant evidence of words originally quite French, taking in a short time a Saxon form and termination: thus the word *batayl* glided into *battle*; *partye* became *part*; *verament* changed to *verily*. Such mutations are rarely made but from a foreign into the native form of speech, and would certainly lead us to believe that they were made by a Saxon tongue. If the early English represent the imperfect attempts of a Norman to speak English, yet, at least, the children of these, being taught the same language, would not preserve the defects of their fathers, but would speak as good Saxon as the rest of the people; in the same manner as the child of a modern Frenchman, born and brought up in England, speaks the language of the country as well as an Englishman.

It appears also from history, that the English language was formed, and mere unmixed Saxon entirely disused, before the upper classes ceased to speak French; and they do not appear to have corrupted it in any way, but to have left it off at once. The English writers before Chaucer, (except those whose works were professedly for the illiterate) composed in French, not at all different from that of their continental neighbours, while English (as distinguished from mere Saxon) had been commonly spoken and understood for a century before his time.

The English language arose, progressed, and was formed during the thirteenth century; for if we compare what Layamon of Ernleye wrote towards the end of the reign of Henry the Second (who died 1189) with what Robert of Gloucester produced in the time of Edward the First (who died 1307), we shall find, that while the former wrote in unmixed though very barbarous Saxon, the chronicle of the latter is composed in the same language as the Canterbury Tales, and is very nearly as intelligible to a modern reader. It is fortunate that we are able accurately to compare these monks together, for they both translated from the French of Wace a fabulous history, entitled Le Brut d'Angleterre. The difference may be seen in the few following lines, from the translations, or rather paraphrases, of the two Englishmen, preceded by the original of Wace.

Wace:—

Quand li service fut fini
Et, Ite Missa Est chanté;
Li Roi a sa coronne ostee,
Qu'il avoit au mostier* portee;
Une coronne menort prist,
Et la reine ensement‡ prist.

Layamon:—

Tha the masse was ysungen,
Of chirceken her thrungen;
The kyng myd hys folke,
To hys mete verde;
And mucle hys dugethe.
Drem was on hirede.
The quene, an other halve,
Hire hereberwe ysohte,
Heo hafde of wyfmonne
Wonder an moni ane.

That is, in English—

When the mass was sung,
Out of church they thronged;
The king with his people,
To his meat went;
And much of his nobility.
Joy was in the household.
The queen, on the other hand,
Her harbour sought,
She had of women
A wonderful many.

Robert of Gloucester:—

The king was to his palace, thoʃ the service was ydo‖
Ylad to his menye,¶ and the quene to hers also.

It was, then, at some period between Layamon of Ernleye and Robert of Gloucester, that is, during the thirteenth century, that the English language was formed; and this circumstance may be satisfactorily accounted for by the great national events of that age.

It must be borne in mind, that previously to the reign of John, the king of England possessed vast territories on the continent; in fact, the dominions of Henry the Second in France more than doubled those at home. In consequence, the greater part of his nobility were Frenchmen, not only by extraction, but also by birth and education, and would of course give the fashion and tone to those of their own class in England, who were of the same race as themselves. But when John lost his foreign provinces, he lost his foreign barons at the same time; and the next age saw the nobility, now excluded from the society and influence of their transmarine cousins, begin to mingle more freely and cordially with their countrymen. In this reign did the barons, almost for the first time since the death of Harold, think and act like Englishmen. They stood forth to oppose their tyrannical and headstrong sovereign, in the name, not only of their own order, but of Englishmen. And when, by their perseverance, the great Charter was wrested from John at Runnymede, in 1215, every denomination of subject, from the noble to the serf, was included in that declaration of rights.

The parliament of 1265, in the succeeding reign of Henry the Third, was the first wherein any other than the great crown vassals sat. Indeed, it was the first which can properly be called a parliament, in the modern acceptation of that term, by which is understood a representative assembly; for hitherto the great council had been composed only of those who immediately held their tenures from the sovereign, and who were called upon to furnish aid to their *suzerain* when required by him; just as the barons themselves held their courts of their own vassals. Whatever may be thought of these great events, they are at least sufficient to show that a stronger sympathy now existed between the Norman and Saxon people; and to them we must, in a great measure, attribute the union of the two races, and of their languages; for the distinction between Saxon and Norman was fast vanishing, and English taking the place of both.

The people had now dropped their Saxon, and used English; the higher classes also understood this language, but continued for some time to speak French among themselves; and Chaucer furnishes us with evidence that it continued to be spoken even so late as his time, by the refined or affected in London, in his Canterbury Tales, where he draws a sarcastic line of distinction between the French of Paris and of Stratford le Bow. Edward the Third, in 1360, gave the last and the effective blow to the French language in this country, by abolishing in an express statute (36 Edw. 3) the use of it in the courts of law: the reason assigned is, that the French tongue was "much unknown in the realm;" and the object he had in view was to become popular with the burgher representatives, from whom he was obliged to draw large supplies to further his designs against France, and at the same time he wished to eradicate any remnants of French that might still exist among his chief subjects, and thereby to estrange them from any sympathy with his foes.

Afterwards, when English became the language of the whole country, it would be natural to expect that the upper classes would retain more French in their discourse than the people, who rather inclined to the Saxon; and this is accordingly found to be the case. Chaucer, who wrote for the aristocracy, or for all, uses twice as many French words (or words of French original) as Langland does in his Piers Plowman's Vision, a work professedly for the people, and composed about the same time as the Canterbury Tales.

The productions of the English writers before Chaucer, were of a very barbarous nature; the greater part were chronicles, translated from the French or Latin, and intended for those uneducated persons who were unacquainted with these languages. The possibility of an elegant or well-finished work appearing in English was never imagined by any one before Chaucer. This great poet began his literary career by translating, not from the French, as his predecessors had done, but from a much purer source, the Italian, then the only European language which could boast of great writers. He proposed to himself Boccaccio as his model. One of his earliest works, 'The Book of Troilus and Creseide,' was an imitation of Boccaccio's Filostrato. Of his other writings, many were translations from the Italian. 'Queen Annelida' is after the Latin of Statius. 'The Romaunt of the Rose,' the most pleasing of all his works next to the Canterbury Tales, is a translation from a French poem of the same name.

Perhaps his only original work is that by which he is best known, the much admired Canterbury Tales; and even here, many of the tales are copied from other authors, and the plot itself is of a similar nature to Boccaccio's Decamerone. But the humorous tales, which are chiefly original, are unmatched in

their kind, and vastly superior to any thing in the Decamerone.

Chaucer fixed the English language. Since his time it has undergone but few changes, and those of an unimportant nature. They who will make allowances for his antiquated orthography, and quaint expressions, will meet with but few words which they do not understand; and when they have taken the pains to master these trifling difficulties, they are surprised that their own language is the same as Chaucer's "English undefiled."

WORDS.

Words, household words, that linger on,
When household love is past,
And keep our childhood's tender tone
About us to the last;
Like pleasant streams that murmur yet,
Of valleys far and green,
And make the pilgrim's heart forget
The deserts spread between:
For sin and sorrow have no part
In that bright Ennoe of the heart.

Words, words of hope—oh, long believed
As oracles of old!
When stars of promise have deceived,
And beacon-fires grown cold;
Though still upon Time's stormy steeps
Such sounds are faint and few,
Yet oft from cold and stranger lips
Hath fallen that blessed dew,
That like the rock-kept rain remain'd,
When many a fairer fount was drain'd.

Words, words of love,—the ocean pearl
May slumber far and deep,
Though tempests wake or breezes curl
The wave that hides its sleep;
So deep in Memory's hidden cells,
The winds of Life pass o'er
Those treasured words whose music swells
Perchance for us no more:
But, Memnon-like, its echoes fill
The early ruined temples still.

Words, mighty words, we see your power
Where'er the sun looks down
On forest tree or fortress tower,
Or desert bare and brown;
The power that by old Tiber's wave,
Could rouse the Roman ire,
And wake to war the Indian Brave,
Beside his council fire,
Or call the flower of Gothic shields
To find their rest in Syrian fields.

And yet that power is with us still,
To wake the waves of strife,
Or breathe in tones of love that thrill
The sweetest chords of life:
But if from mortal lips are poured
Such spells of wondrous might,
What glorious wisdom filled his word
Who spake—AND THERE WAS LIGHT!
Well may that mighty Word restore
The morning of the world once more.

FRANCES BROWN.

Stranorlar, Feb. 9, 1843.

ROYAL ACADEMY.

Professor Howard's Lectures on Painting.

THE Lectures on Painting, annually delivered from this chair, have now been continued so long, and have brought together such a mass of sound doctrine and lucid criticism, that it would seem scarcely possible to add anything very novel or important to what you already possess in the writings of those eminent men who have preceded me. The regulations of the Royal Academy, however, still require from the Professor "Six lectures, calculated to instruct the students in the principles of composition, to form their taste in design and colouring; to strengthen their judgment; to point out to them the beauties and imperfections of celebrated works of art, and particular excellencies of great masters; and, finally, to lead them into the readiest and most efficacious paths of study." In the discharge of this duty, it will, of course, be necessary for him to reiterate much that has frequently been inculcated before; elementary principles which have been correctly deduced cannot be changed; but happily, the aspects under which Nature presents herself to the eye and sympathies of the painter are so infinitely various, and leave such different impressions on different minds, that if we are unable to discover any entirely new views, or open an entirely new path, we may still find ample materials for investigation, and abundant topics for useful remarks.

In the fulfilment of my office, it will be my endeavour once more to bring before you the most approved principles of the art, and to explain (in its several technical divisions) the precepts and practice of those great masters, from whose standard productions our stock of theory is derived; as well as to offer to your attention the opinions I have been led to form in my professional career, with such observations and suggestions as may appear likely to assist you in your progress.

Before entering on the didactic part of my task, I propose briefly to consider what are the particular properties of Painting, to state my conception of its capabilities and demands, and of its true rank and position in the circle of the Fine Arts.

All the Arts spring from an inherent desire in man to enlarge the sphere of his enjoyments, and improve his well-being. As soon as he has learned, by the help of the mechanical arts, to secure for himself the necessaries of life, and has advanced a few steps in civilization, he begins to turn his attention to the arts of elegance and refinement—to what are called the *liberal* and *imaginative* arts;—and calculated as these are to withdraw him from the grossness of mere sensuality, to unfold and exercise some of his noblest faculties, and provide him with a train of pleasures suited to his own mixed nature, (from which he may reap not only amusement but great moral advantage), they may well be regarded as benefits worthy of the Supreme Giver of all good gifts. For many of them, under due regulation, are capable in an important degree of purifying the affections and spiritualizing the mind; their sublimer aspirations are strongly expressive of a yearning after a more perfect state of things; and while they supply us with a delightful solace here, may perhaps afford a glimmering indication of the higher destiny that awaits us hereafter, and even help to qualify us for its enjoyment. These arts, though each is distinguished by some peculiar characteristic, possess many qualities in common, and a strong mutual resemblance, which marks them to be sisters of one lovely family, who reciprocally assist, adorn, and support each other. Thus Eloquence derives her rhythm from Music, her imagery from Poetry; the latter obtains her measures and harmony from Music, her graphic descriptions from Painting; Dancing combines Poetry with motion and gesture, regulated by Music; Sculpture lends her aid to Architecture; and the Drama, an eclectic art, borrows from all. Their general object is that of presenting to us enjoyments and gratifications adapted to our innate appetencies, which are suggested by *Nature*, but must be sought for, selected, and carried on upon deduced maxims of *Art*. To this an agreeable stimulus of the organs by which our perceptions are conveyed to the mind is made to contribute in no inconsiderable degree; hence Addison describes the pleasures of the imagination as holding a middle station between those of mere sense, and the more abstract pursuits of intellect.

Painting, as I shall have occasion to show, bears a striking analogy both to Poetry and Music, and seems, indeed, to blend and unite their respective qualities in a medium of her own; rivalling the former in her inventive faculties and intellectual power, and the latter in harmonic arrangement and fascinating influence on the sense. But Painting is more especially and essentially an imitative art: imitation is its peculiar and distinguishing element, the property by which it first catches our fancy and challenges our attention; and in this respect is at once more extensive in its range, and more ingenious in its mode of operation than any other of the same class; for with apparently very inadequate means (light and dark tints), the painter is able to copy the appearances of things so perfectly as to produce illusion, and in certain cases even to deceive the eye. The great and general admiration excited by this capability has misled some to suppose that deception is not only the prerogative, but the real end and aim of Painting. As this error (though of little practical moment) lies at the root of our whole theory, and as those who are entering upon the study of an art should be aware of its true philosophical basis, some examination of this opinion may not be useless.

That uncultivated minds should not be able to discriminate between the means and the end, affords no grounds for surprise; but it is somewhat remarkable that literary men of modern times should have unreflectingly fallen into this mistake respecting an art so much discussed by admired writers of different ages. It is this quality, however, which they have generally considered to be the painter's chief, if not exclusive, title to praise. Thus Cardinal Bembo, in his famous epitaph on Raffaelle, and Pope, in his application of it to Kneller, evidently speak as if they conceived deceptive imitation to be the great merit of those painters, and, of course, (we may infer) of the art itself. The extravagance of the hyperbole establishes this conclusion. The same notion seems to have been entertained by Rousseau, when he said, with his usual eccentricity, "Painters can give the appearance of a body in relief to a flat surface; I should like to see them give the appearance of a flat surface to a body in relief,"—in which he probably thought that he had suggested, if not an insuperable difficulty, at least the true test of a painter's skill; and Du Piles, who had made our art his study, and collected much that is valuable respecting it, distinctly states that "the end of painting is to *deceive* the eye." It is difficult, notwithstanding, to believe that he could mean this assertion to be understood literally, for he must have been aware that there is no attempt at deception in the works of those great painters whom he so justly extols and places at the head of the art. At any rate, a moment's reflection will convince us that it should not be so understood; for surely the rational aim of all works of skill is to be recognized as such,—as the productions of art, and not to be mistaken for those of nature. A perception of the artist's skill is always one cause of the delight he affords us:

Some the workman praise, and some the work.

We have a pleasure in the exercise of criticism, and like to have something to discover and explain. We refer, in our mind's eye, the imitation to the original type, and if satisfied with the resemblance, our admiration is reflected on the artist. The copy may please us the more from being in a high degree illusive, because we are still more impressed with his ability; but if the imitation be so close as to deceive, and we believe the objects to be real, it follows that for us neither the art nor the artist has any existence: the latter has annihilated both by misapplied ingenuity. The little triumph of surprising the spectator into such a delusion, is but a pitiful ambition, and the trick, when proclaimed, is applauded only with a sneer. The grapes of Zeuxis, and the curtain of Parrhasius, were never considered as other than sportive feats of those artists; and (though conclusive evidence of their imitative power) were neither received as the test of their excellence as painters, nor classed with their legitimate pictures. It is obvious, besides, that many things which please as works of art, would, if mistaken for realities, be passed unnoticed, or turned from with distaste, and could have no chance of interesting but in being immediately recognized as imitations. Some of my hearers may be disposed to think that I am rather

Digitized by Google

contending with shadows, and that there is no fear of mistaking for real the objects represented in a picture, surrounded by a frame, and hung up against a wall, any more than there is of being deceived by dramatic representations, when, in a brilliant saloon, we find crowds of spectators clapping their hands at the distresses of Belvidera or the ravings of Lear. It is obvious that under such circumstances there can be little chance of being deceived; but both cases prove that neither of these most highly imitative arts, though it seek to produce a considerable degree of illusion, ever aims at absolute deception. As it is my duty to point out clearly to the student an erroneous principle which has been sometimes contended for, I shall add a few remarks in further illustration of its incorrectness.

However natural it may be, at the first glance, to suppose that imitations when attempted cannot be too completely effected, and, therefore, that deception must be the cause of mimetic art, this is so far from being the fact, that it is curious to observe what a very slight degree of imitation is sufficient to satisfy us, and how readily the mind, fond as it is of truth, acquiesces in the total absence of many essential qualities of the subject represented. Thus, a mere outline will often excite the imagination of the intelligent, and stir the feelings more effectually, than many an elaborate picture, as we see in the beautiful and pathetic compositions of our revered Flaxman. We are all aware, too, how often a spirited and expressive sketch is preferred to a finished work: the mind being less disturbed by a consideration of the details, is more immediately drawn to the main intention and sentiment of the design; we are pleased, also, with the taste, dexterity, and skill which it shows in the artist, and the imagination overlooks or supplies the rest. Even colour, although so eminently attractive, may be omitted altogether, as we find in many admired drawings and paintings in chiaroscuro. In the best productions of sculpture and engraving, colour is now systematically excluded, as unsuited to the other qualities and more limited aim of those arts. I may mention, also, as a remarkable instance how far this abstraction may be carried, that in many of the masterpieces of sculpture (the Apollo, the Laocoon, the Venus,) one of the most striking features in the human countenance—the eyeball—is not even indicated. All these are evidently more or less deficient or abstract representations of nature, and (with many others which might be adduced) prove that the pleasure we derive from the productions of art does not depend on their absolute truth, or even closeness of imitation, and that those natural properties which we are content to give up, are more than compensated to our minds and sympathies by some poetical or technical charms, some secret qualities, which are often more easily to be felt than explained. The observation of Johnson, then, is fully justified, that "imitations please not because they are mistaken for realities, but because they bring realities to mind."

A certain modified imitation of natural appearances, is only the medium by which our art presents her conceptions to us; her natural language, but not her ultimate aim. The noble works upon these walls show that Painting possesses an original inventive power, and, like Poetry, addresses herself to the mind and to the heart. It is this close affinity with Poetry which raises Painting to the high rank she is entitled to hold among the intellectual arts. They are both avowedly arts of fiction, capable of giving charms to many objects in themselves of little interest, and of lending attractions to Nature herself. The true end of both is to please, by presenting us with images of whatever is calculated to excite our sympathies—agreeably to hold the mirror up to Nature, and reflect vividly to our fancy whatever is beautiful or emphatic, dignified or pathetic, in all that surrounds us; whatever is calculated to delight, refine, and exalt us, "to rouse the genius and to mend the heart." This imaginative and inventive spirit (the spirit of poetry) is indeed the divine spark which animates all the liberal arts; the common principle and bond of union, long since remarked in them, which is modified and characterized in each by the different medium in which it operates and the materials it employs. Poetry has, on the whole, a wider scope and more ample dominion than Painting, being not only able to bring before our minds all the visible objects of Nature, but to impart to the intellect a more extensive range of ideas, and a more distinct knowledge of facts; to exhibit in detail the more subtle workings of the heart and head; to trace the gradual progress of emotion, from its faint beginnings till it becomes uncontrollable passion; and to suspend the feelings between hope and fear, till the interest becomes almost painfully intense, and much exceeds any that Painting can excite. For this greater depth and extent of power, she is indebted to an auxiliary and admirable art—a language composed of conventional signs, capable of expressing with more or less correctness whatever the mind of man can conceive; but as this differs in language in different countries, it must be acquired or translated into our own before we can understand it, and in such cases it may lose much of its original energy and harmony, with, perhaps, something of its precise meaning. Painting, on the other hand, confined to the representation of visible objects and effects, is able to convey thought and feeling, only as they testify their hidden residence by look, action, and gesture: she cannot narrate, but her language, if not always adequate, is nevertheless that of Nature herself, and, therefore, universal;—intelligible to the learned and the unlearned, subject to no change, and often admitting of still greater force, variety, and ornament, than the flowing numbers and ingenious figures of Poetry herself. Thus in the power of expressing beauty, character, grace, and dignity, Painting much surpasses her rival; and to this the poets themselves bear witness. Ovid confesses that, but for Apelles, Venus would still have remained concealed beneath the waves.

In the animated and illusive representation of outward appearances Painting has greatly the advantage; but being confined in every work to a single point of time, all that she can indicate of the past, the present, and the future, must be concentrated and compressed into the narrow focus of that one moment; a difficulty perhaps exceeding any which the other arts have to encounter. Notwithstanding the close resemblance of these twin sisters, the difference between Painting and Poetry is essential and considerable, arising from the different elements in which they move, and the different organs through which they address the mind. Each has her own sphere and potency: the one exists in time, the other in space: the one, presenting us with shapes and appearances, is instantaneous in her effects; the other with expressive sounds in succession, makes her deeper impressions by degrees; but the rich accumulation of treasures which they have mutually bequeathed to the world prove their identity of spirit, and that Painting is well characterized as "mute Poetry," and Poetry as "speaking Painting."

Johnson, in his tale of 'Rasselas,' has introduced an eloquent enumeration of the qualities necessary to form a poet, which, as it is equally applicable to the painter, and accords with my view of the subject, I shall here transcribe, as worthy the consideration of the student:—"To a poet nothing can be useless; whatever is beautiful and whatever is dreadful must be familiar to his imagination; he must be conversant with all that is awfully vast, or elegantly little. The plants of the garden, the animals of the wood, the minerals of the earth, and meteors of the sky, must all concur to store his mind with inexhaustible variety; for every idea is useful for the enforcement or decoration of moral or religious truth, and he who knows most will have most power of diversifying his scenes and unexpected instruction: But the knowledge of nature is only half the task of a poet; he must be acquainted likewise with all the modes of life; this character requires that he estimate the happiness and misery of every condition, observe the power of all the passions in all their combinations, and trace the changes of the human mind, as they are modified by various institutions, and accidental influences of climate or custom, from the sprightliness of infancy to the decrepitude of old age."—We are not surprised to hear Rasselas exclaim,—"Enough; thou hast convinced me that no human being can ever be a poet." And yet all that Imlac has there stated to be requisite for the poet is equally necessary for the painter, and still leaves much wanting to complete the idea of a consummate artist; for the latter operating by sensible appearances (of which the eye udges at a glance), whatever he presents to us must be more minutely studied than is essential to the poet, who addressing us by another organ which does not admit of the same distinctness or of any immediate comparison with his subject, and bringing forward his images one after another, may reject whatever is unsuited to his purpose or his powers.

The painter's acquaintance with the structure and surfaces of bodies, their figures and motions, the natural effects and properties of light (and under every variety of perspective), must, therefore, be much more intimate and particular; to which he must add a scientific knowledge of the nature, distribution, and harmony of colours (equivalent to that of the musician in regard to sounds), with a constant attention to *definite imitation*; and after all this, he has difficulties of manipulation to encounter, perhaps equal to those of a dexterous musical performer, from which the poet is entirely exempt.

If Painting, in its inventive and intellectual part, be entirely analogous to Poetry, so in its technical conduct—in the harmonious arrangement of its materials—it will be found to bear an equally close relation to Music, and with these it combines that mimic faculty peculiarly its own.

The chief advantages then which Painting possesses over Poetry consist in the universality of its language, and its more effective power in the exhibition of visible objects and qualities—and over Music in its intellectuality and durability; for if it be the boast of music that it affords pleasure to hundreds of persons at the same time, it is as transient as it is fascinating. The fine works of painting remain for the gratification of future ages, while music, to use an expression of Leonardo da Vinci, "expires in the very breath that gives it birth."

So much for my general notion of the art whose elements I have to bring before you, to which I now proceed. It appears to me, that Painting may be usefully considered, as it is *Inventive*, or poetical,—*Scientific*, or technical,—*Imitative*, or practical,—for these several qualities or properties must in various degrees enter into the construction of every picture. These I purpose to treat of separately, confining myself on this occasion to the *inventive* part.

Invention has ever been esteemed the highest and most distinguishing attribute of man, as that in which "human power shows likest to Divine:" though not creative, but founded on previous acquisitions, it is originative, and seems to consist in the faculty of discovering and developing novel combinations, extending the boundaries of knowledge, and opening fresh sources of intellectual enjoyment. This is the true province of *Genius*—the great privilege and characteristic of Bacon, Shakspeare, Newton,—of Da Vinci, Michael Angelo, Raffaelle, and all those master spirits who are born to be the guides of mankind, and throw new light upon the world in art or science. *Invention* in painting does not necessarily imply giving birth to the original germ of the subject, but consists rather in contriving its treatment as a picture, in devising an agreeable and interesting composition, by which the story, whencesoever selected, may be best illustrated, and all the desirable qualities of the heart compatible with it be brought before us in the most effective manner: thus it comprehends not only the choice of the subject, but that of the actions, characters, and expressions, the figures, with the scene and accessories belonging to it,—the nature of the light and hues which are to envelope them,—in short, the entire design or scheme of the work, with all its parts; it is therefore not altogether separable from technical *composition* (which I shall consider particularly in a future lecture). The painter may be indebted to the poet or the historian for his theme, but the invention of the *picture* as a whole, must be as much his own as if it had altogether proceeded from his sole conception; for the most graphic descriptions will scarcely ever place the *circumstances* of a story in such a light as will exactly suit the wants of painting; the story or plot, if taken from poetry or history, must be translated into another language, and, if I may so express myself, rendered conformable to its *idioms*; the circumstances must be re-moulded in the mind of the artist, and cast afresh; and no one can do *this* for him, he *must* in this be his own poet. This will hardly be denied when we remember how often subjects have been recommended to the painter by men of taste and literature, which, however striking or interesting

Digitized by Google

in themselves, afford but little scope for his powers and resources (with which, perhaps, artists alone can be thoroughly acquainted). Many of the most ingenious thoughts and happiest touches of poetry are not transferable to painting. Unless they can be made captivating to the mind by form or tone, and offer such materials as our art requires, unless reconcileable with her true principles, they do not fairly come within her province, however true to nature.

Much has been said by various writers on the subject of *truth*, or, in other words, of what is to be understood by the term *nature*, as applied to works of fiction; and it is obviously of the first importance to the student to acquire just ideas on this leading point. It has been shown, that a rigid adherence to positive truth is neither requisite nor desirable, even in the imitative part of our art; that the imitation must not be a strict copy; in the *inventive*, or poetical part, a much greater latitude is not only allowable but indispensable.

Nature must ever be the painter's text-book; but Painting affects not to be one of the exact sciences,—her aim is not to convince the reason or satisfy the intellect, but to excite the imagination, and to bring before us attractive and improved representations of whatever is best adapted to interest and give us pleasure in the display of her particular capabilities. For this purpose, Nature must be compared with herself, and refined from all that is disagreeable and repulsive; much that we find in individuals must be omitted when redundant or inappropriate, or added when deficient,—the objects we select must be such as are in accordance with their own natures and with ours:—"The images of things (as Bacon says of poetry) must be accommodated to the desires of the mind;" and therefore their natural and obvious interest is to be enhanced in every possible way,—they must be reproduced to us less as they *are* than as we wish to find them, and conformably with those ideas of the perfection of Nature which she suggests when contemplated in her happiest moods and specimens, collected, refined, and harmonized, as they may be seen in the most admired works of genius. This was the leading principle of the Greeks (as I shall have occasion to point out in my next lecture), and is the basis of *style*. This is the kind of truth which the best critics concur in laying down as alone proper for the painter. The writings of Reynolds are full of this doctrine, and contain a fund of excellent observations on what is to be considered as "truly nature," which properly comprehends whatever we are formed to relish and sympathize with, and this is not confined to the *real* and familiar, but includes whatever is probable or even conceivable—whatever Painting can suggest persuasively to the fancy. The maxim just cited from Bacon is in accordance with the well-known precept of Horace, which allows to poets and painters an equal privilege of departing from mere matter of fact. Indeed, in all works of fiction this is less a licence than a duty. They must bear a certain resemblance, and in some respects a close resemblance to truth, but it must be selected truth,—truth arrayed in fancy's garb,—"Nature to advantage dressed," aggrandized, beautified, and accommodated to our desires.

That these licences may be carried to an absurd length there can be no doubt, but the question of excess is perhaps only to be determined by the power of the artist. Experience has shown, that if he be able to impart to the spectator his own conceptions and feelings with vigour and enthusiasm,—if he can take captive the imagination and constrain us to follow him in his flight, he may "ascend the highest heaven of invention,"—it matters not *how far* he leave ordinary truth behind him, or to what strange region he may carry us. On the contrary, it is then that he will be most effective and delightful to those congenial spirits whom he has succeeded in binding within his spell. The genius of a painter, like that of a poet, may even call forth new species of beings,—an Ariel or a Caliban, the Midsummer fairies,—and "if his charms crack not," blend them with nature so happily as not to awaken our incredulity,—may lift us out of "this visible diurnal sphere," and "lap us in Elysium;" our incredulity, indeed, seems to be the only criterion whether or not he may have exceeded the ample bounds which taste will sanction. On this point there will of course always be a variety of opinion; he will never be equally effective with all men, and it is obvious that the higher his flight the fewer he must expect to be his followers.

M. Angelo, by common consent, stands at the head of the highest class of inventors in our art, and stands alone. The series of pictures which he has painted in the Sistine chapel, beginning with the 'Creation of Man,' and ending with his final 'Judgment,' display powers of epic invention, daring conception, and terrible expression, far exceeding in sublimity any other productions that Painting can boast of. These, and his earlier work, 'the Cartoon of Pisa,' have already been commented upon in the lectures of Fuseli, with an ingenuity and eloquence, which would render any attempt of mine to enlarge on the same topic, worse than superfluous. As it would be useless here to repeat the remarks of this eminent critic, whose writings are well known to you, I shall simply refer to them as containing much powerful dissertation and instructive criticism on the inventive part of painting. For the same reason I shall abstain from dilating on the less overwhelming, but scarcely less admirable series of paintings by Raffaelle in the Vatican. The nature and excellence of these inventions, you may be led to appreciate by the same able commentators. If Raffaelle did not so often ride on the "Seraph wings of ecstasy," and lift us from the earth like his great rival, he was not second to him in his power over the heart. Fuseli has happily observed, that his genius was essentially dramatic, and that he seems to have selected his subjects for the sake of the characters and expressions they would afford, rather than for the interest of the story. This is more particularly the case with his larger works, both those in the *Stanze* and the *Cartoons*. The series of Scripture histories in the *Loggie*, or what are called *Raffaelle's Bible*, are less dramatic in their treatment, perhaps from being on a small scale. But in these, as in all his works, we find the same propriety, the same true and graceful reflection of human feelings for which he was so remarkable. Some of these compositions I shall have occasion to advert to hereafter.

When speaking of dramatic invention, I must not omit to call your attention to the noble work above me ('The Last Supper'), painted from the original of Leonardo da Vinci, by his scholar Marco d'Oggiono, and formerly a decoration of the Convent of Carthusians, at Pavia. If we may believe those authors who have made the most careful researches into the history of this, the most admirable production of one of the most extraordinary men of his own, or any age, it was the favourite object of his profound study during a number of years, and it contains in itself ample evidence of the probability of the fact. The *Cena*, or 'Last Supper of our Lord with his Disciples,' appears to have been a favourite subject for representation with the early Christians. Leonardo therefore had not the merit of originating the story of his picture, though he has thrown into it an animation and soul unrivalled in any other treatment of the event: he has happily selected the most impressive moment of time for his action, when our Saviour is declaring, "One of you shall betray me." The invention of the whole is simple and pathetic, the characters and expressions varied, dignified, and powerful in the highest degree; its combination of admirable qualities placing it as decidedly at the head of the dramatic class of painting as the 'Last Judgment' of M. Angelo, stands supreme in the epic. (The technical merits of this celebrated work, it will be my endeavour to point out in future.) Among the numerous copies of it which were soon spread over France and Italy (and Bossi mentions more than thirty) there is none, I believe, equal to that which the Royal Academy has the good fortune to possess. The estimation in which the 'Last Supper' has been so justly held, is strongly recognized in the homage paid to it by Raffaelle himself, who was induced to enter the lists with Leonardo in an elaborate composition on the same event (which has been finely engraved by Marc Antonio). He has adopted the same moment of time; but beautiful and expressive as his design undoubtedly is, it serves to confirm rather than shake our admiration of its great prototype.

Almost every kind of poetry, as well as the epic and dramatic, may find its parallel in Painting. Giulio Romano, Correggio, Poussin, and Rubens have given us compositions of a highly imaginative character and embodied many of the beautiful fictions of mythology. Albano has produced a number of graceful works of a *lyrical* character. The 'Aurora of Guido' is an *ode*.

Allegory, too, though almost discarded from poetry, will often furnish the painter with the means of conveying to the mind a variety of agreeable images and ingenious ideas, that could not otherwise be so well expressed, and affords great scope to original invention. In this particular province of art he has, I conceive, much greater power over our sympathies than the poet: Minerva, the Muses, and other established personifications, may be invested with a degree of beauty, grace, and interest in Painting, which Poetry can never give them. Rubens has shown that allegory affords unequalled opportunities in the *technical* part of our art, though he has often perplexed, instead of explaining, his story, with those obscure and trivial emblems, which he had learned to admire in the school of his master, Otho Venius (which were too much the fashion of his time). The mixture of allegorical and historical personages in his Luxembourg Gallery, it must be confessed, shocks us from their incongruity (enveloped as they are in an atmosphere of splendour and pictorial prowess, that almost sets criticism at defiance). But his picture at Florence of 'Mars rushing out of the temple of Janus,' appears to me entirely free from these objections. He is represented as hurried on by vengeance and fury, and trampling on the Arts; Beauty and Love are vainly endeavouring to withhold him, while the Earth follows, lamenting, lifting up her hands and eyes to heaven. The composition is admirable, and sweeps through the canvas with great and appropriate impetus; all the characters are expressive, and easily recognized. The invention is simple, ingenious, and consistent throughout, and affords, I think, a happy example of the capabilities of allegorical painting. It has been said, that these *unreal* personages can never affect the feelings, but this is surely not the fact: they may be made beautiful to the eye as well as interesting to the imagination, and therefore afford excellent materials for a picture, though they would have less hold upon us in a poem. Yet, perhaps, Spenser's long continued allegories are complained of, rather from their want of variety and fatiguing stanza, than from the characters being fictitious, of which we are only reminded now and then by their names. If the representation be lively and agreeable, and have a sufficient appearance of truth, we do not ask if the persons represented have ever had "a local habitation or a name." In the allegory by Rubens, which I have just mentioned, we see a soldier rushing out to battle, and a beautiful female, with her children, endeavouring to restrain him; they are followed by a matron, in an agony of woe; under him are two or three figures thrown down, having in their hands various instruments of art. A mother on her knees before him, clasping a child in her arms, furies and harpies dragging him on; in the background, a town on fire, and a troop of fighting-men. Here is little or nothing that is symbolic, or doubtful; the circumstances and characters have a natural hold on our affections, and we may sympathize with the energy and passions which the principal figures display, without recollecting that they are allegorical types. Why should this fine work be less interesting when we discover, that in its abstract meaning (which few will search for) is an ingenious emblem of war and its effects?

Every one is charmed with Shakspeare's allegory of the mermaid singing on the dolphin's back, "and the stars that shot madly from their spheres to hear the seamaid's music." It is so exquisitely imaginative, so consistent with the fairy scenery and characters among which it is placed, that we are quite content to receive it as a beautiful picture, without thinking of Mary Queen of Scots, and the English nobility, whom she seduced from their allegiance, a hidden meaning, of which, but for the acuteness of Warburton, we might still be ignorant. In these instances the allegory pleases, chiefly from its picturesque circumstances, and whether the concealed meaning be unveiled or not, is of little importance; it is there for those who seek it, and to them will be an additional gratification. At other times the interest may arise more especially from the ingenuity of the thought: of this kind, is the following example, mentioned by Du Bos: "The Prince de Condé caused the history of his father, the Grand Condé, to be

Digitized by Google

painted in the gallery at Chantilly, but that hero having been in his youth opposed to the government, and having performed some of his greatest exploits whilst he bore arms against his country, no display of those could properly be made in such a place; on the other hand, it would have been a great mortification to a son, jealous of his father's glory, to suppress his most illustrious achievements in a kind of temple which he was raising to his fame. He directed, therefore, Clio, the historical muse, a well known allegorical personage, to be drawn with a book in her hand, on the back of which was inscribed, 'The Life of the Prince de Condé.' With the other hand she was tearing some leaves out of the book, and throwing them on the ground, on these might be read the relief of Cambray, the succour of Valenciennes, the retreat before Arras, in short the titles of almost all the great actions of the Prince;" thus, says Du Bos, ingeniously perpetuating their memory while he made a feint of rejecting them. Here the figure of Clio being made beautiful and expressive, perhaps with a half-suppressed smile, would render a happy device a very agreeable picture.

Michael Angelo, Raffaelle, Titian, Paolo Veronese, and all the great painters, have occasionally employed their talents on allegory, as allowing more ample scope than any other class of subjects to a poetical imagination. Two allegorical pictures by Correggio, in the collection of the King of France, have been engraved. One represents man tyrannized over by his passions, the other, virtue triumphing over vice. These, and the picture by Rubens, which I have just noticed, belong to unmixed allegory, which, where too much is attempted, may be somewhat obscure; on the other hand, if mixed with history, though it may have the advantage of being more intelligible, unless happily managed, it is apt to be incongruous; at least, where ancient and modern persons and circumstances are combined. The allegorical figures of Rome and Fortune, in Poussin's picture of 'Coriolanus,' (a fine invention, and as happily commented on by Fuseli,) are quite in keeping with the period to which they belong, and by infusing into a great historical event, the spirit of Poetry, have raised it to the sublime. But allegory affords such opportunities of introducing examples of the highest beauty and the grandest character, with every variety of motion, expression, and picturesque effect, such a rich fund of materials intellectual and technical, that it will probably always be the chief resource of monumental, as well as ornamental painting on a large scale, in conveying ethical lessons or philosophical truths, combined with classical imagery. Necessity (the parent of invention) has sometimes obliged painters to introduce into pictures, not allegorical, mere hieroglyphics or symbols, for the purpose of telling the story, and even these are willingly tolerated, when the work is, in other respects, a fine one. In that noble composition, 'The Delivery of the Keys to Peter,' Raffaelle has given it an express meaning only by the real keys and sheep, which he has adopted to express the metaphorical images of the sacred text—a conversion of poetical types into realities, in which he has, perhaps, drawn more largely on the intellect and indulgence of the spectator, than in any other instance. In one of his beautiful inventions in the Loggie, (Joseph expounding his dreams to his brethren,) he has represented the dreams within two circles, in the air, without which, the whole would be unintelligible. But these pretend to be no more than symbols introduced solely to bring the subject to the spectator's recollection. In another, 'Joshua bidding the Sun stand still,' the sun and the moon are also mere hieroglyphics, for Joshua is turning his back on both, though supposed to be in the act of pointing to them; the light coming in from the right of the picture in front, while the sun is on the left, behind. I do not mention these contrivances as beauties, but to show what may be resorted to in difficult cases, and that where the merits of the works are great enough to bear them out, the mind assents to almost any degree of licence, by which it obtains that information which is wanted to make out the painter's meaning; and if that can be rendered plain by a few words upon a scroll or pedestal, or by any similar clue, it adds to the pleasure we receive, as it shows the ingenuity of the artist, without detracting from the technical merits of the work. In the 'Elymas' of Raffaelle, he has told the story in so many words on the base of the Proconsul's tribune, where it could not possibly have been, as it records the fact which you see taking place before you. From the same motive, the ancients never scrupled to put the names of allegorical personages under them. On medals, it was their invariable practice, and in this they have been followed by Raffaelle and other eminent painters. We find it adopted also in that beautiful marble in the British Museum, 'The Apotheosis of Homer.' On some of the Herculaneum pictures, and on several of the Greek or Etruscan vases, the names of the persons represented are also inscribed under them; and it is more than probable that this was the case with the allegorical picture of 'Calumny,' by Apelles, recorded by Lucian; and, perhaps, in the complex type, which Parrhasius drew of the Athenian people, he had recourse to the same expedient. We are apt to smile at this as a clumsy contrivance of the Gothic painters, but it appears to have been used by the best artists, (in the best times,) who felt that it was contrary to the intention of Art either to deceive or puzzle the spectator, and were ready to adopt every mode of making it intelligible and interesting, even by stepping out of its strict natural limits, for assistance. I may here advert to a painter in whom we may boast of having possessed one of the most original inventors that the art has every produced: I allude to Hogarth. The richness of his vein, his conceptions of character, and truth of expression, all stamp him a true *poet*, and well entitle him to be mentioned in this division of my subject. In the class of Art to which he devoted his powers, and which may be styled in general low comedy, he has displayed (with an inexhaustible fund of wit and humour) a dramatic invention not surpassed by Raffaelle himself. He has the very high merit also in the majority of his best works, such as the 'Rake's Progress,' 'Marriage à la Mode,' and others, of making them the vehicles of moral instruction, and lashing with severity the vices and profligacy of his day. By devoting a series of compositions to the same story, and by the variety of ingenious devices he has introduced, (which in this style, perhaps, add to the comic effect of his pictures,) he has contrived to make them as intelligible as narratives, and has shown such a fertile imagination in his details, such a knowledge of nature and of art in the scheme and treatment of his subjects, as place him alone in his particular department. It is to be observed too, that he has drawn his subjects wholly from his own resources, (an abstract and brief chronicle of the times he lived in,) and is not indebted even for their germs to any other poet.

We may congratulate ourselves that *he*, at least, did not follow the advice which Horace gives to poets, of rather adopting known stories than bringing forward entirely new ones. The value of this precept, as applicable to our art, would indeed appear not a little questionable; for though in adopting it the artist's meaning might be more easily recognized, it would seem to be at the sacrifice of novelty, and to the discouragement of originality. To treat in a new and striking way stories that have been often handled, and must therefore be more or less prescribed or anticipated, is an unequivocal proof of genius; but though taste and science may sometimes supply in technical arrangement and skill what is wanted in original freshness, few subjects can be so rich as to afford *many* opportunities of varying them with success: some will do only once. Some of the finest would probably be excluded by having been already so admirably treated as to forbid further attempts. Who, for instance, would now undertake the 'Last Judgment,' the 'Death of Ananias,' or the 'Last Supper'?

Some modern critics of this country are for restricting the invention of the artist in another way, and have gone so far as to assert that among us the subjects of painting should be altogether drawn from our *native* materials, and that a nation so pre-eminent as Britain ought to have a distinct art of its own; that the subjects and style we admire in the old masters may have belonged properly to those countries in which they were produced, but that if transplanted into ours, they can never flourish, or at least have the flavour of indigenous fruit. But this partial view of the matter, which if adopted would miserably circumscribe the field of art, and fetter all the nobler efforts of the painter, appears to me entirely mistaken and unphilosophical. We may, no doubt, be more deeply interested by the most ordinary circumstances connected with self, the most trivial concerns of domestic life, than by the rarest productions of genius—the coarsest portrait of a valued friend may give us more real pleasure than the finest picture of a stranger by Vandyke himself. Our personal ties and affections will always bid defiance to any rivalry from art. But works of fiction do not pretend to vie with *realities;* their aim is to give an agreeable stimulus to our imaginations or affections, by reproducing to our notice whatever is *permanently* grand, beautiful, emphatic or impressive in our observations and conceptions of nature. Such are the qualities we admire in the most celebrated works of art, the real worth of which is to be estimated, not by the transitory gratification they may afford us from present fashions, or personal ties, but by the aggregate approbation of enlightened minds, in different times and countries, which has passed on them a verdict that they are truly and happily drawn from *universal nature.* Hamlet and Othello engage our sympathy as strongly as if they had been born in England, because they are faithful and impassioned pictures of *man*, who is essentially everywhere the same.

Every country may have its native or popular style, but high art, like truth, is limited to no country, is independent of local associations, and belongs to all periods and climes. The author of a really fine work of fiction contributes to the delight of his species, and is a valuable denizen of the civilized world. Such are Homer and Raffaelle to be considered; such is Shakspeare, whom the Germans at this day challenge as belonging to *them*, no less than to us, from the pleasure he affords them: such are Scott and Molière. Let us not, then, attempt to tether Painting within the narrow circle of our own sorry homestead—a noble courser that was meant to range, and expatiate freely through all the realms of fancy.

It is clear, that were we to admit the absurd restriction alluded to, we should exclude some of the best sources of invention; for it may be observed, that the selection of the subject from some distance (either of time or space), affords in itself an important advantage, by giving more latitude to the imagination. We see too much into the detail of what is close to us; the fancy is checked by familiarity; while, on the other hand, our being freed from homely and trivial considerations is perhaps one cause of the powerful impression produced by the great epic poets and painters. In their elevated sphere, the artist is not contradicted by the too intimate knowledge of the observer. No one, who appreciates the marvellous display of energy and passion in the 'Last Judgment,' thinks for a moment of the every-day nature to which he is accustomed; he is altogether absorbed in the terror and sublimity of the scene before him, as by a stupendous and overpowering vision. Even in subjects of a less aspiring kind, by copying too closely our own accidental habits and manners, we always lose in that permanent interest, which belongs to the best productions of the pencil. The admirable genius of Hogarth will hardly preserve his works from gradually becoming as uncouth to his own countrymen, as they have always been to foreigners, from the strangeness and coarseness of their materials; while those of Raffaelle will probably retain their power over cultivated minds as long as taste exists and human feelings continue in their accustomed course.

The foregoing remarks have been drawn chiefly from Poetry, but they are applicable, in no inconsiderable degree to subjects selected from history, which must also be moulded to the demands of Art by the invention of the painter, or they will fail to affect us with pleasure. In historical subjects, however, attention is required to the costume of the time and country to which they belong, even though that should be unpleasing in itself. And perhaps this necessity, and the unpicturesque forms of modern habiliments, may be one cause why recent history has been so little attempted, and interests so little when it is. There is some risk of its becoming ludicrous, even in the painter's lifetime, merely from a change in the fashions of the day. So much was this felt when West undertook to paint the Death of General Wolfe, that he hesitated at first whether he should not clothe his figures in the Roman costume,

Digitized by Google

to avoid the awkwardness of the regimental uniforms and military accoutrements of the period. And our great painter and sagacious critic, Sir J. Reynolds, is said to have advised him to adopt that course, conceiving it to be necessary in order to support the dignity of the subject. West, however, concluded that by so great a sacrifice of known truth, his picture would lose more in character and popular attraction than it could gain by the introduction of classical instead of English dresses: and his success amply justified the choice he finally made. The masterly work he produced on that occasion will always be interesting to the antiquary, from its faithful details, and to the admirers of art, from the skill displayed in the composition. Nevertheless, though as well managed in this respect as a due attention to matters of fact would permit, the repulsive character of the costume, which he could not entirely overcome, must, I think, always detract something from our entire satisfaction with it as a picture.

We see, then, what description of subjects is calculated to maintain a wide and permanent interest with mankind, and what are those which, if more popular in their day, are likely to prove more transient. The painter, however, who justly appreciates the extensive capabilities and almost unlimited range of his art, will not hesitate to exercise his inventive powers in whatever direction fancy may prompt him. In that direction only can he do justice to his natural gifts, and hope to meet with success. Every work will find its class of admirers in congenial minds, whether that class be limited or extensive. We have a right to expect some portion of the spirit of poetry though small or inactive, to be in the latent breast of men, in general; and this it is the especial purpose of the imaginative arts to awaken and elicit. This is that faculty, otherwise called Taste, by which we perceive and relish the beautiful and poetical of whatever is most impressive and happily characteristic in art or nature, as natural taste should be inherent to a more than ordinary extent in the artist (for it is the native germ of future excellence which, though it may be developed and perfected, cannot be supplied by culture); so in a minor degree it is no less indispensable in those to whom works of art are addressed. These are produced only in the expectation that they will meet with an echo in the breast of the spectator responsive to the feelings of the artist. "Without fine nerves, a bosom nicely warmed, an eye, an ear, a fancy to be charmed," in those who are thus appealed to, the efforts of the greatest genius must be exerted in vain.

I have now pointed out the principal modes of invention, and briefly adverted to the more intellectual properties of the art. I have endeavoured especially to draw the attention of the students to the connexion of Painting with Poetry, believing that a poetical feeling should be intermingled to the utmost possible extent in all its productions, of whatever class, as alone giving to them that yest and preservative quality which should always belong to so refined and elevated an art. But those high qualities, taste, fancy, feeling, are spiritual gifts, and cannot be taught. As far as its own peculiar demands will admit, a picture should be conceived like a poem, and treated like a piece of music; and I trust that I shall be borne out in the views I have taken as I proceed, and adduce the opinions and examples of the most intelligent critics and the most esteemed painters. These leading considerations being more or less connected with every division of my subject (particularly with that of composition), I shall have frequent occasion to revert to them in my succeeding lectures.

I shall conclude this introductory address with some advice to the student who is beginning his career.—He will of course make himself acquainted as early as possible with the valuable lectures and discourses which have at various times been delivered from this place. These form in themselves an admirable code of instruction, which will lead him to form a just estimate of what is truly nature, as well as of the limits and capabilities of his art; this he should regard as a sort of patrimony; and I cannot here forbear reminding the young artist of an useful admonition of Sir J. Reynolds, that, in the earlier stages of his study, he should implicitly adopt and follow his master's rules, as if they were infallible. Docility is one of the first moral requisites in any one who would become a painter; it is almost as necessary, indeed, as taste, memory, and imagination. Of this invaluable disposition and its happy effects, we have a persuasive example in Raffaelle himself. Whatever the student's genius, he must be content for some time to travel in the beaten track; with this it is his business to become thoroughly acquainted, were it only to enable him, in a more advanced state, to deviate from it with the greater security; and I feel it right to caution him seriously against supposing that a desultory or slovenly course of study will ever lead to a favourable result; he cannot be too careful and elaborate in his early efforts; it is the shortest, or rather the only road to excellence. If he refer to the example of the great artists, he will perceive them to have been indefatigable in the prosecution of their studies: the extent and variety of their acquisitions, indeed, seem hardly credible in this our "laggard age." While he is daily and assiduously striving to perfect himself in the imitative part of the Art, he should store his mind with all the general as well as critical and technical knowledge he is able to acquire; making himself acquainted with the collection of prints and other valuable works in the library, and extending his view by degrees to every school and age. There is no species of information, which he may not, at some time or other, bring to bear with advantage on his own comprehensive art: and the more he enlarges the sphere of his ideas, the better qualified will he be to make researches in the inexhaustible storehouse of Nature; and the ampler range will his invention be enabled to take. The respected authority I have just quoted asserts that "ours is not an art of inspiration;" and the doctrine, as addressed to the student, is highly laudable, and encouraging, more especially as coming from one whose genius few will be disposed to question. Yet I am afraid, that without some natural predisposition (by whatever name it may be called), some more than ordinary faculties, nothing very considerable can ever be achieved in Art. Science will be insipid without deep feeling and a degree of enthusiasm, which are other words for genius—and feeling will be ineffective without science. The nature of that rare attribute, genius, which is supposed to be anterior to, or independent of all culture, is not yet very well agreed upon; the strongest claims to it are often disputed, while the aspirant is living, and are not always settled even by impartial posterity. Let not the student however despair, who does not perceive himself to be thus endowed, but rather let him urge his powers, whatever they may be, yet more strenuously; nor let the student who fancies himself possessed of this high gift, relax in his industry and application.

Leonardo considered it a good sign, if an artist was dissatisfied with his productions, because it showed that his conceptions went beyond his present ability, which longer study and practice would doubtless increase; and, on the contrary, that his being satisfied, at once proved the work to be too profound for his comprehension. In the opinion of Michael Angelo, even Raffaelle owed more of his excellence to unwearied diligence, than to his natural gifts; and the genius of our sublime Milton is compared by Pope to a furnace kept at an intense heat by extraordinary art. If we can persuade ourselves that such as these were not endowed beyond the ordinary race of men, we may well believe with Newton and Reynolds, that "nothing is denied to patient and well directed labour." However this may be, a just conception of the extensive demands of our art will convince us, that a life of application and unremitted study must be the lot of all who wish to arrive at any great proficiency in painting. M. Angelo at the age of eighty declared that he was still learning.

I hope the student will not think that it is my wish to overwhelm him with a needless accumulation of difficulties; I have not intentionally exaggerated any, but in this general view of the art I am anxious to omit nothing that may help to awaken his enthusiasm and stimulate his exertions, and to show the necessity of cultivating his mind and heart, no less than his hand, convinced as I am that a great artist can only be reared on the foundation of sound moral principles, and a literate education. I would recommend him particularly to familiarize himself with all the finest productions of poetry, and the noblest traits of history, of every age. These studies will awaken his fancy, prompt and sustain his invention, and perhaps qualify him to emulate those great masters of our art who have achieved undying honour for themselves, and bequeathed such illustrious examples to their successors.

ROYAL ACADEMY.

Professor Cockerell's Lectures on Architecture.

CONCLUDING LECTURE.

Proportion, and the application of its golden rules, as they affect the external forms of Architecture, had occupied the latter part of the preceding lecture; the *αναλογια* of the Greeks, delivered to us by Vitruvius, that analogy, by which all the conformations of artificial bodies were derived from natural bodies, seemed to be a principle of obvious importance and utility to the architect, and should be attentively considered.

It appeared that the animal kingdom furnishes clearer lights for our guidance than the vegetable, because organized nature was more constant in her proportions, and enabled us always to re-establish the whole from a part; thus the hand of a Grecian statue, of the Hercules, the Apollo, or of the Venus, or a fragment of any one of the Grecian orders of Architecture, enabled us to restore the whole; indeed, the proportion by aliquot parts by a modulus, a principle of the Greeks, as explained by Vitruvius, lib. i. c. 11, lib. iii. c. 1, was still practised in India, and seems founded in organized nature.

Not so in the productions of the vegetable kingdom, fragments of which would never enable us to comprehend the whole: however indebted to this part of the creation for the graces of ornament, and various essential analogies, Architecture found a less sure guide of proportion in this than in the animal kingkom: in fact, all architecture so derived was anomalous, as the Egyptian and the Gothic, in which no fixed laws of proportion have ever been applied or attempted. Columns or supports might be from five to fifty diameters in height, and were only bounded by possibility. The stunted pollard, the spreading cedar of Lebanon, the aspiring poplar, or the attenuatedcane, were extremes equally at the disposal of the architect.

But that guide, which the face of nature furnished to the architect for his external forms and proportions, was wanting for the internal—as of areas, squares, courts, and open places; or of internal capacities (height as well as area); as of temples, halls, apartments, &c.; in these we must appeal to the relations of reason, purpose, and convention.

Vitruvius (lib. vi. c. 2, 3, 4, 6, lib. v. c. 1, and c. 2,) gives us the experience of the ancients on this important subject. The Greek forum, says he, was a square, but the Roman was 3 by 2, because the gladiatorial shows were exhibited there; courts should have the proportions of 5 by 3 (the favourite of the learned Palladio), sometimes 3 by 2, or sesquialteral, or the diagonal of the square will be the length. He lays down the proportions of all the apartments of the Greek and Roman house: atria, alæ, tablinium, and peristylium, triclinia, œci, exedræ et pinacothecæ. He does not, however, establish any *principle*, and his rules are wholly empirical. But the great Alberti, not content without a principle, adopts the Pythagorean doctrine of universal harmony, and agreement between sounds and numbers, namely, that what pleases the ear pleases also the eye; he lays down, therefore, his harmonic proportion, in which Blondel, Ouvrard and others have followed. The notion of musical proportions is common, and has occupied many ingenious minds already versed in that art. Describing St. Peter's, Byron, in this feeling, observes

> Vastness which grows, but grows to *harmonize*,
> All *musical* in its immensities.

Alberti was the first also to establish the rules of arithmetical and geometrical proportions (lib. ix. b. 3, 4, 5, 6), applied to all the varieties of areas and capacities. He is followed by Palladio in the arithmetical and geometrical rules, lib. i. c. 23.

It is a comfortable conclusion to the practical architect that the empirical rules of Vitruvius, the harmonic, the geometrical and arithmetical rules of Alberti and his followers, agree in the main; so that either may be adopted without material deviation from correctness; but the neglect of these rules, in which lie that hidden charm that every one must be sensible of when examining a finely proportioned

Digitized by Google

room, has been common of late years, as if the principle were of no value; the zealous student therefore should carefully note that consent of the ancients and the most illustrious masters of the moderns, here set forth; and he will soon learn devoutly to repeat the denunciation of the Hindu Vitruvius (Ram Raz, Asiatic Society, 1834, p. 15), "Woe to them who dwell in a house not built according to the proportions of symmetry."

It is true, that the climate of this country and our habits do not often permit the finer Italian proportions; thus the arithmetical rule of proportion, common with our greatest masters, in our best mansions, 36 by 24, should give us 30 feet high to the vault, but we commonly limit it to 18 feet. To correct the defect of lowness, so frequent with us, the illusions of perspective painting, after the admirable Pozzo, may well apply; but even the arrangement of the trabeation and plaster enrichments, offer to the ingenious architect, versed in perspective, many resources for the increase of the apparent height, and for the attainment of an artificial proportion. But a manufacturing people are prone to carpets, rugs, curtains, gilded frames, and mahogany furniture, while the low ceiling is a sheet of paper stretched like a drum, at most of a neutral tint, of indurated fog, with a gilt moulding: while the artistic Italian opens a window of perspective in his ceiling, through which a canopy of poetry and distance delights the eye, and deceives the understanding; but the floor is paved with tiles.

Again, in our modern churches, a ceiling, 60 by 80, has often been fearlessly stretched in one unbroken surface of plaster, in defiance of the fine examples of Charles's and Queen Anne's churches, in which a cove, after the Italian manner, has the effect of reducing the ceiling, and of rectifying the proportion in the simplest and most graceful manner. The student should well reflect on this important field for architectural skill and effect. He may be a good builder and cheap, but he can have no pretensions as an artist who throws away his time and his character in such condescensions as this mechanical employment of his talent implies.

The rules hitherto referred to, have the beautiful for their object. Beauty in Architecture depends, amongst other causes, especially on the exact and graceful proportions of the parts and of the whole. But the sublime depends upon other causes, in which rules cannot prescribe; to the latter not only the rules of the former do not apply, but they are destructive of it. If the beautiful resides in the proportionate, it would appear that the sublime often resides in the disproportionate. The principles and the rules of beauty and sublimity are distinct. If we stand under an arch of London Bridge, the vaulted soffite, so vast and extended, sustained from such distant abutments, produces a kind of sublime; no doubt aided by its comparative lowness. The Pantheon is inscribed in a cube, its height equal to its diameter; no one standing under its prodigious cupola has ever denied its sublimity. But when that same Pantheon is raised into the air (in equal dimension) at St. Peter's, it may have become beautiful, but has lost its quality of sublime. When Byron apostrophizes the Pantheon, he feels the peculiarity of its merit:—

> Simple, erect, severe, austere, sublime,
> Shrine of all saints, and temple of all gods,
> From Jove to Jesus, spared and blest by Time,
> Looking tranquillity!

As the dome of the Pantheon is raised at St. Peter's into a proportionate height, at the expense of its sublime, so the nave (nearly twice as wide as that of St. Paul's Cathedral), also raised proportionately, loses all effect of magnitude; and the common and universal observation is, that as respects this important effect the architect has laboured in vain; and the work stands self-condemned.

The noble poet coincides with the received opinion, and is obliged to supply by poetical moonshine that dignity and interest which it was his object to give to the Vatican. He says—

> Enter, its grandeur overwhelms you not,
> And why? it is not lessened; but thy mind,
> Expanded by the genius of the spot,
> Has grown colossal; and can only find
> A fit abode wherein appear enshrined,
> Thy hopes of immortality!

Sometimes this failure has been attributed to its proportion, which (from its justness, it is said) takes from its magnitude; a criticism at once the most severe and just that can be. In fact, no increase of a proportionate object will ever give it magnitude and the sublime; these depend on extraordinary relations and excess of parts and proportions.

Some years ago a French giant, upwards of nine feet high, exhibited himself in London, but so just were his proportions that no one would give credit to his dimension, till they stood beside him; he was therefore accounted a kind of fraud, and the exhibition failed. But had he been disproportioned, his head small, his shoulders high, and his members excessive, he might have succeeded, even had he been a foot shorter. Had the nave of St. Peter's, 77 feet wide, been 90 feet high only, instead of 145; or if we were to suppose a stage raised mid-height and place ourselves upon it, we should be sensible of its vast latitude, and the effect of magnitude would have been produced as under a bridge. The Barriere de l'Etoile, from the same reasons, though as large as the front of Notre Dame—the arch itself 48 by 95, equal to the height of the nave, but of ordinary proportions and great simplicity of parts and members—loses its effect: the *arc monstre* is glorious to the *grande armée*, but not to the arts of their day; and is infinitely less artificial in its combination than the arches of St. Martin and St. Antoine, designed by the accomplished Blondel.

If, then, the architect can obtain latitude, he should seek to carry out its effect by quadrate and comparatively low proportions; but if he adds altitude to his latitude, he loses his expense and pains, and he may find too late that half his dimension might have attained the same effect; since *proportionate magnitude* defeats itself.

But as extreme latitude gives the sublime, so does its opposite extreme of altitude: in Cologne and Beauvais, the naves of which are three and a half diameters in height, though scarcely more than half the actual width of St. Peter's nave—limited, therefore, in their dimension to the usual cathedral width, yet nearly double the usual proportion—the sublime is completely attained; and disproportion again appears to be the efficient cause.

But the optical consideration of the visual angle in which these several proportions present themselves is exceedingly important. Thus to the spectator of the dome of the Pantheon, the visual angle is 95°, while the same dome raised into the air at St. Peter's is only 30°. In the nave of St. Peter's, the visual angle is 48°, that of St. Paul's Cathedral is 37°, while the vault of Cologne is only 22°. Since then the effect of magnitude is measured by the number of degrees in the visual angle, the architect will advert to this consideration as of extreme interest.

We come, then, to the important conclusion, that the sublime and the beautiful are to be found in the proper adjustment of proportions, rather than in dimensions; and we may infer, that no increase of scale to the beautiful will ever make it the sublime.

But the sublime is of rare occurrence: the use, however, to which these reflections may be turned by the practical architect, under limited means, is remarkably illustrated in the Casino at Chiswick, where the very circumscribed area of the rooms is compensated by their extraordinary height, and the accomplished Lord Burlington has given a nobility to very small apartments which no one could believe on seeing the plan alone, without visiting that elegant work.

Magnitude is the great object and result of design, and this quality is only to be attained by the fine adjustment of relative proportions in magnitude and order. Architecture consists in magnitude and order (says Aristotle), τὸ γὰρ καλὸν ἐν μεγέθει καὶ τάξει ἐστί. (Poet. p. xi. s. 4.) The works of man, compared with those of Nature, display our insignificance. The Pyramids, seen in the clear sky of Egypt, or St. Peter's at Rome, are proverbially disappointing to the first gaze of the beholder: it is only after he has instituted comparisons and admeasurements that he becomes sensible of the greatness of these human efforts,—and his memory will supply him with many instances in which objects of very inferior dimensions have surpassed them in impression of magnitude upon his mind. It is plain, therefore, that Art alone can produce the full effect of magnitude, and to this the architect should direct all his skill: the ancients will be found consummate masters in this as well as in every other department of our art. It is, indeed, a fine art which enables the accomplished artist to raise ideas of magnitude and grandeur of composition on a piece of paper no bigger than your hand; while a less able one shall cover a vast canvas without executing any comparable notions. Worthy of all inquiry and solicitude is such an art, for it is the whole art of design and proportion. Pliny cites a statue of Hercules, so small that it might be lifted by the hand, which, however, conveyed more grandeur, magnitude, and strength to the mind of the observer, than a Colossus would have done. How great must have been the science of the master! and if, with such small means, he could affect the mind with these impressions, how great the economy of cost and material to the employer!!

Burke, whose notions, however, of proportion are vague and erroneous, says admirably on this point (sec. x.)—"A true artist should put a generous deceit on the spectators, and effect the noblest designs by easy methods. Designs which are vast only by their dimensions, are always the sign of a common and low imagination."

In the last lecture it was attempted to show that magnitude, breadth, and proportion of parts were best found in inequalities; but the consideration of magnitude, as respects composition of the whole, seems to depend on other principles: first, it appears that, to make a great whole, there must be many parts; secondly, to appreciate that whole, the point from which it is permitted to be seen should be eusynoptic, namely, so contrived as to fill the angle of vision of 45.0, and occupy the whole retina with multiplied impressions fairly and agreeably presented.

With reference to the first proposition, it may be observed, that in a young tree bursting from the ground, two or three branches with upward tendency grow from the polished bark; the subdivisions are few, and we may count the leaves. By and bye, with age and maturity, the bark becomes rough and corrugated, the base is surrounded with excrescences and roots, which, partly above the ground, indicate the hold it has on all the surrounding space; the branches now shoot out at right angles with the bulky stem, each limb becomes a tree, the subdivisions of these are infinite, and, in all degrees of size and proportion, the leaves are countless. So the young animal, simple in parts, and smooth, expanding with age and strength, developes features and subordinate parts never dreamt of before; furnished and complete, the measure and fullness of strength and beauty is at length filled up. So in Architecture, the tetra-style portico can never look large, though, in St. Peter's, the columns have eight feet in diameter. The Hecatompedon, burnt by the Persians, was not inferior in the scale of its parts to the present Parthenon, but Ictinus judged that, by increasing the number of parts—making that octo-style which had been hexa-style only—greater magnificence would result.

The Temple of the Giants, at Agrigentum (hepta-style) was the largest Doric of antiquity, but to give it all its value, a number of new features, never seen before, accompany its increased growth and vastness. It is raised on a platform of many steps, a base of novel design surrounds the columns, and these vast masses themselves, each a tower of thirteen feet in diameter, built of *many* stones, told by its *many parts* and its elaborate construction the cost and grandeur of the undertaking. So the columns at Pœstum have twenty-four instead of the usual twenty flutings: in short, examples are infinite to show that, to convey the full effect of real magnitude, an artificial magnitude must be superadded, or it is lost labour.

Gradation and repetition of features of the same general resemblance in various sizes, the major and the minor, are main sources of magnitude; the artist will see in the satellites surrounding the planet Jupiter, the best reason for the title of the Father of the Gods; the western towers of St. Paul's give magnitude to the dome. The same principle was to have been applied to St. Peter's, but the western towers fell down. In the admirable church of the Salute at Venice, the minor dome over the high altar, and again the still smaller towers accompanying this, are foils to the great dome. Byron admirably enforces the number of parts:—

> "Thou seest not all; but piecemeal thou must break,
> To separate contemplation the great whole;

And as the ocean many bays will make,
That ask the eye—so here condense thy soul
To more immediate objects, and controul
Thy thoughts, until thy mind hath got by heart
Its eloquent proportions, and unroll
In mighty graduations, part by part,
The glory which at once upon thee did not dart."
Childe Harold, c. iv. v. 157.

So Palladio (as already remarked) characterized his style by the inter-penetration of the larger order by a smaller.

In decoration we are careful to put a small scroll in juxta-position to the larger, to give its full effect; and so the painter to give size to his principal figures interposes women and children in various gradations: the wreath or swag which shall contain flowers or fruit, all of the same size, will be mean, or look like a string of onions; the whole secret of proportion and whole purpose of magnificence is attained, by satellites, and by gradation of the major and the minor.

With reference to the second proposition, the consideration of the point of view of architectural works, the ancients, as has been already observed, were consummate masters, and cannot be too carefully studied. The labour of the architect is vain, if he miscalculates the point of view, and the picture which he is to present on the retina of the spectator. As well might the painter consent to a bad light for his work, as the architect be careless on this vital point. The *genius loci* will insist upon a peculiar composition; each position requires its own adaptation; we should have proper things in proper places. A design good in one place may fail in another, and the unskilful approach and point of view may ruin the best scheme. It is not enough to be right, but to show that you are so: the "*faire valoir*" is a fine economy which runs through the architecture of life, as well as of every step in brick and mortar. The architect must be well versed in this part of optics: the synoptic, the *eusynoptic*, the *deceptio visûs*, should be his constant observation; like a skilful general he must manage and manœuvre his masses to impose upon the spectator, and by their skilful disposition he may often gain that ascendancy which his real forces may not warrant. A familiar instance of this is seen at St. Paul's, and often practised upon the green-horn mason, who visits London for the first time. Of the two orders which decorate the exterior, the lower one forms the great order of the interior, in the same precise dimension; but the angle of view in the interior being so much larger, the spectator is persuaded of its larger dimension. The roguish cicerone engages the novice in dispute on this question, enforced by a bet, which on proof is always to his disadvantage and the penalty of his pot of beer.

Sometimes accident does more for us than wit. St. Paul's, constrained, and crowded amidst narrow streets, produces on the unsophisticated a magnitude and interest which would be lost if the pedants had their way, and large areas and terraces were to expose it from Farringdon Street and the Thames.

While considering magnitude, we must not forget that (the most difficult of all) which arises from greatness of conception—a quality which every one habituated to contemplate fine buildings, must often have been impressed with. But much more the ingenious architect, who in his practice has had opportunities of comparing his own design with those of others more able than himself, and still more in canvassing the various modes in which a work might be performed, will remark the difference between one mind and another. He will find all the moral qualities of the artist exhibited in his performance. "By their works ye shall know them;" greatness of soul, or contractedness of spirit, a folly or a vice, the specious, the clumsy, the refined, the honest, are written in characters quite legible to those who have learnt to decipher the language of design.

We might show the character of Wren in the lineaments of his work—sublime in his mathematical attainments, clear, original and comprehensive in his combinations above all men; but in his exterior unobtrusive and timid, small and elaborate, concealing the art (as Nature does), revealed only on our nearer examination to our wonder and delight. We plainly see "the Nestor of Athens, not only in his profession the greatest man of that age, but who had given more proof of it than any other man ever did; he was in a manner the inventor of the use of mechanical powers; and they record of him that he was so prodigiously exact, that, for experiment's sake, he built an edifice of great beauty, and seeming strength, but so contrived as to bear only its own weight,—so that it fell with no other pressure than the settling of a *Wren!* But such was Nestor's modesty, that his art and skill were soon disregarded, for want of that manner with which men of the world support and assert the merit of their own performances: and for want of that natural freedom and audacity, necessary in the commerce of life, his personal modesty overthrew all his public actions."—Parentalia, p. 341.

In the works of Jones we see the beautiful and specious, the sensual beauty of the tasteful artist, but no mathematics, no sublime combinations of structure, but generous, and free, and highly ornamental, we discover the director of the masques of the splendid court of the Stuarts,—the "Marquis Would-be."

In Vanbrugh we have the dramatist throughout; his theatre and scenery are everywhere, imposing with a pompous grandiose, the spectator is at first captivated, till he peeps behind the scene, and the illusion vanishes.

In short, it is plain that the architect must have moral as well as intellectual qualities, to acquit himself duly of the high charge intrusted to him; and no argument can more effectually convince the student, that in ordering his studies he must first order his own character and conduct; and that nothing can come from him of great and noble, unless from a pure fountain and a well-regulated stream. We must endeavour to sustain that rank in society which both sacred and classical antiquity have assigned to the architect (see Isaiah, c. iii. v. 1, 2, 3; and Cic. Off. p. 42.)

But an important principle in the æsthetical as well as in the real ends and purposes of our art is solidity, the result of equilibrium between the forces of gravity. Nothing can be beautiful which is not strong, or is not adequately strong for its purpose. The impression of duration is indispensable to that satisfaction and repose which the mind seeks in a well-ordered work of Architecture. According to the simple notions of the ancients, it was the essence of the grandiose and beautiful. The Temple of the Eternal was to breathe the spirit of Eternity—strong in its entire structure, it was to be strong also in its component parts, its "great stones." Energy, mental and physical, and stability, were the expressions most desired in Architecture; voids were to be above voids, solids above solids; the area even of the supports, and the incumbent weight (orthographically considered) in most instances of the finest temples are, or approach to, equality.

To this end the whole composition of the edifice was pyramidal, the sides being inclined (as has already been observed) in every style of architecture known to us. The quoins and piers of the angles which inclose the work are larger than those towards the centre; and we may be sure that the expression of strength and duration given to a building is often of itself sufficient for beauty, without other adventitious ornament; as we may also be certain that the want of this quality cannot be repaired by any expedient which the architect may apply. In fact, the qualities of solidity and equipoise impose on the understanding the same awe and conviction with reason, justice, and truth; as inspiring that security, stability, and peace, without which all is flimsy conceit and vain ambition.

But this rational propensity is sometimes in jeopardy from the love of the marvellous and the exhibition of skill in the artificer, from whom, while we deprecate the hazard, we cannot withhold our applause; and if assured, either by the nature of the material or the quality of the structure, of the security the mind demands, we are easily reconciled to the wonder. But this temptation is often a severe trial to the ambitious architect; and without a sober taste, chastened by modesty and reason, it may be often more than he can resist.

We delight in the suspended arch of a bridge or in the enormous vault which covers the Pantheon, or the Baths of Caracalla, or the Temple of Peace. We are reconciled to those of the Gothic cathedral, so long as their stone props or buttresses continue to perform their duty. Not so in the grove at the east end of Salisbury Cathedral, which, like the banyan tree, seems to be composed of pendants from the roof, in different dimensions, rather than columns to support it; beautiful, indeed, but so fragile that the blow of a stick or the movement of an awkward visitor would put the whole fabric in peril. If, instead of a friable stone or marble, these shafts were made of brass, the mind would relapse into that security which is ever the first requirement of our art.

The love of the marvellous is dangerous; exaggeration is the first sign of a mind indifferent to the value, and beauty, and sufficiency of truth, and the surest sign of depravation of judgment. Truth must ever be the best foundation of taste, and can alone be constant and enduring,—

Rien n'est beau que le vrai; le vrai seul est aimable!
Il doit regner partout, et même dans la Fable.
De toute fiction, l'adroite fausseté,
Ne tend qu'à faire aux yeux briller la vérité.
Boileau, Ep. ix., v. 43.

The Egyptian, the Roman, and sometimes the Greek, indulged in the gigantic, with a view to the expression of a prodigious energy. But the Middle Ages were prone to the marvellous, surprise was the great scope of the Gothic architect. Æsthetics were not, indeed, likely to have been studied under the education to which the mind at that time had access. Miracles infatuated the understanding; superstition was the foundation; a dominant hierarchy was little communicative of the lights of science it possessed. The poetical vein received its chief aliment from the East; our scholars brought home from Cordova the Arabian taste for excess and hyperbole. The chastening counsel of a Locke, a Newton, or a Bacon, were wanting to regulate that exuberant and uncultured fancy, and that enterprising skill which the practical experiments in building promoted at so much cost and zeal in those ages.

The two styles of building, till the fifteenth century, were termed *more Romano*, in semi-circular arches, which followed the old basilica model of St. Peter's and St. Paul's, and *more Germano*, in which the pointed arch was employed after the thirteenth century; it was in the latter taste that the greatest works were executed.

However great and admirable, in many respects, the specimens which have been left us by those able practitioners, it is not believed by the most competent judges that theoretical science was cultivated to any extent. From Cesare Cesariano, the architect of Milan cathedral, and one of the earliest translators of Vitruvius, doubtless one of the most learned architects of his day (1524), we may learn something of the principles which guided the Middle Ages, which were full of the mystical terms of the pseudo-science of the Freemasons. They consisted of a series of triangles or pyramids, no doubt in allusion to the triune, which guided the plan, elevation, and section; see D'Agencourt's Architecture, plate 46, in which the sections of Milan and Bologna cathedrals illustrate those doctrines. The minster at Bath appears to have been built after this theory (1503) by Dr. Oliver King, who was a skilful architect and politician, and had been employed in France to conclude a peace with Charles VIII., and who, therefore, would be acquainted with the most approved art of that day on the continent.

The Middle Age church was wholly founded on superstitious associations. According to *more Romano*, it was enough that the plan described the cross, the universal symbol, "in hoc vince." But according to *more Germano*, the Saviour himself was to be figured; the choir, therefore, was inclined to the south, to signify, that "he bowed his head and gave up the ghost," John, c. xx, v. 30; and there are few cathedrals in which this deflection is not remarkable. The nave represents the body, and the side, which "one of the soldiers pierced," (John, xix. 34), considered to be the south as the region of the heart, is occupied at Wells by a chantrey, at Winchester with the chapel of William of Wyckham, and is constantly the pulpit from which the faithful were reminded "to look on him whom they have pierced," Zech. xii. 10: who "was wounded for our transgressions," Isa. liii. 5. For the same reason the south was considered the most holy: the Old Testament was represented on that side, while the New Testament, and the local or national Hagiology, was placed to the north. The same superstition still gives value to the south side of the churchyard for burial. At the head of the cross was the chapel of the Virgin, at the Fountain of Intercession with her son. At the foot, the west end, was the "Parvis," supposed by

Digitized by Google

some to be a corruption of "Paradis," that happy station from which the devout might contemplate the glory of the fabric, which was chiefly illustrated in this front and from whence they might scan the great sculptured picture, the calendar for unlearned men, as illustrative of Christian doctrine and of the temporal history of the church under its princes and its prelates. Three great niches leading into the church, the centre one often above forty feet wide, were adorned with the statues of the apostles and holy men, who "marshal us the way that we should go;" in front the genealogy of Christ, the Final Judgment, the History of the Patriarchs, &c.

The details, indeed, display the degraded state of the Fine Arts, and of course, of the artists themselves, in the quaintness and disproportion of the sculpture. But extending our indulgence to the performers, regarded in illiberal times only as workmen, we shall admire their native genius, struggling with their moral condition, often on the verge of dignity and grace in execution, and in point of conception frequently reaching an elevation altogether original. It must be confessed, that the continental churches, especially those of Amiens, Rheims, and Paris, surpass the magnificence of our own cathedrals, both in the extent of plan by their double aisles, as well as by their height. But it may be questioned whether a more complete and correct picture of Christian doctrine and dispensation, and Christian history, is to be found anywhere than in Wells Cathedral.

But the same want of cultivated judgment, which is apparent in the æsthetical of the arts of the Middle Ages, is traced also in the imperfection of their Statics and stereotomy, in which again solidity is sacrificed to superstition. The indispensable figure of the cross is a striking example. The arches of the nave, in the northern basilica, found their abutment abundantly in the western termination, which was commonly fortified by prominent buttresses (called by the early commentators of Vitruvius, tetra-style, or hexa-style, according to their number); but at their eastern termination, towards the lofty pillar of the transept, no such abutment existed. And though the pointed arch was eminently calculated to obviate lateral pressure, yet the smallest failure of foundation or superstructure, threw so much weight against these pillars as to occasion them to bend. To counteract this, and secure their stability, the principle of that age, of "pondus addit robur," namely, the weighting the pillars of the transept with a tower or spire, was resorted to very commonly; but this often increasing the evil, the last disfiguring remedy, the construction of a reversed arch between them, was employed.

Similar criticisms apply to all parts of the middle age Architecture, mixed, however, with redeeming excellencies of peculiar skill hitherto unsurpassed.—See sections 1 to 8 of Wren's surveys, in the 'Parentalia,' 264 to 309.

The fifth of those principles of Vitruvius, which the Professor had attempted to illustrate, was Decor, usually considered to refer to that important part of Architecture, ornament; but our author rather appeared to refer to consistency of character, fitness of style and ornament to the Deity, and the purpose or the rank to which the work might be dedicated, quoted in the preceding lecture. But as no part of the art required a nicer judgment, tact, and reasoning than this of character and special physiognomy, so was none more commonly transgressed in many modern buildings; and a stranger might be conducted to some of them, and defied to guess whether he beheld a library or a town hall, a church or a music-room, a theatre, a prison, a brewhouse, or a floor-cloth manufactory, a gentleman's mansion or a union workhouse.

Appropriateness and fitness of character is the special recommendation of all the great critics, from Aristotle to Pope. If, says Horace, to a horse's neck a human head is joined, or a female head and breast should terminate in a fish, you will despise the painter; or if upon the stage you exhibit the graces and the levities of youth, hashed up with the manly strength of middle life or the rigour of old age, the audience would yawn, and at length overwhelm you with indignant hisses. It is, in fact, the significance and appropriateness resulting from the coincidence of use and beauty, the one the explanation and plain result of the other, which we adore in the works of Nature, and which the great artists have best known how to imitate in theirs.

Sir C. Wren remarks on the Temple of Peace,—"It was not therefore unskilfulness in the architect, that made him choose this flat kind of aspect for his temple; it was his wit and judgment. Each deity had a peculiar gesture, face, and dress hieroglyphically proper to it; as their stories were but morals involved; and not only their altars and sacrifices were mystical, but the very forms of their temples. No language, no poetry can so describe Peace, and the effects of it in men's minds, as the design of this temple naturally paints it, without any affectation of the allegory. It is easy of access, and open; carries an humble front, but embraces wide; is luminous and pleasant, and content with an internal greatness, despises an invidious appearance of all that height it might otherwise boast of; but rather, fortifying itself on every side, rests secure on a square and ample basis." On the Temple of War, he says, "As studiously as the aspect of the Temple of Peace was contrived in allusion to Peace and its attributes, so is this of Mars appropriated to War: a strong and stately temple shows itself forward; and that it might not lose any of its bulk, a vast wall of near 100 feet high is placed behind it; (because, as Vitruvius notes, things appear less in the open air;) and though it be a single wall, erected chiefly to add glory to the fabric, and to muster up at once a terrible front of trophies and statues, which stand here in double ranks, yet an ingenious use is made of it, to obscure two irregular entrances," &c.

The German Moller, who is as true and as accomplished an artist as any of modern times, on this point says, "On comparing the elevation of the Merchants' Guildhouse, at Mentz, with the church of Oppenheim, which was finished in the same year, we see how anxious the ancients were, and how well they contrived to impart to every building its peculiar character. Just as the merit of historical painting, and of every art of design, (without which all the rest is valueless,) consists in the importance and peculiarity of its character; so they are principal requisites in buildings, whenever the latter lay claim to the appellation of works of art. In the church at Oppenheim, all the parts are lightly towering up, so that the eye of the spectator in the interior is involuntarily raised, and the elevated richly ornamented windows, and slender aspiring pillars, promise from the outside already a beautiful and sublime interior. But in the Merchants' Guildhouse, the whole exterior announces at once an object very different from that of a church. The few and small windows are easily closed against fire and robbers; and their battlements again, with their projecting canopies and angular enrichments, clearly shew that the destination of the building is to preserve and to protect. And in the same way as the main forms correspond with the object of the structure, so likewise do the ingeniously designed ornaments. On the pinnacles or battlements are the figures of the emperors and electors in full armour. The emperor, who, at that time in alliance with the electors, had confirmed the commercial union of the cities on the Rhine, and taken them under his protection, appears with them here, as the guardian and bulwark of the house. In the midst of the princes, is the figure of St. Martin, the patron of the city, dividing his cloak with his sword, to give it to the poor. Thus, the leading forms announce the destination and solidity of the building; the figures of the princes, the protection it enjoys; St. Martin, that beneficence which ought to be the attendant of wealth; and the Virgin Mary with the infant Jesus, over the entrance, the higher safeguard which the Divinity grants only to the *just*." Thus says the accomplished Moller.

It is a fine observation of Aristotle, that "a noble building without ornament is like a healthy man in indigence." Competence, if not wealth, must be added for the accomplishment of his happiness.

The sculptor's art affords the noblest ornaments to the architect. By his aid, the expression which he has been labouring to give by other associations, and which before was mute, or scarcely audible, becomes *parlant*. Sculpture may be called the voice of Architecture. Unhappily a Protestant country, with the holy fear of image-worship, discourages this generous and most essential art; and perhaps the want of character complained of in Architecture may be mainly attributed to this proscription.

But the carver and the decorator are highly serviceable to the architect, not only as multiplying images for the delight of the eye and the explanation of the subject, but as greatly magnifying the scale of the whole by these means, and giving value and distinction to the plainer features. Our mistress Nature is prodigal in ornament, and the expression of every animal and vegetable is increased by a texture of endless detail spread over the whole surface of her works.

Finally, Distributio, the *οἰκονομία* of the Greeks, the sixth principle, is explained by Vitruvius, drily, as economy in the use and cost of materials; but doubtless, the great masters from whom he borrowed, considered economy, in the larger sense, as the adjustment of means to the end; as the wise and fine thought, contrivance, and supply, of all the requirements and appliances of the building art; in which the highest intelligence is displayed; such, indeed, as by that figure of speech which designates great subjects by small titles, applies to the *Creator* himself that of the Great Architect.

The diligent observer of architectural works will find the greatest strength combined with the least material, beauty united with use, and resulting from it, exact equilibrium, provisions for the accidents of time and climate, selection of materials best adapted, in short, a prescience of every want and consideration: throughout the contrivance admiration almost sublime is occasioned; we feel that the work has, as it were, been self-created by the influences and the wisdom of Nature, and as if the Architect had only followed her instructions. "I am not," says the heifer of Myron, "the work of Myron—he only delivered me from the marble" in which I was inclosed.

Having thus reviewed the theoretical rules handed down by Vitruvius from the Greeks, as far as the limits and means permitted, the Professor proceeded to offer some observations to the students, with reference to their future advancement, which it was the object of these lectures, and the ardent wish of the members of the Academy to promote.

First, with respect to drawing, which was the very language of the art, it was extremely important that the distinction between the painter and the architect should be clearly understood. He deprecated the vain ambition of making pretty drawings, especially on a small scale, as effeminate and uninstructive; as also of pretensions to aërial perspective, which was a separate art. Much time was commonly occupied in this captivating study, which was wholly irrelevant, and at the expense of that valuable time which should be employed in the more essential accomplishments of the art and science. It might, indeed, improve the hand, but not the head; of which the architect had so much need. Drawing after the manner of painters had undoubtedly been an abuse and misdirection.

The orthographic drawing or elevation was conventional: it represented the proposed building from an immeasurable distance—the object being to define those proportions and profiles which constitute the merit of the work—such lights and shades as should more clearly display these forms, and show their relief where necessary; but whatever disturbed these paramount objects, as colour, or such cast shades as might confuse the profiles and pretend to illusion, were impertinent.

Perspective, in the most accurate delineation, was, indeed, a most desirable accomplishment, but it should be wholly linear, assisted with one tone, or two at most. Sciography should be used with great reserve, since the harsh outlines of cast shades were apt to disturb the form and outline; and the finest architectural perspectives, those of Pozzo especially, left them softened and undefined on this account. It was certain that such had been the practice of the great Italian masters, specimens of which, by the hands of Sansovino (the front of Sta. Maria, at Florence, in the possession of Mr. Woodburn), of Michael Angelo, Raphael, and others, and especially the designs for Whitehall, by Inigo Jones, the Professor had exhibited in a former course. Exquisite perspective, proportion, and profile were more scientific, difficult, and much more profitable to the student. The coloured picturesque was a pandering to a depraved taste, and it was a duty to inform the public on this

Digitized by Google

head, and lead them to the appreciation of the true intent of architectural delineation. The draftsman should be habituated to a large scale, and a manly drawing of profile and detail, such as a builder would comprehend and work from. The Professor exhibited a specimen of the architectural drawing of the actual school in Paris, which, though not wholly to be approved, as being rather too minute and elaborate in effect, still showed a more careful attention to outline, and a better system than used by ourselves.

The architectural room in the annual exhibition was at great disadvantage in the neighbourhood of the splendours of the sister art; the vain attempt at vying with her productions in architectural drawings, had both corrupted our style and exposed the utter futility of the attempt. The true course would be a closer adherence to the province of the architect in a more correct delineation of profile and proportion, and in the most accurate linear perspective; a tasteful employment of these resources would probably more effectually uphold the interest of that room than any other means that could be devised.

Constant observation and travel were essential to the architect; but the interesting objects of our own country should be seen before those of others. Much time was often lost in foreign travel by misdirection and the dangerous novelty of the student's position.

In examining architectural works, the student should bear in mind an important rule of criticism, which was, to account in precise terms, for the motives of approbation or dislike which he might experience. By applying a just expression on all occasions, he would soon cease to take one thing for another—the beautiful for the sublime—quantity for quality—cost for magnificence—and either of these for proportion or fitness—ornament for art. He would learn to apply characteristic terms to every gradation, quality, and style: and so, by degrees, he would form a just and discriminating taste.

In an art and science essentially referable to association, this discrimination was peculiarly necessary: the emotions arising from sight, like those from music, would often be found irrespective of the intrinsic merit of the performance, as loyalty in hearing 'God Save the Queen,' union and patriotism in the 'Marsellaise.' Often patriotic, historical, and romantic associations will blind us to forms and styles, otherwise both unfit and unworthy our age; often quantity, extent, and quality of material would impose that approbation which ought only to be accorded to elegant and just proportions; elaboration would often usurp the praise which was due only to a well-ordered work.

> To hide by ornament the want of art,

should not deceive the experienced critic; and the painter "who would make his Venus *fine*, not knowing how to make her *beautiful*," would be ranked as he deserved. The discernment of merits rather than defects will be found more difficult, and much more profitable, because those we shall appropriate, while the latter are only to be rejected. Such a habit will exercise the better qualities of the mind, and lead to originality. The works of men who have long enjoyed reputation, should be the peculiar objects of our critical examination; they will seldom be found frauds; the inquiry will commonly justify their fame, and like the conversations of original inventors, they will reveal secrets which can else hardly be discovered.

The antiquary should be distinguished from the architect, and he should be careful to separate the available experience, from research into the curious and obsolete.

The student was recommended especially to cultivate that manly independence of mind which became a thinker, and the leader of an art; he should have a settled distrust of fashion; although he would find himself sometimes constrained in some measure to bend to it. Those "who live to please, must please to live;" he should, however, courageously but respectfully remonstrate.

There were two rocks, which the art was expressly liable to: the first was the presumption of absolute novelty; the second, the indolent and servile imitation of former styles. The latter was the peculiar vice of these times throughout all the civilized countries of Europe. Grecian, Gothic, Byzantine, Italian, Revival, French, were indifferently employed. There was no attempt at a style which should express to future ages the century in which we live; and posterity will be at a loss to recognize in the buildings of our day, that character which a country great and glorious at the present period, the bulwark of civilization, the arbiter of the world, and the great exemplar of political government, morals, and useful science, should impress upon its architectural productions. Shall it be said that this great people, original and free in other respects, adapting and expanding itself in an unexampled manner to times and improvements, was stationary, or rather retrograde, in the arts alone? That though science and capital and mechanical skill were daily furnishing new engines for our art, with prodigality, that our invention alone in these walks of genius was at a stand? that our skill as artists was the only deficiency in the march of our age? That they crudely adapted the models of ancient Greece to modern London, the sunny palaces of Italy to the foggy atmosphere of England: the niched and canopied architecture of a religion peopled with images of saints and martyrs, sibyls, angels, and holy men, to a Protestant religion, which, admitting none of these, must leave the niches and the canopies *tenantless:* like well-gilt frames adorning an apartment, the *pictures* being omitted: the pride and pomp of heraldry, armorial shields and crests, to an age in which chivalry was exploded, and quarterings had dwindled to insignificance? What should we say of Harry the Sixth, if, instead of that admirable and most original chapel of King's College, at Cambridge, he had limited his artists to the style of the Conqueror, or any other imitation; or if Henry the Seventh had concluded on carrying on the style of the cathedral of Henry the Third, and so on, saving all further trouble of invention and criticism, should we not contemn their poverty of spirit and negation of mind? Would not the historian, the artist, and the tasteful observer, have to deplore the absence of that internal evidence and hieroglyphic character of the times, which adds such a relish to the architectural remains of our fair and beloved country?

But let us suppose that either of these monarchs had been enlightened by the art of a Raphael or a Michael Angelo, or by the sculptures of a Phidias, which he might even affect to appreciate and to be proud of; and that we should learn by historical record that he had said,—"We are so anxious to carry out the style of former days that we shall shut our eyes to those excellencies of sculpture and of fine art, and force our artists to copy the obscenities and senseless carvings of those barbarous times; simply that we may carry out the imitation of the style in all respects."

Restoration, indeed, is a different consideration, and the happiest result of this taste is, that we reinstate, for centuries to come, those venerable antiquities to which we have so many reasons of attachment. The restoration of the Palace at Westminster may find under this consideration a sufficient apology. But for works altogether new such a system of imitation is not reconcileable with our pretensions to genius and enlightenment; and it does appear that there is in it a vice of mind or of industry for which posterity will visit us. Such an indifference as to choice of styles indicates, in fact, an absence of culture and perception of the really fit, and beautiful, and great,—a state of mind which, in religion, politics, or morals, would be accounted fatal to improvement, and the sure forerunner of every heresy. D'Agencourt attributes to this spirit of imitation under the Emperor Hadrian the decline of taste in Rome.

The learned in Paris deplore it not only under this apprehension, but as the imposition of anachronisms on posterity, and as the falsification of the pages of history, in its most interesting and characteristic traits. "Have we not," as says Isaiah, "a lie in our right hand?"

It is very important that the merits of that question should be debated in a candid spirit, and that the true grounds of a style should be investigated by the rules of sound criticism; as how far Architecture has ever been and should be the picture in which all the discoveries of mechanics, of materials and of industry, are to be exhibited and recorded; and whether the successive changes of style have not been chiefly owing to the progressive discoveries and improvements on workmanship, materials, and convenience. How far the combinations of this art are capable of displaying the intellectual character of an age and people, and what should be the just bounds and limits of association, authority, and imitation.

Finally, let us never forget the pregnant saying of the great Schiller:—

> The artist is the son of his time;
> Happy for him if he is not its pupil;
> And happier still if not its favourite.

In conclusion, the Professor expressed the gratification he had felt in the attention paid by the students to this course of lectures; not as it reflected upon himself personally, but as it gave the strongest possible evidence of the ardour and assiduity with which they pursued their studies: for he could with great sincerity assure them that, amongst the achievements of a very long period of singleness and devotion to his profession, he should consider that the most glorious, which had contributed to the instruction, and warmed the enthusiasm of those rising talents destined perhaps in future times to adorn and illustrate our country.

FOREIGN CORRESPONDENCE.

The Pyramids, Gizeh, Jan. 12, 1843.

We are now about to leave this place for Saccara and Dashour. Dr. Lepsius little imagined, when we arrived here on the 9th of November, that we should find so many interesting monuments yet undescribed; or that the expedition would find full employment in this place for so long a time. If you look over Sir Gardner Wilkinson's large map, you will notice a crowd of smaller monuments surrounding the Pyramids; of these, parts of one or two have been published—but the great mass of them being almost covered and filled with sand, we could not examine before our excavators had cleared them out. I am glad to say, that this labour has been well repaid; for Dr. Lepsius has found a great number of chambers covered with figures and inscriptions mostly in good preservation; in some of them, even the colours remain in perfect condition. All of them have been carefully drawn, and casts and paper impressions have been taken of the most interesting parts. Dr. Lepsius has thus collected a large mass of interesting materials—illustrating the very earliest known period of history—for he finds, from the inscriptions in these tombs, that they were built about the time of the Pyramids which they surround. For this reason, the Doctor has made so long and careful an examination. These records are of the utmost value in his historical researches; and there are very few examples of this early time remaining, excepting in this neighbourhood. The Egyptian works hitherto published of the buildings at Thebes and elsewhere, mostly belong to a much later period.

It is difficult to give any idea of a building, without the help of drawings, but I will attempt a general description of one of the many monuments, built on the plane of rock, west of the great and north of the second Pyramid. All these monuments differ in many respects, but generally the ground-plan is an oblong parallelogram, whose longest sides are the east and west. Externally, the walls incline considerably inwards—they are built of the stone of the rock upon which they stand, a calcareous stone full of fossils and cavities, the blocks very large and well fitted together. The exterior is quite plain, without any ornamental architectural feature, excepting the door; the lintel of which is sometimes, but not always, covered with hieroglyphics.

We will suppose the oblong ground-plan divided into two unequal parts, by a line drawn from north to south—of these the greater is on the west side—and this part of the building is solid, only perforated by one or more pits now open at the top, and which descend through the masonry of the building to a considerable depth in the rock below—out of these pits, near to the bottom, are little chambers cut in the rock, in which the dead were placed. These chambers are rudely finished, without any ornament or inscription. They have been all entered before, probably by the Arabs in former times, when they broke into the Pyramids in search of treasure. There may have been mummies in them, with rich cases and ornaments, but now we find nothing but human bones scattered about. The other division of the ground-plan, on the east side, is occupied with one, two, or more narrow chambers, the ceilings of which are large single stones, resting at each end on the walls, excepting where the chambers are divided by square pillars,

Digitized by Google

when one end of the ceiling-stone rests on the wall, and the other on the architrave supported by the pillars. The entrance door is nearly always placed on the east side. It is in these chambers dimly lighted by small windows cut through the thick wall, that we find the walls covered with inscriptions and figures beautifully executed, representing the deceased, his wife, and other relations, his pursuits in life, and his riches and estate. There are, besides, many architectural ornaments, false narrow doors and recesses, impossible to describe without drawings.

The tombs at the east side of the Pyramids, of the same style and date, resemble in their arrangement those just described, excepting that as they are entirely excavated in the solid rock, they have no external elevation but on the east front, where a place is cut for the door.

Dr. Lepsius finds also a great number of tombs of the comparatively modern time of the Psammetic dynasty. Of these, some situated on the rock to the south-east of the third Pyramid, are particularly interesting. They consist of one or more chambers cut out of the rock, in the furthest of which, from the entrance, is the square deep pit. The ceiling of these chambers is near to the surface of the rock, and between them and the external door is an antechamber, the walls of which are also formed in the rock, but the ceiling is a semi-cylindrical vault, built very carelessly, but with the arch-stones of the proper wedge shape. No figures or inscriptions have been found in these tombs—probably, if there were any, they were only painted on the plastered walls.

I have attempted to describe some of the objects of our labours—I must now tell you a little of the mode of our proceedings. Nothing can be more quiet and regular. We rise now a little before the sun, and as it is then rather cold, we are all glad to meet at our hot breakfast of coffee, milk, and bread. Remember, I pray you, that our coffee does not mean a brown warm wash, but aromatic Mocha, freshly roasted. After breakfast, those who are likely to be out all day take with them their luncheon of bread and cheese and dates. Three of the society are always engaged in copying figures and inscriptions. Two of them, Prussian artists, execute this kind of drawing (which requires much practice) with the greatest fidelity and beauty, having been accustomed to it long before their arrival here, in drawing the plates for Dr. Lepsius's works on Egyptian antiquities. Our friend Mr. Bonomi is the third; and you know both his skill and the great interest he takes in the subject upon which he has been so long engaged. We have also a very skilful German artist, sometimes engaged in this service, but oftener in taking views; he is now painting a panoramic picture of the whole plain, from the top of the second Pyramid. The architect attached to the expedition has been chiefly employed in enlarging and filling up a map of the Pyramids, with the tombs surrounding them: and in taking plans, with sections, &c. of the different monuments—in this last occupation I have been glad to assist. We have too a general assistant or factotum, a very clever merry fellow—who makes the plaster casts—does the carpentry—orders the removing of stones—sings very well—and, as I hear, makes excellent jokes; the laugh that follows them I can translate—the German not yet.

Our chief, Dr. Lepsius, is always indefatigably active: either writing in his tent, or desperately riding about on his donkey over the loose fields of broken stones, directing all our operations, and making his own observations. We have all had very good health, with slight exceptions.

On the 9th of December we had a fresh arrival, long expected—Mr. Abeker, whose name will be known to many Englishmen from his former position at Rome.

I have described our occupations, and thus regularly do we go on. We have our holidays, however, and keep them with no little difference. Thus, on Christmas-eve, a large bonfire was lighted on the top of the Great Pyramid, and we had a feast, crowned with a bowl, no! a huge tin soup tureen of mulled claret. This I prepared with great praise, although without cinnamon. We drank it with patriotic toasts and sentiments of good fellowship, and songs, with choruses. On the evening of Christmas-day we were invited by the Doctor to a repast in the king's chamber of the Great Pyramid. We found that a young palm tree had been placed in it, from the branches of which were suspended numbers of wax candles, illuminating the room, and strings of dates, and figs, and raisins. We had to find the present prepared for each of us among a number of silk purses, to each of which was attached a silver seal, with the name of the owner engraven on it in Arabic characters. I seal this letter with mine. We then took our dates and figs with some excellent hock, and after a few healths had been drank, and the national anthem sung, we left the tomb with each a branch of the palm tree to place in our tent.

The new year was ushered in with like rejoicings; but we had a large fire on each of the three Pyramids. If you knew the great difficulty of ascending to the top of the second Pyramid, you would then know that this bonfire was no slight achievement.

It is now delightful weather. I am sitting, very lightly clad, with my tent half open; the sun shining warmly on the hills of sand, and on the bright green fields between us and the Nile. You, I suppose, shuddered, when you rose this morning, to think of the hoar frost on your chamber-window panes, or of the almost as cold fresh-lit fire in the library. But let me not boast. Through nearly all the month of December we were troubled with violent cold winds from the south-east. Our tents have been blown down three times, and in imminent danger often. It requires use to sleep calmly, with the sides of your tent flapping about, the ends creaking, and disputing with the pole in the middle how long they can stand it. If they are not all of one opinion down comes the pole. On some days the clouds of rain have been so thick, and it has been so cold, that little work could be done, and we were glad to wrap ourselves up in our capotes and seek the shelter of the nearest tomb. Now, I hope the time for this weather has blown by, and that I shall have to describe no more of it. Yours, &c. James W. Wild.

Berlin, 2nd February.

I am just returned, in rather a pagan mood, from witnessing the first performance this winter of the 'Antigone,' and as I do not remember to have seen an account of it from any of your English correspondents, I think you may be willing to accept such an one as an unlearned person can give. I feel how impossible it is to convey any idea of the general effect it produced upon me. So far from finding it tiresome, as I have heard people call it, I found the interest of the portentous story powerful from the first, and ever rising to the awful close. I never came away from any drama more exhausted with attention and emotion. From the first appearance of the curse-laden and heroic Antigone to the last death-wail of the tyrant, stricken in the midst of his cruelty and arrogance by the never-sleeping vengeance of Zeus, all is grand, tragic, divine! yet how simple, how unconstrained and unadorned, how *human*, are the emotions and the passions! witness Creon's cries over his son. How entirely tragical, how death-devoted does Antigone stand before us from the first! How do we foresee and desire for her the narrow house in which she is to repose from her long wanderings with her wretched father, and her last pious and heroic duties to his wretched son! How, on the other hand, do we see the wrath of the outraged gods gathering in a black storm round the head of the arrogant tyrant! How ominous is the sudden exit of Hæmon! How woe-denouncing the speech of Tiresias! Never, as it seems to me, can pity and terror be more strongly excited.

But to the mechanism. You know, probably, that the chorus occupies the space usually occupied by the orchestra, which is placed on either side, separated by white draperies, which are unobtrusive, and serve only to bound the proscenium. In the centre of this is an altar decorated with garlands. On the steps of the altar lie offerings of fruits. The chorus, of course, enters by the doors at which the musicians usually enter. The curtain never drops. There is no change of scene or division of acts. The chorus is always present. The actors appeared to me all very much below their parts: and how can it be otherwise? Madame Crelinger has evidently great stage practice: her attitudes were often admirable; especially in repose, and she rose towards the conclusion; but there was a great deal wanting—and I can hardly say what—to make her the doomed and o'erwearied daughter of a god-like and royal line—the submissive and yet dauntless servant of the gods—the being exalted by the awful distinction of a curse which the gods bestow not on the meaner herd. Of the chorus it is difficult to say too much. If at some moments the singing was not perfect, on the other hand, the expression was sustained, noble, decorous—well calculated to preserve the effect of the mighty and awful fable. The *mise en scène* I shall not attempt to describe. It must be seen. I had read abundance of descriptions, but had no clear idea of it. There are moments, for instance, in the hymn to Bacchus, where the chorus encircles the altar, uplifting their thyrsuses and wreaths, and singing to Iacchus, when the whole significancy of the Greek drama as a religious act, comes over one with overpowering force and solemnity.

There exist great differences of opinion about the music. I confess it struck me as a wonderful effort of skill and genius, considering what the task is. The composer has every difficulty to contend with. It must be solemn and religious; yet it must not in the least resemble church music. If once Christian associations are called up, there is an end of the unity of the piece. Secondly, the Greeks knew nothing, it appears, of harmony; yet how could we endure men's voices singing a whole evening in unison? Thirdly, it would be impossible to produce instrumental music that we could listen to with the instruments known to the Greeks. Considering all this, and how conjectural, at best, the music must be, it seemed to me as appropriate and expressive as it could be made. It might perhaps be better were the music altogether more subordinate. It ought never to appear as anything more than a means of binding and harmonizing the utterance of many voices: above all, never to overpower them. Perhaps a mere cantilena, or chant, would be, on the whole, better: but then the difficulty recurs of avoiding all resemblance to church music.

There is a talk of getting up the 'Œdipus' or the 'Medea.' If this is realized, other composers may try whether they can find any way of solving the problem.

That the chorusses must be sung, and not said, nobody will doubt, who has heard 'The Bride of Messina' as usually acted. The confusion of tongues spoils even those noble and musical verses.

The audience was extremely numerous and attentive. Spite of the continued stretch on the attention, I saw and heard no symptoms of restlessness. Altogether it was one of the most favourable views I have had of Berlin. Perhaps no other capital in Europe could produce so scholar-like and artistical a performance of the sublime drama of antiquity, nor so interested an audience.

It has been universally believed that the Greek tragedies would not do to act—would be dull—would fly over people's heads, and so on. It is clear that this is a mistake. I had read Antigone in this translation more than once, and had heard Tieck read it—certainly the next best thing to scenic representation—but imperfect as the acting was, the vast dramatic force of the work was brought out by it. The chaste, severe, and unchanging scenery—the disposition of the persons—the groups—for example, Antigone embracing the altar as she goes to death, the chorus standing round, and Creon on the stage above—all this contributed to make Greece and Grecian life *anschaulich* (perceptible) to a degree I could never have conceived: in short, I came away with the desire to see it again and again and again.

Your scholar-readers will be interested to hear that Boeckh has just completed a translation of Antigone, as I head from himself. Jacob Grimm is preparing a new edition of his 'Deutsche Mythologie,' also a great subject of rejoicing to all who care to see the current of superstition and tradition, which has wound itself through ages and nations, tracked by a master hand. His colossal work, the Dictionary, is advancing at a rate which those may hail with unmixed joy who do not care more for the man than even for his mighty work, and who are not frightened by the possible effect of such application upon his health. I have lately read, in a collection of Hessian biographies, two little bits of autobiography by these illustrious brothers, which I long to send you. It would give the English public some idea of the sweetness, nobleness, and simplicity of these two giants in literature—

Digitized by Google

of their touching family love—their pure and high affections for nature, country, freedom, humanity; and all so unconsciously revealed: and this is natural, for they could speak no other language. It gives also a touching picture of the best side of German life and character.

I have been to see Rauch's model for the colossal statue of Frederick the Great, which is to be erected at the end of the Linden. It is a master work: attitude, expression, are all that one can desire, even to the exquisite *finesse* of the lines about the mouth. It is interesting to see the *pentimenti* of the sculptor. He tried Frederick without his three-cocked hat, with an oaken wreath, &c., but soon returned to truth and reality. "*Unser Fritz*" is there, as he lived and moved, and looked and rode: nothing is added but an ermine cloak, which falls gracefully over one shoulder, and takes off the bareness of a buttoned figure. The attitude seems suggested by a little bas-relief by the venerable Schadow, one of the few remaining who remember Frederick.

The recumbent figure of the late king, which is destined to lie by the side of his beloved and beautiful wife, at Charlottenburg, is also a work of great genius. It is a perfect embodying of the lines—

> And he lay like a warrior taking his rest,
> With his martial cloak around him.

It is death—but death the twin-brother of sleep. One sees clearly that those eyes will never again unclose—those hands are folded in eternal rest: but there is not the least of the horror of death. Rauch has also executed an exquisite recumbent bust of the Princess of Thurn and Taxis, who, to judge by this, must have surpassed even Queen Louisa in beauty; and a recumbent statue of the third grace of this remarkable trio, the late Queen of Hanover.

Tieck is, I rejoice to see, recovered from his attack. He has not resumed his readings, but his eye is bright and arch, and his conversation lively.

I see you are going to have all Mdlle. Bremer's novels in English. I should doubt whether even Mrs. Howitt could make so large a dose of Swedish life palatable. Mdlle. Bremer is an admirable scene painter, and a very bad *raconteuse*. There are conversations full of good sense, cleverness, and excellent woman's wisdom and woman's feeling; but she has no power of putting a story together. The stories are partly twaddling, partly violently improbable and romantic, and the latter parts stand out from the *hausbackenes* of the other like tinsel upon a grogram suit. But in these days of mischief, when women are not ashamed to put their names—and *decorated* names, too—to what women are, or ought to be, ashamed to read, one is thankful to Mdlle. Bremer for something decent and wholesome. Her '*Streit und Friede*' has some fine descriptions of Norwegian scenery, and interesting traits of Northern manners. There are two other Swedish ladies in the field already.

By the kindness of Dr. Waagen I was admitted yesterday to see the new works of art he has bought for the Museum. A ceiling (on panel) by Paul Veronese—paintings in tempera, by Lucini—a magnificent colossal Descent from the Cross, by Sebastian del Piombo, after a design by Michael Angelo, apparently a part of a picture—are among them. Still more interesting, as it seemed to me, are the remains of sculpture, Greek, Roman, and of the Middle Ages. We were glad to hear that the works of art wrecked on the Welsh coast are saved. It is consolatory to find that England is not the only country that has blundering inefficient consuls. The Prussian consul at Leghorn, to whom these precious cases were committed, first kept them three weeks, so as exactly to hit the equinoctial gales, and secondly, shipped them on board a vessel the captain of which was so notoriously bad a sailor, that the insurance office required an additional premium on his account.

I heard yesterday afternoon a very agreeable and instructive lecture from Professor Zumpt, on the structure of Roman houses. We were all furnished with a little plan from those called of Pansa and of Sallust, at Pompeii; and the explanation was extremely clear and interesting. This was just a subject for a lecture. Generally speaking, I had rather read what people have to say; but a *spécialité* like this was exactly fit to be treated in an hour's popular discourse. The Prince of Prussia, Prince and Princess Charles, Prince Augustus and Princess William, were there; and the large room (the Sing-Academie) was crowded. This is the fourth that has been given, and the third I have heard. On the Statistics of Berlin, by Dr. Diederici; on the Popular Poetry of Bretagne, by Dr. Häring (Willibald Alexis); and on the Life of Placius, the Reformer, and disciple of Luther, by Dr. Tevesten, the relation and biographer of Niebühr. The majority of the audience are, I think, of the female sex; but I saw close around me Boeckh, Rauch, Raumer, Tieck the sculptor, and other mighty men. In speaking of Rauch's studio, I forgot to mention the beautiful little monumental tablet to Niebühr and his wife—alto-relievo, half length figures—the idea taken from that of Cato and Portia in Rome. Not only is it an exquisite work of art, but as a portrait of Niebühr invaluable to those who cared for him. A perfect cast of it may be had at the studio for a guinea (seven dollars). Enough for the present.

OUR WEEKLY GOSSIP.

Some years since, when we began to enlarge the *Athenæum*, by giving, on occasions, an additional sheet, a good-humoured correspondent protested against it; he was accustomed, he said, to read the *Athenæum*, soberly and enjoyingly, after breakfast on a Saturday morning, and then take a quiet walk to digest both, but that before he could get through a double number, dinner was announced. Under present circumstances, then, when an additional sheet seems a matter of course, and is not, it appears, always sufficient, we submit to our breakfast friends that they must be content with some twelve or fifteen columns of a morning. After this temperate fashion the present number will last them a week, and the *Athenæum* will thus serve as a *daily* literary paper. Seriously, we are somewhat embarassed by our riches. The Lectures at the Academy have excited so much interest, that we are unwilling to defer their publication, and this day give the first of Mr. Howard's on Painting, as well as the last of the admirable series, by Mr. Cockerell, on Architecture. We have every reason to believe that our reports of these Lectures have given great satisfaction; but in conscience must acknowledge, that no report could do Mr. Cockerell full justice, wanting, as it necessarily must, the many interesting drawings with which he so thoroughly illustrated his subject. The Societies, too, are just now in full activity; and the arrival of a letter from Egypt, giving an account of the labours of Dr. Lepsius and his party, and another from Berlin, from a friend who was present at the performance of the Antigone, induced us to decide on the somewhat costly expedient of again enlarging our sheet. We consent, however, that the most courteous and devoted of readers shall be at liberty to acknowledge, any time between this and our next publication, that he has not fully and fairly read and digested the whole of this day's paper, for it contains little less than an ordinary octavo volume.

The only remaining portion of the Old City Wall which is in tolerable preservation, is threatened with destruction. A petition for its removal has been presented to the Common Council by the members of the Metropolitan Churches Fund, which it is to be hoped the Common Council will refuse. It is a case for the interference of the Society of Antiquaries, who ought to be the custodes of all national antiquities, until our Government sees fit to create a special institution for the purpose, as the French Government has done. The portion of the City Wall thus threatened is situate at the back of the houses on the eastern side of Trinity Square, and on the northern side of Little George Street, at the back of Postern Row, and forms the western boundary of a piece of vacant ground belonging to the Crown.

Letters from Berlin mention that the King has determined on establishing at the Palace a portrait gallery of the most celebrated scientific and literary men and artists of Germany. The first on whom his Majesty's choice has fallen is M. Schelling, the philosopher, whose portrait is to be executed by M. de Begas, of the Royal Academy of Berlin. The establishment of religious music, attached to the Cathedral of Cologne, under the direction of Dr. Felix Mendelssohn-Bartholdy, is to be shortly inaugurated. The King has ordered that the young men belonging to it shall only perform one year's military service. The number of pupils is fixed at 100 males and 100 females. He has also revived the Order of the Swan, created by Joachim I., Elector of Brandenberg, in 1440, in honour of the Virgin Mary, as a reward to persons eminent for their Christian virtues. The order was abolished by Joachim II., in 1539, when he embraced the doctrines of Luther. The first person on whom the King has bestowed the Order is the Queen. His Majesty recently placed the image of the Virgin, which is the principal ornament of the Order, round the neck of his royal consort, in presence of the whole Court.

One of the late numbers of the 'Rhine Museum' contains an interesting article by Dr. Gustavus von Eckenbrecher upon the site of the Homeric Ilium. It seems carefully written, and well deserving the attention of all who take an interest in the question. The number of travellers who visit the plains of Troy is yearly increasing; and the sanguine hope soon to see a map of Ilium accompanying the Iliad, equally clear and certain with that of Ithaca for the explanation of the Odyssey. Dr. Eckenbrecher seems to differ from his predecessors in this investigation, in removing Troy from the heights of Bunorbaschi, (on which since the times of Le Chevalier it has been supposed to be situated,) two miles lower on the plain, on the spot which, up to the present time, has been known by the name of New Ilium. A residence of several years in the Levant has afforded the author ample means of observation, which, coupled with his research and accuracy, give value to his testimony.

The *Allgemeine Zeitung* contains an account of the design presented to the Archbishop of Cologne for painting the altar of the cathedral. Mr. Steinle is the artist. It has been found impossible to restore the original paintings: the hand of Time has done its work on them effectually. Steinle proposes to follow the old mystical plan of decoration, in which "cherubim and seraphim continually do cry" over the sacred enclosure, the *τριθάγιον* of the ancient church. Cherubim flaming with fire, seraphim blue as the sky of Italy, and golden thrones environ the altar, while at either side the archangels and the guardian angel of the church stand as its protectors. The figures of the angels are to be eleven German feet in height! The ground is be golden, and the panels will be surrounded with a triple arch of gold, red, and blue, the colours long appropriated to this ancient ecclesiastical style.

The Duchess of Parma and Archduchess of Austria, Maria Louisa, has employed the Chevalier Foschi to copy in aqustint, and afterwards to engrave on steel, the frescoes of Correggio in the cathedral and other churches of Parma. There are many frescoes and paintings scattered over Italy which deserve to be thus made known.

It is announced that the librarian of the convent of Sta. Croce has lately discovered a work entitled 'Aponii libri xii. in Canticum Canticorum,' of which six books alone had been previously extant, and these from a very corrupt manuscript; and that in another Italian library a manuscript has been discovered of some previously unknown works of that greatest of the schoolmen, Thomas Aquinas.

Dr. Knorr, professor at the University of Kasan, has lately made a discovery which may lead to important results in the study of the nature of caloric and thermo-electricity. He has discovered a method of copying by means of heat on silver, copper, and steel plates, not prepared as in the daguerreotype and other existing systems. Some of these thermographs were taken in from 8 to 15 seconds; others, by another process, in from 5 to 10 minutes.

The French government has commissioned an artist (M. Louis Auvray) of the town of Valenciennes, the birthplace of the illustrious chronicler, to execute a statue in marble of Froissart, for the Historical Museum of Versailles. The picturesque old writer will be represented, it is said, in his costume of Chanoine of Chimay, with his Chronicle beside him, open at the words "*Je suis de la noble et franke ville de Valenciennes.*"—The Minister of the Interior has just presented to the Royal Library a copy on porcelain, painted in Italy by M. Constantin, of an authentic portrait of Charlemagne, which has been at Rome for centuries.—The play-going public is occupied with a difficulty which has arisen in the way of the rehearsal of Victor Hugo's 'Burgraves,' in consequence of disputes between him and Mdlle. Maxime. That actress,

Digitized by Google

after having been cast for, and studied, a principal character in the new tragedy, was informed that M. Hugo was desirous of taking it from her, and intrusting it to another; and she appealed to the Civil Tribunal of the Seine, to prohibit the performance, and even the rehearsals, without her aid.

SCIENTIFIC AND LITERARY

ASIATIC SOCIETY.

Feb. 11.—Prof. Wilson in the chair.—Part of a paper, containing a review of Hindú Literature, by the Rev. Dr. Stevenson, of Bombay, was read. The portions read related to Brahmanical literature; the remainder, on the Buddhist and Mohammedan writers of India, being reserved for another meeting. The writer professes to give only such a popular notice of the literature of India as may be interesting to an Englishman who has no special connexion with India, or acquaintance with its languages. He divides the subject into four portions: the first is the ancient Brahmanical literature in the Sanscrit language; the second that of the Buddhists and Jains, generally in Pali, which appears to be a modification of Sanscrit; third, the Mohammedan, composed in Persian or Hindustani; and, fourth, the modern literature in the vernacular languages of the country. The Brahmanical literature cannot, like the literature of Europe, be divided into sacred and profane. All the works of antiquity, from the Védas and Sastras, down to those which teach the mechanical arts, are considered to have been either received directly from the gods, or to have been written by divine aid: such, at least, is the view of the Hindús at the present day. But the Doctor is of opinion that no such pretensions were ever conceived by the authors of these works, now looked upon as divine. He thinks that the idea arose partly from the circumstance that the Hindús often give the names of gods to their children, and that when Panani, for instance, ascribes the invention of a certain technical arrangement of letters to Maheswara, he meant some older grammarian of that name, and not the god, as now universally believed; and partly from the practice of invoking the gods for aid, much in the same way as classical writers, ancient and modern, invoke Apollo and the Muses. The most ancient of Brahmanical works are the Védas, generally said to be four, but, in reality, only two, the additional ones being merely selections from the others. The simple style, the archaic forms, and obsolete words of the Védas, are decisive of their antiquity; and it is possible there is not, nor has been, for centuries, an individual in India, capable of a tolerable imitation of them. The Rig Véda, which is chiefly noticed by Dr. Stevenson, is a collection of hymns, some to the deified elements, fire, air, sky, &c., some to heroes and sages, and some intended to be sung during the performance of various kinds of sacrifices. The gods now universally revered in India, are hardly named in the Védas. Vishnu is mentioned only as the younger brother of Indra, the sky; and Brahma as the originator of the four castes: the name of Siva does not once occur. Several specimens of the hymns of the Védas are here given by the learned writer, who refers also to Rosen's edition of a portion of the Rig Véda, to Colebrooke's Essays, and to his own translation of the same Véda. The compositions next in importance to the Védas are the Puranas, which are ancient legends relating to the reproduction of the world, the creation of man, accounts of the early sages and heroes, the establishment of holy places, and religious rites. They are eighteen in number, one of which, the Vishnu Purana, has been translated by Professor Wilson, and will give an idea of the rest. To a Hindú, one Purana alone is holy, namely, that which praises his own favourite god above all others; this alone will he read, or hear read. Much of the matter of the Puranas is absurd and bombastic, but there are found, occasionally, valuable records of antiquity, and some passages of pathos and beauty, which would do honour to the literature of any country. An extract from the Matsya Purana is here introduced, relating the preservation of mankind and all other creatures in a vessel during a universal deluge, in which Dr. Stevenson sees an imitation of the Scripture history. An interesting extract is also given, in which Bharata, the monarch of the earth, who had left wife, children, and kingdom, to embrace a solitary life of penance, saves a young fawn from death, and becomes tenderly attached to it. The next works reviewed are the Ramayana and the Mahabharata, the two epic poems of India, which are of the same character as the Puranas, notwithstanding which the latter has sometimes been called the fifth Veda. The Ramayana relates the history of Rama, King of Oude, the conqueror of the peninsula of Ceylon. The Mahabharata celebrates the great civil war of India. The Ramayana, and portions of the Mahabharata, have been published in English. The writer then proceeds to the philosophical works of the Hindús, and remarks, that philosophy in India consists of an investigation into the nature of spirit, and an inquiry into the means by which it may be liberated from dependence on matter, and absorbed into the divinity. The two grand divisions of Hindú philosophy into theistical and atheistical, are then described, and their subdivisions; the latter into the direct and implied atheistical doctrines, and the former into the Sankhya and Vedanta systems. Law is the next branch of Brahmanical literature, and one which has, more than any other, attracted the attention of Europeans. Dr. Stevenson says less of this than other branches, from the subject having been sufficiently treated in English works well known to the general reader,—as Colebrooke, Mill, Elphinstone, &c. The Hindú works on medicine, grammar, and the mathematical sciences, are then briefly touched upon. The Hitopadesa, the most ancient specimen of the apologue, is passed over with a slight notice, as being too well known to require further remark. The subject of the Hindú drama is dilated upon more fully. This branch of the subject has been already made known to the English reader by the translations of Jones and Wilson. Extracts were read of expressive passages from the *Hindú theatre* of the latter translation; and the writer concludes with the remark that the Hindú drama "has no superior in the beautiful and pathetic, but comes short in the awful and sublime." This part of the paper concludes with a mention of the modern commentators on the Védas.

GEOLOGICAL SOCIETY.

Feb. 1.—Mr. Murchison, President, in the chair.

1. 'On the Tertiary Strata of the Island of Martha's Vineyard in Massachusetts,' by Mr. Lyell, V.P.G.S. The most northern limit to which the tertiary strata, Atlantic, have been traced in the United States, is in Martha's Vineyard, lat. 41° 20′ N., an island about 20 miles in length from E. to W. and about 10 from N. to S., rising to the height of between 200 and 300 feet above the sea. The tertiary strata of this island are, for the most part, deeply buried beneath a mass of drift, in which lie huge erratic blocks of granite and other rocks which appear to have come from the north, probably from the mountains of New Hampshire. They consist of white and green sands, a conglomerate, white, blue, yellow and blood-red clays and black layers of lignite, all inclined at a high angle to the north-east, and in some of their curves quite vertical. They were assigned by Professor Hitchcock, who first called attention to this formation in 1823, to the eocene period, while Dr. Morton supposed them to be in part only tertiary, and that they rested on green sand of cretaceous period. The difficulty of determining the age of these beds has arisen, not from the scantiness of the organic remains, but because the shells are rare and only in the form of casts. Mr. Lyell saw no grounds for concluding that any cretaceous strata occurred in the island, or that any fossils washed out of a cretaceous formation, were present in the tertiary. The lithological character of the beds did not appear to him to warrant the supposition of their being older than the miocene period, and an examination of the fossils led him to the conclusion that the strata of Martha's Vineyard are miocene. The shells procured were casts of *Tellina*, *Cytherea*, and *Mya*, the first allied, at least, to a miocene species. The fishes' teeth resemble species collected by the author in the Faluns of Touraine, and most of them were found by him in miocene strata in Virginia. Remains of two species of crustacea were found. The abundance of cetacean remains militates against the supposition of the beds being eocene; and the skull of a walrus and tooth of a seal, both closely allied to existing species, imply that the formation is not of high antiquity.

2. Mr. J. Hamilton Cooper 'On Fossil Bones found in digging the New Brunswick Canal in Georgia.' Mr. Cooper prefaces his communication by a description of the country surrounding the locality in which the bones were found. The portion described is that part of the sea coast of Georgia which lies between the Alatamaha and Turtle rivers in one direction, and the Atlantic Ocean and the head of tide water on the other. For twenty miles inland the land is low, averaging a height of from 10 to 20 feet, and reaching, in some instances, 40 feet, and consisting of swamps, salt-marshes, sandy land, and clay loam. It then suddenly rises to the height of 70 feet, and runs back west at this elevation about 20 miles, at which point there is a similar elevation of between 60 and 70 feet. The whole of this district is a post-tertiary formation, and is composed of recent alluvium, and a well characterized marine post-pliocene deposit. The recent alluvium is divided into inland-swamp, tide-swamp and salt-marsh. The two last occupy a shallow basin having a depth of about 12 feet, the bottom and sides of which are the post-pliocene formation. This the author divides into 3 groups, in the last of which constituting the elevated sand hills, no organic remains have been found; in the two former marine shells of existing species occur.

The fossil bones of the land mammalia discovered by Mr. Cooper, were found resting on the yellow sand and enveloped in the recent clay alluvium. Their unworn state and the grouping together of many bones of the same skeleton, render it highly probable that the carcasses of the animals falling or floating into a former lake or stream, sank to the sandy bottom, and were gradually covered to their present depth by the sedimentary deposits from the water. Among them were remains of the megatherium, *mastodon giganteum*, mammoth, hippopotamus and horse. The fossil shells found in the post-pliocene, were species at present existing on the neighbouring shores.

The facts narrated by Mr. Cooper lead to the following conclusions: 1st. That the post-pliocene formation extends further south than Maryland, to which it has hitherto been limited. 2nd. The coexistence of the megatherium with the mammoth, mastodon, horse, bison, and hippopotamus. 3rd. That the surface of the country has undergone no sudden or violent change since those animals inhabited it, which is proved by the absence of all traces of diluvial action in the enveloping alluvium or surrounding country. 4th. That whatever changes of temperature may have taken place since that time, fatal to the existence of those mammalia, the identity of the fossil with the existing species of the marine shells of the coast, shows that the temperature of the ocean at a period prior to the existence of the megatherium, the mastodon, and the hippopotamus was such as is congenial to the present marine testacea of Georgia.

3. 'On the geological position of the *Mastodon giganteum*, and associated fossil remains at Bigbone Lick, Kentucky, and other localities in the United States and Canada,' by Mr. Lyell. With a view to ascertain the relation of the soil, in which the bones of the mastodon are found, to the drift or boulder formation, and whether any important geographical or geological changes have taken place since they were imbedded, and what species of shells are associated with them, Mr. Lyell visited a number of places where they had been obtained, and in this paper gives the result of his explorations. At the celebrated locality of Bigbone Lick, in Kentucky, he found that the remains of the mastodon, mammoth, and other extinct quadrupeds, are imbedded in bogs, resting on Silurian strata, covered in places by silt, but not associated with drift. In these bogs are salt springs, and the buffaloes till lately were in the habit of coming in troops to lick the salt, when numbers were mired in the bogs; and their bones are found mingled with those of the extinct quadrupeds. Mr. Lyell considers the latter to have been mired under similar circumstances before the deposition of the silt, and found the shells contemporaneous with them to be of the same species with those of the present day. He holds that no geographical change has taken place in the valley of the Ohio since the mastodon and its companions were mired, and that they may have trodden the same paths which were used by the buffaloes till lately, and by cattle at the present day. At Cincinnati, on the Ohio, teeth of the elephant are found in terraces of

Digitized by Google

sand and gravel, on which a few boulders are said to rest. At Niagara remains of the mastodon are found in fluviatile strata, since the deposition of which the falls have receded four miles. The drift between Lakes Erie and Ontario is of much higher antiquity than these strata. At Rochester, about 12 miles S. of Lake Ontario, the mastodon is found in marl below peat, associated with existing species of shells. These beds are posterior to the hills of drift in that locality. At Geneseo the mastodon occurs in a small swamp in a cavity in the boulder formation, with existing species of shells. In Albany and Greene counties, mastodons are found in mould containing existing shells deposited subsequent to the drift, only four or five feet below the surface. The greatest elevation at which the mastodon bones have yet been found in the United States, is at Hinsdale, where they occur at a height of 1,500 feet above the sea. On the Atlantic border of the United States marine strata containing the mastodon and other extinct quadrupeds associated with existing shells, have been discovered by Mr. Nuttall in North Carolina. In South Carolina the mastodon was found associated with marine shells in digging the Santee Canal, and in Georgia it is imbedded in fluviatile clay, resting on a quicksand, containing existing marine testacea. From his investigations he concludes—1st. That the extinct animals of Bigbone Lick, and those of the Atlantic border in the Carolinas and in Georgia, belong to the same group, the identical species of mastodon and elephant being in both cases associated with the horse, and while we have the megalonyx at Bigbone Lick, we have the mylodon and megatherium in Georgia. Mr. Darwin found animals of the same group in the Atlantic border of South America, in strata of later date than certain marine newer pliocene and post-pliocene beds. 2nd. That these quadrupeds lived after the deposition of the northern drift, and were contemporaneous with existing species of mollusca; and 3rdly. that coldness of climate was not the cause of their extinction.

Astronomical Society.—*Jan.*—F. Baily, Esq. V.P., in the chair. J. E. Ashby, Esq. was elected a Fellow. The following communications were read:—

1. A Letter from Professor Hansen 'On a New Method of Computing the Perturbations of Planets, whose Eccentricities and Inclinations are not small.' "I hasten to communicate to you a piece of astronomical intelligence of some importance. You are aware that all the methods that we possess for calculating the perturbations of the planets suppose that the eccentricities and inclinations are small, and that for those of the celestial bodies, which move in orbits very eccentric and very much inclined, we have been hitherto obliged to calculate the differentials of the perturbations for a great number of points of the orbits, and to integrate them by mechanical quadratures. I have just now discovered a method by which we can calculate the absolute perturbations,—that is to say, the perturbations for any time whatever, whatever be the eccentricity of the ellipse and the inclination of the orbit. For a first example of this method, I have calculated the perturbations of the comet of Encke produced by *Saturn*. The series to which my methods lead are of such rapid convergence, that the perturbations of the longitude contain only forty-six terms, and the perturbations of the radius vector and of the latitude, somewhat fewer than this. I have reason to believe that it is impossible to reduce them to a less number of terms." Prof. Hansen then gave an example of his method.

2. 'On a new Arrangement of a Vertical Collimator attached to the Altitude and Azimuth Instrument,' by W. Simms, Esq. The essential respect in which the altitude and azimuth instrument differs from similar instruments by which it has been preceded is this: the azimuth or vertical axis is perforated and fitted with an achromatic object-glass having a diaphragm in its focus, so as to serve, in conjunction with the spirit-level upon the instrument, as a vertical collimator.

3. Description of a Universal Instrument made by M. Ertel, of Munich.

4. Occultations observed chiefly at Ashurst in the Year 1842, by R. Snow, Esq.

5. Observations on the (apparently periodical) Variations in the Lustre of certain Stars of the First Magnitude, by T. Forster, Esq.

Institution of Civil Engineers.—*Feb.* 7.—The President in the chair.—The business commenced with a paper by Mr. Dobson, explaining an adaptation of Bramah's hydraulic press, for diminishing the labour of raising and lowering a drawbridge over one of five openings, in a stone bridge erected over Bowcombe Creek, Devon, by Mr. J. M. Rendel.—The press was so arranged, that a rack on its piston-rod worked into a pinion on the axis of the rising part of the bridge: the labour of even a female at the force-pump sufficed to give it such a motion as that it only occupied about fifteen minutes in raising and lowering the drawbridge. The machinery appeared simple, and was stated only to have cost about 7*l.* annually for repairs and keeping in order for twelve years.

'An Investigation of the Comparative Loss by Friction in Beam and Direct-action Steam-Engines,' by Mr. W. Pole. This paper, consisting almost entirely of mathematical investigation, and involving the application of the differential and integral calculus, was read in abstract. Its object was, to show the futility of an objection frequently urged against the "direct-action" or "Gorgon" engines, from their alleged increased friction. The results of this investigation appeared to be, that,

The vibrating or oscillating cylinder engine	has a *gain* of	1.1	per cent.
The direct-action engine, with a slide	a *loss* of	1.8	..
Ditto with a roller	a *gain* of	0.8	..
The "Gorgon" engine	a *gain* of	1.3	..

showing that the direct-action engines as generally constructed, and as adopted by the government for the steam-vessels in the Navy, has rather the advantage over the ordinary beam or side-lever engines. In the conversation which ensued, it was agreed that the allowance which had been usually made for friction in steam-engines had been overrated; that, in reality, the friction rarely amounted to more than 1 lb. per square inch; and that, owing to the perfection to which the construction of machinery had now arrived, a further gain might be anticipated. Although the law of "friction being independent of the area of the rubbing surface," as given by Poisson and others, was impugned by some of the members, it was allowed, that as both kinds of engines had in the paper been treated analytically by the same rule, the results for both would, in an equal ratio, approach towards truth, and that, therefore, the conclusions arrived at might be received as correct.

Sir M. I. Brunel then presented a drawing and models of the polling boards by means of which he had been enabled to traverse the ground under the Thames, through which he had pushed the tunnel. This contrivance was described by him at length.

Messrs. Chevalier, Benkhausen, E. S. Barber, T. Barton, T. E. Blackwell, G. L. Taylor, and W. Spence, were elected Associates.

Feb. 14.—The President in the chair.—In the conversation which was renewed upon Mr. Pole's paper, 'On the Comparative Friction of Beam and Direct-action Steam Engines,' the author further explained the nature and objects of his paper, which had not been fully understood on the former evening, and illustrated the mode of analytical reasoning, by which he had arrived at his conclusions. He then proceeded to answer the objections which had been raised against the laws of friction adopted by him, and to comment upon the mode of experimenting of Vince and others; showing, on the other hand, by quotations from the recorded experiments of Amonton, Coulomb, Rennie, and Morin, and from the works of Gregory, Brewster, Emerson, Playfair, Barlow, Farey, De Pambour, Poisson, Pratt, Whewell, and Moseley, that the views he had taken were correct. He also noticed the variations produced by attrition, and by the introduction of unctuous substances between the rubbing surfaces. These views were corroborated by several members present; some of whom had been quoted as authorities, and the propositions involved appeared to be generally received.

'A new mode of making malleable Iron direct from the ore at one process;' it is the invention of Mr. Clay, and is used at the Shiroa works, near Kirkintilloch. By this process a mixture of dry hæmatite, or other rich iron ore, is ground up fine, with about four-tenths of its weight of small coal; this mixture is allowed to pass gradually through a hopper into an oven adjoining, and forming part of a species of puddling furnace, into which a given quantity is drawn at stated times, when thoroughly and uniformly heated. The charge is then puddled in the usual manner, but with less labour than when working plate iron; and in about an hour and a half the iron is produced in a malleable state, fit for shingling and rolling into bars. After another process of filing and rolling again, malleable iron bars are produced, of a quality (as was stated by some members present) superior to the cable bolts or best iron usually made by the long and expensive process of calcining the ore, smelting in the blast furnace, and refining the pig-iron, and the saving of fuel is necessarily very great. The iron was stated, also, to be capable of being converted into steel of superior quality, and when worked by Mr. Heath's plan, of uniting manganese in the process, cast steel was produced, which possessed the property of welding or uniting to iron; and, in consequence, all the cutlery which was formerly made of shear steel was now made of cast steel. The cast iron produced by the scoriæ, or refuse slag of this process, is of a better quality, in consequence of the absence of phosphoric acid, which is ordinarily present in the limestone, and as a flux in the blast furnace. This discovery may be the means of working the comparatively unopened mines of hæmatite of rich quality existing in Lancashire, Devonshire, and Cornwall, all of which could be brought into use by this means; and if, as asserted, the iron made good steel, England would be rendered independent of Sweden.

Feb. 21.—His Grace the Duke of Buccleuch was presented on his election as an Honorary Member.

The discussion was renewed upon Mr. Clay's process of making malleable iron from hæmatite ore. It was shown that of the twenty-five thousand tons of steel made annually in this country, not more than two thousand five hundred tons were made from the best quality of Swedish iron; the rest was made from inferior charcoal iron from Russia and Germany, or from English iron, which was not well calculated for converting.

An account was then given, by Mr. J. O. York, of the 'Experiments upon the strength of the ordinary Solid Axles, as compared with the Hollow Axles invented by him.'—It was submitted that the requisite qualities in a railway axle were, first, the greatest possible degree of rigidity between the wheels, to prevent the axle from bending or breaking from concussion; and secondly, the greatest quantity of elasticity and freedom in the particles of iron within the axle itself, to prevent the injurious effects of vibration. It was contended, that the hollow axle was better able to resist these strains than a solid one, because the comparative strength of axles is as the cubes of their diameters, and their comparative weights only as their squares; consequently, with less weight in the hollow axle, there must be an increase of strength: and also that the vibration had a free circulation through the whole length of the hollow axle, no part being subject to an unequal shock from the vibration, and that the axle would therefore receive less injury from this cause than a solid one.

Society of Arts.—*Feb.* 8.—Mr. Esquilant explained his method of making architectural and other ornaments of leather. The process employed is to prepare metal moulds of the separate leaves, petals, and other parts of which the flowers to be represented are composed. The leather of the required thickness is then to be cut to the proper form of the leaf, petal, &c., and afterwards soaked for a day or two in a solution of rosin and common oil of turpentine. When the leather is fully impregnated with the liquor, it is taken out, carefully wiped, and then cold-pressed in the mould with sufficient force to give it the intended figure. The subject was illustrated by specimens in imitation of the carvings in wood by Gibbons and others.

Mr. Whishaw read the first part of a paper 'On the Application of Electricity to the Arts and Manufactures of the Country.'—The immediate subject was the application of electricity to the transmission of signals, by means of Messrs. Cooke and Wheatstone's telegraph, already in daily operation on the Blackwall, Edinburgh and Glasgow, and Manchester and Leeds Railways. By experiments lately made by Mr. Cooke, he is enabled to lay down the telegraph at half the original cost—the iron tubing for pro-

Digitized by Google

tecting the wires from injury being dispensed with, and the insulated wires being suspended either from wooden or iron standards, nine feet high, ranged at convenient intervals.

'Todd's Portable Hatching Apparatus.'—Many schemes for hatching chickens, ducklings, and the young of other domestic poultry, have at various times been brought before the public. The advantages claimed for Mr. Todd's apparatus are portability, the little attendance required, and the small weekly cost of keeping up the required temperature. The whole contrivance is inclosed in a vessel of cylindrical form, made of sheet-iron, whose diameter is 24 inches and height 22 inches. It consists of the following parts:—the hatching tray, occupying the upper part of the vessel, which is 21½ inches in diameter and 2¾ inches deep, is lined with wool, and has around a central aperture, through which the steam passes from the boiler to the hatching department, a reservoir of annular form, 1½ inches wide and 1¾ inch deep, to contain water for the purpose of keeping the atmosphere of the hatching compartment in a sufficiently humid state. The boiler, of zinc, is placed 3½ inches below the bottom of the hatching tray, is 22 inches in diameter, and 10 inches in extreme depth, the upper and lower sides being of a somewhat hemispherical form. The boiler is filled with hot water by a ¾ inch pipe, passing out on one side of the vessel into a vertical reservoir of 2 inches diameter and 5 inches high. In the centre of this reservoir is a cylindrical case, in which a thin copper wire, suspended from a float in the upper part of the reservoir, works freely, and which is connected with a valve at bottom, working in a small pipe communicating with the heating chamber. The use of the float and valve is to regulate the temperature of the water. The heating chamber is of copper, about 4 inches square, and 19 inches long, running in a central line through the boiler. It is furnished with a lamp tray having any number of burners that may be required according to the temperature of the apartment in which the apparatus is placed. The lamp tray, in the present case, is 7 inches long, 4 in width, and 1½ in depth. The hatching process is simple, and may be thus described. When the eggs are first placed in the hatching tray, it is necessary to mark 1 and 2, or A and B, or some other mark, by which to distinguish opposite sides; as also to write the date on each egg, so as to distinguish one batch of eggs from another. The tray will hold 100 eggs. Once in every 24 hours, for 21 successive days, it is necessary (for so Nature dictates) to turn the eggs: at the expiration of that time, when the chickens break forth from their shells, it is found advisable to leave them in the tray for about 24 hours, before they are transferred to the rearing compartment, the temperature of which is about 12° lower than that of the hatching room.

Feb. 22.—Mr. Juckes's patent furnace was described, and illustrated by a working model.—(See *ante*, p. 91.)

Chemical Society.—Since our last report the following papers have been read:—

'On the Division of the Equivalents of the Phosphorus family of Elements by three,' by Professor Graham. This family includes the elements nitrogen, phosphorus, arsenic, and antimony, of which the division of the received equivalents by three has already been advocated on various grounds. The new argument adduced here in its favour is founded on the thermal relations of two sets of salts. The equivalent proportions of nitrate of potash and bichromate of potash produce considerable cold when liquefied by dissolving them in water, which is of exactly the same degree in both salts. This indicates a similarity of constitution, and the two salts will possess the same number of atoms, namely ten, if the single equivalent of nitrogen in the nitrate of potash is reckoned three. Again, biphosphate of potash, binarseniate of potash, and terchromate of potash appear likewise to produce all the same degree of cold on dissolving. The last-mentioned salt certainly contains fourteen atoms, and the other two are made to correspond with it in that respect, if the single equivalent of phosphorus and arsenic, which they respectively contain, be supposed to be three atoms.

'On the Sugar of the *Eucalyptus* of Van Diemen's Land,' by Professor Johnston of Durham. This is an exudation of sugar or manna, in tears, or drops, which may be collected in considerable quantity. When crystallized from alcohol, it gave the same composition as grape sugar, but differs from it in relation to heat and other properties, and is considered by the author to be a new and distinct species of sugar; and not mannite, as hitherto supposed.

'Remarks on the Determination of Nitrogen in Organic Analysis,' by W. Francis, Esq. The author adds his testimony in favour of Dr. Will's mode of determining nitrogen, the accuracy of which was doubted; and tests its powers by new analyses of picrotonine, which give 1.3 and 0.75 per cent. of nitrogen in that vegetable principle—quantities too small to be appreciated by the old method.

A communication, by Mr. Balmain, 'On the probable existence of Nitrogen, combined with Silicon, in soils and other substances.'

'On Palladium; its extraction and alloys,' by W. J. Cock, Esq. The author described particularly the means adapted for the extraction of this metal from the gold ores of the Brazils, as practised in his establishment.

'On the Formation of Fat in the Animal Body,' by Dr. Justus Liebig. The carnivorous races of animals thrive on azotized food, which supplies material to replace their wasted tissues, and these wasted tissues again afford material to be oxidated or burned in respiration, and support the animal heat. But besides azotized matter, the food of the graminivorous races contains sugar, starch, and gum, which are not employed in the proper nourishment of their bodies, but solely for the generation of animal heat by combustion at the expense of the oxygen of the air. The disappearance in like manner of fat in the animal system, in circumstances where rapid oxidation is known to occur, seems to point out a similarity in the use of the latter, which thus becomes burned in the body into carbonic acid gas and water, in the absence of the vegetable principles above mentioned. It is well known that graminivorous animals, abundantly supplied with food containing starch or saccharine matter, and whose respiration is, to a certain extent, checked by want of motion and exercise, become in a short time loaded with fat, which the above consideration indicates to have been formed out of the excess of non-azotized food over and above that required for respiration. This is supposed to take place by a metamorphosis analogous to that by which alcohol and carbonic acid are produced from sugar. This opinion of the origin of fat has recently been called in question by M. Dumas, who contends, that the whole fat of an animal body has been furnished ready formed, in that state, by the food itself, and cites an experiment in which a goose has been fed for some time upon maize, supposed to be free from fatty matter, the starch of the grain appearing to have generated the fat found in the bird, an inference which he rejects by showing that maize itself contains a large quantity of oil: it therefore became desirable to obtain additional evidence on the subject. In an experiment at Giessen, three young pigs were fed, during thirteen weeks, on peas and potatoes, the quantity of fat contained in these vegetables being calculated, from the researches of Braconnot and Fresenius. It was found, at the expiration of that time, that the bodies of these animals contained no less than about seventy pounds more fat than could possibly have been given in the food, and which was therefore inferred to arise from an alteration of the starch. An equally satisfactory experiment is described by Boussingault, in which the butter furnished by a cow was found to exceed greatly the fat of the food. The author then states the result of a chemical examination of hay and straw, with reference to fatty matter, and describes them to contain about 1.5 per cent. of a crystalline waxy matter, mixed with chlorophyll, altogether different from ordinary fat. The excrements of a cow, fed on those substances, yielded a quantity of the same waxy substances corresponding very closely to the whole quantity contained in the food; so that it appears quite evident that the fat of the butter does not arise from this source. The author concludes with observations on the composition of maize, which contains very different quantities of oil, from 1 to 9 per cent., when grown in different localities. [See *ante*, p. 93.]

'On the Changes in Composition of the Milk of a Cow, according to its exercise and food,' by Dr. Lyon Playfair. The principal object which the author had in view in this paper, is to draw the attention of practical men to the conditions which effect a change in their dairy produce. An improved mode of analyzing milk is described and followed. The cow being in good milking condition, and at the time fed upon after-grass, he ascertained the average amount of her milk for five days, and then proceeded to analyze it. In the first day it was observed that the milk of the evening contained 3.7 per cent. of butter, and of the following morning 5.6 per cent. The deficiency in the first observation is referred to the consumption of a greater portion of the butter or its constituents, from respiratory oxidation during the day when the animal was in the field, than during the night when it was at rest in the stall. When confined during the day, and fed with after-grass in a shed, the proportion of butter rose to 5.1 per cent.; when fed with hay, the butter was 3.9 and 4. 6 per cent.; when fed with portions of potatoes, hay, and bean flour, the butter was 6.7 and 4.9 per cent.; with hay and potatoes, 4.6 and 4.9 per cent. The author then examines Dumas's theory of the origin of fat in animals, in reference to the foregoing experiments, and concludes, in opposition to that theory, that the butter in the milk could not have arisen solely from the fat contained in the food, while it may reasonably be referred to the starch and other unazotized elements of the food, as maintained by Liebig. Experiments of Boussingault are quoted in favour of the same conclusion, and observations of dairymen in different localities. Potatoes are particularly favourable to the flow of milk and increase of butter, from the starch they contain; so is malt-refuse. Porter and beer are also well known to be favourable to the production of butter, both in the milk of woman and of the cow, although these fluids do not contain fat. The quantity of caseine (cheese) in the milk, is shown to be dependent on the quantity of albumen in the food supplied on different days to the cow, and to the supposed destruction of the tissues by muscular exercise. Peas and beans are the food which yield most caseine. Pasturing in the open field is more favourable to the formation of caseine, while stall-feeding is more favourable to the formation of butter. It is also shown, that the proportion of butter, in the milk of woman, is increased by rest and the diminution of the respiratory oxidation.

Feb. 5.—Papers were read by Dr. W. Gregory, 'On a new mode of reducing Silver conveniently, by decomposing the chloride of that metal, by a strong solution of caustic potash, and heating the oxide of silver afterwards in a crucible;' and by Professor Everitt, 'On the preparation of Malic Acid,' which he finds to exist in large quantity in the leaves of garden rhubarb; which is recommended as a preferable source of this acid to the berries of the mountain ash.

Philological Society.*—*Feb.* 10.—Prof. Wilson in the chair.—A paper was read by Prof. Latham upon the Languages of the Negutos of the Asiatic and Australian Islands. By the term Negutos was meant a variety of tribes approaching, in their physical characters, the type of the African, and spread over a long range of islands from the Andaman Islands, west, to the Figis, east, and from Formosa, north, to Van Dieman's Land, south. In the Moluccas they had the appearance of being the aboriginal inhabitants, anterior to the dominant race of the Malays. From New Guinea, eastward and southward, they were the sole occupants of large islands. Physical conformation indicated a multiplicity of races. The evidence of language had not hitherto been examined. The enumeration of the Neguto localities was followed by the enumeration of the vocabularies of their languages. Of these there was an insufficient number. The fullest evidence was for Australia. As far, however, as the data went, the following statements were considered as verified. 1. That the languages of each particular island (even to the whole extent of Australia) were radically one. 2. That the languages of New Guinea, New Ireland, Solomon's Isles, New Hebrides, and

* The Meetings of the Society are held at 49, Pall Mall.

Digitized by Google

(probably) New Caledonia were radically one. 3. that there was an affinity between the languages of Van Diemen's Land and that of Australia. 4. That the evidence in favour of *all* the Neguto languages, of which we possess vocabularies, being allied to one another in the same way that the languages of the Indo-European tribe are allied, was quite as strong as could be expected from the scantiness and paucity of the data.

MEETINGS FOR THE ENSUING WEEK.

SAT. Asiatic Society, 2, P.M.
— Botanic Society, 4.
MON. Geographical Society, half-past 8.
— Royal Academy, 8.—Sculpture.
TUES. Institution of Civil Engineers, 8.—'Description of the Roofs over Buckingham Palace, covered with Lord Stanhope's Cement,' by P. Hogg.—'Account of the Victoria Bridge on the Durham Junction Railway,' by D. Bremner.—'Account of repairing a high chimney, at Messrs. Cowper's Cotton Works at Glasgow,' by J. Colthurst.
— Zoological Society, half-past 8.
WED. Society of Arts, 8.—Mr. Casella 'On an Improved Rain Guage.'—Mr. Whishaw 'On Arithmography.'
THUR. Royal Society, half-past 8.
— Royal Academy, 8.—Painting.
— Zoological Society, 8.
— Society of Antiquaries, 8.
FRI. Royal Institution, half-past 8.—Mr. Williams 'On Ancient Greek Coins.'
— Botanical Society, 8.

FINE ARTS

BRITISH INSTITUTION.

Middle and South Rooms.

We must notice, as among the best things in the Middle room, a few cabinet pictures. Two of these are (145) Mr. Carpenter, jun.'s *Scene on the Avon at Salisbury*, and (146) Mr. Brockey's *Scene from James's Novel of Philip Augustus*—the figures full of affectation, yet so cleverly painted as to deserve a note of admiration. Mr. Brockey has undertaken a more serious task in his *Il Reposo* (178)—the last version of 'The Flight into Egypt;' we are sorry to add, one of the least satisfactory. Though the Virgin Mother be placed in a reclining position, her figure is twisted so as to preclude the idea of rest. The child, again, is strangely drawn; but the colouring of the whole is better than the drawing. Mr. F. Howard exhibits, in No. 156, a cabinet group of 'Christ blessing the Children,' which, as far as design goes, might have been studied with advantage by Mr. Brockey, though it is still chargeable with feebleness—a fault into which those treating a subject so delicate are apt to fall.

Another odd piece of cabinet work, bearing as odd a title—is Mr. Haydon's *C'est lui* (173): for who could imagine that these two French words designate the portrait of the Duke of Wellington? or rather of the Duke's back? We presume that in time we shall have the hats and coat tails of all our statesmen thus commemorated: and cannot but fancy the whimsical effect of a gallery thus furnished! Mr. Haydon's 'dæmon,' we fear, is rarely under due control. There is hardly a visitor to the gallery, who will not smile at the huge *Curtius* (384). Yet there is genius in the picture: though the attitude of the horse resemble the coiling of an heraldic wyvern rather than the plunging of a steed, though the man wears on his brow the look of true opera heroism—and though the gulph be far more like the lonely rift of some desert moor, than the one which yawned in the Forum, its horror enhanced by contrast with the towers and temples, at whose very feet the fatal chasm unclosed—the contrast between animal terror and human devotedness is forcibly and finely rendered. Mr. Haydon, however, has not done justice to his own conceptions by his colouring: the harsh tones and glaring contrasts of this picture remind us of the strange 'Phinees' by Poussin in the National Gallery.

Returning to the *Middle room*, we must specify with a word of praise, M. Lafaye's *Bedchamber of Louis Quatorze* (154), which is truth itself, and, had but a little more air been admitted into the picture, might have challenged comparison with the most elaborate Flemish interior. In another branch of art, the strong men of Antwerp and Amsterdam are rivalled by Mr. Sidney Cooper: see his cattle-piece (No. 196), which could hardly be surpassed, whether for texture or for finish. Neither is Mr. Copley Fielding's *Vessels at Burlington Pier* (198) at an impossible distance from Vandervelde—the deficiency being a want of that marvellous transparency, which, be the depth of gloom or the brightness of sunlight ever so intense, is never absent from the sky and water of the Neptune among marine painters. We are next to speak of one of those landscapes which England can show, without parallel or archetype; we mean Mr. Martin's vision of *Goldsmith's Hermit* (211.) In his grand architectural perspectives, and his dreams of old Jerusalem and Nineveh, he has been, perhaps, forestalled by Paul Brill, whose compositions, if less magical in their distribution of light and shade, are, perhaps, even yet more marvellous for their accumulation of details, and immensity of prospect. But we have no precedent for Mr. Martin's reading of Nature—whether it be literal, as in his exquisite little water colour drawings of hedge-row and cornfield, or poetical, as in the grand landscape, suggested by Goldsmith's simple ballad. What if the eye, at first, be startled—nay *shocked*, by the conventionalisms of his colouring, by the prodigality of azure blue, metallic brown, and yellow gold with which he has flooded the canvas—it will, ere long, become reconciled to the extravagance of these tints for the sake of their richness and harmony, and the poetical invention of the composition upon which they are expended. The light that lingers upon the wood-crowned heights to the left of the scene, the depth behind depth of shadow, which have enfolded the valley, the solemn retirement of the path leading upward to the hermitage, are all in our artist's best manner: the two figures, it may be added, not in his worst.

We shall merely specify Mr. Morton's *Study from a Hindoo* (226), and Mr. O'Neil's *Scene from Twelfth Night* (239), observing, however, as regards the latter, that a gratuitous improbability is given to it, by the obvious girlishness of Viola. No Duke, were he ever so enamoured—no Olivia, were she ever so fantastic, (how much more when waited upon by a keen, sprightly, penetrating Maria!) could have, for an instant, been imposed upon by the doublet and hose of the maiden if they were no more of a disguise than here represented. Mr. Linnell's *Forest Scene from Nature* (240) lacks subject; but there is always something in the artist's manner of handling which we like, and which, as we have heretofore said, reminds us of the free, yet distinctive landscape touch of Rubens. One of the most charming landscapes in the room, is Mr. Stark's *Penning the Flock* (251)—a work, we are surprised to perceive, as yet unsold, and which is a welcome variety from the artist's usual manner. There are parts of it which Cuyp need not have disdained.

Hard by this landscape hangs the best single figure in the exhibition—the *Effie Deans* (255) of Mr. Middleton. She is represented seated on her prison-bed: perhaps the serenity of her reverie is too placid and her features have a dutiful peacefulness (despite their sadness) not altogether befitting one so wilful and petulant as the poor Lily of St. Leonard's. But allowing for this mitigation of the expression, so exquisitely touched by Scott, that none but a master hand could paint up to his text—the picture has a beauty, a pathos, and a simplicity yet breadth of effect, which raise it high above most of its compeers in the exhibition room. All the details, too, are felicitously arranged, and the work ought to add to the reputation of its graceful painter. Why is it that Mr. Middleton is so sparingly to be met with?

As we are asking questions, we will now put an inquiry which, for the last three years, has been at our pen's point—and demand of Mr. Inskipp when he is going to treat us to a new manner? or when he means to finish the pictures painted in his present peculiar style. He is considered, by some of his admirers, to have administered a stinging sarcasm to "the powers that be" in the malicious R.A. with which he has branded the hind quarters of the donkey in his *Ferncutters* (425): we, on the contrary, feel that such an attack is unwise in one on whom Academic Science could retaliate so sharply. For what, save excess of mannerism, is there to give any peculiar character or value to such a picture as his *Despondency* (268)?—where it is impossible to avoid suspecting that the lady was not so sorrowful but that she could don that most coquettishly striped mantle of hers, by way of humouring the artist's fancy for colour. And though the Ferncutters aforesaid have a touch of rural grace with all their homeliness, which reminds us of Gainsborough, on what plea could the artist defend himself, if attacked by some irate professor on the score of slovenly handling to the point at which painting and daubing meet? We wish too well to Mr. Inskipp, and think too highly of his taste in countenance and in colour, to see him degenerating into a mannerist, without raising a voice of warning. After having pointed to a simply quaint costume figure *Sunday Morning* (284) by Mr. C. Martin we are clear of the *Middle room*: a few pictures in the *South room* claiming a word or two. Mr. Shayer disappoints us in his large pair of rural subjects (347 and 356) as a still greater want of atmosphere than distinguished his early pictures is to be remarked in these. There is poetry and grace in Mr. Severn's *Silvia* (368), and some character in Mr. Fraser's *Illicit Whisky Still* (412), but the colouring is sadly feeble and streaky. Lastly—though Mr. Lauder shows a certain sense of male humour and female beauty in his picture (418) from the last scene of 'The Fortunes of Nigel,' giving us a very fair King Jamie, and a sweetly graceful Margaret Ramsay, his discrimination of character is less clear. Which of the elders is George Heriot, and which the caustic Sir Mungo Malagrowther, is problematical; but the picture is one of the better class exhibited: and we are glad that it enables us to make our exit from the British Institution with a word of praise, and hope for the future.

MISCELLANEA

Paris Academy of Sciences—Jan. 30.—A report was read by M. Gasparin, on the agriculture of the Maine-et-Loire.—M. Chasles presented the translation of an abacus discovered by him in one of the public libraries. It is devoted to an explanation of the rules of multiplication and division.—The peculiarity in the system relates to a mode of division which has fallen into disuse, and which differs completely, at least as regards form, from the process which we have retained. The system appears to have consisted in taking an imaginary divisor, greater than the real divisor. If the latter be a number of a single figure, 10 is taken as an imaginary divisor. In this manner, the quotient obtained is the dividend itself. It then remains to multiply the divisor by the quotient, to subtract the product of the dividend. Instead of this mode, the operation is carried on by arithmetical complements. The complement of the division is multiplied by the quotient, and the result is regarded as a new dividend. Thus, 43 are divided by 7; the complement of the division is 3; the quotient corresponding to the imaginary divisor 10 is 4; the product of the complement, by this quotient, is 12: we add this product to the rest of the division, which gives, as a new dividend, 15. It is as if we had multiplied the real divisor by the quotient 4, and struck the product 28 from the dividend 43. Dividing in the same way 15 by 10, we have 1 for the quotient, 3 for the product of the complement by this last quotient, and 5 + 3, or 8 for the new dividend. Here we can no longer operate by the same method, for we must divide by 10; we return, therefore, to the first mode; namely, we divide 8 directly by 7. The quotient is 1, and there remains 1. The partial quotients, then, are 4, 1, and 1, so that the total quotient is 6, and there remains 1. It will be perceived that this process of calculation, which the author of the abacus applies to all cases, and which in point of fact consists in dividing by 10, would lead to decimal fractions. But the author had no idea of these fractions. We find nothing in all these works but the theory and use of the Roman fractions.—An account was given of some experiments by MM. Sandras and Bouchardat, with a view to ascertain the mode of absorption of the different elements of nutrition contained in the principal articles of food used by man or the lower animals. Taking as a basis that soluble aliments are absorbed by the veins, and insoluble aliments by the chyliferous tubes, it remained to be ascertained in what way nature had provided the means of rendering certain aliments soluble, or of separating them to such a degree as to enable them to pass through the chyliferous tubes. MM. Sandras and Bouchardat divided their experiments into two series: one chemical, the other physiological. The chemical experiments showed the action which water, slightly acidulated by chloridic

Digitized by Google

acid, exercises upon the fibrine, albumine, caseum, gluten, and the gelatinous tissues. All these substances enlarge and become translucent, and some of them dissolve. It is sufficient in order to produce most of these phenomena, to add to 10,000 grammes of water 6 grammes of hydrochloric acid, but it was found necessary in order completely to dissolve the fibrine to add a few drops of rennet. Hydrochloric acid, therefore, is not the sole dissolving agent in the gastric juice; the animal matter, called pepsino, or chymosine, must also be present. This being admitted, it appears probable from the experiments of MM. Sandras and Bouchardat, that neutral azoted animal substances, when once dissolved in the stomach, pass directly into the veins. This is the case with gluten. Starch and fecula are wholly or partially converted into lactic acid in the stomach, and are absorbed in this form. Neither starch nor sugar is found in the chyle during a course of feculent alimentation. Greasy substances resist the action of the stomach, and pass into the intestinal canal, where they form a sort of thick cream, and at the same time the chyle, under their influence, developes itself in extraordinary abundance in globules capable of rendering them milky and opaque. According to MM. Sandras and Bouchardat, therefore, greasy substances are the main agents in the production of chyle, so necessary for the process of digestion.—A communication was read relative to some experiments on the blood, by MM. Andral and Gavairet. These gentlemen, struck with the fact that a professor had succeeded in precipitating albumine in the form of globules, by adding a sufficient quantity of water to serum neutralized by an acid, repeated M. Liebig's experiment, and found that the globulous bodies, which developed themselves in the serum of the blood, were nothing less than the first rudiments of the vegetable of fermentation. Their experiments were repeated on the white of an egg, and on various serosities produced by disease, and the result is, that whatever may be the albuminous liquid, the alkaline property of which is removed by an acid, the same phenomenon presents itself.—*Feb.* 6.—'On the Diluvium of France,' by M. Fournet. M. Fournet enters, at great length, into a review of the prevailing theories as to the geological changes of the earth, and contends that those persons who attribute the presence of the immense deposits of a character essentially different from the localities in which they are found, to the overwhelming pressure of enormous glaciers, or those who ascribe them to an irruption of the sea, are equally in error. He supposes these fragments to have been brought by one or repeated deluges of fresh water, and makes a calculation of the force with which they would be carried, and of the effect which such overflowing would have in forming a channel through the valleys, and creating regular and continuous rivers.—'On the presence of entozoaries in the blood of a dog.' MM. Gruby and Delafond's paper reported the discovery of animal life in the blood of a dog. There has hitherto been no well-authenticated case of such phenomenon in warm-blooded animals, excepting birds. The presence of animal life in the blood of cold-blooded animals, particularly frogs, however, is common.—'On the use of Arsenic as an external application for the cure of Cancer.' M. Mance states that, in most of the cases in which it has been tried, mixed with ointment for the cure of cancer, either radical cures have been effected, or the extension of the disease has been so checked as to prevent the destruction of the patient. The secretions, says M. Mance, for some days after the administration of the remedy, give proofs of the presence of the arsenic, thus showing that it has been absorbed, but none of the injurious effects of the poison are manifested in the system.—A communication was made respecting insanity in the United States from M. Rammon de la Sagra. He informs us that the greater number of insane persons is in some of the States of New England, and the smaller number in the States of the South, and the new districts of the West recently civilized. The general rule, however, as to the States of the South is not without its exceptions, for the high number of one insane person to every 700 of the population in the North is found also, he says, in some of the States of the South.—In the course of the sitting some specimens of lithographic engraving in relief by means of acids, by M. Tessier, were laid before the Academy.—*Feb.* 13.—M. Pelouze read a report on the discovery of a new acid of sulphur, recently made by MM. Fordos and Gelis.—M. Arago communicated the results of the experiments made by M. Becquerel, jun., in the application of the daguerreotype process to the study of the solar spectrum. M. Becquerel has demonstrated that the obscure lines of the spectrum correspond with the gaps which are rigorously equivalent in chemical radiation. In mentioning the curious results of the experiments, M. Arago went into considerable details as to what remains to be done on this subject, in order to follow up the discovery of M. Daguerre, and arrive at a solution of the long-pending discussion on the undulations of light. M. Arago then alluded to the experiments made by M. Fiscau, with a view of ascertaining the correctness of those of M. Moser, on the extraordinary transmission of images without the aid of light. He stated that M. Fiscau had satisfied himself of the reality of the results, and would shortly lay a paper on the subject before the Academy.

Metropolitan Improvements.—On Wednesday evening a meeting of the Metropolitan Society was held. Mr. J. Ivatt Briscoe in the chair. The chairman congratulated the meeting on the attainment of one of the principal objects of the society, the appointment of a Government Commission to prepare a comprehensive plan of Metropolitan Improvement. From a letter in the hands of the secretary from Sir Robert Peel, it appeared that the new Commission had commenced its labours by inquiring into the expediency of an ordnance survey and map of London upon the largest scale, and it was understood that the Commission was now engaged in considering the various plans proposed for an embankment of the Thames. Mr. Martin, the painter, said, that for fourteen years he had been engaged in promoting the twofold object of throwing open the banks of the Thames, and of converting the contents of the sewers, now flowing into the river, to agricultural uses. Mr. W. E. Hickson observed, that some idea of the pecuniary value of the liquid manure, now permitted to be lost, might be formed from the fact, that in Paris a new contract had recently been signed, by which the contractor agreed to give the city 22,000*l.* per annum for the contents of the cesspools of Paris. Mr. Fowler observed, that as numerous private interests would be affected by an embankment of the Thames, it was very important to watch any proceedings relating to this object, in order that the public interest should not be sacrificed. Mr. W. Lindley was anxious that the new Commission in considering any plan for the embankment of the north side of the river, should inquire into the practicability of connecting it with the Essex road by means of a new and broad street running from Aldgate to the Thames, so as to form a practicable carriage thoroughfare from the west to the east of London, which now could scarcely be said to exist.

Lotteries and Little-goes.—The "extension," as it is called, of "the principle of Art-Unions" has not only been followed by our own Ham, Tongue, and Twelfth-cake men, but by the citizens of Dublin and Glasgow; and the following announcements will, we think, excite the envy of the Polypicnic people:—

"STUFFED BIRDS OF PARADISE, &c.—Eighty-four rich prizes of glass shades of stuffed birds, a superb musical table, speaking parrot, Italian greyhound, &c., to be drawn upon the same plan as the Royal Irish Art-Union on Friday, the — instant, at one o'clock. As only 20 tickets remain unsold, no postponement under any pretence whatever will take place. Tickets only 2*s.* 6*d.* each. Those subscribers who were unfortunate in the last drawings will be allowed tickets in this at 2*s.* each, to be had at ——— Grafton-street.—N.B. For sale the head of a New Zealand Chief."

"The head of a New Zealand Chief" is a touch of the sublime: we recommend the Polypicnic people to secure this treasure. From Glasgow we have an advertisement of a "subscription sale," as it is called. "A gentleman leaving the country" is desirous, it appears, of parting with "a valuable chamber organ, a few framed prints, and a day and night telescope," and all these treasures are to be "disposed of in 176 shares, at 10*s.* each, on Wednesday, the — of March, at 7 o'clock in the evening, in Messrs. ———'s Furniture Rooms, Argyle Street, where the subscription-book lies."—At home, we have "The Friendly Union" to add to our catalogue. Here, for a quarterly 2*s.* 6*d.*, there is to be a "distribution" of "cabinet furniture, blankets, hosiery, and silks," every article "varying in value from 10*s.* to 20*l.*"—Respecting the Proof of *The Lattice*, we have received the following letter:—

Mr. Lloyd's assertion, that "a proof of *The Lattice* has never been either sold, advertized, or even printed," must be quite disposed of as to the *printing*, by the exhibition of it at your office. Allow me to add one word as to the *sale* of it. Within these ten days, I myself saw, in the stock of a printseller in Cambridge, a print of *The Mantilla*, and a proof of The Lattice *with open letters*. About this, sir, there is "no mistake," for I had a conversation with the printseller on the audacity of Mr. Lloyd in denying the existence and sale of this latter engraving.

Feb. 20, 1843. I am, &c., +

We are obliged to our correspondent, and the more so because he has sent us his name as a guarantee for his statement. We have also received a letter from Mr. Lloyd:—

26, Soho Square.

I find that it is your intention to exhibit publicly, to-day, at your office, a specimen of the engraving of *The Lattice*, which you are pleased to term a "*proof*," simply because the word *Lattice* is engraved in open letters. Now I beg to inform you, that all the subscribers to the "National Art-Union" are supplied with precisely similar prints to the one you call a proof, as there is but one character of lettering adopted upon all the plates.—I am, &c.,

20th February, 1843. Richard Lloyd.

What a pity Mr. Lloyd did not make this statement in the first instance, instead of rudely contradicting Mrs. Parkes, and leaving the public in the dark, until we "declared our intention" of exhibiting the prints. Mr. Lloyd talks of a plate with "open letters" as what *we* "are pleased to call a proof." Will he tell us what Mr. Moon is "pleased to call a proof"? How print publishers distinguish proofs from prints but by the open letters? The *facts*, however, now established are these:—the subscriber who went off chuckling with what he supposed was a *proof* of '*The Lattice*,' published "by the proprietors" of the National in 1842, is now informed that he has got only a *print of an old engraving, published under the name of* '*The Mantilla*,' *by Mr. Moon, in* 1838.

Wealth.—"One of the best and most satisfactory uses of wealth, my dear boy, (says *Punch*, in his 'Letters to his Son,') is to dazzle with our riches the eyes of our neighbours. Your dear mother once hit this point to a nicety. We had long expected the payment of a small legacy bequeathed to her by a distant relation, whose exact degree of kindred I cared not much to inquire into. It was enough for us that your dear mother's name was down in the will; and that the executors promised some day to faithfully perform the injunctions of the dear deceased. 'And when we get this money,' said your mother to me in a moment of connubial confidence, 'I tell you what we'll do with it—I tell you, my love, what we'll do with it.' As I knew she would proceed no further until I begged to know her intentions, I at once put the question. 'What, my dearest, what will you do with it?' 'Why, my love,' answered your parent, her eyes sparkling with pleasure, 'we'll take the plate out of pawn, and give a party.' Yes; the great gratification to be gathered from the legacy was, that we might flash our four tea-spoons and pair of tongs in the eyes of people for whom we had not the slightest esteem; and to one of whom your mother had, I know, on three occasions captiously refused the loan of her bellows. * * I think I have heard you say you love the face of Nature? The open sky—the fields, the trees, the shining river, all are glorious to you! My dear boy, whatever may be your present delight in contemplating these objects, as yet you know nothing of their value. Look upon them with the eye of a proprietor, and what a bloom will come upon the picture! Every bit of turf will be an emerald to you; every grasshopper will chirrup—a very angel to your self-complacency; every tree, moved by the wind, will bow to you as you pass by it; the very fish in the river will

Show to the sun their wav'd coats dropp'd with gold,

reflecting there *your* wealth, and not *their* beauty. Nay, that portion of the sky which rains and shines its blessings upon your land, you will behold as yours; yea, human pride, strong in its faith of property, will read upon the face of heaven itself—'Meum!' Every sunbeam will be to you as tangible as if it were an ingot. How delicious and how entrancing must have been the feelings of Adam when he awoke in Eden, to find himself—a landed proprietor!"

Erratum.—Page 163, col. 3, line 18 from bottom, for *Sir* J. Ross, read *Captain* J. Ross.

With an Illustration by GEORGE CRUIKSHANK.
Richard Bentley, New Burlington-street.

On March 1, 1843, will be published, No. I. price 1s. of

THE LONDON REVIEW, a Monthly Digest of Literature, Science, and Public Affairs.
In offering a new Periodical to the Public, the Editors of the London Review have reason to believe that their Monthly Journal will be found to fill a vacuum in Literature that has been often acknowledged. The stream of publication is now so rapid that few readers can afford either the time or the expense necessary for the perusal of works which yet contain much that is valuable, and sometimes essential to be known. The vast discoveries in Science now constantly in progress; the development of new forms and elements in our social existence; the application of established principles in new directions; the narratives of the traveller; the researches of the historian; the lighter but not unimportant volumes of the novelist; all these compose a mass of literary novelty containing information of the highest interest, yet whose very bulk must debar the greater number of readers from its acquisition.
The great object of the London Review will thus consist in giving every month a reflection, faithful, and, if possible, full of all the useful and interesting features contained in the publications of the period; affording to every work and every subject the attention demanded by their importance, and endeavouring always to fill its pages with the materials best calculated to interest and instruct.
The criticisms of the Review will be condensed as far as is consistent with the full elucidation of the subject under discussion. And no diffuse comment written merely for display will be allowed to encroach upon its space to the exclusion of more useful matter.
Each Number will consist of nearly 100 pages, printed in a handsome octavo form, and published at the price of One Shilling.
Office of Publication, 10, Bolt-court, Fleet-street, London; where all Communications and Advertisements are received. Sold also by Joseph Thomas, 1, Finch-lane, Cornhill; Messrs. Simpkin, Marshall & Co. Stationer's-court, London; and to be had of all Booksellers in Town and Country.

Whittaker & Co. Ave Maria-lane.

In demy 8vo. price 8s. 6d. cloth, with a Map,

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.

By WILLIAM DESBOROUGH COOLEY.

"A truly classical work....This work, well considered, is historical rather than geographical and ethnographical; it is unquestionably the only truly critical work hitherto undertaken and completed on the subject."—Count Graberg da Hemso, in the *Rivista Europea*, May, 1842.

"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated....The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. ....The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.

"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal."—*Friend of Africa.*

"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*

London: J. Arrowsmith, 10, Soho-square; and all Booksellers.

Just published,

A GENEALOGICAL and HISTORICAL TABLE of the ROYAL FAMILY of ENGLAND, from the Norman Conquest to the Present Time: showing the Births, Marriages, and Deaths of its illustrious Members; together with those of the collateral branches; and the Accessions and Coronations of the Sovereigns.

By JOHN JAMES YATES.

The Chart is so arranged that in a continuous line, and at one view, the descent of the British Monarchs and Princes, together with that of the collateral branches of the illustrious family, from William the Norman to our present Most Gracious Sovereign Victoria, is clearly defined. The ancestors of some of our present Nobility, who have descended from the Conqueror, are also pointed out.

Richard Bentley, New Burlington-street,
(*Publisher in Ordinary to Her Majesty.*)

Shortly will be published,

AN APOLOGY for the REVIVAL of CHRISTIAN ARCHITECTURE IN ENGLAND.

By A. WELBY PUGIN,

Professor of Ecclesiastical Antiquities at St. Marie's College, Oscott.

The following matters will be set forth:

1. The Inconsistencies of Modern English Architecture, with Critical Remarks on several structures recently erected.
2. Christian Architecture defended against several objections.
3. The Inconsistency of the Revival of Classic Architecture in the 16th century.
4. The Propriety of reviving Pointed Architecture in all modern Ecclesiastical Buildings.
5. The Propriety of reviving Christian Sepulchral Memorials.
6. The Propriety of reviving Pointed Architecture in Civil Buildings of every class, considered with reference to climate, arrangement, and destination; with the modifications and alterations that are allowable to suit present necessities.
7. How far the Modern Mechanical Inventions are available in the execution of Christian Buildings at the present time.
8. The Principles of Christian and Pagan Sculpture considered, and Christian Architecture proved to afford the greatest scope for the exercise of that Art.
9. The intimate Connexion shown between the existing system of Government in England and that of our Catholic forefathers.
10. England the most favourable country for the Revival of Christian Architecture; with Reflections on the many glorious Remains of Catholic Antiquity which it contains.

Illustrated with 18 Plates.

And uniform in size with the 'True Principles of Pointed or Christian Architecture.'

John Weale, 59, High Holborn.

NEW AND IMPROVED CHURCH AND CHAMBER ORGAN,

MANUFACTURED BY H. C. LINCOLN,

Organ Builder to Her Majesty the Queen,

And to their late Majesties George the Fourth and William the Fourth;

AND BUILDER OF THE ORGANS IN

HER MAJESTY'S CHAPEL ROYAL, BRIGHTON.
HER MAJESTY'S PALACE, THE PAVILION, BRIGHTON.
HER MAJESTY'S CHAPEL, DEVONPORT.

ORGAN MANUFACTORY, 196, HIGH HOLBORN.

MR. LINCOLN solicits the attention of the Nobility, Clergy, and the Professors and Amateurs of Church Vocal and Instrumental Music, to the peculiarities and advantages of the great and numerous improvements he has recently adopted in the construction and arrangement of the Church and Chamber Organ. These alterations have been made with a view of affording an increased efficacy to the Organ, in rendering its support to a large Congregation, and in the performance of Church Instrumental Music. The effect gained is such, as to combine the breadth and variety which distinguish the Continental Organ, with the universally recognised sweet and silvery tones produced by the English mode of voicing and finishing the pipes.

The advantages gained by the adoption of the new mode of construction, are unquestionable,—

1st. The Organ has a more weighty and solemn character of tone, which is gained by the introduction of the new Stops, called the Bourdon, Tenoroon, and Quint.

2nd. It has a more brilliant and silvery character, from the new mode of arranging the Sesquialteras, Mixtures, and by the use of a new Stop, called the Doublette.

3rd. It has a more soft and varied character, from the circumstance, that instead of the Instrument only possessing one Flute, it has three, four, or even six, all of which combine with the new Stops in producing an entirely new quality of tone to the Organ, and which is admirably adapted to the purposes of Psalmody. These flutes are called the Claribel-Flute, the Oboe-Flute, the Wald-Flute, the Suabe-Flute, the Piccolo, and the Flageolet.

4th. It has more breadth and body of tone, from the adoption of a new method of manufacturing the Reed Stops. These are made to speak, so as to combine the weight of a Diapason with the fullest tone which it is possible to give to a Reed Pipe. The new Reed Stops are called the Posaune, the Trombone, the Cornopean, the Soft Horn, the Corno-Flute, the Clarionet, the Trumpet, the Clarion, the Oboe, and the Octave Clarion.

5th. A distant, subdued, and piano effect, combined with brilliancy sufficiently prominent to keep up the voices, is gained by the Tenoroon Dulciana, a new Reedy-toned Dulciana, and the Echo Dulciana Cornet, a Stop of five ranks of Pipes, which has been copied from one in the celebrated Organ of Cologne Cathedral.

6th. More Pipes are obtained to each Key than has yet been attained, and at a less expense; and it must be evident, the greater number of Pipes of differing qualities of tone that can be brought to bear upon each Key, the greater must be the musical resources of the instrument.

7th. The Sound-boards are made to contain nearly double the work of the ordinary sound-boards, and the wind chests nearly double the quantity of wind.

8th. No money is thrown away upon useless mechanism, but the greatest attention is paid to create music in every possible variety and combination.

9th. Although the compass of the Keys is apparently contracted to CC, in effect the Organ extends to CCC, as every Key on the Manual has it with its Unisons, the Octave below; thus, in fact, the instrument has the same compass as the Organ in St. Paul's Cathedral, without the disadvantages attending the old compass.

MR. LINCOLN begs to refer to the following Organs, as examples of the new manner of combining great power and variety at a small expense.

The New Organ in the Church of St. Thomas, the Rolls, Chancery Lane; (*Opened in Nov.*)

The New Organ in Crosby Hall, Bishopsgate Street; (*Opened in Dec.*)

The Organ now erecting at the New Church Withington, Manchester;

The New Grand Organ now constructing for the Cathedral Church of St. David.

MR. LINCOLN submits the following TESTIMONIALS from the late Dr. Clarke Whitfield, Mr. Attwood, Mr. Thomas Adams, Dr. Gauntlett, and Mr. Purkis, as to the Character of his style of Organ Building:

From Dr. J. CLARKE WHITFIELD, *Professor of Music to the University, Cambridge.*

I have employed Mr. Lincoln at Trinity and St. John's Colleges, during my residence at Cambridge, and therefore can vouch for the superiority and durability of his work, as well as for his moderate charges. It is my opinion that the Diapasons of Mr. Lincoln possess more of the sweetness of the celebrated "Father Schmidt" than those of any other Organ Builder of the present day.

From Mr. ATTWOOD, *Organist of St. Paul's Cathedral, and Composer to the King.*

I have the pleasure to inform you that I think the Organ built by Mr. Lincoln an instrument possessing a fine quality of tone, great power, and very complete in all its parts.

Testimonial from the NEW CHURCH COMMITTEE, *Newington, and* Mr. PURKIS, *Organist.*

The undersigned feel highly gratified in expressing our opinion upon the Organ built by Mr. Lincoln for the said Church; and testifying to the great satisfaction he has given therein, not only with respect to its internal construction, mechanism, and powers, but also to the very fine and superior quality of tone it so eminently possesses, and of which it is scarcely possible to convey a sufficiently just and adequate idea.

(Signed) A. CYRIL ONSLOW, Rector.
GILBERT ELLIOTT, Minister.
JOHN PURKIS, Organist.
(And all the Committee.)

Testimonial from the NEW CHURCH COMMITTEE, *Camberwell, and* Mr. THOMAS ADAMS, *Organist.*

The undersigned deem it only common justice to Mr. Lincoln to express the very high and general satisfaction which he has given in the erection of an Organ in such new Church: without any written contract, he completed, within the time stipulated, all, and even more than in his tender he had engaged to perform, without claiming a single extra. Of the appearance of the Organ, of its internal mechanism and workmanship, and above all of its powerful yet mellow and most beautiful tone, it is scarcely possible to convey a just idea of the praise which has been bestowed upon it by all who have seen and heard it.

(Signed) JOHN GEORGE STORIE, Vicar.
JOHN VANE, Minister.
THOS. ADAMS, Organist.
(And all the Committee.)

Testimonial from Dr. GAUNTLETT, *Organist of Christ Church, Newgate Street, London, and of St. Olave's, Southwark.*

Mr. Henry C. Lincoln has erected two Organs on my new plan, and has two others now in progress. I have much pleasure in recording my opinion of his merits. In the contracts which he has executed under my superintendence, I have ever found him, although exceedingly moderate in his price, yet very desirous to give his employers every advantage. The internal mechanism and the outward decoration of his work have been finished in the best style. The metal and manufacture of his pipes have been of high excellence; and every portion of his instrument has been completed with the same uniform attention to its durability and due effect.

MR. LINCOLN has the honour to announce

A New and improved CHURCH BARREL ORGAN;

ALSO,

The CONCERT ORGAN, for the SALOON or DRAWING ROOM;

AND

The APOLLONICON, or SELF-ACTING ORGAN,

For the mechanical Performance of Symphonies, Overtures, Choruses, &c.

MR. LINCOLN continues to Manufacture **The OLD ENGLISH UNISON and GG CHURCH ORGAN,**
To which he gives some new Characteristics by means of his newly-invented Flute, Reed, and Diapason Stops.
He also reconstructs the Old Instruments upon the New Plan.

Now complete in 22 Parts, 9*l.* 18*s.* THE
WORKS of JEREMY BENTHAM; with Memoirs of the Author by JOHN BOWRING; an Analytical Index to the Works and Memoirs, and an Introduction to the Study of Bentham, by JOHN HILL BURTON, Advocate, one of the Editors.
The Introduction may be had separately, price 2*s.* 6*d.*
William Tait, Edinburgh; Simpkin, Marshall & Co. London.

In 8 vols. post 8vo. price 6*s.* each,
HISTORY OF SCOTLAND.
By PATRICK FRASER TYTLER, Esq. 2nd edition. And lately,
Volume VIII. of the First Edition. 8vo. 12*s.*
"One more will complete the work, which we venture to predict will then become, and long remain, the Standard History of Scotland."—*Quarterly Review.*
William Tait, Edinburgh; Longman & Co. London.

DISEASED AND HEALTHY LIVES ASSURED.
MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000*l.*
This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.
The *extra Premium* discontinued on restoration of the Assured to permanent health.
Increased Annuities granted on *unsound* Lives, the amount varying with the particular disease.
Members of Consumptive Families assured at Equitable Rates.
Healthy Lives are assured at *Lower Rates* than at most other Offices. F. G. P. NEISON, Actuary.

ECONOMIC LIFE ASSURANCE SOCIETY,
No. 34, Bridge-street, Blackfriars, London; established 1823.
Empowered by Act of Parliament, 3 William IV.
Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.
The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.
Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.
CAMPBELL JAMES DOWNER, Sec.

FAMILY ENDOWMENT SOCIETY, LIFE ASSURANCE and ANNUITY OFFICE,
12, Chatham-place, Blackfriars, London.
Trustees.
W. Butterworth Bayley, Esq. | Henry Porcher, Esq.
Martin Tucker Smith, Esq.
CAPITAL 500,000*l.*
The objects of Life Assurance may be accomplished at this Office on terms as low as is consistent with security.

Examples of Life Assurance for 100*l.*

Age.	30	40	50	60
Annual Premium..	£. s. d. 2 4 7	£ s. d. 3 0 3	£. s. d. 4 4 9	£. s. d. 6 2 5

Endowments for future and existing children, and Annuities of all kinds are granted by this Society.
The usual commission allowed to Solicitors and others, and 5*l.* per cent. extra on the first premium.
JOHN CAZENOVE, Secretary.

PELICAN LIFE ASSURANCE OFFICES,
70, Lombard-street, and 57, Charing-cross.—Established 1797.
Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.
Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.
The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.
The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.
Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.
Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.
R. TUCKER, Secretary.

H. WALKER'S NEEDLES (by authority the Queen's Own), with the new large eyes, are easily threaded, even by blind persons, and work with great ease, having improved points, temper, and finish. The labels are correct likenesses of Her Majesty and His Royal Highness Prince Albert, in relief, on coloured grounds. H. Walker's improved fish hooks, steel pens, hooks and eyes are recommended. For the home trade neat packages of needles or pens, from 1*s.* to 10*s.* value, can be sent free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value. Every quality, &c. for shipping. H. WALKER, Manufacturer to the Queen, 20, MAIDEN-LANE, WOOD-STREET, London.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, Crests, &c. for book plates, in their proper HERALDIC COLOURS, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 7*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their Warehouses,
EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN.
or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.* 12*s.*, and 8*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large, and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting books, Bibles and Prayers, gold and silver pencil-cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices.

ELECTRICAL and ELECTRO-MAGNETIC APPARATUS, Improved Galvanic Batteries, Callan's Coils, with various arrangements for giving powerful shocks; Apparatus for showing the Dissolving Views, Microscopes, Cameras, and all kinds of Optical Instruments, made and sold by C. W. COLLINS, Philosophical Instrument Maker, by appointment, to the Royal Polytechnic Institution, 3, Wardour-street, (three doors from Oxford-street,) late of Princes-street.

PLATE ENGRAVED on REASONABLE TERMS.—J. PAYNE begs to inform the Nobility and Gentry that he has removed from 22, Fleet-street, to 16, Great Castle-street, Regent-street, where he will continue to engrave Silver and Plated Spoons and Forks, Table Knives, &c. with Crest or Cypher, in a superior manner, at 3*s.* per dozen. Waiters, Tea Sets, and other articles of plate engraved with Arms or Crest at equally reduced prices. Joshua Payne has engraved plate for several members of the Royal Family and many of the Nobility; specimens of which may be seen at his house, 16, Great Castle-street (one door from Regent-street), near the Polytechnic Institution.

H. PAPE, Pianoforte-maker to his Majesty the King of the French, 106, New Bond-street.—PATENT GRAND, SQUARE, CONSOLE, and TABLE PIANOFORTES.—In opening the above establishment H. Pape trusts that his instruments will command in this country the same preference that they have enjoyed on the Continent for the last 25 years. The sale of nearly 4,000 of these instruments is the best proof of the superiority of his new system of construction, in which the hammers, contrary to the usual mode, strike the strings downward. The excellence of these instruments for keeping well in tune, for obedience and elasticity of touch, and for great solidity, is now well known, and every person who bestows on them a fair examination will find that they are also far superior to all pianofortes of the ordinary construction in power and sweetness of tone. Amongst the different instruments at present in H. Pape's ware-rooms may be seen a Grand Piano of eight octaves, constructed on this new system, as well as a very remarkable Square, covered with one single sheet of ivory, which is produced by machinery invented by H. Pape for sawing spirally. This magnificent instrument is the most complete square piano that ever was manufactured, the tone of it being as powerful as that of any ordinary common grand. This instrument was undoubtedly the most remarkable pianoforte at the last national exhibition at Paris; and for this, as well as for his other numerous improvements, H. Pape obtained the gold medal, and was created by the King, Chevalier of the Legion of Honour. M. de Glime, professor of music, from the Conservatoire at Brussels, attends to show the instruments on Tuesdays, Thursdays, and Saturdays, between the hours of four and five o'clock; and the Table Pianos can also be had from Mr. Willis, of Lower Grovesnor-street.

IMPORTANT TO LADIES.
FAILURE TO OBTAIN AN INJUNCTION TO RESTRAIN THE MANUFACTURE OF
KIRBY'S NE PLUS ULTRA PINS, with Perfect Solid Heads, and Smooth Adamantine Points.
RESULT OF LITIGATION.
A Copy of a Notice served on Messrs. Kirby, Beard & Co., dated the 31st of December, 1840, and signed, "White and Borrett," solicitors to the Assignees of Henry Shuttleworth, a bankrupt, and circulated in a letter, signed "J. Briggs for D. F. Tayler & Co.", dated the 1st of January, 1841, having been sent to several of the customers of Kirby, Beard & Co., and re-issued more recently, to the effect that "Any persons purchasing or vending Solid Headed Pins in violation of the alleged patent rights of such assignees, were liable to be called to account like any other PIRATES." Messrs. KIRBY, BEARD & Co. think it right to communicate to their customers and consumers of Pins, the result of the litigation which has taken place in the Courts of Chancery and Queen's Bench, between MARLING and OTHERS, as assignees of the said HENRY SHUTTLEWORTH, and KIRBY, BEARD & Co.

"MARLING AND KIRBY, RE SHUTTLEWORTH.
"It is mutually agreed between the assignees of Mr. Henry Shuttleworth, and Messrs. Kirby, Beard & Co., that the assignees shall withdraw all their proceedings against Messrs. Kirby, Beard & Co., relating to 'Wright's Patent,' for making Solid Headed Pins, and that the assignees shall pay TWO HUNDRED AND TWENTY-FIVE POUNDS in discharge of the costs of Messrs. Kirby, Beard & Co. Dated this 10th day of December, 1842.
(Signed) WHITE & BORRETT,
Solicitors for and on behalf of the Assignees of Henry Shuttleworth,
HUGHES, KEARSEY, & MASTERMAN,
Solicitors for and on behalf of Kirby, Beard & Co."

KIRBY, BEARD & Co., Pin and Needle Makers to Her Most Excellent Majesty Queen Victoria and the Dowager Queen Adelaide, with a grateful recollection of many years' distinguished and extensive public patronage, preference, and support, respectfully solicit the attention of their Customers and Consumers of Pins and Needles to their HIGHEST QUALITY OF PINS, known from all other Pins in the Trade, by the name of "KIRBY'S NE PLUS ULTRA PINS, with PERFECT SOLID HEADS AND SMOOTH ADAMANTINE POINTS." The product, at a great expense of many years' experiments and improvement upon the *original invention and first patent taken out* for the manufacture of Solid Headed Pins. An eminent Engineer, on an inspection of KIRBY, BEARD & Co.'s New Machinery in daily operation, described it as "*As combining the skilful application of the most ingenious mechanism, practically applied in its minutest construction and operations to effect uniformly the highest quality and finish to Pins with Solid Heads.*" Notwithstanding the above quite original and true description printed on the labels and wrappers of Kirby, Beard & Co.'s Pins, the same has been and is dexterously copied and counterfeited, with the omission of the words "*Kirby's*" and "*Smooth*," by a firm of Solid Headed Pin Makers, *untruly* calling themselves *exclusive* patentees, who by such piracy and in a spirit of great unfairness, as Tradesmen, one towards another, advertise and sell by such description their Solid Headed Pins of a SECOND PRICE, and consequently of a SECOND AND INFERIOR QUALITY.
The attention of the public and consumers being thus directed to this species of deception, and the perverted application of the words "*Ne Plus Ultra*" against their obvious sense and meaning, they will readily distinguish the ORIGINAL AND GENUINE ARTICLE from the RECENT COUNTERFEIT; and Ladies, should they wish to purchase the former, are respectfully solicited (to prevent mistakes) to ask for "KIRBY'S NE PLUS ULTRA PINS," which, as well as
KIRBY'S
NE PLUS ULTRA NEEDLES,
WITH PERFECT DRILLED EYES,
For the convenience of purchasers (as well as in the usual manner), *Kirby & Co.* make up their *Ne Plus Ultra Needles* in a variety of Medallion Cases, each containing One Hundred of assorted useful sizes; also in *Morocco, rich Satin, and superb Velvet Cases*, containing Ten Papers of useful sorts and sizes, which includes One Paper of all the *unique and best adapted perfect Needles*, expressly manufactured for every description of modern and elegant *Ladies' Fancy Needle-work*. Also, their *Kirby's Ne Plus Ultra Pins*, in superb Cases containing Six Papers of the most approved sizes, forming useful appendages to a Ladies' Repository, and a choice of *these elegant little Presents* are sold at *very moderate prices* at all the leading Haberdashers, Silk Mercers, and Linen Drapers in the United Kingdom, and every part of Europe and America.
Every description of Pins, Needles, and Fish Hooks to be had Wholesale and for Exportation, at KIRBY, BEARD & Co.'s Manufactories, No. 46, Cannon-street, London, and Gloucester.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and Name, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 1*s.* 4*d.* per quire; no charge for the die. Wafers from the die, 1*s.* per 100, or 6*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY—Terms: 2*l.* 2*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Cornhill, corner of Queen-street, May-fair. Orders by post punctually attended to.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARNICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s.	d.		s.	d.
Table Spoons and Forks, per doz.	16	6	Mustard Spoon	0	6
Dessert ditto, ditto	12	6	Tea Spoons, per dozen	5	6
Fish Knives	5	6	Gravy Spoons	3	6
Soup Ladles	6	6	Salt ditto	0	6
Sauce Ladles	1	6	Sugar Tongs	1	0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.
C. WATSON begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.
TEA TRAYS, and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 35*s.*; a best Gothic border 30-inch Japan tray, 12*s.*; a dozen ivory table knives, 11*s.*; dessert ditto, 9*s.*; a pair of carvers, 4*s.* 6*d.* A Palmer's Candle Lamp, bronzed, lacquered, 9*s.*; a solar ditto, to burn common oil without smoke or smell, 25*s.*; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1*s.* each; best ivory-handle razors, 8*s.* 6*d.* per pair.
41 and 42, Barbican, and at 16 Norton Folgate.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headache, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 5*s.* ("This is the best book on nervousness we have."—*Prof. S——, Surgeon.*)

ELEVEN CHAPTERS on NERVOUS or MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, knows not 20 uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3.

ROWLAND'S MACASSAR OIL, under the Special Patronage of Her Most Gracious Majesty, the Royal Family, and the several Courts of Europe.—This Oil has acquired celebrity for its truly extraordinary efficacy and *fecundity in nourishing, preserving, and beautifying* the Human Hair. It imparts an additional vigour to the roots, together with a glossy brightness, and a beautiful tendency to curl. For inducing an accelerated growth of Whiskers or Moustache, the MACASSAR is unfailing in its stimulative operation. In reference even to the Hair of early childhood, the use of the Oil is found attended with the happiest effects.—Mild, invigorating, stimulative, and purifying, it materially assists in dispelling scurf or dandriff, and renders supererogatory the use of the fine-comb. Price 3*s.* 6*d.*, 7*s.*, Family (equal to four small) 10*s.* 6*d.*, and double that size 21*s.* per Bottle.
CAUTION.—Ask for "ROWLAND'S MACASSAR OIL," and see that those words are on the Wrapper, as much pernicious trash is now offered to the Public as "MACASSAR OIL" by Perfumers of apparent respectability.
Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, and by Chemists and Perfumers.

AN ACCOUNT of the PRIVATE LIFE, MANNERS, CUSTOMS, RELIGION, AGRICULTURE, &c. of the ANCIENT EGYPTIANS, derived, during a Residence of 12 years, from the study of Hieroglyphics, Sculpture, Paintings, and other Works of Art, still existing, compared with the Accounts of Ancient Authors.
By Sir GARDNER WILKINSON.
"Indefatigable in research, full of learning, accurate in facts, and logical in the application of his facts and his learning, Sir Gardner Wilkinson has at the same time treated his subject with the enthusiasm of Genius and the liveliness of Poetry. He opens to you the Temple of their Deities, the Palace of their Sovereigns, the Field of Battle, and the repositories of the Dead. He traces for you their early history, he exhibits to you their knowledge of the Arts and Sciences, the course of their Husbandry, and the process of their Manufactures, and he introduces you to their private life, with a graphic vivacity which makes you at once a judge of the virtues and vices of the Egyptian character, and a partaker, as it were, of the intimacies of their domestic society."—*Lord Ripon's Address to the Royal Society of Literature*, 1841.

Richard Bentley, New Burlington-street,
(*Publisher in Ordinary to Her Majesty.*)

Price Half-a-Crown,
WITH ILLUSTRATIONS ON STEEL BY GEORGE CRUIKSHANK,
AINSWORTH'S MAGAZINE,
CONTENTS OF THE MARCH NUMBER:
WINDSOR CASTLE,
An HISTORICAL ROMANCE. Book III., Chaps. I. II. III. and IV.
By W. HARRISON AINSWORTH, Esq.
With Two ILLUSTRATIONS on STEEL by GEORGE CRUIKSHANK, and WOODCUTS by W. ALFRED DELAMOTTE.
The Twin Giants, by the Author of 'The Porcelain Tower.'—The Soul of Song, by Miss Pardoe—Notes and Anecdotes—Russia, by Charles Hervey.
The First Word in the Morning, and the Last at Night, by Nimrod.—The Three Trials, a Legend of the Black Forest, by Miss Skelton.
The TOWN LIFE of the RESTORATION (continued), by ROBERT BELL, Esq.
Recollections of O'Keefe—Scraps from Heinrich Heine, by John Oxenford.—A few Words with our Ancestors, by Laman Blanchard.—Lines with a copy of Anster's Xeniola, by Edward Kenealy.—The Loss of the Tigris, by W. Francis Ainsworth.—Raphael, by the Hon. Julia Augusta Maynard.
A Day at Strasburg, by Captain Medwin.—Virtuous Love, by Mrs. Edward Thomas.—What became of the Executioner? by Charles W. Brooks.—The Last Page of an Album, by Margaret Scott.—The Cousins, Part First, by the Baroness de Calabrella.
The ELLISTON PAPERS, from Authentic Documents in the hands of the Executors,
Edited by GEORGE RAYMOND, Esq., and illustrated on Steel by George Cruikshank.
"The number of this amusing Magazine for the present month contains a more than usual variety of contributions, and, what is more to the purpose, most of them are the contributions of people who know what they are about. 'Windsor Castle,' by the Editor, forms the most conspicuous feature in the miscellany. The story proceeds with its original vigour, and the incidents thicken as the plot advances: it is illustrated by Mr. G. Cruikshank in his usual clever manner. A paper called 'Town Life of the Restoration,' by Mr. R. Bell, will be read with interest. For those who delight in horrors there is a horrible account of an execution in China, by Mr. F. Leslie, the details of which sufficiently prove that the inhabitants of the Celestial Empire have more barbarism than humanity in their composition and manners. There are several poetical effusions: one, a translation from the German by Mr. J. Oxenford, entitled 'The Leader's Death,' is very excellent; and some lines by Miss Skelton will be read with pleasure. A short paper, 'The Oath,' by the Baroness Calabrella, is a valuable contribution to the number. In a word, this number is, in all respects, a very excellent one, and will increase the reputation which the publication has already acquired from previous portions. There is an almost endless diversity of subjects—something to suit all tastes, much to delight, and not a little to instruct."—*The Times*, 24th Feb. 1843.
CUNNINGHAM & MORTIMER, Publishers, Adelaide-street, Trafalgar-square.

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS; and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh;—for IRELAND, J. Cumming, Dublin.

CONTRIBUTED TO THE *EDINBURGH REVIEW*.

By the Right Hon. THOS. BABINGTON MACAULAY.

3 vols. 8vo. *On Thursday, the 16th.*

*** This work is the copyright of Messrs. Longman and Co.; and they give notice to persons importing and selling an American edition of Mr. Macaulay's writings, that they will protect their rights by law.

2.

THE LIFE OF A

TRAVELLING PHYSICIAN,

From his first Introduction to Practice: comprising Twenty Years' Wanderings through the greater part of Europe; including a long Sojourn in Poland and Russia; with Notes of Events, Descriptions of Scenery, and Sketches of Character.

3 vols. post 8vo. with 3 coloured Plates.

*** This work is the REAL LIFE of an English Physician. It consists of a Journal commenced to relieve the *ennui* of a dull Foreign Court, and continued until the Author's recent return to England.

3.

A MARRIAGE GIFT.

By a MOTHER.

A LEGACY TO HER CHILDREN.

1 vol. small 8vo. *In a few days.*

4.

AN ENGLISH-GREEK LEXICON.

By the Rev. JOHN ALLEN GILES, L.L.D.
Late Fellow of C. C. Coll. Oxon.

8vo. 7s. 6d. cloth. *Ready.*

The publishers having repeatedly had applications for the above separately from Dr. Giles's Greek-English and English-Greek Lexicon, have been induced to publish it as a distinct work.

5.

A DIAMOND LATIN-ENGLISH DICTIONARY.

By the Rev. J. E. RIDDLE, M.A.
Author of 'The Complete Latin Dictionary.'

Royal 32mo. *Nearly ready.*

This Dictionary is designed chiefly as a guide to the meaning and quantity of classical Latin words. It offers information necessary for persons who, with greater or less knowledge of the Latin language, may need assistance in ascertaining the force or bearing of a sentence; and it may perhaps be found useful as a companion in travelling, and in other cases in which a larger volume would be burthensome or inconvenient. In substance, it is an abridgment of the 'Young Scholar's Latin-English Dictionary,' in square duodecimo, and the more 'Complete Dictionary,' in octavo.

6.

AN INTRODUCTION TO THE

COMPOSITION OF LATIN VERSE;

Containing Rules and Exercises intended to illustrate the Manners, Customs, and Opinions, mentioned by the Roman Poets, and to render familiar the principal Idioms of the Latin Language.

By CHRISTOPHER RAPIER, A.B.

Second Edition, carefully revised by
THOMAS KERCHEVER ARNOLD, M.A.

12mo. *Just ready.*

7.

THE EDINBURGH REVIEW.

No. 155. [*published.*

CONTENTS.

I. The Advertising System.

A MANUAL FOR TEACHING

MODEL DRAWING and SOLID FORMS: the Models founded on those of M. Dupuis; combined with a POPULAR VIEW of PERSPECTIVE, and adapted to the Elementary Instruction of Classes in Schools and Public Institutions, as taught under the Sanction of the Committee of Council on Education. By BUTLER WILLIAMS, C.E. F.G.S., Director of the Drawing Classes at Exeter Hall, Professor of Geodesy in the College for Civil Engineers, and Author of *Practical Geodesy*. Handsomely printed in 8vo. and illustrated by Shaded Engravings of the Models, and numerous Woodcuts.

Also,

INSTRUCTIONS in DRAWING, for the Use of Elementary Schools, abridged from the foregoing 'Manual for Teaching Model Drawing.' By BUTLER WILLIAMS. With numerous illustrative Woodcuts, and Outline Figures of the Models.

A SYSTEM of LOGIC, Ratiocinative and Inductive; being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. 2 vols. 8vo. 30s.

The PHYSIOLOGICAL ANATOMY and PHYSIOLOGY of MAN; with numerous Original Illustrations. By R. B. TODD, M.D. F.R.S., and W. BOWMAN, F.R.S., of King's College, London. To be completed in Three Parts. Part I. 7s.

AN INTRODUCTION to the STUDY of CHEMICAL PHILOSOPHY; being a preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S., Professor of Chemistry in King's College, London. With numerous Illustrations, the 2nd edition, revised and much enlarged, 21s.

LIFE AND CORRESPONDENCE OF THE LATE

SIR ASTLEY PASTON COOPER, Bart. From Documents bequeathed by him for the purpose. By BRANSBY B. COOPER, Esq. F.R.S. 2 vols. 8vo. with Portrait, from the Original Picture by Sir Thomas Lawrence. 21s.

Dedicated, by permission, to His Royal Highness Prince Albert.

MEMORIALS of ERNEST THE PIOUS, First Duke of Saxe-Gotha, the Lineal Ancestor of Prince Albert. By the Rev. THOMAS LATHBURY, M.A., Author of *A History of the Convocation of the Church of England*. 6s.

The BIBLE CYCLOPÆDIA, a Comprehensive Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings. Complete in 2 vols. and illustrated by several Hundred Woodcuts, price 2l. 10s.

CHRISTMAS DAY, and other SERMONS. By FREDERICK DENISON MAURICE, M.A., Chaplain of Guy's Hospital, and Professor of English Literature in King's College, London. 8vo. 10s. 6d.

A MANUAL of CHRISTIAN ANTIQUITIES; or, an Account of the Constitution, Ministers, Worship, Discipline, and Customs of the Early Church; with an Introduction, containing a complete Chronological Analysis of the Works of the Antenicene Fathers. By the Rev. J. E. RIDDLE, M.A., Author of *Luther and his Times*, *First Sundays at Church*, &c. Second Edition, 8vo. 18s.

The FOURTH VOLUME of

LIVES of EMINENT CHRISTIANS, by the Rev. R. B. HONE, M.A., Vicar of Hales Owen; containing Lives of John Bradford, Archbishop Grindal, and Judge Hale. With Portraits, 4s. 6d.

The FIRST VOLUME contains the Lives of Archbishop Usher, Dr. Hammond, John Evelyn, and Bishop Wilson. The SECOND VOLUME, Bernard Gilpin, Philip de Mornay, Bishop Bedell, and Anthony Horneck. The THIRD VOLUME, Bishop Ridley, Bishop Hall, and Robert Boyle.

The EARLY CHRISTIANS: their MANNERS and CUSTOMS, TRIALS and SUFFERINGS. By the Rev. W. PRIDDEN, M.A. Fourth Edition, 4s.

FABLES and CLASSICAL SKETCHES. By a CLERGYMAN. With Illustrations, 1s. 8d.

BIOGRAPHICAL SKETCHES, Selected from the SATURDAY MAGAZINE. With Illustrations, 1s. 4d.

London: JOHN W. PARKER, West Strand.

REVIEWS

Report and Appendices of the Children's Employment Commission. Presented to both Houses of Parliament, by Command of Her Majesty.

How little do people dream of the incidents and ills of that wide world of industry, with all its deeply interesting varieties of craft, skill, and condition, which surrounds and sustains our daily existence, unheeded and unseen by the throng of society! How fearful is the pain, toil, disease, and vice, convulsing the very class who supply some of the costliest pageantries of life! It is not so with all the trades which minister to pleasure; but some of the extremes of pain of production, and luxury of enjoyment, are fantastically and horribly coupled.

The Report before us was last week presented to Parliament. It is an outpouring of facts full of warning; teeming with graphic narratives and discoveries of horror, which ought to have been long since known and remedied, and which, being to the world as novel as they are interesting, are a stigma on the mind and soul of our generation. There is something to us unintelligible, and almost contradictory, in the present growth and inactivity of intellect. Nobody questions this growth, and yet we see no fruits equal to the progressive sense of the need, as well as power, of improving society and the sources of its weal. Nevertheless, this is the use and design of all mental power. But it is our purpose to pourtray, and not to philosophize.

We mean to gather from these leviathan revelations the most striking and interesting of the descriptive passages relating to a variety of employments, of which the circumstances almost form a romance unlooked-for in the regions of labour, even by those who dwell in them. The very seats of fashion and easy opulence in this voluptuous London, present the worst instances of excessive toil in their service, of which the industry of the empire has afforded any evidence throughout the whole scope of this very searching inquiry, in the case of

The Milliners.

After reading Mr. Grainger's Report, and the body of evidence he adduces, we can well appreciate the remark made to us by an individual, acquainted with the facts, on the morning of the last Court Fancy Ball,—"I shall have no pleasure there: I shall have before my eyes a score of the makers of those gay dresses in their coffins."

We gather from the Report that there are about 15,000 milliners and dress-makers in the metropolis. They commence work usually at from 14 to 16,—that is to say, at an age when the future health and constitution is determined by the care it then receives. A very large portion of these girls are boarded and lodged by their employers, and they often come from the country healthy and strong. During the busy seasons—i. e., from April to August, and from October to Christmas—the regular hours of work "at all the principal houses" are, *on the average, eighteen hours daily!* "Long as these hours are," adds Mr. Grainger, "they are very often exceeded." Sometimes fifty of these girls work together in a room almost always insufficiently ventilated. The sleeping apartments are generally over-crowded. In one instance, five slept in a single bed, and often ten in one room. They are fed chiefly, says an experienced witness, on cold mutton; but they subsist mostly on tea and bread and butter. Stimulants are often applied to keep them awake.

"Miss O'Neil, of Welbeck-street, (who has been a dress-maker and milliner several years, and employed in several of the London houses, is now in business for herself,) states, that the hours of work in the spring season are unlimited. The common hours are from 6 A.M. till 12 at night; sometimes from 4 A.M. till 12. Has herself often worked from 6 A.M. till 12 at night for 2 or 3 months together. It is not at all uncommon, especially in the dress-making, to work all night; just in 'the drive of the season' the work is occasionally continued all night, 3 times a-week. Has worked herself twice in the week all night."

Cases, such as follows, are not uncommon. Miss H. Baker says that—

"On the occasion of the general mourning for His Majesty William IV. she worked without going to bed from 4 o'clock on Thursday morning till half-past 10 on Sunday morning; during this time witness did not sleep at all: of this she is certain. In order to keep awake she stood nearly the whole of Friday night, Saturday, and Saturday night, only sitting down for half an hour for rest. Two other young persons dozed occasionally in a chair. Witness, who was then 19, was made very ill by this great exertion, and when on Sunday she went to bed, she could not sleep."

We will now extract a few facts from the evidence of some of the girls themselves. For obvious reasons the names are not given. Miss ——, in the establishment, we are informed, of a first-rate milliner, states that—

"On special occasions, such as drawing-rooms, general mournings, and very frequently wedding orders, it is not uncommon to work all night: has herself worked 20 hours out of the 24 for 3 months together; at this time she was suffering from illness, and the medical attendant remonstrated against the treatment she received. He wished witness to remain in bed at least one day longer, which the employer objected to, required her to get up, and dismissed the surgeon."

X. Y., in the same house, "was told she ought to take her breakfast standing"; and "M. D. has known several young persons so much exhausted that they were obliged to lie down either in the work-room or in their bed-room for an hour before they could undress."

In consequence of giving this evidence, which Mr. Grainger was, owing to the interruptions of the mistress, obliged to obtain elsewhere,—

"M.D. was grossly abused before 3 or 4 persons; accused of improper motives in meeting the Sub-Commissioner to give evidence, and at a moment's notice, turned out of doors without a character. She has reason to believe that her employer has made false representations to her relations. These circumstances have caused witness deep mental suffering and anguish, and have also most seriously interfered with her future prospects in life. She is at this time out of a situation. M.D. is ready to corroborate the truth of the whole of these statements on oath."

It must not, however, be imagined that there are no instances of considerate humanity. "In houses," says one of the witnesses, "where they profess to *study the health* of their young people, they begin at 8 A.M., and leave off at 11 P.M. Never earlier"! And houses which are "regulated," Miss Baker informed the Commissioner, "mean those where they do not work all night." How comforting to philanthropy to find health sometimes studied, by a limitation of labour in a close room to fifteen hours per diem *only!* The humanities among *modistes* occasionally assume even a higher range; and the benevolence of superintendents sometimes even exceeds the tender mercies of the regulations themselves. A witness says:—"If they get very sleepy they lie on the floor, on the cuttings if there are any. This indulgence depends on the kindness of the head of the room!"

Mr. Grainger, though he feels bound to state that his Report in some respects, owing to intimidation of witnesses, falls short of the truth, yet maintains "that there is a strong desire on the part of many of the employers to promote the comfort of their workwomen, as far as the long hours permit." But do they permit of comfort, or any approach to it? Are they not hours universally protracted to an extent necessarily painful at the time, and utterly destructive of future health and welfare?

The effects on general health are so disastrous, that one only had retained it out of the whole number, known to witness, who had been for years in the business. Indigestion, constitutional derangement, heart diseases, and, at last, consumption, seem to prevail in nearly every case. It is, in fact, a slow death.

One witness accounted for her approaching death by her excessive hours of work, and colds caught, at Bath, where her time for sleep was so short, that she used frequently to sleep on the rug, it not being "worth while to go to bed." Another, aged 25—

"Has been in the millinery business 8 years, in London. In the busy season, she began to work at 7 A.M., and went on till 12 or 1 in the morning. She was so unwell she could not begin before 7; *but the principal wished it. Lately has not gone to bed before 2 or 3 in the morning:* for a good while has been in a bad state of health."

This girl was ill at home, when the Commissioner visited her with her medical attendant. "In fact," says he, "such was her state, that it seemed as if I were taking, not her evidence, but her dying declaration. It is very doubtful if she will recover."

Medical evidence is not wanting to complete this picture, and authenticate its truth. Sir James Clark says, in his written evidence, of these poor girls:—

"—worked from 6 in the morning till 12 at night, with the exception of the short intervals allowed for their meals, in close rooms, and passing the few hours allowed for rest in still more close and crowded apartments;—a mode of life more completely calculated to destroy human health could scarcely be contrived, and this at a period of life when exercise in the open air, and a due proportion of rest, are essential to the developement of the system."

Dr. Devonald states that he—

"Is convinced that in no trade or manufactory whatever is the labour to be compared to that of the young dress-makers; no men work so long. It would be impossible for any animal to work so continuously with so little rest."

Those who work at the great Mourning Establishments frequently lose their eyesight, and their tragic fate is closed in blindness.

Mr. Tyrrell, surgeon of the Ophthalmic Hospital, after elaborate evidence on this point, gives the following additional instances of the ravages made by this branch of the business:—

"A fair and delicate girl, about 17 years of age, was brought to witness in consequence of total loss of vision. Recovery was hopeless. She had been an apprentice as a dress-maker. The immediate cause of the disease in the eye was excessive and continued applications to making mourning. She states that she had been compelled to remain without changing her dress for nine days and nights consecutively: that during this period she had been permitted only occasionally to rest on a mattress placed on the floor for an hour or two at a time; and that her meals were placed at her side, cut up, so that as little time as possible should be spent in their consumption."

He has, he states, "often" seen cases of total loss of sight from the same cause. Mr. Dalrymple, of the Moorfields Ophthalmic Hospital, gives similar evidence; and, in one instance, succeeded in rescuing a young victim from total blindness, (who was *then* required to work 18 hours per day only,) by a threat of appeal to the Lord Mayor, to force her mistress to cancel the girl's indentures.

The portion of the work done in making mourning which is so peculiarly hurtful to the sight, is embroidery on black. A Court mourn-

Digitized by Google

ing is calculated to cause the loss of eyesight to at least thirty of these girls.

To the Misses Ollivier, in Pall Mall, credit is due for an endeavour to alleviate the evils of the system. They have drawn up regulations, by observing which, much time may be saved. Miss Ricks, of Mount-street, equally desirous of benefiting the objects of the Inquiry, sensibly remarks that she—

"Has found by experience that by having more moderate hours she derives quite as much benefit in her business as when they worked much longer. If young persons are kept up night after night very late, they become languid, exhausted, and unfit for proper application to the work."

But what, after all, is the moderation recommended? This—"the restriction of the *work* of young persons under 18 to 12 hours a-day, to be taken between half-past 5 A.M. and half-past 8 P.M., which would not interfere with the efficiency of the business." We dare say not. The question which the humanity of the country has to settle, is how far it may interfere with the efficiency of health, for a young girl, under 18, to be confined at work for 12 hours a-day to a close sedentary occupation. Where really humane employers deem this "moderation," it is manifest that less moderate mercies must interpose to save the victims. Miss Ricks says that—

"One of the principal causes of the late hours is the influx of orders and the short time which is allowed to execute them. A considerable amelioration would result if the ladies would be more considerate, and allow more time for their orders."

Well may Dr. James Johnson exclaim in his evidence:—

"The fashionable world know not how many thousand females are annually sacrificed, during each season, in this metropolis, by the sudden demand and forced supply of modish ornaments and ephemeral habiliments. They know not that, while they conscientiously believe they are patronizing trade and rewarding industry, they are actually depriving many thousand young women of sleep, air, and exercise."

Such is the condition of 15,000 of the inhabitants of London; a body, moreover, so quickly mouldering away, that during the span of an ordinary life full two generations have passed through the horrors of the craft, and perished in its service. Now, supposing these 15,000 beings, instead of being scattered over and lost sight of in the vortex of our Metropolitan millions, constituted the whole of a town, and a separate community, as large, for instance, as Canterbury, or Dover, or Halifax, what outcries of indignation, what lamentations of sympathy, what a hurricane of virtuous reproach, would burst forth over the breadth and length of the land! And yet these towns of Canterbury, Dover, or Halifax, contain no larger population than that of the London milliners, and there would not be an atom more suffering than there is already.

The refinement and wealth of London is ever commemorating events, and efforts, and epochs; great men and great doings have their mementos in every square and nook; we erect palaces for our private pleasures, temples for our public pieties, galleries for art, and pillars and pedestals, great and small, for every sort and kind of hero; but oh, for a monument to remind us of our crushing crimes,—our thousands and tens of thousands of fellow beings, the doomed slaves of our glittering grandeur, living a deathly life of torment for the gratification of wealth, which immolates them almost without a thought or care in the service of its paltry pomp and silly pageantry. Of all the vanities of life, that of dress is at once the most inane and mindless, and its gratification the least defensible, if purchased at the cost of pain to any human being. We shall consider that this Report has done valuable service if, henceforth, where plumes wave and diamonds sparkle, and fashion disports herself in all the galaxy of her costliest trappings, a thought be now and then bestowed on the mass of suffering from which that splendour sprung. If the bloodless cheeks and attenuated frames of these poor milliner girls passed in array before the beauty their lives are sacrificed to adorn, it might, perhaps, induce them to abate a little of the brilliance of our ball-rooms, for the preservation of the souls and bodies of fifteen thousand of our fellow beings.

LACE-MAKERS.

From the Milliners of London, let us turn to the Lace-makers of Nottingham. Lace-making is a mechanical process, requiring constant and unremitting attendance. It appears that the number of the machines, which was 1,312 in 1836, has since then a good deal diminished, and that the trade is passing into the hands of the larger manufacturers. This arises from the enormous sacrifice which the rapid changes of pattern and the necessary improvements demand. So rapid are these fluctuations, that a machine, which cost 1,000*l.*, has been sold in a short time for 45*l.*; and in 1833 and 1834, five or six hundred of the old slow machines were broken up, and sold for old iron. Their prices vary from 250*l.* to 1,000*l.* The short life of these costly machines renders it necessary to get the utmost possible produce from them while they last; and hence the hours of work are extremely long. The majority of these machines are still worked by hand. The total value of the lace produced in 1835, was found to be 2,212,000*l.* The quantity is probably increased since then, at a less sale price, by the improved machinery.

Although the lace of Nottingham is wholly made by machines, they require constant tending; in order to mend the thread, and pass the ends of it through the bobbins into the aperture in the carriage, of which the object is, as it were, to feed the machine. About 1800 bobbins have to be threaded for every machine. It will scarcely be credited that this operation is performed by children as young as three or four years old, who work even at that age from 12 to 14 hours per day. The Commissioners also state that, "in winding for lace machines, the children have no regular and certain time whatever for sleep or recreation, being liable to be called upon at any period during sixteen, twenty, or twenty-two hours out of the twenty-four, while they have frequently to go from one place of work to another, often at considerable distances, at all hours of the night, and in all seasons."

The most instructive evidence on these points is that of a Mrs. Houghton, taken by Mr. Grainger, the Commissioner. The scene is her own house, well garnished with clock, brass warming pan and comfortable *et cætera*, where a lace machine was at work, "threaded" by a row of little Houghtons ranged on a bench, not ill-looking, but plump, and, strange to say, healthy enough in appearance. Harriet, the forewoman of the corps, is aged eight, and is quite a practised hand, having been at it from time immemorial to her. "It is dree work for the eyes," she thinks. Anne is six, and Mary four; and here Her Majesty's most faithful Commissioner (who religiously examines them all) ascertains that Mary's wages are a penny a week, to which averment Mary's "+" duly appears in attestation thereof. Both Mary and Anne commenced business at the age of two; and in order that no time may be lost, Eliza (at present two years old) is under a course of experimental performances. The mother's evidence was given as follows, interrupted, however, with 'Mind your work,' 'Take care,' 'Make haste,' 'Now, Anne, get on,' 'Mind your work';—

"Eliza 'has tried and drawn a few threads out.' Begins generally at 6 A.M. in the summer and 7 in the winter; in the former goes on till dark, in the latter till 10 P.M. The two biggest children work with witness these hours; Mary begins at the same time in the morning, but she leaves off about 6 P.M. The children have no time to go out to play; 'they go out very seldom.' Have breakfast whilst they have time to get it; the same with dinner and tea. The children are obliged to sit at their work; they sit all day. ['Mind your wôrk.'] The work tries the eyes; the black is the worst; 'it is dree work.' ['Now mind your work.'] The children have very good health; they go to a Sunday school."

This woman admits that she can earn something herself, and her husband has work at 23*s.* per week, generally regular. Yet this Mrs. Houghton, who, with ample means, thus blights the childhood of her offspring for the extra gain of 2*s.* 6*d.* per week, is an angel of light compared with the general character of the mothers in this trade.

We have often heard, as have many of our readers, of the extent to which Godfrey's Cordial is administered, to "quiet" children, in many districts where the pressure of poverty obliges the mother to work instead of attending to her baby. We confess that, accustomed as we have been to hear such rumours, we were little prepared for the horrors which Mr. Grainger's Report has brought to light on this systematic poisoning of children; for to this the following well attested evidence clearly amounts.

In the first place, the extent to which the practice is carried may be guessed from the admission of one druggist to the coroner, that he had himself made up thirteen hundred weight of treacle into Godfrey's Cordial in one year! Not only is this mixture a preparation of laudanum, but witness (a chemist) is obliged to prepare the laudanum of a greater strength than is prescribed in the Pharmacopœia, or the persons who purchase it would object; and the cordial so prepared is stronger than that sold under the same name in London. The system is, to commence the dose as soon after birth as possible. The mothers "begin with the syrup of rhubarb and laudanum mixed together; then they go to 'Godfrey's Pure,' and then to laudanum, as the effects become by habit diminished." About half a tea-spoonful of the mixture is at first given, then one tea-spoonful of the cordial, and finally they arrive at 15 and 20 drops of laudanum at a time! The child, thus hocussed, lies for hours in a state of stupor in its mother's lap, whilst she pursues her employment of winding the thread on the bobbins. The results on the health of the little victim are soon apparent. It becomes pale and wan, with peculiar sharpness of feature, and rapidly wastes away; and the *majority* of these children die by the time they are two years old! The following is the statement of a girl, evidently acting in accordance with the custom, and in entire ignorance of its result. She is 20, and the mother of an illegitimate child: "has worked since she was six years old for 14 or 15 hours a day on the average." Can earn about 3*s.* a week now, working from 9. A.M. till 10 P.M. "If it were not for her having to sit so close to work, she would never have given her baby the cordial. She has tried to break it off many times, but cannot, for if she did, she would have nothing to eat. * * When the infant was a week old, she gave it half a tea-spoonful of Godfrey's twice a day. * * She gradually increased the quantity by a drop or two. * * When it was four months old it was so *wankle* and thin, folks persuaded her to give it laudanum, to bring it on, as it did other children." At the end of her evidence is appended a note from the doctor, that the infant was brought to him in the last stage of marasmus, suffering under very considerable diarrhœa,

Digitized by Google

and would not in all probability live many weeks.

But is it conceivable, that all women are equally blind to the effects of this wholesale poison? There is clear evidence to the contrary. The following is the testimony of Mr. Michael Browne, the Coroner of Nottingham, given under his signature:—

"The excuse has frequently been that the mother was obliged to adopt this plan because she had no time to attend to the child, being engaged in work. Has strong reason to believe that many infants, other than those on whom inquests are held, perish more insidiously from the administration of laudanum. * * Knows that the practice of administering pure laudanum to infants, as being more efficacious than the cordial, is very prevalent. Knows that the cordial and laudanum are given to infants on the day of birth, and that even it is prepared in readiness for that event. Knows of an inquest lately in which death took place from this cause on the second or third day."

The following is almost too monstrous for belief. The Coroner continues:—

"In 1836 he held an inquest on an infant four months old, apparently a fine healthy child, to whom the mother had given, in the forenoon, a dose of cordial; stupor was produced, and ultimately, after six hours had elapsed, medical assistance was procured, *but not by the mother, who apparently wished the child to perish.* By proper treatment, persevered in from 6 P.M. until after 12 at night, the child was so far restored as to open his eyes and to cry. The *surgeon gave directions* that the child should be kept aroused, and in motion, and have cold water dashed on the face till the narcotic effects had subsided. Instead of this, in a quarter of an hour after the surgeon left, *the infant was allowed to sink to sleep and die.* The medical attendant, Mr. Wilson, told witness, that by attention to the directions given to the mother the child would have recovered. *It was witness's opinion that the case against the mother amounted to manslaughter; the verdict was, 'Died in consequence of having a large dose of Godfrey's cordial administered by the mother.'* On enquiry ascertained that besides this one, *four other children had died suddenly*, of whom one was killed by an injury from a cart; *the cause of death in the other cases is not known.* Within the last two years the number of these inquests has somewhat diminished, which witness is inclined to attribute rather to a greater care *in concealing such cases* than to any diminution of mortality."

For the words "Godfrey's Cordial," in this sapient verdict, read "poison," and the precise truth is told. The coroner's notion, that the conduct of the mother amounted to manslaughter, is, we apprehend, short of the fact; our idea of the matter is, that where a person does any act of which the probable consequence may be, and eventually is, death, such killing should go by another and a shorter name. The giving a child a "large dose" of laudanum, when the mother had the means of knowing the exact effect, sufficiently establishes, we think, her knowledge of the probability that death would ensue. It did ensue; and her conduct beforehand was the only course she could pursue to insure that effect—pursued moreover against the express warning of a medical man. The malice aforethought is evidenced by the same facts. The Attorney General has moved for a *certiorari* to quash less doubtful inquisitions than this.

But there is further evidence of this system of child murder. A chemist, whose name is withheld, says:—

"A case occurred a short time ago of a mother coming into the shop with her child in the arms. Witness remonstrated against giving it laudanum, and told the mother she had better go home and put the child in a bucket of water,—'it would have been the most humane plan of putting it out of the way.' The mother replied that the infant had been used to laudanum and must have it, and that it took a half-penny worth a-day, or 60 drops. Does not know what has become of the child, but '*supposes it is done for by this time.*' It is not uncommon for mothers to begin this practice with infants of a fortnight old; commencing with half a tea-spoonful of Godfrey's, or 1 or 2 drops of laudanum. *Has known an infant killed with three drops of laudanum, but nothing was said about it.* Knows that many infants die by degrees, and that no inquest or other inquiry is made. Has known some odd cases where surgeons have been called to apply the stomach pump; but 'infants go off quickly, they are not like grown people.'"

Now what we wish to ask is, whether "nothing will be said about this" by the country and the legislature? Shall we acquiesce in the accommodating disposition of Nottingham inquests, as a precedent for the general encouragement of insidious deaths, and the disposal of surplus infancy? These facts are now officially before the government. At any rate, we apprehend that there can be little dissent from the opinion of the witness, Mr. Whitchurch, that "the well-being of children can neither be intrusted to the natural feelings of their parents nor to the humanity of employers." He thinks, however, that whilst the abject wretchedness and poverty of the working classes continue to exist, there will be little hope of amending things. We must, however, close for the present the hideous picture which these facts have compelled us to present.

The Last of the Barons. By the Author of 'Rienzi.' 3 vols. Saunders & Otley.

'THE Last of the Barons' is announced by Sir Edward Bulwer as probably the last fiction which he will offer to the public; on which plea, in his preface, he once more takes occasion to analyze his own principles of art, and his own career, and indulge in a scornful fling at the critics. 'The Last of the Barons,' he opines, "will prove more popular in its nature" than 'Zanoni,' though he does not believe that either work will be placed in its true position [illegible] since "[illegible] comprehend [illegible] history of the day consists of a series of judgments set aside."

As the sentences of the hour, according to this theory, are to be reversed—Sir Edward will probably rejoice if many, like ourselves, should esteem 'The Last of the Barons,' as among the most ambitious and the least successful [illegible] tions. Clogged with historical details [illegible] authenticated by foot-notes, and [illegible] over-elaborated dialogue, the story moves so slowly and lifelessly, that we could not but ask, as we read, where are the passion and the power of the author of 'Eugene Aram'—where the gorgeous colouring of his two Italian romances—where the deep and delicate thoughts, that, in spite of the conceit with which they were encrusted, gave such a charm to 'Ernest Maltravers'? This *must not* be the last of our author's fictions, unless he is content that his sun should set behind a cloud, which Posterity by no alchemy of regret or intelligence can convert into a glory.

We have adverted to the dialogue, and this brings us to speak of the style of the novel. Sir E. Bulwer describes himself to have employed "that established compromise between the modern and the elder diction which Sir Walter Scott so artistically improved from the more rugged phraseology employed by Strutt, and which later writers have, perhaps, somewhat over-hacknied." We cannot admit that our author's success has been great, nor even that his compromise and Scott's are the same. Scott's feelings and sympathies were with the past—its language was habitual to him, and early reading and research had given to his mind a sort of antique character. Here, however, in 'The Last of the Barons' we have merely modern language studded with obsolete words. The Lady is sure to be a "donzell," or a "bonnibel"—clad "in silken sheen"—the King will talk of his "roiaulme" and his "bell'amie," the Nigromancer (we adopt our author's spelling) tell how he *glamours* his clients, and the crone looks "parlous witch-like"—but the compound is wholly unlike that energetic, living, characteristic speech, which men talk, and Scott recorded. So much for faults; and as we wish to close the record of these, we will say little of the historical delineations.

The tale turns upon those troubles of England, in which Warwick, the king-maker, bore a conspicuous part; but to no chronicle, be it ever so stirring, could our author refuse some touches of acute or pensive thoughtfulness peculiar to himself, some insight into the workings of natures more delicate and subtle, than usually have leave to figure upon the crowded and tawdry canvasses of our modern scene-painters. Thus, in the midst of his busy legend, while he talks about kings and generals—courtly intriguers and ambitious queens—his heart is with Adam Warner, the dreaming man of science, and with Sybill, his daughter; and he has a mournful interest in tracing how the superior intelligence of the father is stricken down—how the pure and modest love of the daughter trampled to death, as it were, among the spears and gauntlets of ambitious and ignorant men. As a foil to the learned enthusiasm of Warner, we have the ignorant craft of the redoubtable Friar Bungey—as a contrast to the delicate loveliness of his daughter, the meretricious ferocity of the glee-women, a troop of savage Bacchantes, forcibly drawn, the first idea of which, was the woman so eager for "the merry, merry show," in our author's own 'Pompeii.' Perhaps we cannot give a more favourable specimen of 'The Last of the Barons' than from a chapter which shows these lights and shadows in close vicinity. The venerable man, who has anticipated the invention of the steam-engine, and thereby been brought into court notice—the fair maiden who has been beloved by Hastings, and thus become an object of court jealousy, have been involuntarily made partakers in the intrigues of the time. After many doleful vicissitudes they are at last chased from home, and find themselves at [illegible] not very far from the village of Hadley, [illegible] heath or chase of Gladsmoor, on which was fought, some time afterwards, the Battle of Barnet."

"The stirring events which had within the last few weeks diversified the quiet life of the Scholar had somewhat roused him from his wonted abstraction, and made the actual world a more sensible and living thing than it had hitherto seemed to his mind; but now, his repast ended, the quiet of the place, (for the hostel was silent and almost deserted,) with the fumes of the wine—a luxury he rarely tasted—operated soothingly upon his thought and fancy, and plunged him into those reveries, so dear alike to Poet and Mathematician. To the Thinker, the most trifling external object often suggests ideas, which, like Homer's chain, extend, link after link, from earth to heaven. The sunny motes, that in a glancing column came through the lattice, called Warner from the real day—the day of strife and blood, with thousands hard by, driving each other to the Hades—and led his scheming fancy into the ideal and abstract day—the theory of light itself; and theory suggested mechanism, and mechanism called up the memory of his oracle—old Roger Bacon; and that memory revived the great Friar's hints in the Opus magus—hints which outlined the grand invention of the telescope: And so, as over some dismal precipice a bird swings itself to and fro upon the airy bough, the Schoolman's mind played with its quivering fancy, and folded its calm wings above the Verge of Terror. Occupied with her own dreams, Sybill respected those of her father; and so in silence, not altogether mournful, the morning and the noon passed, and the sun was sloping westward, when a confused sound below called Sybill's gaze to the lattice, which looked over the bulustrade of the staircase, into the vast yard. She saw several armed men—their harness

Digitized by Google

hewed and battered—quaffing ale or wine in haste, and heard one of them say to the landlord—'All is lost! Sir Geoffrey Gates still holds out, but it is butcher work. The troops of Lord Hastings gather round him as a net round the fish?' *Hastings!*—that name!—he was at hand!—he was near!—they would be saved! Sybill's heart beat loudly. 'And the Captain?' asked Porpustone. 'Alive, when I last saw him; but we must be off. In another hour all will be hurry and skurry, flight and chase.' At this moment from one of the barns there emerged, one by one, the female vultures of the battle. The tymbesteres, who had tramped all night to the spot, had slept off their fatigue during the day, and appeared on the scene as the neighbouring strife waxed low, and the dead and dying began to cumber the gory ground. Graul Skellet, tossing up her timbrel, darted to the fugitives, and grinned a ghastly grin when she heard the news—for the tymbesteres were all loyal to a king who loved women, and who had a wink and a jest for every tramping wench! The troopers tarried not, however, for further converse, but having satisfied their thirst, hurried and clattered from the yard. At the sight of the ominous tymbesteres Sybill had drawn back, without daring to close the lattice she had opened; and the women, seating themselves on a bench, began sleeking their long hair and smoothing their garments from the scraps of straw and litter which betokened the nature of their resting-place. 'Ho, girls!' said the fat Landlord, 'ye will pay me for board and bed, I trust, by a show of your craft. I have two right worshipful lodgers up yonder, whose lattice looks on the yard, and whom ye may serve to divert.' Sybill trembled, and crept to her father's side. 'And,' continued the Landlord, 'if they like the clash of your musicals, it may bring ye a groat or so, to help ye on your journey. By the way—whither wend ye, wenches?' 'To a bonny, jolly fair,' answered the sinister voice of Graul—

> Where a mighty SHOWMAN dyes
> The greenery into red!
> Where, presto! at the word
> Lies his Fool without a head—
> Where he gathers in the crowd
> To the trumpet and the drum,
> With a jingle and a tingle,
> Graul's merry lasses come.

As the two closing lines were caught by the rest of the tymbesteres, striking their timbrels, the crew formed themselves into a semicircle, and commenced their dance. Their movements, though wanton and fantastic, were not without a certain wild grace; and the address with which, from time to time, they cast up their instruments and caught them in descending, joined to the surprising agility with which, in the involutions of the dance, one seemed now to chase, now to fly from, the other, darting to and fro through the ranks of their companions, winding and wheeling—the chain now seemingly broken in disorder, now united link to link, as the whole force of the instruments clashed in chorus—made an exhibition inexpressibly attractive to the vulgar. The tymbesteres, however, as may well be supposed, failed to draw Sybill or Warner to the window; and they exchanged glances of spite and disappointment. 'Marry,' quoth the Landlord, after a hearty laugh at the diversion, 'I do wrong to be so gay, when so many good friends perhaps are lying stark and cold. But what then? Life is short—laugh while we can!' 'Hist!' whispered his Housekeeper; 'art wode, Ned? Wouldst thou have it discovered that thou hast such quality birds in the cage—noble Yorkists—at the very time when Lord Hastings himself may be riding this way after the victory?' 'Always right, Meg—and I'm an ass!' answered the Host, in the same undertone. 'But my good nature will be the death of me some day. Poor gentlefolks, they must be unked dull, yonder!' 'If the Yorkists come hither—which we shall soon know by the scouts—we must shift Sir John and the damsel to the back of the house, over thy tap-room.' 'Manage it as thou wilt, Meg—but, thou seest, they keep quiet and snug. Ho, ho, ho! that tall tymbestere is supple enough to make an owl hold his sides with laughing. Ah! hollo, there, tymbesteres—*ribaudes*—tramps—the devil's chickens—down, down!' The Host was too late in his order. With a sudden spring, Graul, who had long fixed her eye on the open lattice of the prisoners, had wreathed herself round one of the pillars that supported the stairs, swung lightly over the balustrade—and with a faint shriek, the startled Sybill beheld the tymbestere's hard, fierce eyes, glaring upon her through the lattice, as her long arm extended the timbrel for largess. But no sooner had Sybill raised her face than she was recognized. 'Ho! the Wizard and the Wizard's daughter! Ho! the girl who glamours lords, and wears sarcenet and lawn! Ho! the Nigromancer, who starves the poor!' At the sound of their leader's cry, up sprang, up climbed the hellish sisters! One after the other, they darted through the lattice into the chamber. 'The ronions! the Foul Fiend has distraught them!' groaned the Landlord, motionless with astonishment. But the more active Meg, calling to the varlets and scullions, whom the tymbesteres had collected in the yard, to follow her, bounded up the stairs, unlocked the door, and arrived in time to throw herself between the captives and the harpies, whom Sybill's rich super-tunic and Adam's costly gown had inflamed into all the rage of appropriation. 'What mean ye, wretches?' cried the bold Meg, purple with anger. 'Do ye come for this into honest folks' hostels, to rob their guests in broad day—noble guests—guests of mark! Oh, Sir John! Sir John! what will ye think of us?' 'Oh, Sir John! Sir John!' groaned the Landlord, who had now moved his slow bulk into the room. 'They shall be scourged, Sir John! They shall be put in the stocks—they shall be brent with hot iron—they——' 'Ha, ha!' interrupted the terrible Graul, 'Guests of mark—noble guests trow ye! Adam Warner, the wizard, and his daughter, whom we drove last night from their den, as many a time, sisters, and many, we have driven the rats from charnel and cave.' 'Wizard! Adam! Blood of my life!' stammered the Landlord—'is his name Adam, after all?' 'My name is Adam Warner,' said the old man, with dignity; 'no wizard—a humble scholar, and a poor gentleman, who has injured no one. Wherefore, women—if women ye are—would ye injure mine and me?' 'Faugh—Wizard!' returned Graul, folding her arms. 'Didst thou not send thy spawn, yonder, to spoil our mart with her gittern? Hast thou not taught her the spells to win love from the noble and young? Ho, how daintily the young Witch robes herself! Ho! laces, and satins, and we shiver with the cold, and parch with the heat—and——doff thy tunic, minion!' And Graul's fierce gripe was on the robe, when the Landlord interposed his huge arm, and held her at bay. 'Softly, my sucking dove, softly! Clear the room, and be off!' 'Look to thyself, man. If thou harbourest a wizard, against Law—a wizard whom King Edward hath given up to the people—look to thy barns, they shall burn; look to thy cattle—they shall rot; look to thy secrets—they shall be told! Lancastrian, thou shalt hang! We go—we go! We have friends among the mailed men of York. We go—we will return! Woe to thee, if thou harbourest the Wizard and the Succuba!' With that, Graul moved slowly to the door. Host and housekeeper, varlet, groom, and scullion, made way for her, in terror; and still, as she moved, she kept her eyes on Sybill, till her sisters, following in successive file, shut out the hideous aspect; and Meg, ordering away her gaping train, closed the door."

From this peril father and daughter were providentially rescued; but the reader, if he would know the fate for which they were ultimately spared, must consult the novel. It is their presence, as we have already said, which assures us that Sir E. Lytton Bulwer has not forgotten his own cunning, in his desire to make experiments after the fashion of others, and which makes us, in parting, ask him for another fiction, more like his early ones in its nature, and less resembling 'The Last of the Barons' in its art.

The Mechanical Principles of Engineering and Architecture. By the Rev. H. Moseley. Longman & Co.

Professor Moseley's works remind us, *apropos des bottes*, of Professor Poncelet; and equally does this treatise on engineering and architecture suggest to us, oddly enough, some remarks on our favourite grievance (next to Lotteries and Little-goes), viz. Literary Piracy and International Copyright. It is an incidental quotation of Mr. Moseley, from the work of M. Poncelet, that has reminded us of one of the hardest cases we have met with, both as regards the property of the author and the reputation of the man of science. Mr. Moseley quotes an error made by M. Poncelet in a very important branch of mechanical science; but whence does he make the quotation? from a publication made in a foreign country, of a work published many years ago, and now re-issued without benefit of the author's revision. Thus it comes round, that if by a chance (and who is exempt from such?) an author have *once* been led into an error, however trivial or flagrant, this error or mistake is printed and reprinted, without remedy or revision, in every country to which the author's increasing reputation, or the popularity of his subject, may carry it. In this instance the circumstances are as follows:—M. Poncelet is one of the most distinguished men of science in France. He is now, or was very recently, President of the Academy of Sciences of the Institute, and Professor of Natural Philosophy in one of the Universities. In theoretical mechanics he is now the highest authority in France. But, many years ago, M. Poncelet was a much humbler personage; he was attached to an establishment at Metz, and he there delivered a course of lectures to a class of workmen and mechanics,—a course of lectures distinguished, as all his works are, by originality of treatment and sound generalization. To render these farther useful to those men, he makes abstracts of his lectures, and gets them lithographed, under the title of Lessons in Practical Mechanics. Time rolls on, and with it advance the fortunes and the reputation of M. Poncelet. The Academy wants him; he is brought to Paris, created member of the Institute, elevated to a professorship, and finally, crowned President of the Academy, placed at the head of French science. So favourable an opportunity does not escape the Belgian pirate. A copy of the old Lessons in Practical Mechanics is obtained, and there issues from the press of Brussels the *Mécanique Industrielle* of *M. Poncelet, Membre de l'Institut, Professeur, &c. &c.*, with all the honours. The pirate who plunders him of his property, at the same time accumulates with all the original errors of oversight or of judgment the essential blunders of unrevised letter-press, and thus assassinates while he plunders. Such is one instance, among the many, which call for the expulsion of these robbers from the family of civilized men.

Now for the work of Mr. Moseley. Theoretical mechanics, or the mathematics of mechanics, has hitherto occupied the attention of French engineers much more than that of our own. Practical skill, more especially the acquisition of the requisite tact and shrewdness which are the means to manage mankind, have been the distinctions of the engineers of this country. The want of scientific treatment has been argued as a reproach to the literature of engineering in Britain. If we deserve such a reproach, then certainly this stain will be erased by the work of Mr. Moseley, which is an elaborate, profound, accurate, and elegant, abstract and purely mathematical disquisition, on the theoretical principles of mechanics. It will serve to increase Mr. Moseley's high reputation as a mathematician, but its motto should have been that of the old school of science, "Let no one who is not a mathematician" (that is, pretty dexterous in the use of the differential and integral calculus) "enter here" (that is, look into this book).

In a work of this purely mathematical character, we can do little more than analyze generally, for the use of such of our readers as take an interest in this subject, the principal topics of the work, the mode of treatment, and the conclusions arrived at.

Digitized by Google

The work consists of two portions—Statics and Dynamics. In the statical part, we have first the principles of direct and oblique pressures developed, and the determination of the centres of gravity, forming Part I. Then we have, in Part IV., the application of these principles to the determination of the stability and form of structures and edifices. On this subject Professor Moseley has peculiar views. He treats the question of stability with reference to the properties of a certain line which may be conceived to pass through every structure, and which he calls the "line of resistance"; and he measures the stability of a structure by the distance of this line from its extrados, which measure he designates as the modulus of stability. By these means he measures and estimates the stability of piers, walls supported by counterforts and shores, buttresses, Gothic structures, &c., the pressure of earth on revetment walls, and the theory of arches. Part V. extends the statical problem to the strength of materials, the form of beams, the theory of suspension bridges, and the strength of columns.

The dynamical portion of the work treats of the subject of work done by moving powers, according to the system adopted by M. Poncelet, with so much advantage to the theory of machines. We agree with Mr. Moseley in the propriety of the phrase "unit of work" as a standard of mechanical power, using it to represent a pound weight lifted to a foot height. It accords well with the common phrase of horse power, which consists of 33,000 units of work. We prefer it to the word dyname, which has been proposed for the same purpose. Part III. contains the theory of machines. This is not only one of the best, but also one of the most original chapters of the work, and we feel strongly disposed to adopt several of the views it suggests. On the subject of teeth of wheels he states some important doctrines; amongst others, that in epicycloidal and involute teeth the loss of power is greater before the teeth pass the line of centres, than at corresponding points afterwards,—a point in which our author differs from Prof. Airy, and in which we think he is right; and he determines the range of contact on both sides by a simple formula in the case of involute teeth.

On the whole, we are satisfied that Mr. Moseley has made a creditable addition to the mathematical principles of engineering, and also earned honour as a mathematician of much elegance and tact in the application and interpretation of the higher mathematics. We have to express our fears that the mathematics of our practical men have not yet reached the standard necessary for the profitable use of this work, and to regret that he has not exhibited, under the form of tables fit for practical men, the numerical results of his formulæ applicable to practical cases, by which such men as have confidence in the results of the calculus might have accomplished their immediate application to practice. This, however, would nearly have doubled the labour of the work; and we must conclude by thanking the author, who has expended so much labour and talent on behalf of the members of a profession, who are not wont to appreciate sufficiently the works of the theoretical mathematician.

Journal and Letters of the late Samuel Curwen, an American Refugee, &c. &c. By G. A. Ward. Wiley & Putnam.

If called upon to define a very large part of the productions of the overteeming press of the passing moment, we should be sorely distressed to find them a fitting qualification. Necessaries they certainly are not, for they are wholly unprofitable: still less can we consider them as luxuries, being, as we know to our special cost, bores of no ordinary magnitude. Superfluities approaches, without coming up to a fitting designation; for they are not merely superfluous, but impertinent—standing in the way of better things, and blocking up the highway to national improvement. But whatever the difficulty in defining the class, there can be none in assigning to the volume before us a high place in the equivocal category; insomuch that we are at a loss even to guess at a probable motive for the publication. The character of an American refugee, obsolete in the recollection of Englishmen, must, one would think, be anything but acceptable to the American public. But if we are to collect from the dedication to Lord Lyndhurst, that the volume is intended as an appeal to Tory feeling across the Atlantic, the inference is met by the strongest internal evidence against the supposition; for if anything general can be drawn from its contents, it must be a conclusion against the intellectual calibre and political importance of a class of men of which Mr. Curwen is selected as the representative.

The greater number of pages are filled with prophecies and forebodings which succeeding times have not confirmed; of weak reproaches against the American people and their leaders, refuted by the journalist himself in his protestations against the injustice of the mother country, and by frequent admissions that his secession from his countrymen was unnecessary and ill-advised. Considered therefore either intellectually or morally, this specimen of the American loyalist is little calculated to give a favourable idea of political seceders; and we cannot help thinking that the enlightened citizens over the water will be apt to wish the "Britishers" joy of their bad bargain, in the men they paid for turning their backs on their own country. Mr. Curwen, as he is represented by himself, seems to have been a conscientious but exceedingly weak man, vacillating eternally between a (laudable) love of his native land, and a servile devotion to the parent state; between a just apprehension of the wrongs of the colonies, and a stupid indignation at the risks and perils to which he was personally exposed by those who resisted the oppression; never bold enough to adopt his country's cause, and abide by the consequences, yet never sufficiently English at heart to thoroughly merit his pension. That his head, however, was more in fault than his heart, (to use a fashionable cant phrase) is evident, not merely from his political false reasonings and unhappy conjectures concerning the future, but from the superficial nature of his observations on things in general, scattered through the journal. This journal was made during his residence in England—a memorable period in English history; yet both in the stranger's remarks on the public characters of the day, or on the, to him, novel aspect of the country and its inhabitants, there is inconceivably little of intrinsic value. One, and one only, charm can be extracted from this portion of the publication, and that lies in the incidental mention of matters of the day, not yet quite forgotten. To remarks of this kind we shall exclusively confine our extracts, which we shall take as they occur, without much attention to order and arrangement. Among these the occasional references to theatrical matters would possess interest, had the author been capable of speaking to the purpose; but he rarely says much that is worth recording. Still, as the observations of a contemporary, and to a certain extent reflecting the opinions of the moment, we shall glean what we can.

"Saw Mr. Garrick in Hamlet at Drury Lane; in my eye more perfect in the expression of his face than in the accent and pronunciation of his voice, which, however, was much beyond the standard of his fellow actors."

The next remark goes somewhat deeper:—

"Evening at theatre to see 'Belle's Stratagem;' entertainment 'Waterman.' I would not indulge a cynical, surly disposition, but cannot help acknowledging that I find great disappointment at the theatrical performances. Actors fall below my idea of just imitation; to my seeming they overact, underact, or contradict nature;—a hero is a bully, a gentleman is a coxcomb, a coxcomb a fool, a lady affected, pert or insipid; but gamesters, chamber-maids, footmen, indeed, the whole series of under-characters, not illy played."

If any weight can be assigned to this judgment, it goes somewhat against the imputed excellence of those whom we traditionally regard as great actors. Certain it is, that the faults here attributed to the English stage are still its prevailing defects. The following passage probably refers to 'The World as it goes':—

"To theatre to see Mrs. Cowley's new play; unfortunately it was hissed off the stage just before the conclusion of the last act; being in its progress of acting alternately and frequently hissed by its foes and cheered by its friends; the latter proved the minority, and therefore unsuccessful, as all in minorities are in state and church, as well as theatres. Many came for the express purpose of supporting or damning it; her husband, a writer in one of the daily papers, employs his pen in criticising works of all other stage writers, and has by the severity of his remarks raised up a host of determined foes, to crush whatever proceeds from his quarter; though no foreign considerations were needed to banish this piece from the stage, its own intrinsic unworthiness was more than enough; being a low performance, and unworthy the pen of the author of '*Belle's Stratagem*' and '*Who's the Dupe?*' Knowing the writer and her connections, I feel severely for them, especially, too, as her brother is a fellow lodger, whose exquisite delicacy of feeling must be cruelly wounded on this occasion. The prologue and epilogue were excellent, and did great credit to the performers, Mr. Lewis and Miss Young, who were rewarded with universal applause."

In the next extract is embalmed the memory of a quackish exhibition, which in its day occupied all the disposable idleness of the town. Dr. Graham, its hero, under the pretence of science, was supposed to have secretly administered to the licentiousness of the wealthy vicious. His lectures were the fashionable lounge of the day, and were a marking, though transitory, feature of the times in which they were permitted. It is necessary to add, that amongst Graham's other *scientific* devices, the pretended removal of barrenness, by the use of an electrified bed, stood prominent:—

"Evening at Dr. Graham's lecture on health, in his '*Temple of Health*,' in Pall Mall, near St. James's. The first room entered was properly a vestibule, from whence through folding doors one passes into the apartment holding the electric bed, about seven feet square, raised three feet from the floor: over the frame at the head are fixed two balls gilded of four inches diameter and one inch apart, to receive the electric spark from the machine above, continued down in a glass tube through the floor. Passing this, you enter the room of Apollo, through a narrow entry, having on each hand two or three niches containing statues gilded, about half the natural size. The first object that meets the eye is the temple of Apollo, being a round cupola five feet in diameter, supported by six fluted pillars of the Corinthian order and eight feet high, in imitation of scagliola; in the centre stands a tripodal frame with concave sides, on which rests in each angle a lion *couchant*, supporting a long frame for the branch of six or eight lamps, adorned (or rather overcharged) with crystals, whose tremulous motion by the company's walking adds great brilliancy to the appearance, the walls all round having many branches with three candles each, besides two more large central branches, suspended by gilt chains from the ceiling. The decorations in the frippery kind are in great profusion in this as well as in the other room, consisting of glass in various forms and sizes, inlaid and hanging—many gilt statues of Apollo, Venus, Hercules, Esculapius, etc., besides a few pictures. The master discovered a ready elocution, great medical

Digitized by Google

knowledge, and appeared well qualified to support the character he assumes."

The following brief paragraph contains two reminiscences:—

"Attended the exhibition in Piccadilly of Society of Artists of Great Britain; was really surprised at the meanness of the portraits; nothing appeared to my eye well executed but some fruit-pieces and a few miniatures in crayons and water colors. From hence Mr. Silsbee and myself adjourned to Mr. Joseph Green's; we drank tea and passed a pleasant hour. Stopped by the way at Ely Palace, so called, on Holborn hill, now sold and pulling down to build two rows of houses. There are yet standing the chapel and hall in the old Gothic taste."

We shall next give the author's picture of Liverpool, such as it was only sixty years ago. We believe his idea of the place was perfectly correct:—

"Entered the city of Liverpool, so celebrated for its commercial character; houses by a great majority in middling and lower style, few rising above that mark; streets long, narrow, crooked, and dirty in an eminent degree. During our short abode here, we scarcely saw a well-dressed person, nor half a dozen gentlemen's carriages; few of the shops appear so well as in other great towns; dress and looks more like the inhabitants of Wapping, Shadwell, and Rotherhithe, than in the neighbourhood of the Exchange, or any part of London above the Tower. The whole complexion nautical, and so infinitely below all our expectations, that nought but the thoughts of the few hours we had to pass here rendered it tolerable. The docks however are stupendously grand; the inner one, called Town Dock, lying in the centre of it, and filled with vessels exhibiting a forest of masts; besides this, are three very large ones lying in front of the city, communicating with each other by flood-gates, intermixed with dry ones for repairing. The lower or new one has a fine wide quay on its outer side, an agreeable walk being lined with trees on either hand; below this, on the river, is now building, nearly finished, a circular battery with embrasures for thirty cannon. Parade and barracks are in hand, and when completed will afford a charming walk and prospect, if allowed to the inhabitants."

Our next extract embodies an anecdote which preserves the memory of a strange piece of English humorousness, which, if not true, is at least *ben trovato*:—

"Dr. Barton, dean of Bristol and rector of St. Andrew's, Holborn, who was, according to British mode of expression, dark, meaning stone-blind, being of a humorous disposition and great self-command, having a mind to entertain himself, invited four eminent persons in the same desolate condition as he was, to a dinner, none other being present but the servants. These were Sir John Fielding, of as eminent a character in the juridical line as perhaps any man in the civilized world; Mr. Stanley, the well known musician, and others whose names I forget. After partaking of a joyous feast, they took a humorous leave and departed."

Here is another touch of the times:—

"At the time of my first arrival in London, a house opposite Governor Hutchenson's, in St. James'-street, was then finishing, called '*Sçavoir vivre*,' being a gaming-house of the highest modern taste, perhaps much more magnificent in architecture and furniture than English America can boast, and designed for gentlemen exclusively. The ladies' pride being piqued, they bought up that which the governor lived in, and the two on either side of it, and though in excellent repair, demolished them, erecting in their room one in the same taste as its opposite neighbour; and to this day these two temples are devoted to the worship of the blind deity, *Fortune*, on whose altars are nightly sacrificed thousands, besides the peace and support of many of her foolish and equally blind devotees."

The date of our next quotation is 1780, and our younger readers will be surprised to learn, by one instance of the fact, how very modern the larger part of London is:—

"About ten days since wandered to the further end of Mary le Bone, being designed to a distant quarter. On finding myself there, I enquired for the gardens which you remember to have been resorted to by company, and where fireworks were exhibited; to my surprise the whole ground is laid out in streets and covered with grand and elegant houses, and even beyond it. In this ramble accident revealed a secret that has puzzled you and the wise men of Cowbridge, that probably I should otherwise never have possessed. Some months since a letter was addressed to me by James Russell, dated Manchester-square—the location of which was beyond the reach of my knowledge or any of those I had consulted, having never before heard of it; chance, however, in this ramble directing my steps among rows of new buildings, and directing also my eye to a corner house in an unfinished square of noble structures, inscribed Manchester-square, this unimportant secret was thereby revealed."

Many persons are shocked at the recent interventions of females in public meetings, as being an unprecedented abandonment of propriety. The following will show that "such things were" in the time of our fathers:—

"Accompanied Mr. Dalglish to La Belle Assemblée, or Ladies' Disputing Society. The question proposed was: 'Would it not be prudent and proper, considering the great demand for public supplies, and the difficulty of raising them, to lay a tax on old bachelors?' The lady who first spoke, moved to alter the question and include old maids, which was objected to by a fine young lady, who answered in a lively, pleasing manner; her objection was, however, overruled by a vote put by the president. Question then stood as including old maids. Twelve female speakers stood forth in succession, and the question was carried in the affirmative. There were many excellent thoughts expressed and some witty ones; some acquitted themselves to the approbation of the company. A few, through diffidence or forgetfulness, stopped short in mid-race, and sat down, unable to proceed; these met with polite and kind indulgence, and were clapped by way of encouragement."

And again:—

"Samuel H. Sparhawk called; accompanied him to Ladies' Disputing Club, at King's Arms, Cornhill. A lady presided and acquitted herself very commendably. *Question: 'Was Adam or Eve most culpable in Paradise?'* Mrs. President addressed the assembly with great propriety, just accent and pleasing voice; explaining the nature of the meeting; justifying ladies appearing to speak in a public promiscuous assembly. She was frequently applauded; on ascending the chair, she turned round and gracefully saluted the company, discovering perfect self-possession, void of all embarrassment. The other speakers also acquitted themselves laudably, and were frequently clapped. Some spoke, I won't say argued, on one side, some on the other; very little serious argument, unless declamation, quotations from Hudibras, etc. can be so denominated. The subject afforded matter for mirth, but the most serious speeches turned against the mother of us all. Question being put, whether Adam was most in fault, vote by three hands only, negatived by one. Thus Eve stands acquitted in this female school of oratory of being the most guilty."

We have yet one other memorial of past amusements to quote:—

"After tea, called on Mr. Dalglish; whom, with his friend, I accompanied in a coach to 'Carlisle House,' at a Sunday evening entertainment, called the promenade, instituted in lieu of public amusement; and to compensate for twelve tedious hours interval laid under an interdict by the laws of the country, yet unrepealed formally by the legislature, though effectually so in the houses of the great and wealthy, from whence religion and charity are but too generally banished. The employment of the company is simply walking through the rooms; being allowed tea, coffee, chocolate, lemonade, orgeat, negus, milk, &c.; admission by ticket, cost, three shillings; dress, decent, full not required; some in boots; one carelessly in spurs happening to catch a lady's flounce, he was obliged to apologize and take them off. The ladies were rigged out in gaudy attire, attended by bucks, bloods, and maccaronies, though it is also resorted to by persons of irreproachable character: among the wheat will be tares. The arrangement of the house is as follows:—From the vestibule where the tickets are received, the entrance is through a short passage into the first room, of a moderate size, covered with carpets, and furnished with wooden chairs and seats in Chinese taste; through this the company passes to another of a larger size, furnished and accommodated as the former; passing this, you enter the long-room, about eighty feet by forty; this is the largest, and lighted with glass chandeliers and branches fixed to side walls, against which stand sofas covered with silk, —floors carpeted. Hence tending to the left, you cross the hall, and enter the wilderness or grotto, having natural evergreens planted round the walls; the centre an oblong square, about twenty-five feet long and fifteen broad, fenced with an open railing, a few shrubs interspersed, flowering moss and grass; in one of the angles is a natural well, with a living spring, which the attendant told me was mineral. Fronting the entrance, in the centre, at the further end is a cave cased with petrifactions, stones artificially cut into resemblance of the former, and spars, with here and there a dim lamp, so placed as to afford but an imperfect sight of surrounding objects. To the top of the arch leading to the cave, is an ascent of two flights of steps on each hand, and over it a room not unlike in form the cave below, painted in modern style in oval compartments, containing hieroglyphics and ancient stories; on the same elevation is a narrow gallery, continued on either side to about half the length of the room, fronted near three feet high with an open Chinese fence or railing:—this room is about fifty feet deep by thirty wide, lighted as the others with variegated lamps, but rather dim; next enter into two tea rooms, each with tables for forty sets or parties. So far for my imperfect description of this house, wherein the well known Mrs. Cornelly used to accommodate the nobility, etc. with masquerades and coteries. Dress of the ladies differed widely; one part swept their track by long trails, the other by an enormous size of hoops and petticoats. The company usually resorting there about seven hundred, as the ticket receiver told me;—this evening the house was thronged with a good thousand. The rooms were filled, so that we could scarce pass without jostling, interfering and elbowing; for my own part, being old, small and infirm, I received more than a score of full butt rencounters with females. * * I never saw a place of public resort where the company was treated with so little respect by servants; even common tea-houses, whose character is far humbler, as 'Bagnigge Wells,' 'White Conduit House,' 'Dog and Duck,' etc., are in this respect preferable. It would be treating 'Ranelagh' with great indignity to bring it into comparison with this which is designed to supply its place during the long vacation of that fashionable resort; nor are Vauxhall Gardens less than a thousand times beyond this in every eligible circumstance, unless I saw it under peculiar disadvantages."

Of the celebrated Count Romford (then known as Benjamin Thompson) our author thus speaks:—

"Went early in order to be at Mr. Benjamin Thompson's in time, and being a little before, heard he was not returned home from Lord George Germaine's, where he always breakfasts, dines, and sups, so great a favorite is he. To kill half an hour, I loitered to the park through the palace, and on second return found him at his lodgings; he received me in a friendly manner, taking me by the hand, talked with great freedom, and promised to remember and serve me in the way I proposed to him. Promises are easily made, and genteel delusive encouragement the staple article of trade belonging to the courtier's profession. This young man, when a shop lad to my next neighbour, ever appeared active, goodnatured and sensible; by a strange concurrence of events, he is now under secretary to the American secretary of state, Lord George Germaine, a secretary to Georgia, inspector of all the clothing sent to America, and Lieut. Col. Commandant of horse dragoons at New-York; his income arising from these sources is, I have been told, near seven thousand a year—a sum infinitely beyond his most sanguine expectations. He is besides a member of the Royal Society. It is said he is of an ingenious turn, an inventive imagination, and by being on one cruise in channel service with Sir Charles Hardy, has formed a more regular and better digested system for signals than that heretofore used. He seems to be of a happy, even temper in general deportment, and reported of an excellent heart; peculiarly respectful to Americans that fall in his way."

Digitized by Google

The personal appearance of George the Third and his family, the author thus describes:—

"At St. George's chapel, prayers at eight; present, the King, Queen, Princesses Elizabeth and Sophia,—about a hundred hearers; we joined the train to Queen's house, or rather to the gates. The King was dressed in blue fly, cuffs small, open, and turned up with red velvet, cape of same, buttons white, breeches and waistcoat of white cotton, an ordinary white wig with a tail ribbon, a round black chip hat, small, as used in riding. He is tall, square over the shoulders, large ugly mouth, talks a great deal, and shows his teeth too much; his countenance heavy and lifeless, with white eyebrows. Queen of the middle size and bulk, height five feet and a-half,—though far removed from beautiful, she has an open placid aspect, mouth large, foot splay:—at prayers their voices often heard, and they appeared devout. They take no state upon them, walk freely about the town with only a lord in waiting. At seven, every evening after tea, the King, Queen, Prince of Wales, Princess-royal, Princesses Sophia and Elizabeth, walk for an hour on terrace half a mile long, amidst two or three thousand people of all ranks. The Prince of Wales appears a likely agreeable person, far more graceful than his father, who is ungainly. The prince affects much the '*Jemmy*' dress and air; age will doubtless soften down the juvenile taste and affectation. The Queen's dress, a riding-habit, same colour and facings as the King's—a small bonnet with a blue feather."

It is seldom that the author goes much deeper, but of the character of the King, he gives a striking trait, which he probably adopted from the current opinion of the town at the time, and the anecdote is, we believe, to be relied on:—

"Called on Mr. Heard at Herald's office; there learned, in a conversation with a Mr. Webb, of seeming great political knowledge, that at the time the House of Commons left the late administration in a minority, or in other words, refused to support Lord North's measures, the king took it to heart, and resented it so far as to declare he would leave them (as he expressed it) to themselves, and go over to Hanover, from whence his family came, and proceeded so far as to order the administration to provide two yachts to transport himself there; whereupon the queen interfered, and remonstrated against such a desperate measure, so fatal to her and his family, as well as his own personal interest. Others, too, represented the distressful condition to which the nation would be reduced by the absence and want of royal authority, though it seemed to little effect, so sadly chagrined and provoked was he. Lord Rockingham also joined the remonstrants, and showed the necessity of a change of men and measures, with no better success;—so naturally obstinate and pertinaciously bent was he on his favorite plan of subjugating his (here called) rebellious subjects in America, and bringing them to his feet, till he was told that as sure as he set his foot out of the kingdom, the parliament would declare the crown abdicated and the throne vacant, nor would he ever be permitted to re-enter the kingdom again,—which argument, it seems, brought him to a more cool and juster sight of the folly of such a step, and the absolute necessity of stooping to a compliance with the requisitions of the public. * * On the first court day after the appointment, when he was in a manner forced out of his closet into the room of audience, he received his new servants with a smile, and transacted business with them afterwards with as much seeming cordiality and openness, as if they had been in his favour, and in his most intimate conceits; so seemingly satisfied and so serene was the royal countenance, that all the newspapers sounded forth the gracious monarch's obliging, condescending goodness to the public wishes, though nothing was farther from his heart, had not the necessity of his affairs impelled him thereto. At the same time coming up to Mr. Wilkes, he said he was glad of the opportunity to thank him for his very proper and laudable behaviour in the late riot; took notice of his looks, which indicated a want of health, advised him to a country air and exercise, which, said his majesty, I find by experience an excellent expedient to procure and preserve health; all this with the same apparent sincerity, as if they had been in a continued course of paying and receiving compliments, congratulations, and acknowledgments for mutual kindnesses and good offices, though all the world knows there was not a man in the three kingdoms more thoroughly hated, nor whom he had taken a more foolish and unnecessary pains to ruin. The above-mentioned interview being told of in company, Mr. Wilkes took occasion to remark in the following words:—'To have heard the king, one would have thought I was consulting a quack on the score of my health.'"

One more political remembrance, and we have done:—

"To Covent Garden; abode an hour amidst very numerous throngs, this being the last day of polling, and Fox to be chaired; it is feared, great riots and destruction will be the consequence. The foot-guards and a squadron of horse are ordered to hold themselves in readiness, and approach within a callable distance. In the afternoon went to Covent Garden, now emptied; the company gone to attend Mr. Fox's procession,—the hustings removed and all the stands taken down. Proceeded thence to Charing Cross, which, to my surprise, I found crowded; the procession then just beginning to march by from Westminster Hall, in the following order:—the officers of each parish distinct, with their peculiar standards, attending two and two, with wands in their hands; bands of music; next gentlemen on horseback; then others on foot; in the rear was Mr. Byng, whose appearance was announced by '*Byng and Fox for ever!*' Then followed a few horsemen; then *Mr. Fox*, mounted on a lofty chair, on and around interwoven with a laurel bower almost encompassing him; soon after appeared a lofty white silk banner, with this inscription,—'*Sacred to female patriotism*;" and was immediately followed by the Duchesses of Portland and Devonshire in their coaches, around which were laurel festoons, each drawn by six horses; the whole concluded with about thirty private carriages. An innumerable crowd attended, and with vociferous acclamations, but no riot nor mobbing."

Such, then, is the *farrago* of Mr. Curwen's volume. During his residence in England he travelled about a good deal, and has journalized his experiences, but has preserved little of any present interest.

Mr. Pecksniff. The Life and Adventures of Martin Chuzzlewit. Nos. 1 & 2. Chapman & Hall.

No class of persons have escaped so completely scot-free from the novelist, the dramatist, and the satirist, as architects. All other professions and callings, together with all the really or imaginably queer characters which society affords, have been depicted—sometimes wholly in black, at others wholly in white—so repeatedly that not a few of them are now become threadbare and stale, and are for the most part little better than stereotype figures. The legal and medical professions, down to the sheriff's officer and the apothecary's boy—we had nearly said the undertaker—have furnished their full quota to the dealers in fiction; nor has the clerical profession escaped: actors again, artists, authors, antiquaries, and others, who may be classed along with them under a convenient and comprehensive '&c.' have appeared times innumerable upon the stage of the novelist and the dramatist, to say nothing of the considerate attentions occasionally bestowed on them by the satirists. But architects! they have till now walked through the highways and byeways of life as secure from observation as if every one of them had worn King Gyges' ring, or were invulnerable to the shafts of ridicule and satire. Martial indeed was wicked enough to say—

Præconem facito vel architectum;

meaning thereby, "if your son is too stupid for anything else, make him either an auctioneer or an architect;" which gives us no very high idea of the position or credit in which the profession was then held.

Since that saucy fling at them, architects have enjoyed what all the political compacts ever made have not been able to secure to the rest of the world—"a perpetual peace:" for Ben Jonson's satire was rather personal than general. If at any time a chance reflection has been cast at them, it has, strange to say, been by one of the profession. Gwynn seems to have had a sort of indistinct glimmering of a Pecksniff flitting across his mind, when he described "the great Mr. Trowel, just returned from Rome," whose character might have served as a hint for some such a personage to any novelist, had it not been buried in a book not likely to be consulted by writers of that class. In our time, the profession have been shown up rather more fully and freely, by another architect, who, so far from standing up for his order, has not scrupled to lay to the charge of his brethren a good deal of charlatanry, and the being, for the most part, no better than mere traders. Nor has Mr. Welby Pugin been much more lenient, although he has not indulged in the same strain, being merely bitter, without any attempt at humour and facetiousness. If to these instances we add an occasional paper in the periodicals, we have named everything of the kind that we remember. Unfortunately, one of the most nervous and pungent writers who ever wielded the pen of satire—he who inveighed with such severity against the abuses in his own art—did not make that of architecture one of his subjects, although he lived in times when it was greatly degraded. Had the "impartial" Salvator Rosa (for it is to him we allude)—had he given us a satire on architecture, as well as on music, on poetry, and on painting, we should doubtless have had some plain truths, and those not uttered in honied phrases.

On further recollection, we remember to have seen in a French journal, '*Annales des Bâtimens, &c.*', some rather pointed animadversions on the architectural profession, who were divided into classes, such as *architecte artiste*, *architecte à patente*, *architecte artisan*, *architecte pantographe*, *architecte negociant*, &c., the last-mentioned being one who keeps assistants and journeymen, under the name of clerks, to make his designs and drawings, while he occupies himself solely with the business part of his practice, of which the looking out for jobs, and getting them by hook or by crook, is not the least: in short, he is a "capital man of business," and a bit of a Pecksniff—which last remark brings us to our professed subject.

Yes, an architect is now for the first time introduced among the *dramatis personæ* of a novel, and that by no less popular and able a writer than Boz, who, instead of venturing timidly, as on an experiment to be made with caution, boldly puts him prominently forward—the principal actor in many of the scenes of his new piece—and lets him advance up to the very footlights, in order that we may obtain a perfect view of him. One thing therefore is tolerably certain, that, so brought before the public, Mr. Pecksniff will obtain marked notice. As little doubt is there that, whatever may be its success, some will protest against the character as unjust, and calculated to excite a prejudice against the profession generally, and others that the profession itself does not offer a sufficient number of salient peculiarities and absurdities for ridicule to fasten on. One circumstance which has tended to keep the profession out of the broad daylight of public observation is, that its members have been so few as hardly to amount to a class; but of late years its numbers have increased enormously. At present, architects may be reckoned, not only by scores, but by hundreds, and even thousands. There is, we believe, but one 'Regius Professor' in the country—the Professor at the Royal Academy—but there are as many architectural professors as there used to be architects. Architectural Societies spring

Digitized by Google

up like mushrooms in a wet warm autumn, and we have a new architectural journal about every other month. No wonder then if the profession stands now in a different position from what it did heretofore; that it is now looked on as one of the "genteel professions," to which persons who have extensive connexions may advisedly "bring up a son," without reference to his tastes, inclinations, or natural capacity; the name is the little bit of gilt ornament that gratifies mamma; and, following the example of the great Pecksniff, he may write "ARCHITECT" on the brass plate, but add, in a neat Italian hand, on his card, "*and surveyor*," and that satisfies papa, as it opens the door for corporation influences, and lets in "Highways," "Sewers," "District," turtle and champagne.

Besides, other professions have been long overstocked, and such too we fear is now the case with regard to architecture; wherefore it is not surprising if it include many plodding mediocrities and respectable blockheads, content to drudge in what is to them a mere trade; nor surprising if some among them are not over scrupulous in their practice. There are charlatans, quacks, not to say knaves, in all other professions; why not then in architecture, where competition is now so great that fair-dealing, education, and talent do not always ensure success? In such a state of things, why should not the Pecksniffs be brought forward and shown up for what they are, and in their proper colours?

Some may be apprehensive that the doing so will bring, not only the profession, but the art itself, into contempt: we have no such fears. It is precisely our love, we may say devoted attachment, to art, for its own sake, that renders us intolerant of those who, without feeling or affection for it, follow it as hirelings, mercenaries, and mechanics, and who, if they are sometimes successful—according to their own meaning of the term—make every opportunity that falls in their way a mere job, to be valued in its results by the rule of £. *s. d.* Instead of being scandalized at Pecksniff's being represented as an architect, what we should object, if called on to state objections, is, that his professional character is, as yet at least, scarcely touched on; and so little is made of it that it amounts to no more than an arbitrary badge of costume, as unimportant as the colour of his coat. There is more of caricature than of character about him, for he is a mere pompous hypocrite, who so overacts his part that he could scarcely impose upon any one; nor does it say much for the discernment of Tom Pinch, that, situated as he was, he did not *feel*, even if he could not see through, his very gross humbug. Tom himself is of course intended to serve as the marked contrast, and authentical *pendant* to his employer; to be the light opposed to the shadow of the picture, and to show the favourable side of the professional character. Yet here the same objection recurs as before, namely, that such character does not seem likely to be developed, or made much of, in the course of the story. At present Tom shows himself to be a simple, good-hearted, good-natured creature, without genius, enthusiasm, or even talent. Indeed, were it otherwise, he could not have failed to discover instinctively that Pecksniff was the shallowest of pretenders—a contemptible charlatan: therefore, however much Tom might have been duped by that gentleman's rather clumsy affectation of moral goodness, he could not be so obtusely blind to his incapacity. Possibly Tom may turn out a genius after all, for the wand of the magician is powerful; but certainly Boz did not prepossess us in favour of his intellectual abilities or love of art, when he made him pass his time at Salisbury in staring at the market people and the shops, instead of examining the architecture of the cathedral, with the eye of an enthusiastic student. There seems to be very little of the poetry of art in worthy Tom's composition. Victor Hugo would have revelled in such an opportunity for entering into a description of so fine and interesting a work of Gothic architecture as Salisbury Cathedral. He would have depicted, with graphic pen, the entire structure, both inside and out, and in all its details. Boz, on the contrary, has evidently fought very shy of the subject, and, slurring over description, has thought it enough to let Tom Pinch mount up into the organ-loft. Description of another kind, too, there might have been, in regard to Mr. Pecksniff's own drawings and designs, which are merely enumerated; and yet a good deal might have been made of them, and some capital hits aimed at the inane and absurd things manufactured by persons of the Pecksniff tribe as "designs."

To say the truth, we suspect that Boz has here undertaken rather more than he can well manage, for it certainly is no easy matter to make an architect a leading character in a novel, so as to bring out his professional traits, and connect him with the plot in his professional capacity. As a mere episodical personage, an architect may be introduced with little or no difficulty; but that is very different from bringing him and his profession prominently forward as an illustrative portraiture of a class, and of its practices. No doubt the biography of an architect would frequently be interesting enough as a vehicle for anecdote, and for sketches of the various individuals of note with whom his professional career may happen to have brought him in contact. We fancy that if Sir Jeffry Wyatville had written his own memoirs, he could have told us as much, or more, about George IV., and his taste in art, than Fanny Burney has done about Queen Charlotte; and could also have let us behind the scenes at Windsor Castle, in regard to a good many other persons and their doings.

The Germans have attempted a particular species of novel to which they give the name of *Kunst-roman*, the hero being an artist—either an entirely fictitious, or an historical character—the narrative being the vehicle for criticisms and opinions relative to art. Yet rarely has such an idea been executed with even tolerable success: narrative becomes overwhelmed and smothered by dialogue and dissertation; or the opposite fault is committed, and we have a mere romance palmed on us with the name of an eminent artist upon its title-page. That of "Erwin von Steinbach" once operated as a bait to ourselves, for it sounded like a promise of much interesting and curious biographical matter, and information relative to German architecture and art, else why evoke from the dead the illustrious architect of Strasburg cathedral? Alas! it was a mere phantom after all, that was conjured up; for any other name would have done equally as well, or even better, because then the story would not have been encumbered with what was forcedly dragged into it, only to be dead-weight upon it.

With that single exception, we do not remember an instance of an architect's being made to sustain a prominent part in a work of fiction until now, when Boz introduces the public to Mr. Pecksniff, who at least promises some amusement. But Mr. Dickens has opened to himself an opportunity of doing much more than amuse—of exposing the mal-practices which take place at architectural competitions, and in the managing committees, who have sometimes a way of managing such matters with which the public ought to be made acquainted; and as he seldom loses sight of a moral purpose, we earnestly hope that the opportunity will not be lost. What he will ultimately make of his 'Mr. Pecksniff' and Tom Pinch, time will in due course disclose. If it be thought that we have been somewhat too premature in our remarks, prejudging and commenting upon characters which have not yet fairly displayed themselves, the fault is not ours; if novelists will exhibit their scenes piece-meal, they must submit to the inconveniences attending such a system, nor complain if critics pass opinions on their works before it can be known what they will at last turn out.

Herbert Tresham. By the Rev. J. Neale. Rivingtons.

THIS is a Puseyite tract in the enticing form of a 'Tale of the Great Rebellion.' Puseyism, however, is as fairly entitled to win its way by the flowery paths of fiction, as any other system of opinions, or even fair Orthodoxy herself. There is a short preface, significant of the school to which the writer belongs, and dated, after the fashion of his party, "The Feast of All Saints."

Mr. Tresham is rector of the parish of Scaldwell in Northamptonshire, a pastor deserving of the name, a staunch cavalier, and one who looked upon an archbishop as but little lower than an archangel, and upon Archbishop Laud as the pattern of archbishops. Just before the battle of Naseby, the village of Scaldwell is menaced by an incursion of Roundheads, and a council is held to save the stained glass and the gilt screen of the parish church. In our reverence for stained glass, and the other ancient decorations of our churches and cathedrals, we are Puseyite to the back-bone; we neither yield to the imaginary parson, Tresham, nor to the real parson, Neale. The following dialogue takes place between Mr. Tresham, his daughter, and Fletcher, a royalist serjeant:—

"'Well now, Fletcher,' said Mr. Tresham, 'you must often have been in situations like this, and I know we may depend on you. What can we do by way of preparation, if the army should pass this village to-morrow?' 'Why, sir, God helps them that help themselves, as Prince Rupert used to say. For ourselves and the village you can do little enough: but for the church, you may, if you choose, do a great deal.' 'How so?' 'If the Roundheads should come upon it as it is now, depend upon it, by this time to-morrow, there won't be an inch of stained glass left. I know how quick they are at anything of the kind. And the great gilt screen will stand no chance, nor the pillars either, I fear, unless something be done to them. However, they hate the glass most of all.' 'But what in the world are we to do with it?' asked the rector. 'Take it out, sir, and bury it in some field hard by,' replied the serjeant. 'It will be there for years, and be none the worse at the end. And as to the pillars, if you whitewash them, and paint the screen, it may be they'll escape. But if not, I've seen enough of these things to know what will go with them.' 'Whitewash that beautiful stone!' exclaimed Agatha; 'why, one might as well break it up at once.'"

The burying of the glass and the whitewashing of the pillars are resolved on; Fletcher undertakes the execution of the plan; and our Puseyite minister of the olden time bids good-night to Agatha, and "provided with a dark lantern" bends his way to his church, there to pass a lone hour in meditation and prayer for the shaken throne and altar. Tresham pours out his soul in supplication for "the poor Church of England" until he is joined by Fletcher and others, "whom he knew to be staunch Churchmen," bringing with them buckets of lime-wash, ladders, hammers, and chisels, and other tools for their pious object. We should have joined in these operations ourselves, had we been villagers of Scaldwell, whatever might have been our views of the questions between Charles I. and the people of England; but we do not think our passion for stained glass would have carried us so far as to regard its removal for the sake of protection in the following "dim religious light";—

"'And now,' said the rector, 'as we are going to commence what looks so much like sacrilege, let us ask God's pardon for the necessity which is laid on

Digitized by Google

us of profaning His Holy Temple, and His blessing in our endeavours to preserve the church and ourselves.'"

In this extravagance, attributed to a cavalier parson, cannot Mr. Neale perceive the cause, and if not the excuse, certainly some palliation for the excesses of the Puritans?

After the battle of Naseby, the horrors of the revolution are felt at Scaldwell. A commission issues to examine into the life and doctrines of parson Tresham; and the following articles of accusation (upon which he is of course found guilty) are exhibited against him:—

"The articles against him were as follows:—'1. Imprimis: That he useth the Common Prayer, 2. That he boweth at the name of Jesus. 3. That he preacheth for the standing up at the Gloria Patri. 4. That he useth the sign of the Cross in Baptism, and the ring in marriage. 5. That he prayeth for the deliverance of the saints out of purgatory.'"

The fallacy pervading this little book must here be noticed. Mr. Neale avers, that it is his object to warn us "against an admiration of the doctrinal views, a belief in the deep experimental knowledge, and a study of the writings, of those whose deeds were so fearfully wicked." To effect this, he represents, all the violence of the Puritans as excited by such trifles as the marriage-ring and the sign of the cross in baptism, omitting, or keeping out of view, all the grave and substantial causes that stirred the masses of the English people in a manner so extraordinary. He contrasts all the accumulated excesses of the civil war with the peaceful life of an exemplary clergyman of the establishment, leading unthinking readers to conclude, that it was the very piety and virtue of the English clergy, combined with the stained glass of their churches, that inflamed the public mind against them. This is a manifest "*suppressio veri*," but independently of this, what can be weaker than to assail the tenets of the Puritans even by a faithful recapitulation of their deeds? and how very easily might such an argument be retorted upon our Puseyite novelist?

Mr. Tresham lives until after the Restoration, to be blessed by one peep at the "revised edition of the Book of Common Prayer," which, it appears rather too plainly, is held by that worthy man in equal reverence with the Bible itself. His death-bed scene is eminently characteristic.

OUR LIBRARY TABLE.

Popular Conchology: or the Shell Cabinet arranged, being an Introduction to the Modern System of Conchology; with a Sketch of the Natural History of the Animals, an Account of the Formation of the Shells, and a complete descriptive List of the Families and Genera, by Agnes Catlow.—We have given the title of this little volume at length, as it best explains the object of the work; by far the greater portion of which consists of concise descriptions of the genera of shells, with short notices of their habits, accompanied by wood-cuts of nearly every genus; which cannot but fail to be of service to the beginner, who must not, however, expect, in a little volume, like the present, to be able to find the *specific names* of his collection. We wish that the introductory matter had been more extended, as too little attention has been paid to the economy, structure, and peculiarities of the animals inhabiting the shells; but, on the whole, we can recommend the work to those for whose use it has been written.

Genoveva: a Poem, by R. C. Trench.—This is an English version (not translation) of the popular legend of Saint Genevieve, some account of which was given a short time ago, in this paper, (No. 792). The author has followed Tieck in the general arrangement of the incidents, but told his story with great freedom, and in more than ordinarily graceful verse.

Josephine, and other Poems, by F. M. Eaton.—The principal poem undertakes to exhibit, in a series of pictures, the varied episodes which composed the eventful life of the kind-hearted Empress of France, Josephine—from her play-ground at Martinique to her grave at Malmaison. The minor pieces are musical, and occasionally graceful.

Fire-side Philosophy, or Glimpses of Truth.—Such distorted glimpses as might be obtained in the fog which Homer describes as worse than night for clear perception.

The History of Josiah.—Under the guise of a commentary on the Scriptural history of Josiah, the author advocates those principles of ecclesiastical domination and religious intolerance which of old set Christendom in a flame. Fortunately we live in an age when little is to be feared from such bigotry, and may safely leave unrefuted the strained interpretations of Scripture, by which the author defends the right of persecuting dissenters.

Anglican Church Architecture, with some remarks upon Ecclesiastical Furniture, by James Barr.—A neat and tasteful manual, abounding with illustrative woodcuts, many of which however strike us as taken from the 'Glossary of Architecture.'

List of New Books.—Goethe's Faust, translated by J. Birch, 2 vols. royal 8vo. 1*l.* 14*s.* cl.; Vol. II. royal 8vo. 18*s.* cl.—Thornton's Family Prayers, 15th edit. fc. 8vo. 3*s.* cl.—Newman's (the Rev. J. H.) Parochial Sermons, Vol. II. 4th edit. 8vo. 10*s.* 6*d.* bds.—Alford's (the Rev. H.) Hulsean Lectures for 1842, 8vo. 6*s.* bds.—Archdeacon Manning's Sermons, 2nd edit. 8vo. 10*s.* 6*d.* bds.—Watson's (the Rev. A.) Sermons on Divine Discipline and Practice, 8vo. 10*s.* 6*d.* cl.—Twelve Sermons, Preached in St. Mary's Chapel, Glasgow, by the Rev. Isaac Hitchin, M.A. 8vo. 7*s.* 6*d.* cl.—Chaff and Wheat, or the Teaching of Rome and the Truth of God, with Preface, by the Rev. J. Haslegrave, 18mo. 2*s.* 6*d.* cl.—Foreign Library, Part V., 'Celebrated Crimes, by Alexander Dumas, Part I.,' 8vo. 5*s.* swd.—Comic Nursery Tales, 'Jack the Giant Killer,' by the Author of 'Comic Latin Grammar,' with illustrations, square, 2*s.* 6*d.* fancy bds.—Knight's London, Vol. IV. imp. 8vo. 10*s.* 6*d.* cl.—Carpenter's Cyclopædia of Natural Science, Part III., containing Mechanical Philosophy, 12mo. 4*s.* swd.—A System of Logic, Ratiocinative and Inductive, by J. S. WINTER AND THE FLOWERS.

Old Winter loveth not the flowers, for they
Do mind him, with their meek and innocent looks,
How soon his sceptre must be laid aside.
Awhile since came the snowdrop preaching thus;
Him Winter heard, and hearing, inly vowed,
That he would wreak upon those rebel hosts
Sudden and sharp revenge; so, putting on
The aspect of mild Spring, he bade the winds
Blow softly, and the unclouded sun look down
With warmer radiance on the quickening earth:
This did he many a day, till, one by one,
Came forth the bursting flowers, and 'gan to ope
Their fairy blossoms, and their perfumes pour
Upon the pinions of the treacherous breeze.
Then laughed Winter, with a scornful laugh,—
And stripping off the mask, with killing eyes
He looked around; his helpless victims shrank
Beneath that cruel gaze, and on their stems
Hung, droopingly and pale; then shouted he,
To his pitiless jailor, Frost, to bind his realm,
Meadow, and garden, each green pastoral spot,
And woodland nook, and dell, and river-bank,
In chains of adamant: next morn the flowers,
Lay on the icy earth, withered and dead,
But the sweet sky, as if in gentle ruth
For such fell ravage, veiled the sun with clouds,
And spread, with weeping face, above their graves,
A pall of virgin snow.

Enfield, Feb. 1843. T. Westwood.

ANTARCTIC EXPEDITION.

H.M.S. *Terror*, Port Louis, Berkeley Sound, Falkland Islands, July 31st, 1842.

On our arrival in this place I was so much occupied that I really had not time to write to you; but now that I have got the rough of my work done, I must let you know of all our "hairbreadth 'scapes by flood and field." * * I wrote you a few lines from Sydney, which I hope you received, and now I will relate all our adventures since that time. After remaining at Sydney three weeks, we went to the Bay of Islands, New Zealand, where we immediately erected the Observatories, and commenced our magnetometric observations. You must have heard a great deal about New Zealand lately, but I think it will be a failure as a colony; and as long as I could procure a crust of bread and cheese in England, I would not go there: it will be a loss to all, except land speculators; an honest man will never survive there, in my opinion. We sailed from that place on the 23rd November, intending to touch at Chatham Island for magnetic purposes, but the weather was so foggy when off it, that we did not even make the land, and it was not of sufficient consequence to detain us, so we made the best of our way to the southward and eastward, it being Captain Ross's intention to proceed as far as the 150th degree of West longitude, and then to proceed south; the winds were favourable, and the weather fine, but occasionally very thick fogs, which kept us continually firing muskets, beating gongs, and tolling bells, to keep company with the *Erebus*. On the 13th December we arrived in the parallel mentioned, and proceeded south; on the 18th we entered the Pack in latitude 62½°, and longitude 147° W.: this was considerably to the northward of where we made it last year. We proceeded through it very well till the 23rd, when the ice became thick and heavy, and we were unable to proceed, excepting a few miles now and then, by boring and shoving along with poles. We crossed the Antarctic circle on the 31st, both ships at the same time made fast to the same floe. We saw the old year out and new year in on the ice between the ships, and on the evening of the 1st had a ball there, and kept the dancing up till three the next morning; so you see, even blocked up by ice on every side, we had some fun; but that was the first and last of it. We cast off occasionally, but were obliged to make fast again; on the 18th January cast off, and on the 20th had a very heavy gale, with a tremendous swell, which rendered our situation for thirty-six hours truly perilous: it was more like being tossed about by an earthquake than a sea, the immense masses of ice threatening, as it were, to grind us to powder; and indeed no ordinary built ship could have stood it an hour; as it was, soon after the commencement of the gale the *Erebus* had her rudder rendered useless, by the head of it being wrung, and ours was completely torn from the stern-post, although the fastenings were the same size as those used in line-of-battle ships; there we were—two ships in an unknown sea, drifting about at the mercy of the winds, and (I may say) ice, without being in the slightest degree able to assist ourselves: fortunately the gale moderated, and the swell went down so rapidly, that the next day we were enabled to make fast and repair damages. We had a spare rudder, and after a great deal of difficulty we were enabled to ship it, although only half as secure as it was before. We experienced no other damage of consequence; a great deal of copper was torn off, although some of it was three times the thickness of that generally used; also everything that in the least protruded from the sides was torn away. However, in a couple of days we got all to rights and were enabled to proceed; and, to our great delight, on the 2nd February, got into open water, having been upwards of six weeks in the Pack: this was in latitude 68° and longitude 160° W.; here we found the edge of the Pack trend to the westward. At this time the season was far advanced, and, as in the preceding year, we had to commence a retreat on the 9th of the same month. Captain Ross did not think proper to re-enter the Pack, but proceeded along the edge to the westward; we went as far as 187° W., then to the southward and eastward: on the 20th we had a gale, but in open water. Still it was very bad, not on account of the wind, but the spray coming over us formed itself into ice before reaching the deck, so that everything was a mass of ice; coils of rope, and everything else were covered several inches in thickness, and most of our running gear about the bowsprit was carried away by the weight of ice formed on them. At midnight on the 21st we came in sight of a Pack right a-head. After half an hour's beating at the ropes, we managed to get the ship round, but the *Erebus* missed three times; however, we escaped without much damage, and again stood south. On the 23rd we came in sight of the Grand Barrier, and, as the day was fine, stood within a mile and half of it, finally reaching latitude 78° 10′ S. in longitude 162° W., having got six miles farther than we did the year before; under all circumstances this was more than we expected, for after being detained so long in the Pack, and the season closing so fast, we had little prospect of attaining so much; and although we had not discovered any land, all the magnetic and other observations are very satisfactory, and the position of the Pole more fully verified. Not being able to proceed to the eastward, we were obliged to commence our retreat, which we did, tracing the Pack edge. On the 5th March we re-crossed the Antarctic circle, and saw but a few icebergs. On the night of the 12th, or rather the morning of the 13th, for it was a little after midnight, the night being pitch dark and stormy, with a heavy sea, running in latitude 60°, we were running east, wind nearly aft, when suddenly we found ourselves close to a chain of large icebergs, and in hauling up to clear them, (each ship doing so on opposite tacks) we came into unavoidable (and, as it proved to be, fortunate) contact, striking very violently; our starboard bows met. This ship carried away jib-boom, cat-head, anchor, yard-arms, booms, and a boat, &c.; but the loss experienced by the *Erebus* was much greater; her bowsprit close off to the bows, fore-topmast, cat-head, anchor, and a number of small spars. Nothing but the extraordinary strength of the ships prevented our being cut down to the water's edge; as it was, she smashed our strengthening pieces outside, and her bulwarks forwards were cut down to the deck. All the time we were foul we were helplessly drifting towards the icebergs, and we thought we were inevitably lost; but on the ships clearing, we saw one part of the bergs darker than the rest, and, fortunately, it was an opening. Immediately after clearing the ship, we were rushing close past an immense berg, and passed through an opening between two not more than twice the breadth of the ship, the foam caused by the sea against them breaking over us on each side. I have neither time nor inclination to dwell on the events of that dreadful night; it even now makes me shudder to think of it; but some day, please God, through whose merciful interposition we were saved, I will give you an account when sitting over the fireside. I suppose no naval annals in the world could record such a narrow escape; however, we did escape, and, what was more fortunate, without the loss of a life. The crippled state of the ships prevented Captain Ross from fully performing all he had originally intended, which was after arriving at latitude 60°, longitude 125° W. (a spot calculated by Colonel Sabine as that of maximum intensity, but which had proved to be incorrect), to have again proceeded south, if possible, as far as Cook's "Ne plus ultra," and then to this place. As it was, we made the best of our way, and, with the exception of losing a man overboard, off Cape Horn, arrived here in safety without a man on the sick list in either ship, on the 6th April, after being 135 days at sea, and 133 without seeing any land. We are now waiting for orders, and going on with our magnetometric and pendulum observations, and I assure you we have enough of it. At the end of August we are going down to St. Martin's Cove (near Cape Horn), leaving an Observatory here, and we shall be there a couple of months. On our return, we expect to receive orders to go again south, but as it is uncertain, you may expect to have me again amongst you in a few months. I do not know if you will be able to decipher my hieroglyphics; but you are an old sailor, and know how to take the will for the deed; my time is very much occupied, or I would give you a longer yarn. If you have a few minutes' spare time, believe me I shall be delighted to hear how you all get on. Direct it to the Cape of Good Hope to await our arrival, for we are certain of touching there. Yours, &c. ——

ROYAL ACADEMY.

Sir R. Westmacott's Lectures on Sculpture.

LECTURE II.

On the evening of the 20th ult., Sir R. Westmacott delivered his second lecture on Sculpture. It embraced a general survey of the schools and style of art of and from the earliest, or *archaic*, period, down to the fifth century before Christ; the age of Pericles, and of Myron, Phidias, and Polycletus. The Professor in his introduction adverted to the primary object or application of sculptured forms, and remarked how that circumstance influenced the style or sentiment of the artists. The purpose of the first emblematic representations in all countries being, he said, to present to the people objects of public worship, the spirit which invented them became transferred to Art. With some nations, as with the Egyptians, this representation could only be effected under certain forms established by custom or by law. The same obstruction to improvement (for it had that effect) existed in more eastern countries; and it may be traced even in the early periods of Rome. With the Greeks, also, a high degree of veneration for ancient types continued for some time after they had arrived at comparative eminence in art; but when the rapid progress in civilization of this highly gifted people had produced its natural effects, both in their physical and moral condition, their ideas respecting art experienced, also, a revolution, and, as will be seen as we proceed in our examination, they substituted more pleasing forms for the hitherto prescriptive characters of their divinities; and while they rejected or modified the old symbols, they sought in nature for the character most accordant with their ideas of fitness with relation to the personification proposed.

The first types of their divinities were mere blocks Thus we find Jupiter Milichius was worshipped under the form of a pyramid; and Diana Patroa, and the ancient Venus of Paphos, were represented by rude columns; to these, heads were shortly after added. The Lacedæmonians retained this practice for a long time, and Pausanias speaks of a Venus Urania of that early style of art preserved at Athens in his time.

Figures, with the arms attached to the body, in the Egyptian manner, followed next; the separation of the lower extremities being marked by a mere line; but at what time the formation or developement of the whole figure, with action, took place is uncertain.

This extremely rude art appears to have continued until about 800 years B.C., when Dibutades of Sicyon is supposed to have formed his school. The statues of that time, from the custom of exhibiting figures at festivals, were draped, and we have most probably a fair specimen of their simple con-

Digitized by Google

struction and treatment in a fragment of a draped statue now in the British Museum. It is from the temple presumed to have been dedicated to Themis, at Rhamnus. It must be admitted, however, that the foundation of the schools of Sicyon, Corinth, and Ægina is involved in much obscurity. The most authentic examples of archaic art and style are to be found in coins and medals.

It would not be difficult, perhaps, to trace the causes of the changes in Art; to distinguish the passions or motives which influenced these changes; and to see how far imagination swayed the artist in this respect. In recurring to the history of the people amongst whom the arts were most successfully cultivated we shall find that the departures that were made from ancient usage arose from no light or unsteady desires,—from no inconsistency or indifference to the Arts in the mass of the people, but from a sense of their religious and political importance, combined with the personal feeling of the artist, who desired to have scope for the full developement of his powers; and the time arrived when a nation felt that its glory was as immediately connected with the fame of its artists, as with that of its historians and its poets.

The first period of Greek art, that is, from the 30th Olympiad to the age of Ageladas, was distinguished in its earliest stage by the same peculiarities in the eyes, countenance, and general forms which I have noticed in the early period of Etruscan Art. The earliest Athenian tedradrachms, as well as the coins of Posidonia, Caulonia, and some others, the character of which are eminently deficient in variety and expression, supply examples of this period.

The more ancient temples of Greece, and the statues within them, having been utterly destroyed in the Persian invasion, medals, from the symbols found on them, not only assist in making us acquainted with the ideas entertained of art in those towns where they were struck, but they often lead to the knowledge of statues, and other works now lost, and also of the epochs in which they were executed. The Professor took occasion to observe, that as the Mint was in many cities wholly under the control of the priesthood, a long adherence to archaic form was secured, even after the twin branch of Sculpture had considerably improved. Indeed, the respect paid by the Greeks themselves to early emblems, frequently led them to preserve these forms on their coins, in preference to imitating on them their own more beautiful statues.

In the choice of medals to assist his inquiry into the progress of art, the student was recommended to have recourse to those of the cities of Magna-Græcia and Sicily rather than to those of Greece Proper; the former were situated in a more fruitful soil, and from that and other causes they sooner attained to a state of wealth and prosperity, always favourable to the developement of art.

It is remarkable that the faculty of seeing and boldly copying nature is strongly indicated in the coins of Sybaris, which are even of an earlier date than those of Posidonia and Caulonia. In the Bull, which appears on the reverse of these coins, the hind quarters of the animal are treated in a very grand and effective manner, and the whole is executed with surprising freedom.

From the necessity of adapting both alto and basso relievo to their coins, these works present notions of just proportions at a very early period of art. The best specimens of the kind in this country (speaking of works in low relief), may be seen in a subject representing 'Hercules taming the Hind,' and in one of the 'Dioscuri curbing a Horse.' They present a quality of relievo which has been successfully adopted in a later age, for works in particular situations. An interesting example, in marble, may be seen at Wilton House. This very curious basso-relievo has on it an inscription in the Boustrophedon manner.

The style of this early period is rigid, and there are peculiarities which distinguish it in a marked manner from that of later ages. The muscles, more especially of the body, are more strongly indicated than they appear in nature; but they are accurately disposed. The proportions are long; sometimes extending to eight heads; the chest is full, and the lower part of the abdomen contracted, while the thighs are much charged or swollen. This style continued so late as 500 B.C.

Thus, from the examples preserved to us of bassi-relievi, and with the aid of medals and coins, we may form a tolerably just estimate of the state of Hellenic Art, for several ages,—from the rude to the more enlarged view of nature, until the principles of style became fully established at about 525 B.C.—the age of Canachus and Aristocles, the heads of the School of Sicyon,—and of Ageledas the master of Phidias, of Myron, and of Polycletus.

Art, even in the most adverse times, when Greece was disturbed by various foreign irruptions, but more particularly by the check given to its prosperity by the Dorian Invasion, was still supported by Religion; and although slow in its progress, it was never, as with their literature, wholly interrupted. Their statues, at earlier periods of art, were usually of wood or clay, or in what is called Toreutic Art. But the Professor remarked that Pausanias mentions having seen at Lacedæmon a statue in brass by Gitiadas, whom some antiquaries place at 750 B.C.; and another by Learchus, of Rhegium, said to be the oldest existing in that material. They were of hammered work, and rivetted, and, most probably, were—so-called—Dædalian Art.

There are also some statues in marble of the above period. The colossal head of Hercules in the British Museum, with crisped locks of hair, is of the same style. The Professor's opinion of this work is, that it is a copy from a bronze of an earlier period. This head has, however, other peculiarities than those common to art of its supposed age, in the double marking to the upper eyelids. The coins of Acanthus of this period are remarkable for their beauty and intelligence, as are also those of Ænos and of Thasos.

It must be observed, that, imperfect as are these examples, they were the germ of those principles which were preserved to succeeding ages. Thus we find, at a very early period, when the free study of nature was still fettered in Greece (the fine arts being under the control of hieratic laws), that the artists established certain principal divisions of the body; this was soon followed by the extension of the masses and the more correct marking of the muscles; the union with the adjacent parts was observed, and much attention was given to the termination of the bones, and their appearance as indicated in nature. Though we still find no direct attempt at beauty, there was a more exact consideration as to parts; and though the treatment or execution was angular and severe, both in statues and in works in relievi, the drawing generally was more correct.

We now approach a period when civil institutions became more settled, and science and literature had begun to enlarge the mind. The Greeks perceived that something more was required than the mere imitation of nature, but they had not yet arrived at that degree of confidence which stimulated them to follow immediately the impulses of genius, though many of their works clearly show that they were struggling for more noble objects and a wider range.

Before I proceed to consider the style of the immediate precursors of Phidias, and their reputed works, I shall advert, as they more properly belong to the Archaic Age, to the discoveries among the ruins of the temple of Jupiter Panhellenius, in the island of Ægina.

Of the artists who constructed this temple, or who executed the sculpture, we are uninformed. We may, however, from the high character of the people, and from the veneration in which the Panhellenian god was held, reasonably conclude that the most celebrated artists of the age were employed in the execution of these sculptures. Callon was at this time in great repute, as was also Canachus; and Ageladas, then in his noviciate, worked under them. This was about 535 B.C.

The Æginetans had long held a distinguished place, both as a commercial and a refined people, among the other nations of Greece. The Athenians, jealous of their reputation and increasing naval power, sought by exclusive decrees a cause of quarrel, which ultimately led to the captivity and dispersion of the weaker state. After the Battle of Ægos Potamos, and the termination of the Peloponnesian War, 405 B.C., the Æginetans were allowed to return to their island, but they never again rose to any great consideration or power.

The dispersion of a school which had been held in such high esteem, and in which it may be said Myron, Polycletus, and Phidias were formed, must have had considerable influence on the people with whom they had colonized, and must have contributed generally to the establishment of sound principles in art. In the marbles to which I have alluded, the peculiarities of the early manner are not only subdued, but a striking attention to nature may be observed in the bodies, the arms, and the lower extremities, while the heads and the hair have all the peculiar and distinctive character of the symbolical and prescriptive sculpture of the remote Archaic period.

It will not be very difficult to account for this discrepancy and seeming inconsistency. Typical Sculpture, as the Professor had before remarked, was preserved (in coins more particularly) long after considerable progress had been made in art. With the Æginetans there were most powerful reasons for its being more especially observed. Proud of their lineage, and their direct descent from the Æacidæ, they remained strongly attached to every idea connected with their local deities, or with forms which conduced to the remembrance of the heroes from whom they sprung; and the respect in which these (the Æacidæ) were held throughout Greece induces a strong belief that these marbles present typical images; perhaps of Telamon, of Peleus, of Achilles, and Pyrrhus, ancestors of the Æginetans, and the memory of whose heroic actions they must have been particularly anxious to preserve.

The heads, which afford subject for the antiquary, rather than the artist, have all the peculiarities of the most ancient period; but the eyes protrude, and are rather full on the profile; the mouth is a little open, the terminations turning upwards, giving the expression of a constant smile; the chin is large and pointed; the hair on the heads, beards, and on the pubis is disposed in a regular order, in small and crisp locks. To several of the helmets metal ornaments were attached.

In these marbles we may perhaps trace the last examples of the early consecrated form in the heads of divinities and heroes; though later artists imitated the style of Etruscan statues, and we are told that Eutierates, the son and scholar of Lysippus, preferred the austerity of preceding masters to the elegance of his father's works; and thus we still find, even in the soft age of Praxiteles, examples of the more severe manner of Myron. But it was no longer a prescribed system of representation from which artists could not depart.

An example may be seen of the style of art immediately preceding the age of Phidias, in a statue of Apollo in the British Museum. From the description left us by Pliny and others, it affords us a fair idea of the style of Onatas. Though it is hard and severe, it has much grandeur and vigour, and there is in it an approach to ideal grace, and a more careful imitation of nature: we may still, however, trace, both in the treatment of the head and in the thighs, some of the characteristics of archaic art.

Among the works which immediately preceded the most splendid era of Sculpture, may also be classed the marble statue of the Discobolus, or Quoit-thrower, of the British Museum; an ancient copy from the celebrated statue in bronze, by Myron. This statue, it must be observed, offers in its composition one of the very few examples preserved to us in the antique of statues in violent action.

The Professor here alluded to the great advantage which accrued to art from its extensive employment in decorating temples, and in recording the heroic deeds of the Athenians. The defeat of the Persians had as extraordinary an effect on the arts as on politics. The enterprising spirit of the Athenians received every possible stimulus to exertion, and the aid of art was called in to do honour to noble and patriotic achievements. This gave ample employment to the sculptor, while religion became sufficiently indemnified for the departure from the old consecrated forms in the almost superhuman excellence which characterized art in the representation of gods and heroes, and in the surpassing splendour of chryselephantine Sculpture, or the combination of ivory and gold.

To name all the distinguished sculptors and statuaries of this period, would offer a mere catalogue without any very useful application. It will be sufficient to say, that this age was graced by Phidias,

Digitized by Google

Alcamenes, and Agoracritus, and embracing a period of fifty years, by Polycletus, Gorgias, Myron, Scopas, and Pythagoras. Under these artists, or at about 430 years B.C., Sculpture may be said to have reached its acme.

OUR WEEKLY GOSSIP.

Too zealous to wait for Easter, Mr. Burford, by way of Carnival treat, has opened a new Panorama: the subject, the City of Edinburgh, taken at the moment of Her Majesty's arrival,—of course, in the absence of the Baillies. The view has almost the literal and lineal truth of a Daguerréotype, not merely as regards the aspect of the city, with its picturesque contrast of ancient and modern architecture, but as giving the rainy, variable atmosphere of the North. It seemed to us, however, more feebly coloured than usual; but this is an impression which we know wears off with familiarity; but were the judgment accepted as final, it would do little to damage the value of a picture, which is as welcome as it is interesting.

There are rumours of extensive alterations being about to take place in Westminster Abbey. The organ is to be removed, and the choir enlarged, by taking in portions of the aisles of the nave and transepts, now detached by wooden screens. These changes will necessitate others in the present arrangement of the choir. We hope they will lead to the substitution of real carved wooden stalls, in a more consistent style and better character than the present, which we believe are *cast iron* painted. The pews, of course, must be abandoned, when the crusty vergers will lose their bribes for civility—a preparatory step, perhaps, to the Dean and Chapter giving up the exhibition fees. The monuments against the present choir screen must also find some other locality—perhaps in the triforium. Let us hope that the dusty matting will be removed from that venerable relic of Mosaic work, Bishop Ware's pavement; and that the black and white marble flooring will give way to the red and amber patterned tiles. But we ought to possess Fortunatus's wishing cap to effect half our desires with respect to this venerable building; so we cease for the present.

The following is an extract from a letter written by a gentleman, who has lately joined Dr. Lepsius and his party:—"On Sunday morning, we visited the Great Pyramid. The prospect was indeed unique, and can scarcely be described. On the one side the rich valley of the Nile, on the other the dead and barren wilderness, and near us the burial places, over which 5,000 years have passed without being able to efface them. All our friends are well, and suffer more from cold than heat. I am now once more in Cairo in order to make some purchases. This place is thoroughly eastern, and we may fully realize here all that we have read in the Arabian Nights. Constantinople cannot, in this respect, be compared with it. Cairo is, indeed, a city of wonders, with its narrow, closely-packed houses, covered with strange, fantastic carving, its gigantic mosques, its slender, arrowy minarets, and its rich suburbs crowded with palm groves, broad-leaved bananas, cypresses, and all the rich vegetation of the Nile, its noisy, half-naked, muscular, Arab and Egyptian population, varied now and then by the solemn Turk, riding on his finely caparisoned ass or stately camel. On one side of the town are gardens and fields extending to the banks of the Nile; on the other the Mocattam range begins to rise, and the whole scene is crowned by the lofty citadel. In the evening a magician paid us a visit, who exhibited Lord Nelson with his one arm, an exceedingly good likeness, in a mirror of ink. The whole, however, was a most ridiculous exhibition. Among others, he gave us a representation of the present Prince of Wales *in black trousers, and with enormous moustachios!* To-night we are to be visited by a snake-charmer. As soon as our investigations on the field of the Pyramids are finished, we think of going on to Saccara; from thence we shall proceed to Fazum, which is only a day's journey further. Lepsius's plan is then to go slowly on camels along the eastern bank, to Syene, and return by the western. The journey farther south will be postponed to the next winter."

The *Fife Herald* mentions, that Miss Wilkie, sister of the late Sir David Wilkie, has presented for the use of the church of Cults a splendid gallery clock, made by Mr. Thomson, of London.

A further consolidation of the Public Records took place at Carlton Ride last week, and likewise the removal of certain documents of a miscellaneous character was effected from the Chapter House to the Rolls House. The records brought to Carlton Ride were all of a dry, legal character, and chiefly modern—indictments, affidavits, writs, orders, controulment rolls, &c. (the latter from the reign of Edward the Third)—belonging to the Court of Queen's Bench.

The daily papers record the recent decease of Michael J. Quin, in the fiftieth year of his age. He was, we believe, the first editor of the *Dublin Review*, and published 'Travels in Spain,' 'A Steam Voyage down the Danube,' and, if we mistake not, had another work on the eve of publication.

Letters from St. Petersburgh announce the death in that city, at the age of seventy-four, of Frederic d'Adelung. Adelung was born at Stettin, in Prussia, and was son of the still more illustrious linguist of the same name. The son is the author of numerous works on the languages and literature of the East, and on Asiatic, Russian, Scandinavian, and German antiquities.—A Russian journal, the *Gazette of Commerce*, also gives a tempting description of an acquisition recently made by the Museum of the *Corps des Mines*, in St. Petersburgh, the gift of a munificent merchant, M. Löwerstine. It consists of a remarkable collection of pearls and precious stones—amongst which are more than 500 *monstres* pearls, valued at upwards of 60,000 roubles. One of these, in particular, is a pearl of prodigious size and incomparable beauty, adhering to its shell. The collection of precious stones, cut and in the rough, of all forms and hues, and the collection of diamonds, are not less extraordinary than that of the pearls. The Emperor has acknowledged the donor's munificence by creating him a Knight of the order of St. Stanislaus, of the third class.

It seems that Mendelssohn has made another addition to the store of concert music, by the recent production, at Leipsic, of a grand cantata 'The First Walpurgis Night.' This was enthusiastically welcomed; some of the pieces receiving a double *encore*. We are told that there is a chance of Spohr coming to conduct the last of our Philharmonic Concerts; and we read that another difference, between Duprez and the management of the French Opera, has been followed by the tenor proffering his resignation. By all these novelties and changes we English may possibly be gainers.

The *Kunstblatt* announces the completion of the monument to Sebastian Bach. It is as yet covered, and will not be exposed to public view until the 21st of this month, which was Bach's birthday.—The same journal also informs us that the arcades of the Minster at Aix-la-Chapelle are to be restored, by command of the indefatigable King of Prussia, at an expense of 20,000 thalers.

The continental papers furnish several heads of information interesting to archæologists. The *Armoricain* gives the particulars of a remarkable discovery resulting from the recent gales. A complete mountain of sand has been displaced on the coast at Crozon, and the casualty has exposed to view the remains of a village, with its church and surrounding cemetery. The oldest inhabitant of the country retains no tradition which can have reference to this sea-Herculaneum. From Brittany, we hear of a discovery which has been made in the fine old cathedral of Saint-Pol-de-Léon. The workmen engaged in repairing the vault, discovered a vase of baked clay, which being broken, was found to contain some thirty ancient coins, of the fourteenth century. They are all the coins of contemporary princes—placed there, no doubt, to indicate the date of the portion of the building in which they were discovered—the greater number of them being of the dukes of Brittany. Amongst these pieces there are—one of John, Count of Montfort, who died in 1345, the father of Duke John IV., and husband of the famous Jeanne de Montfort, the daughter of Louis Count of Flanders and Nevers, who died at Cressy, in 1346,—one of this latter prince,—one of Edward III. of England, who was John's ally in his wars against France, and the father of his first wife,—one of David, King of Scotland,—one of Philip of Valois,—and several of Charles V.—From Copenhagen, we have accounts of the annual meeting of the Northern Archæological Society—the most interesting of whose proceedings were the presentation and explanation of several monuments recently discovered in America, corroborative of the view of its early intercourse with Europe, long before the days of Columbus. These monuments were,—1, a stone slab, bearing an inscription composed of twenty-four Runic characters, discovered in the valley of the Ohio; 2, a pair of pincers, of massive silver, found in the Brazilian province of Bahia, exactly resembling those of the same kind, in bronze, so often met with in the tumulary mounds of Scandinavian countries; 3, arrows, with heart-shaped heads in rock crystal, saws made with the teeth of sharks and fragments of flints, discovered in California, and resembling in all respects those used by the ancient Greenlanders; and 4, three very ancient Peruvian vases. The chaplain to the frigate *Bellona*, during her last voyage of circumnavigation, announced that the Brazilian government had taken steps for exploring the ground on which so many ruins have been found, which appear to announce the former existence of a Scandinavian colony. This ground is situate in the southern portion of the province of Bahia, on the left bank of the Braço-do-Cinçora, to the south of the Sierra-do-Cinçora. The Society has also received intelligence of the discovery of the foundations of a church in Greenland, the existence of which has, hitherto, been unsuspected.

We publish, in another column, a letter from an officer on board H.M.S. *Terror*, giving some interesting particulars of the Antarctic Expedition. It is, as the writer states, "a sailor's yarn," and was addressed to an old sailor; but it is of great interest, and we are obliged for being permitted to make in public.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS IS OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1s.: Catalogue, 1s.

WILLIAM BARNARD, Keeper.

THE CHINESE COLLECTION, Hyde Park-corner.—Consisting of objects exclusively Chinese, surpasses in extent and grandeur any similar display in the known world, entirely filling the spacious saloon, 225 feet in length, and embracing upwards of fifty figures as large as life, all fac-similes, in their native costumes, from the highest mandarin to the blind mendicant; also many thousand specimens, illustrating the appearance, manners, and customs of more than three hundred million Chinese, is NOW OPEN, from Ten till Ten.—Admittance, 2s. 6d.; Children under Twelve years of age, 1s.

ROYAL POLYTECHNIC INSTITUTION.

During Lent the DISSOLVING ORRERY will be exhibited on WEDNESDAYS and FRIDAYS, at Twelve o'Clock in the Morning and at Eight in the Evening. At work daily, a complete arrangement of COTTON SPINNING MACHINERY, consisting of a CARDING, ROVING, and SPINNING FRAME, showing the whole Process of converting raw Cotton into a State fit for Weaving. Cary's NEW MICROSCOPE, magnifying Seventy-four Million times. New DISSOLVING VIEWS, exhibiting Scenes in AFFGHANISTAN, CONSTANTINOPLE, the HOLY LAND, &c. &c.

The COLOSSAL ELECTRICAL MACHINE, is exhibited Daily, at a quarter to Three and at Eight in the Evening, except Wednesdays and Fridays. Lectures Daily on CHEMISTRY and NATURAL PHILOSOPHY, by Dr. Ryan and Prof. Bachhoffner. The CLASS LECTURES are continued as usual. Admission, One Shilling, Schools, half-price.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.

THE Anniversary Meeting was held on the 17th of February, when Mr. Warburton was elected President, and, for *Vice Presidents*, Dr. Buckland, Mr. Darwin, Mr. Greenough, and Mr. John Taylor;—*Secretaries*, Mr. R. A. C. Austen, and Mr. W. J. Hamilton, M.P.; *Foreign Secretary*, Sir H. T. De la Beche; *Treasurer*, Mr. J. L. Prevost.

On announcing the award of the Wollaston Medals, and of the Donation Fund for 1843, Mr. Murchison, the President, made the following observations:—

The Report of the Council having acquainted you that Wollaston Medals have this year been adjudicated to MM. Dufrénoy and Elie de Beaumont, I beg to be permitted to preface their delivery by a few observations.—With liberal and enlightened views, Dr. Wollaston left the Council perfectly unfettered in their selection of persons qualified to receive the proceeds of a fund which he bequeathed to us for the purpose of encouraging geological researches, or of rewarding those who successfully completed them. In founding a medal which bears on it the likeness of that great philosopher, we recognize the principle of an occasional reward for eminence in geological labours, whilst the interest of the surplus money might be annually bestowed on some man of

Digitized by Google

science employed in the accumulation of facts. In the course of the Address which I am about to read, the useful application of one of these donations derived from this source will be pointed out, and in the mean time I will briefly advert to the destination of the Gold Medals, which have been adjudicated to M. Dufrénoy and M. Elie de Beaumont, for their Geological Map of the French dominions. Of the peculiar excellencies of this great work, as creditable to the French Government, who fostered it, as to the geologists who executed it, I have already expressed unqualified approbation in my discourse of last year, when the map was sent to us, with the assurance of its authors, that they had great pleasure in offering it to us, as it was in our own islands, when young geologists, that they first acquired that knowledge of the classification of sedimentary deposits which led them to embark in their great national enterprise.

To treat of all the merits of our distinguished Foreign Associates, would be to enter not only upon the geology of France, so fertile in remarkable phenomena, but also on the structure of other tracts of the surface of the globe on which they have reflected light. I must therefore restrict myself to the expression of my sincere belief, that this Society never made an award more creditable to its just appreciation of pure geological merit, than is evidenced in the adjudication of our Wollaston Medal to men who have raised such a durable monument to our science as the Geological Map of France.

In heartily congratulating you, gentlemen, on having done honour to yourselves by adding the names of Dufrénoy and de Beaumont to the list of those eminent foreign philosophers who have already won the meed of your applause, you have, I am convinced, raised the value of the distinction in the estimation of all cultivators of geology; and in handing these medals to our Foreign Secretary, Sir H. De la Beche, for transmission to our French Associates, I beg that he will express to them, that in this award we view them not as foreigners, but as friends and leaders, from whose writings we have received both instruction and delight, and whose successful career we have thus endeavoured to honour by the choicest gift we have it in our power to bestow.

In presenting the medals to Sir H. De la Beche, Mr. Murchison rose and said,—

Sir Henry, I have now simply to request you to make known to our distinguished French Associates how highly we prize their services, a task which may indeed be well confided to your hands, as by your own long continued and successful labours in the same departments of our science, you are better qualified than any member of this Society to appreciate the high order of merit of the Geological Map of France.

Sir Henry De la Beche expressed the great gratification it afforded him to receive the medals on behalf of his distinguished friends MM. Dufrénoy and Elie de Beaumont. It would be superfluous in an assembly of geologists such as the present to advert to the labours of such men: they were known and fully appreciated by the geological world. The Geological Map of France, now before the Society, spoke for itself. MM. Dufrénoy and Elie de Beaumont had desired him to express to the Society their high estimate of the honour conferred upon them; and he felt assured that the Society, on its part, could not but experience great gratification in thus endeavouring to show their high sense of the important benefits it in common with the geologists of all nations had derived from the labours of these distinguished men.

The President then handed the balance of the Wollaston Fund to the Secretary, Mr. W. J. Hamilton, to promote the publication of Mr. Morris's tabular work, on organic remains.

Feb. 22.—The President, Mr. Warburton, in the chair.

1. 'On some new species of Fossil Chimæroids, with remarks on their general affinities,' by Sir P. G. Egerton, Bart.—The number of described species of *Chimæra*—soft-boned fishes of singular forms—is very small, whether recent or extinct. They were first recognized in a fossil state by Dr. Buckland in 1835. The original memoir comprised descriptions of four species; two others were added by Professor Agassiz. The list was soon afterwards augmented by two species from the Stonesfield oolite, constructed by Dr. Buckland from some enigmatical specimens forwarded by the author under the impression that they had some resemblance to the subjects he was engaged upon. A ninth species came from the Caen oolite. A tenth has been described by Professor Owen, in his Odontography, from specimens in the Hunterian Collection, and Professor Agassiz has named an eleventh, in the museum of Lord Enniskillen, from the galt. Sir P. Egerton, in the present memoir, doubles the number. He describes seven new species from the Stonesfield slate, one from the Molasse of Switzerland, and three from the neighbourhood of Boulogne. With one exception, the characters are drawn from the lower jaws of the animals; the appreciation of their distinction is simple and unerring, and the risk of ascribing specific differences to teeth derived from one and the same species, varying in form according to their position in the mouth, is avoided. The author gives a full and elaborate description of each, instituting a critical comparison of the several species with each other and with their living analogues. He examines, in detail, the structure of the characteristic parts of the existing *Chimæras*, and corrects some errors in the published figures of their jaws. He observes, that the fossil species hitherto ascribed to the genus *Chimæra*, arrange themselves naturally into two groups, the one characterized by the size of the teeth and the coarseness of their structure, the other by their compact form and denser structure. The species belonging to the former division range from the tertiary strata to the great oolite; the latter group is confined to the oolite. He thinks it may be necessary hereafter to subdivide the fossil species into two genera, and proposes, in such case, the name *Gavodus* for the second group. At present, he includes the whole under the generic name of *Ischyodus*, indicative of the great power of jaw these fishes must have possessed. From specimens in the Hunterian Collection he constitutes two new genera of Chimæroid fishes, the one, *Elasmodus*, including two species, one of which is from the London clay, and the other, *Psaliodus*, including a single species, supposed to be also from that deposit. Sir P. Egerton adds a table of all the known fossil genera and species of Chimæroids, with their localities, and the strata in which they have been found.

2. 'On the Geology of Bayonne,' by Mr. Pratt.—The author gave an account of a remarkable deposit in the neighbourhood of Bayonne, referred by French geologists to the upper part of the cretaceous system. It is many hundred feet in thickness, more or less highly inclined, and resting, as far as the disturbed state of the district will admit of a determination, nearly conformably upon well characterized cretaceous strata. The whole has apparently been elevated by the same causes which have disturbed the cretaceous beds in the neighbourhood. It contains numerous fossils, the greater part of which are tertiary, a few referable to cretaceous forms, and several new or indefinite. The mineralogical character of this deposit differs equally from any known tertiary or cretaceous system, approaching more nearly the plastic clay, and in its upper part apparently covered by it. On the other hand, the existence of some cretaceous species among its fossils, the doubtful character of others, and the nearly conformable position and high inclination of its strata, overlying the chalk marl, seem to connect it with the cretaceous system. Mr. Pratt describes, in detail, the sections of this deposit, seen on the sea coast, in the neighbourhood of Biarritz, where the cliffs vary from twenty to eighty feet in height. The strata are much disturbed, and there are several faults. In places the intrusion of igneous rocks has converted an impure limestone into a hard crystalline marble, or dolomite. The organic remains differed in different localities, but Mr. Pratt found certain species common to all the beds. The fossils therein found differ altogether, however, from those which occur in the cretaceous beds by which they are succeeded. The latter have much the appearance of chalk marl, and form cliffs varying from 50 to 150 feet in height. Mr. Pratt gives lists of the fossils found by him in this interesting deposit. Several of them, referred by French naturalists to cretaceous species, he found on comparison, to be distinct. He remarks, that though there is a gradual change of species in the organic remains from the first rise of the strata to their termination, certain corals and shells continue throughout, and the change is not greater than might be expected, considering the variety in the mineralogical character of the beds. He concludes by observing, that this extensive deposit, the characters of which are, on the whole, tertiary, and which probably may be placed earlier in the series than any described eocene beds (unless we except the Diablerets and some other deposits allied to them in position and fossil characters), has been elevated at a period posterior to the chalk.

GEOGRAPHICAL SOCIETY.

Feb. 27.—Sir Charles Malcolm, V.P., in the chair.—The reading of Mr. Schomburgk's account of his journey to the source of the Takutu, which had been begun at the last meeting, was resumed.—Mr. Schomburgk and his party having quitted Pirara on the 26th of March, arrived, after a march of fifteen miles, at the junction of the River Pirara with the Mahu. At this place they were detained some days in consequence of an accident, by which one of the men nearly lost his life, through his own imprudence. On the 2nd of April the party resumed their journey across the savannahs, and reached the junction of the Mahu with the Takutu. The point of confluence was found to be in 3° 35′ 8″ N. lat., and the difference of longitude between Pirara and the confluence 1ᵐ 36.11 west in time. The Takutu, which in 1838 had a width of 192 yards, was now found dwindled to a small rivulet, and almost stagnant, while the Mahu still poured forth a great volume of water, of a dark brown colour. The ascent of the Takutu in the corials was very slow and tedious, in consequence of the lowness of the water, which was such as frequently to necessitate the unloading of the boats. Among other objects found in the bed of the Takutu, a black sand was occasionally met with, in which were minute particles of gold; but whether or not the sand was worth washing, there was no opportunity of determining. The whole of the savannah between the Rio Branco and the Rupununi, between which two rivers the Takutu has its course, was found covered on the surface with a vast abundance of angular masses of quartz rock, while natural sections along the river showed the soil to be composed of white and ochreous clays, much mixed with rounded pebbles, with a covering of but a few inches of vegetable mould. Indeed, Mr. Schomburgk is of opinion that the savannahs are of no use but as grazing lands. Continuing the ascent of the river, and passing several affluents, coming in for the most part on the right bank, the travellers reached the western extremity of the Canuku Mountains, in which Mount Ilamikipany was found to attain a height of 2,500 feet above the savannah. The Sawara-a-uru river was next passed, by means of which and a portage the Rupununi is reached in three days. Hunting and fishing were successful, but on land the rattlesnake was to be dreaded, and in the water the caiman and sting ray. By one of the latter a man of the expedition was wounded, and his agony was so great as to render him almost mad; he hid his head in the sand and bit the earth with pain. The Cursato Mountains were next reached: they form a small chain, whose highest summit, in lat. 2° 47′ N., was 3,000 feet. A little beyond this, the route was continued along the left bank of the river, and having first crossed the Curati, and passed the Warecokua group of hills, they came to the river Watuwau. Of the Curati Mr. Schomburgk says, that by means of it and a portage to the Guidiwau, the Rio Branco is reached. As for the Watuwau, it was a foaming torrent, 150 yards wide, and very difficult to cross, in consequence of the rapidity of the current. From this place the travellers proceeded to the Tuarutu Mountains. They are about ten miles in their greatest length, and attain a height of 1,800 feet above the Takutu. Southward of this group rose the Ossotshuni Mountains, composed chiefly of granitic and amphibolic rocks. Leaving these, Mr. Schomburgk came to the Macusi settlement of Maripa, the inhabitants of which, he says, with those of two others in the vicinity, were the last Indians west of the sources of the Essequibo. Taking a guide from Maripa, the Takutu was again reached on the 6th of May; its bed was here only ten or twelve feet wide, its waters were collected in pools almost stagnant, and the colour nearly black, while lower down, before its junction with the Mahu, it is blueish. The bed of the river

Digitized by Google

was followed up for several miles, and in so doing the dry beds of two or three affluents were passed. On the 7th, Mr. Schomburgk selected a rocky platform on which to make his observations, and found the source of the Takutu to be in lat. 1° 50′ N., and nineteen miles west of Pirara. The next morning the party set out on their return. They retraced their steps some part of the way, and then Mr. Schomburgk crossed over in an E.N.E. direction to the Wapisiana Settlement of Kawurua, close to the Rupununi, which he visited. On the 16th he arrived at Tenette, on the right bank of the Takutu, where, finding it impossible that the party could proceed any longer in the boats, for want of water, Indians were procured to carry the baggage to Pirara, where they all arrived safe on the morning of the 22nd of May, in time to celebrate the birth-day of Her Majesty. They had been absent nearly two months, and had greatly suffered from fatigue and excessive heat. The paper was illustrated by a map, and several geological specimens were exhibited.

ROYAL SOCIETY.

His Grace the Duke of Norfolk, Sir B. Heywood, Capt. S. W. Widdrington, R.N., G. O. Rees, M.D., A. F. B. Creuze, John Gould, E. Solly, jun., J. B. Heath, J. MacCullagh, Esqrs. have been admitted Fellows. The following papers have been read, viz.:—

"Observations on the Blood-corpuscles, particularly with reference to opinions expressed and conclusions drawn in papers 'On the Corpuscles of the Blood,' and 'On Fibre,' recently published in the Philosophical Transactions," by T. W. Jones, Esq.

'Wind Table, from observations taken at the summit of the Rock of Gibraltar,' by Colonel G. J. Harding.

'Spermatozoa observed within the Mammiferous Ovum,' by Martin Barry, M.D.

'Experimental Inquiry into the cause of the Ascent and Continued Motion of the Sap; with a new method of preparing plants for physiological investigations,' by George Rainey, Esq.—The ascent of the sap in vegetables has been generally ascribed to a vital contraction either of the vessels or of the cells of the plant: the circumstances of that ascent taking place chiefly at certain seasons of the year, and of the quantity of fluid, and the velocity of its motion being proportional to the developement of those parts whose functions are obviously vital, as the leaves and flowers, have been regarded as conclusive against the truth of all theories which professed to explain the phenomenon on purely mechanical principles. The aim of the author, in the present paper, is to show that these objections are not valid, and to prove, by a series of experiments, that the motion of the sap is totally independent of any vital contractions of the passages which transmit it; that it is wholly a mechanical process, resulting entirely from the operation of endosmose; and that it takes place even through those parts of a plant which have been totally deprived of their vitality. The lower extremity of a branch of *Valeriana rubra* was placed, soon after being gathered, in a solution of bichloride of mercury. In a few hours a considerable quantity of this solution was absorbed, and the whole plant, which had been previously somewhat shrunk from the evaporation of its moisture, recovered its healthy appearance. On the next day, although the lower portion of the branch had lost its vitality, the leaves and all the parts of the plant into which no bichloride had entered, but only the water of the solution, were perfectly healthy and filled with sap. On each of the following days additional portions of the stem became affected in succession; but the unaffected parts still preserved their healthy appearance, and the flowers and leaves developed themselves as if the plant had vegetated in pure water and the whole stem had been in its natural healthy state. On a minute examination it was found that calomel, in the form of a white substance, had been deposited on the internal surface of the cuticle; but no bichloride of mercury could be detected in those parts which had retained their vitality; thus showing that the solution of the bichloride had been decomposed into chlorine, calomel, and water, and had destroyed the vitality of the parts where this action had taken place: after which, fresh portions of the solution had passed through the substance of the poisoned parts, as if they had been inorganic canals. Various experiments of a similar kind were made on other plants, and the same conclusions were deduced from them. As the addition of a solution of iodide of potassium converts the bichloride of mercury into an insoluble biniodide, the author was enabled, by the application of this test to thin sections of the stems of plants into which the bichloride had been received by absorption, to ascertain, with the aid of the microscope, the particular portion of the structure into which the latter had penetrated. The result of his observations was, that the biniodide is found only in the intercellular and intervascular spaces, none appearing to be contained within the cavities of either cells or vessels. As the fluids contained in the vessels and in the cells hold in solution various vegetable compounds, their density is greater than the ascending sap, which is external to them, and from which they are separated by an intervening organized membrane. Such being the conditions requisite for the operation of the principle of endosmose, the author infers that such a principle is constantly in action in living plants; and that it is the cause of the continual transmission of fluids from the intervascular and intercellular spaces into the interior of the vessels and cells, and also of the ascent of the sap.

'On the Nerves,' by James Stark, M.D.—The author gives the results of his examinations, both microscopical and chemical, of the structure and composition of the nerves; and concludes that they consist, in their whole extent, of a congeries of membranous tubes, cylindrical in their form, placed parallel to one another, and united into fasciculi of various sizes; but that neither these fasciculi nor the individual tubes are enveloped by any filamentous tissue; that these tubular membranes are composed of extremely minute filaments, placed in a strictly longitudinal direction, in exact parallelism with each other, and consisting of granules of the same kind as those which form the basis of all the solid structures of the body; and that the matter which fills the tubes is of an oily nature, differing in no essential respect from butter, or soft fat; and remaining of a fluid consistence during the life of the animal, or while it retains its natural temperature, but becoming granular or solid when the animal dies, or its temperature is much reduced. As oily substances are well known to be non-conductors of electricity, and as the nerves have been shown by the experiments of Bischoff to be among the worst possible conductors of this agent, the author contends that the nervous agency can be neither electricity nor galvanism, nor any property related to those powers; and conceives that the phenomena are best explained on the hypothesis of undulations or vibrations propagated along the course of the tubes which compose the nerves, by the medium of the oily globules they contain. He traces the operation of the various causes which produce sensation, in giving rise to these undulations; and extends the same explanation to the phenomena of voluntary motion, as consisting in undulations, commencing in the brain, as determined by the will, and propagated to the muscles. He corroborates his views by ascribing the effects of cold in diminishing or destroying both sensibility and the power of voluntary motion, particularly as exemplified in the hybernation of animals, to its mechanical operation of diminishing the fluidity, or producing solidity, in the oily medium by which these powers are exercised.

'On a New Method of computing the Perturbations of the Planets whose eccentricities and inclinations are not small,' by Prof. Hanson.

'Variation de la Déclinaison et Intensité Horizontale observées à Milan pendant vingt-quatre heures consécutives le 25 et 26 Novembre, et le 21 et 22 Décembre, 1842,' par Prof. Carlini.

'On the minute structure of the Skeletons or hard parts of Invertebrata,' by W. B. Carpenter, M.D.—The present memoir is the first of a series, and relates only to the Mollusca; he proposes, hereafter, to extend his inquiries to the skeletons of the Echinodermata, and the various classes of articulated animals.

'Observations on certain cases of Elliptic Polarization of Light by Reflection,' by the Rev. Baden Powell.

'Variation of the Magnetic Needle as observed at Washington City, D.C., from 3h 30m July 24th to 3h July 25th, 1840, inclusive (Gottingen meantime),' by Lieut. Gillies, of the United States Service.

'Experimental Researches in Electricity,' Eighteenth Series, by Michael Faraday, Esq. Section 25, 'On the Electricity evolved by the Friction of Water and Steam against other bodies.'—The object of the experiments related in this Paper, is to trace the source of the electricity which accompanies the issue of steam of high pressure from the vessels in which it is contained. By means of a suitable apparatus, which the author describes and delineates, he found that electricity is never excited by the passage of pure steam, and is manifested only when water is at the same time present; and hence he concludes, that it is altogether the effect of the friction of globules of water against the sides of the opening, or against the substances opposed to its passage, as the water is rapidly moved onwards by the current of steam. Accordingly it was found to be increased in quantity by increasing the pressure and impelling force of the steam. The immediate effect of this friction was, in all cases, to render the steam or water positive, and the solids, of whatever nature they might be, negative. In certain circumstances, however, as when a wire is placed in the current of steam at some distance from the orifice whence it has issued, the solid exhibits the positive electricity already acquired by the steam, and of which it is then merely the recipient and the conductor. In like manner, the results may be greatly modified by the shape, the nature, and the temperature of the passages through which the steam is forced. Heat, by preventing the condensation of the steam into water, likewise prevents the evolution of electricity, which again speedily appears by cooling the passages so as to restore the water which is necessary for the production of that effect. The phenomenon of the evolution of electricity in these circumstances is dependent also on the quality of the fluid in motion, more especially in relation to its conducting power. Water will not excite electricity unless it be pure; the addition to it of any soluble salt or acid, even in minute quantity, is sufficient to destroy this property. The addition of oil of turpentine, on the other hand, occasions the developement of electricity of an opposite kind to that which is excited by water; and this the author explains by the particles or minute globules of the water having each received a coating of oil, in the form of a thin film, so that the friction takes place only between that external film and the solids, along the surface of which the globules are carried. A similar, but a more permanent effect is produced by the presence of olive oil, which is not, like oil of turpentine, subject to rapid dissipation. Similar results were obtained when a stream of compressed air was substituted for steam in these experiments. When moisture was present, the solid exhibited negative, and the stream of air positive electricity; but when the air was perfectly dry, no electricity of any kind was apparent. The author concludes with an account of some experiments in which dry powders of various kinds were placed in the current of air; the results differed according to the nature of the substances employed and other circumstances.

'Magnetical Term-observations made at the Observatory at Prague, for September, October, November, and December, 1842,' by Professor Kreil.

'On the Structure and mode of action of the Iris,' by C. R. Hall, Esq.

After reciting the various discordant opinions entertained at different periods by anatomists and physiologists relative to the structure and actions of the iris, the author proceeds to give an account of his microscopical examination of the texture of this part of the eye, in different animals. He considers the radiated plicæ, which are seen on the uvea in Mammalia, as not being muscular; but he agrees with Dr. Jacob in regarding them as being analogous in structure to the ciliary processes. The white lines and elevations apparent on the anterior surface of the human iris, he supposes to be formed by the ciliary nerves which interlace with one another in the form of a plexus. The iris, he states, is composed of two portions; the first consisting of a highly vascular tissue, connected by vessels with the choroid, ciliary processes, sclerotica and cornea; and abundantly supplied with nerves, which, in the human iris, appear, in a front view, as thread-like striæ, and which are invested,

Digitized by Google

on both surfaces, by the membrane of the aqueous humor. They are more or less thickly covered with pigment, which, by its varying colour, imparts to the iris on the anterior surface its characteristic hue, and, by its darkness on the posterior surface renders an otherwise semi-transparent structure perfectly opaque. The second component portion of the iris consists of a layer of concentric muscular fibres; which fibres, in man and mammalia generally, are situated on the posterior surface of the pupillary portion of the iris; but which, in birds, extend much nearer to the ciliary margin, and consequently form a much broader layer. In fishes and some reptiles they do not exist at all. The author then proceeds to inquire into the bearings which these conclusions may have on the physiology of the iris. He thinks that the phenomena of its motions can receive no satisfactory explanation on the hypothesis of erectility alone, or on that of the antagonism of two sets of muscular fibres, the one for dilating, the other for contracting the pupil. He is convinced that the contraction of the pupil is the effect of muscular action; but does not consider the knowledge we at present possess is sufficient to enable us to determine the nature of the agent by which its dilatation is effected. He, however, throws it out as a conjecture, that this latter action may be the result of an unusual degree of vital contractility residing either in the cellular tissues, or in the minute blood-vessels of the iris. It is from elasticity, he believes, that the iris derives its power of accommodation to changes of size, and its tendency to return to its natural state from extremes either of dilatation or of contraction; but beyond this, elasticity is not concerned in its movements.

STATISTICAL SOCIETY.

Feb. 20.—T. Tooke, Esq., V. P., in the chair.

M. V. Misson, of Brussels, was elected a Foreign Honorary Member. Three Fellows were elected.

A paper was read, entitled, 'The Agricultural Statistics of Five Parishes in Middlesex—Norwood, Greenford, Perivale, Hanwell, and Ealing,' by Mr. H. Tremenheere. Norwood contains 2259 acres; it is divided by the Uxbridge road into two nearly equal portions; that of the north is composed of a heavy clay soil; that on the south of a light loam, and of gravel. The rent of land varies from 40*s.* to 50*s.* per acre, and the farms in the southern division let for 20*s.* per acre more than those in the northern. The surface of the soil in the northern part indicates that almost the whole of it was within no very remote period in a state of arable cultivation. It is now almost entirely pasture land. The soil is richly manured, abundance of dung being procured from London, but there is a very general inattention to the preservation of manure made on the farms. The liquid produce of the stables and outhouses is permitted to run into the farm-yards, and to stagnate in black ponds in the winter, and evaporate in the summer. There is a strong prejudice against all modern inventions for facilitating or abridging labour. The wages of labour vary from 12*s.* to 15*s.* per week. A farm of 250 acres gives permanent employment to 14 labourers. The produce of wheat, in 1842, was 32 bushels per acre. Barley, 40; oats, 32; potatoes, 7 tons, and hay three-fourths of a ton. The number of live stock was 886. The population was 2,385 (including 1,005 persons in Hanwell Lunatic Asylum), and the number of inhabited houses 234. Greenford consists of 2,032 acres; it contains about 12 farms, the largest 221 acres. The rent of land varies from 32*s.* to 3*l.* per acre. There are 1,605 acres of meadow land, 371 of arable land, and 54 of woodland. The soil is a strong clay, well calculated for the growth of wheat, beans, and tares. Much of it is susceptible of improvement by a good system of draining. In some parts the land in winter becomes so saturated with water as to be unfit for the support of cattle. No modern machinery of any kind was observed. The agricultural produce, in 1842, was as follows: wheat, 24 bushels per acre; barley, 38; oats, 40; and potatoes, 74. The number of live stock was 673; the population, in 1841, 588, and the number of inhabited houses, 95. Perivale consists of 626 acres. It belongs entirely to one proprietor, and is divided into five farms. The soil is a heavy clay, requiring four and occasionally six horses to plough it. The most profitable mode of managing the land is found to be the production of hay for the London market. The drainage is very defective, and the farmers are little disposed to attempt any mode of improvement. The wages of labourers vary from 12*s.* to 14*s.* per week. The agricultural produce per acre was, wheat, 22 bushels, and hay three-fourths of a ton. The number of live stock was 599, of which 531 were sheep, these animals being taken in to feed at the rate of 2*s.* 6*d.* per score. The population 46. Hanwell contains 1,363 acres. The rent of land is about 50*s.* per acre. Manure is supplied from London. The agricultural produce, in 1842, was, wheat, 48 bushels per acre; rye, 24; oats, 48; potatoes, 6 tons; and hay 1 ton. The live stock amounted to 186; the population being 1,469. Ealing consists of 3,807 acres. It is composed of two different descriptions of soil, the heavy or clay and light rich loam, the former constituting meadow or pasture land, the latter arable farms and market gardens. The rent paid for arable and pasture land varies from 40*s.* to 60*s.* per acre. Farms are generally held on leases for 21 years. Little use is made of modern agricultural machinery. The implements of husbandry are of the same kind that were in use 30 years ago. A considerable portion of Ealing consists of market gardens, and forms a part of that large area in the vicinity of the metropolis, lying on both sides of the western road, which may be regarded as the great fruit and vegetable garden of London. The fruit gardeners have an upper and an under crop growing on the land at the same time. The soil is an excellent dry loam, and is abundantly manured. The number of labourers employed on these gardens is very great, being estimated at 30 persons to each acre. The average rent paid is 10*l.* per acre. The wages of labour vary from 10*s.* to 15*s.* per week, and the proportion of women to men employed is as two to one. An important benefit was conferred on the labouring population, and on the poor of this parish, in the year 1832, by the Bishop of London, as lord of the manor, who granted 20 acres of waste land for the purpose of inclosure and allotment. The proportion allowed to each person is 20 rods, at a yearly rent of 5*s.* The land is now divided into 146 allotments, and so great is the demand for those that are vacant, that there are, at the present time, 50 applicants. This system is found to be attended with most beneficial results. The occupier undertakes to live soberly, and to abstain from working on the Sabbath, on pain of forfeiting his allotment in case of non-compliance. The average assessment for the relief of the poor, from 1827 to 1833, was 4*s.* in the pound, and from 1835 to 1841 it has been reduced to 2*s.* 8½*d.* The wages of labour vary from 12*s.* to 15*s.* per week. The agricultural produce of 1842 was, wheat, 35 bushels per acre; barley, 50; oats, 43; potatoes, 85; and hay, 1 ton per acre. The number of live stock was 1,430, of which 1,200 were sheep. The population, in 1841, was 8,407.

A paper 'On the State of Education in the Parishes of Greenford, Hanwell, Acton, and Ealing,' and the towns of Old and New Brentford, by the same author, was appended.—Greenford contains one endowed free charity-school, which is attended by 14 boys and 15 girls, who are clothed at the expense of the charity. There is also a dame school, attended by 12 children. Hanwell contains one national school, supported by subscription, for 60 boys and 49 girls. The average attendance is 87. There are four dame schools, which supply instruction to 48. Three of these schools are kept by Dissenters, and one by a member of the Church of England. There is one common day school, attended by 25 boys and 15 girls, from the ages of 5 to 14, who are instructed in reading, writing, arithmetic, history, and geography, for 13*s.* to 21*s.* per quarter. There is also a middle day school, attended by 8 boys, who are taught the classics, elementary mathematics, geography, and history, for a guinea a quarter. Acton, with a population of 2,665 persons, has one national school, attended by 46 boys and 62 girls; one infant school, attended by 43 boys and 41 girls; three dame schools, attended by 17 boys and 18 girls; and one common day school, attended by 20 boys. Ealing contains one national school, attended by 159; one infant school, attended by 50; six day schools, attended by 60; two common day schools, attended by 34; and three middle day schools, attended by 36. The town of Brentford has been for several years past in a state of progressive decline, and the tendency to a state of deterioration has been accelerated of late by its almost complete disuse as a posting station. The labouring population consists of about 3,000, and may be divided into three classes,—those labouring in the market gardens, fishermen, and a considerable body of men deriving their support from a large soap manufactactory, an extensive distillery, gas-works, and water-works. The girls' national school at Old Brentford was founded by Mrs. Trimmer, in 1789; the average attendance of girls is 60; 1*d.* per week is paid for each girl. The infant school comprises 200 children. The British and Foreign school has an average attendance of 140 boys and 94 girls. There are two dame schools, attended by 86 children. An adult school has recently been established, for the instruction of both sexes in reading and writing, and for improvement in scriptural knowledge. It originated with the females, who were incited by the proficiency made by their daughters in the schools. In New Brentford there are seven schools, giving instruction to 156 boys and 120 girls. The author states, that he found the national schools in a very inefficient condition, and ascribes the circumstance to a want of proper superintendence on the part of the trustees or subscribers. Two of the common day schools are kept by reduced tradesmen, one by a mechanic, occasionally employed in the evenings, and three by men who had been employed as labourers or servants. One of these solicited charity.

CHEMICAL SOCIETY.—*Feb.* 21.—Prof. Graham in the chair.—1. A communication from Dr. Balfour was read, announcing the discovery of the principle *Theine* in Paraguay tea, the leaves of the *Ilex Paraguayensis*, as observed by Dr. Stenhouse. The infusion of these leaves forms the beverage of a large portion of the inhabitants of South America. The plant is found to contain the same active azotized principle as the tea of China, which chemical analysis has also found in coffee. Mankind has, therefore, adopted the seeds and leaves of plants, belonging to different orders, and having no natural relation, for a common purpose, which agree in containing the same remarkable substance. The characteristic constituent of chocolate, theobromine, is also known to be closely allied, in its composition and properties, to theine.

2. A communication from Prof. Croft, of Toronto, 'On the manufacture of Sugar from the stalks of Indian Corn' (*Zea mais*). This is a new branch of agricultural industry, which is exciting considerable interest in the United States. By plucking off the ears of corn from the stalks, as they begin to form, the saccharine matter is greatly increased, and the juice comes to contain three times more sugar than that of the maple, and equals, or exceeds, the juice of the ordinary sugar-cane, as raised in the United States. By experiments it appears, that one acre of maize yields 1000 pounds of sugar. This crop has also the advantage that it comes to maturity in from seventy to ninety days, while the sugar-cane requires eighteen months, and is precarious.

HORTICULTURAL SOCIETY.—*Feb.* 21.—R. W. Barchard, Esq., in the chair. M. W. Attwood, W. Broadhurst, K. Lewis, and J. Luscombe, Esqrs., were elected Fellows.—Mrs. Lawrence exhibited *Epacris nivalis, impressa*, and a hybrid bearing resemblance to *E. variabilis;* a beautiful plant of *Erica melanthera*, a mass of tiny lilac flowers; *E. Lambertia rosea*, a free-blooming flesh-coloured variety; *Mirbelia floribunda*, interesting on account of its deep violet colour; *M. grandiflora*, a pretty species, with yellow and dark-brown flowers, and *Cælogyne flaccida*, bearing a graceful spike of white blossoms, having the labellum delicately marked with yellow and brown; a Knightian medal was awarded. From T. Brocklehurst, Esq., were cut specimens of *Dendrobium Paxtoni*, a rare and beautiful species, with flowers of deep orange, having the interior of the labellum strongly marked with dark-brown, and the margin delicately fringed; *D. nobile*, the best of the group to which it belongs, and cut from a plant bearing upwards of 100 flowers; a dark variety of *Cyrtochilum maculatum*, and *Oncidium longifolium*, with bright yellow flowers, remarkable for being paler at the back than on the front: a Banksian medal was awarded. From S. Rucker, Esq., a fine cut specimen of *Oncidium Cavendishianum* with *Lissochilus grandiflorus*, a newly-introduced

Digitized by Google

terrestrial Orchidaceous plant, bearing a tall spike of singular violet-coloured flowers, and a pretty species of Dendrobium, also new, with smooth, shining leaves, from the axils of which its fragrant, light buff-coloured blossoms are produced separately and in pairs; a Knightian medal was awarded. From Messrs. Veitch, a new and elegant species of Passiflora, called, from its resemblance to the rays of an *Actinia*, *P. actinia*; it was raised from Brazilian seed, and will probably succeed in a green-house. From Mrs. Marryatt, a showy hybrid Rhododendron, apparently between *R. arboreum* and *caucasicum*; and a fine plant of *Banksia Cunninghamii*, bearing a multitude of its curious brown spikes of flowers: a certificate was awarded. From M. T. Smith, Esq., a magnificent specimen of *Leschenaultia formosa*, trained upon a hemispherical trellis, at least 2½ ft. in diameter, which it covered: a Banksian medal was awarded. From the Hon. W. Strangways were branches of Camellias, from plants growing in the open air, in Dorsetshire, in different soils—loam and peat; that from the former presented an unhealthy appearance; the others, from a plant removed a few years back into an American border, were in a most healthy state. With these were cut flowers of *Helleborus purpurascens*, *Euphorbia veneta*, Characias, and Myrsinites, which, although not producing showy flowers, are valuable on account of their blooming, in favourable situations, during the earliest months of the year; both the latter Euphorbias are hardy, but the former, unless protected, will only stand out in the milder parts. A cylindrical guard of iron wire, for protecting trees from hares and rabbits, made by Messrs. Burn, was exhibited: it was about 3 ft. high and 1½ ft. in diameter, the wire being secured to three iron rods, for keeping it steady in the ground. Mr. Judd exhibited three good Cucumbers, one called Young's Champion, the other, Mills' Frame, with the following account: "They were grown in a steep-roofed house, according to Ayres' system; the house is heated by hot water, and although 20 ft. long, the expense does not exceed 1*s.* 6*d.* per week; the temperature being never above 60° at daybreak. Fruit has been cut from the same plants since November, and they will continue in bearing till next autumn. It has been found that salt, used in the proportion of 8 oz. to 4 gallons of water, does not injure the foliage, is an excellent remedy against mildew, and a good manure for the plants." Young's Champion was stated to be the best kind for winter forcing. A certificate was awarded. From Sir H. Fleetwood, Bt., was an Olive-branch with fruit upon it, having been grown in a conservatory upon a plant, which with others was imported about 15 years since, and which, under ordinary treatment, annually produce an abundance of fruit. From C. G. Thornton, Esq., a dish of Filberts in excellent preservation: this was effected by gathering them in a dry day towards the end of September, when they are laid thinly upon mats or shelves in the fruit-room, and allowed plenty of air. They remain there for a fortnight, when they are put into open-worked hampers, a peck in each, and not pressed down. They are kept thus till the end of November, after which they are placed in boxes upon cut straw, a thin layer of each until the boxes are full, and they are afterwards changed every three or four weeks. The specimens exhibited were as plump and free from mouldiness as when fresh gathered: a certificate was awarded. From J. Moorman, Esq., were some fine specimens of Pears in excellent preservation; having been kept in a dark hayloft (occasionally ventilated), and laid upon *horsehair*: a certificate was awarded. From the Garden of the Society were the singular *Huntleya violacea*, *Brassavola glauca*, a rare plant with pretty greenish white flowers; *Begonia coccinea*, an exceedingly showy species of late introduction, with brilliant scarlet blossoms; *Hakea acicularis*, an old greenhouse plant, seldom seen, but well suited for growing in a pot in small greenhouses, on account of its easy cultivation, as well as for its singular dark-brown, warted fruit, and slightly fragrant white flowers; the latter of which are abundantly produced at this dull season: a hybrid Rhododendron, brought for the purpose of exhibiting the effect of an overdose of nitrate of soda upon it; this was apparent in the tips of the leaves having a scorched appearance, and in the flowers rapidly losing their colour after expansion: with these were *Dryandra armata*, with curious thistle-like blossoms.

LINNEAN SOCIETY.—*Feb.* 21.—E. Forster, Esq., in the chair.—A paper was read from Professor Croft, 'On the obtaining of Sugar from Maize' (see Report of Chemical Society, *ante*). The next paper was from the Rev. F. W. Hope, 'On the Portraits of Linnæus.' At the commencement of the paper the author referred to the English mode of spelling the name of Linnæus, with the *e* instead of the diphthong *æ*, which was the manner in which the name was spelt by Linnæus himself. Of paintings of Linnæus, the author was aware of the existence of seven original ones. These were by Roslin, Pasch, Krafft, Hollman, and Rehn. The one by Pasch is considered the best likeness extant, a copy of which is in the possession of Robert Brown, Esq. Hollman painted several, one of which is a full-length figure. The portrait by Rehn is at Holm, in Sweden, and has been lithographed by Templeton. Of engraved portraits and engravings of medallions, upwards of seventy exist. Nine of these are Swedish, and the best is by Auvilliers, and attached to the "Species Plantarum;" the next best is after the painting by Krafft, and is engraved by Snach. There are twelve French engraved portraits: the best is by Alix, after the painting by Roslin, and there is also a good lithograph by Vigneron. The author had seen but one Italian engraving, by Felix Luciani. In connexion with this, he related the circumstance, that when Linnæus first published his works they were ordered by the Pope to be burned, but before he died, Linnæus heard that the Pope had ejected a professor of botany from his chair, because he was ignorant of the writings of Linnæus. Of twenty-two English engraved portraits, the best is that by Roberts, after Pasch. The two in Thornton's Botany were also pronounced good. One of the English portraits, in profile, has the motto, "Deus creavit; Linnæus disposuit." Mr. Hope thinks this the work of an enemy, prompted by the same spirit as the following passage, said to have been written by Haller:—"The unbounded dominion which Linnæus has assumed in the animal kingdom, must, on the whole, appear disgusting to many persons. He sets himself up as a second Adam, and gives names to the whole animal creation, according to certain distinctive marks of his own; and without the least regard to his predecessors, he dares to place a man and a monkey in the same category." There are several busts of Linnæus existing, but where they are, and who done by, was not mentioned in the paper.

SOCIETY OF ARTS.—*Feb.* 15.—Mr. Rotch, V.P., delivered a lecture on Mr. Hullmandel's Lithotint process, which was illustrated by a variety of specimens.—The art of lithography was invented in 1796, by Alois Senefelder. While one of his dramatic works was going through the press, he spent much time in the printing office, and made himself fully acquainted with the art of printing. Numerous plans occurred to him for producing a substitute for the ordinary printing process, in none of which, however, he succeeded till his attention was accidentally directed to a fine piece of Kelheim stone which he had purchased for the purpose of grinding his colours. It occurred to him, that, by covering the stone with ink composed of wax, soap, and lamp-black, he might use it for his exercises in writing backwards. One day, as he had just succeeded in polishing a stone which he intended to cover with etching-ground, his mother entered the room, and asked him to write for her a bill for the washerwoman, who was waiting for the linen. Having no paper at hand, he wrote the required bill on the stone with his composition ink, which he intended to copy at his leisure; suddenly he thought of biting in the stone with aquafortis, applying printing-ink to it, as to wood engravings, and thus taking impressions from it. In this he succeeded. From Senefelder's time up to the present day, the art of Lithography has gone on gradually improving. The lithotint process of Mr. Hullmandel may be thus described:—The drawing having been sketched, tinted, and finished by the artist on the stone with lithographic ink mixed with water to produce the various shades, is covered over with gum water, and weak nitric acid, to fix it; after waiting a sufficient time to dry, a solution of rosin and spirits of wine is poured over the stone, and as this ground contracts by drying, it cracks into millions of reticulations, which can only be discovered by the use of a microscope; very strong acid is then poured over the aquatint coating, which, entering all the fissures, produces the same effect on the stone as the granulations of the chalk by the ordinary process. The rosin protects the drawing everywhere but in the cracks, and having remained a sufficient time to act on the unprotected parts of the drawing, the ground is washed off, and all appearance of the subject on the stone vanishes, until, ink being applied by a roller in the ordinary way, it is reproduced, and ready for taking off the required number of impressions, which in some cases have extended to the number of 2,000.

March 1.—Mr. Whishaw read a paper on Arithmography, accompanied by diagrams illustrative of this new art of universal writing.—The Arabic characters, being those ordinarily used throughout Europe, as well as in many other parts of the world, whether for purposes of commerce, mensuration, astronomy, &c., are taken as the groundwork of this system. Mr. Whishaw's Arithmographical Dictionary contains 12,200 words, including terms of art, &c., and in addition an appendix containing 7,326 proper names, names of persons, kingdoms, &c. The words are numbered regularly, from the beginning to the end of the Dictionary, so that the particular word, or the number corresponding with that word, is readily found; and it is evident that, if a French or Italian dictionary were similarly prepared, this system of numerical reference would form a complete key to the three languages. Nouns are distinguished by writing the first figure larger than the rest; and verbs by writing the last figure larger than the rest. The cases of nouns and adjectives are distinguished by prefixing a small figure, as—nominative, $^{1}7042$, a man, homo, *ανθρωπος*; genitive, $^{2}7042$, of a man, hominis, *ανθρωπου*, &c. The tenses and persons of verbs are, in like manner, represented by fixing small figures before and after the number corresponding with any particular verb, as $^{4}6391^{6}$, they loved; the small 4 shows the perfect, or fourth tense, (according to Dr. Major's Grammar,) and 6 representing the third person plural. When names of persons or places are to be represented by their corresponding numbers, a line is to be written under those numbers, as 5124 Pompey; 4841 Peterborough. Where numbers are to be read numerically, a line is placed over the figures, as $\overline{2000}$ 7861, or two thousand people. By this system an Englishman might correspond with a German, or a Welshman with an Italian, without either knowing the language of the other. The expense to each country adopting this system of communication would only be in the preparation and construction of a complete arithmographical lexicon.

MEETINGS FOR THE ENSUING WEEK.

- MON. Society of British Architects, 8, P.M.—'Observations on the Principles of Architecture as laid down by Vitruvius,' by W. W. Pocock.—'A Brief Description of Holy Trinity Church, Hull,' by W. L. B. Granville.—The Council will report their decision upon the Essays and Drawings sent in for the Prize Medals offered by the Institute.
- — Royal Academy, 8.—Sculpture.
- — Entomological Society, 8.
- TUES. Horticultural Society, 3.
- — Institution of Civil Engineers, 8.—'Description of a Method of laying down Railway Curves on the Ground,' by W. J. M. Rankine.—'Description of Lieut. Rankine's Spring Contractor, for suiting the Action of Railway-Carriage Springs to variable Loads,' by W. J. M. Rankine.—'On the Causes of Fracture of Railway Axles,' by W. J. M. Rankine.—'Description of Cast and Wrought Iron Bridges on the Bishop Auckland Railway,' by J. Storey.
- — Linnean Society, 8.
- — Chemical Society, 8.
- WED. Geological Society, half-past 8.
- — Literary Fund, 2.—Annual.
- — Society of Arts, 8.—Mr. R. Prosser's Invention for making Bricks, Tiles, and Tesseræ, for Forming Tesselated Pavements, and their mode of fixing; also on Inlaid and Mosaic Pavements generally.—Mr. Braithwaite's Process of Carving in Wood.—Mr. Wilson's Safety-Valve, to prevent explosions from Boilers.—Mr. Casella's improved Rain-Guage.
- — Medico-Botanical Society, 8.
- THUR. Royal Society, half-past 8.
- — Royal Society of Literature, 4.
- — Royal Academy, 8.—Painting.
- — Society of Antiquaries, 8.
- FRI. Astronomical Society, 8.
- — Royal Institution, half-past 8.—Mr. Smee 'On Electro-Metallurgy.'
- — Philological Society, 8.

FINE ARTS

ART-UNIONS, LOTTERIES, AND LITTLE-GOES, WITH *Counsel's Opinion as to their Illegality.*

IT is curious and amusing to observe how anxiously the schemers endeavour to protect themselves and their selfish projects behind that public opinion, which, wisely or unwisely, has undoubtedly given its support to the Art-Unions. Throughout the whole of the

Digitized by Google

sophistical nonsense put forth by them, the identity of Art-Unions and Little-goes is assumed—then some vast benefits to be conferred on Art by Art-Unions is assumed—then the *Athenæum* is indignantly reviled for not upholding British Art, and accused of being prejudiced in favour of foreign art (as if our argument was to recommend foreign in preference to English Lotteries)—then the schemers, parodying the apple proverb, exclaim, "we," that is, the Little-goes and Art-Unions, "must stand or fall together." Now, have we ever said anything to the contrary? The moral distinction between the projects is obvious enough, but we suspected from the first that there was no legal difference. But let us put the case in another form. If it be not illegal to receive money for tickets, which give to purchasers chances of prizes to be distributed by lot, of pictures, bronzes, models, telescopes, fiddles, pianos, &c., why is it illegal so to distribute hams, tongues, twelfth-cakes, Italian greyhounds, talking parrots, and heads of New Zealand Chiefs? However, as we acknowledged heretofore, we are not lawyers, and therefore the subscribers to these projects may like to hear the opinion of one who is a lawyer and of eminence; for to this issue it is come at last, and to this we foresaw that it must come. The printsellers and publishers of the metropolis have, it appears, taken Serjeant Talfourd's opinion on the subject; and that there might be no mistake, they submitted to him the prospectuses of the "Art-Union," "the National," and of Mr. Boys' proposed "Distribution," and required to know—

"Firstly, whether the whole of such schemes are not Lotteries, or such distributions by chance, as are in direct violation of the statutes 12 Geo. 2. c. 28. s. 1. and 42 Geo. 3. c. 119. s. 2?

"Secondly, whether the managers and projectors, and the printers and publishers, of these schemes are not liable to the penalties inflicted by 12 Geo. 2. c. 28. ss. 1. and 4. and 42 Geo. 3. c. 119. ss. 2. and 5?

"Thirdly, whether the parties subscribing to, or purchasing shares in, the proposed distributions, be not liable to the penalties of 12 Geo. 2. c. 28. s. 3?"

From the learned Serjeant's "opinion" we shall quote so much as immediately concerns the public:—

"I am of opinion, that all the schemes above described are Lotteries, or such distributions by chance, as are in direct violation of the statutes 12 Geo. 2. c. 28. s. 1. and 42 Geo. 3. c. 119. s. 2. Having referred not only to those statutes, but to others *in pari materiâ* with them, from 10 & 11 Will. 3. c. 17. downwards, I think that a scheme by which any valuable things, whether monies, lands, or *chattels*, are offered as prizes, *to be determined by lot or other machinery of chance, among parties who obtain a right to share in the chance by payment of money, is in the nature of a Lottery, and within the penalties of the Statutes.* * * Secondly and thirdly, I am, therefore, of opinion, that the managers and projectors, and the printers and publishers of these schemes, are liable to the penalties inflicted by 12 Geo. 2. c. 28. ss. 1. and 4. and 42 Geo. 3. c. 119. ss. 2. and 5; and *that the parties subscribing to, or purchasing shares in, the proposed distributions, and who proceed to take their chances of prizes at the drawing of the lots, are liable to the penalties of* 12 Geo. 2. c. 28. s. 3."

The question of legality is therefore set at rest, and the various projects may be considered as at an end; for we cannot suppose, that the parties will set the law at defiance and hazard the penalties. Here then we might take leave of the subject, and a very annoying one it has been to us, for we have had to fight the battle almost single handed, and under the direct threat of prosecution. But now that the battle is won—now that the nuisances must be abated—we are not unwilling to notice the charges preferred against the *Athenæum*, and to show what are our recorded opinions with reference to English and Foreign Art; and to prove that we have been undeviatingly consistent in our opposition to these gambling projects, and even to Art-Unions, as generally conducted.

First, as to the prejudice of the *Athenæum* in favour of foreign art; here is what we said twelvemonths since, when noticing the exhibition of the Wilkie pictures:—

"Let England put a simple question to all Europe. Let her receive a candid answer. She has been able to exhibit, without presumption—without national prejudice or egotism—six series of modern works among those of ancient masters, viz., the works of *Reynolds*, *Hogarth*, *Wilson*, *Gainsborough*, *Lawrence*, and *Wilkie*. What other kingdom could have done the same? we mean with a right which the rest of Europe would have admitted. Could France, on the strength of her two series—*Vernet's* landscapes and *Greuze's* figure-pieces? For if she push forward the works of *David*, *Gérecault*, *Girard*, *Gros*, &c., into the rank, we must bring up those of *Barry*, *Morland*, *Northcote*, *Stothard*, *Hilton*, and numberless others into line also. Could Italy, on the strength, or rather, the weakness, of Appiani's productions, and Battoni's?—Could Germany? She has but one such series—Mengs's—and of that she herself would consider an exhibition as an exposure. No other people could dare to exhibit, side by side with the Old Masters, one-half so many New as the British, without such a contrast rendering their presumption flagrant, ludicrous, and repulsive."

Is this proof of a prejudice in favour of foreign art? Why our whole endeavour, for years, has been to uphold the character of English art—to give it a higher aim, a more ennobling purpose; to release it from its trammels, and find a protection for it where trade winds and trade influences should not reach and wreck it. It is true that the folly or the fashion of he hour has never found an echo in the *Athenæum*; that we have not fallen into ecstasies at every picture so soon as it was purchased by a print publisher; that, though we have respect for many printsellers, we do not hold with the *Art Journal* that they are the great patrons of art, or mistake Alderman Boydell for another Pericles. On the contrary, we are of opinion that art has been of late years too much under the control of the printsellers; that by power of money, and the forty-horse power of puffing, the print-publishers have held the fortunes of art and artists in their hands; that art has suffered degradation in consequence; and that to that cause, mainly, may be attributed what we urged in the very paper referred to, and what we will never cease to urge till it ceases to be true,—the superiority of *living* continental painters, as respects *elevated aims*, and *enlarged principles*, and *productions of a nobler, purer character*.

As to the Art-Unions, and our opposition, it may not be inopportune to say a word on their past history, that, if any of them survive these troublous times, they may benefit by it.

The first association in London was the 'Society for the Encouragement of British Art,' established some eight or nine years since by a few gentlemen who were of opinion that it was a wise policy to diffuse a knowledge of art among the people—to associate art more intimately with their daily thoughts and feelings—to raise the standard by which art ought to be judged—and to bestow not merely barren praise, not merely sympathy and approbation, but needful rewards on those "faithful found among the faithless"—those who devoted their anxious lives to the accomplishment of that high purpose, through the instrumentality of art, without which, as its aim and end, art ceases to be worthy of respect or regard. We assumed this at once, from their proceedings—we judged the men and their intentions from their actions. The prospectus of this Association set forth, that "*ten per cent.*" of the whole subscription should form a reserve fund, and be "applied to the purchase of works of British artists, to be *presented to* and placed in some church, public building, or institution, with the view of exciting public admiration, and *promoting the cultivation of the higher class of art*:" and the remaining nine-tenths were to be applied to the like purchase of the works of British artists, to be *selected* from our exhibitions "*by a committee.*" Here the most suspicious could find nothing to cavil at; there was no self-seeking, no self-interest at the bottom: no temptation to gambling, for gambling sake and the benefit of the projectors. This Association, then, was worthy of the support of the *Athenæum*; and it had, from the first to the last hour of its existence, our hearty and zealous support; a support beyond mere words; for, now that our motives are questioned and cavilled at, we shall not hesitate to say, that we refused even to receive payment for the insertion of its advertisements. Had the public co-operated with us; had it subscribed, as it ought to have done, in aid of this Association; had it even refused to subscribe to any association not founded on equally liberal principles, the Art-Unions might have escaped the degradation of this hour; for the schemers would not have had a single hypocritical pretext behind which to shelter their selfish projects. It was not so. The "Art-Union" was started: it appealed to self-interest and vanity: every subscriber was to have his money's worth, and every prize-holder to select his own prize: its triumph was proportionate, but it rose on the ruin of the Association. Its success, counted in guineas, has been great: considered with reference to what it has done for art, it has been worse than a failure. We foresaw the mischief, and denounced it. So early as 1837, we put on record our opinion that the Art-Union would, and must of necessity, tend still further to the degradation of art: "any man," we observed, "who purchases pictures, may be presumed to have a love for, and this will in the end generate a knowledge of art. But there will be many subscribers who desire only a little gambling—to risk a pound for the chance of winning a hundred—and who would quite as soon join in a raffle for a horse, or a snuff-box, or a pipe of port wine, as for a picture. The motive of the subscriber, however, is of no consequence, so long as others have to dispose of the money; but the Art-Union proposes that each prizeholder shall 'select for himself.' Now is it not certain, that such patronage must tend to degrade art? The scheme may be beneficial to the lowest class of artists, but utterly ruinous to art itself!" On another occasion we observed, "When every individual member, be he whom he may, is allowed to follow his own judgment in the disposal of his prize-money, the best results can be but an irresponsible indulgence of individual whim and caprice,—the worst, and certain, is the degradation of art. Men who paint to live, instead of working with all their power, be it more or less, up to the best and highest judgments, must now descend to the lowest, and instead of seeking for the approbation of the intelligent, must solicit the sweet voices of the uninformed, the chance prize-holders, and therefore purchasers, of the Art-Unions." This argument we have never ceased to enforce; not a year has passed that we have not, under one form or another, submitted it for consideration. In 1841 the Council of the Art-Union had so far become sensible of its truth, that a resolution was passed to the effect that "the vast means at the disposal of the Society may be for good *or for evil*," according as they are disposed of; and a special Committee was appointed to consider of "the best mode of encouraging the Fine Arts." It was rather late, it must be confessed, to be speculating on this subject. Still we were eager to commend even good intentions; but our commendation rested on the old argument:—"We have, from the first, protested against the principle on which the Art-Union of London was founded. To say nothing of jobbing, to which it so readily lends itself—the large sums of money disposed of, in the purchase of works of art, by persons incompetent to form an opinion as to the merit of such works—which permits the chance winner of a large sum of money to invest it as whim, caprice, or ignorance may direct—must have a mischievous and degrading influence on Art itself. This plain truth lies so obviously on the surface, that, sooner or later, it was sure to force itself on the attention of all who took an honest interest in the proceedings and workings of the Association."

No change, however, took place, and what was the result? What said the public to the exhibition of the prizes last year? There was a universal feeling of astonishment. We saw in it the fulfilment of our prophecy, and said so. Still, be it ever remembered, the errors of the projectors were errors of judgment. The whole scheme was of the world, worldly; the eyes of all parties were fixed on the ledger, and the amount of subscriptions was considered as the measure of success. But there were no trade influences at work—no personal and selfish interests to mislead—the proprietors had no empty show-rooms to let for exhibition-rooms, no dead stock to dispose of—and, as their intentions were beyond suspicion, no one cared to question the legality of their proceedings. Yet it was in the face of this obvious degradation of art that, east, west, north, and south, Schemers, calculating only how they might share in the tens of thousands which had been levied on the public, set on foot other projects, with like pretensions, but for their individual and especial benefit; and, as in the

Digitized by Google

lowest deep a lower still, the selfish madness spread all over the country—and hams, tongues, and twelfth-cakes were to be distributed by lottery, and the demoralizing influences were thus extended into our kitchens and nurseries. Even the Royal Polytechnic Institution was not ashamed to get up a raffle, with a hundred thousand tickets, at one shilling; and it is curious, as showing the mighty influence of words and of humbug, that the parties who profess to be so indignant because we persist in treating their proceedings as selfish, mischievous, immoral, and illegal, put forth their defence under the Art-Union pretence, and never once advert to this shilling raffle, which is conclusive as to their animating spirit. But we have done—and we trust for ever; for we sincerely hope and believe that Serjeant Talfourd has given the *coup de grace* to all Nationals, Sweeps, Little-goes, Polypicnics, and Distributions.

MUSIC AND THE DRAMA

CONTEMPORARY MUSICAL COMPOSERS.

A. F. LINDBLAD.

FEW, we apprehend, will deny that musical creation in Europe is in a state of suspense, if not of exhaustion. The schools of Italy, Germany, and France, have no one to show younger than Mendelssohn—Rossini continues capriciously silent—Meyerbeer, in the prime of his renown, cautiously or coquettishly reserved—Spohr wastes his strength in vain efforts to achieve the picturesque and dramatic—and Auber, if still piquant, is piquant by repetition rather than variety. This, then, is the moment for searching in more distant places than the beaten tracks of the continent, for works of merit, and writers of individuality or promise. More than one indication has invited us northward. The name of Gebel, as a Russian who has enriched the store of chamber music, is beginning to make its way in our select circles, and we but wait an opportunity to give an account of his works. Though the Swedish author before us appear in the less imposing form of a song-writer, he, too, is worthy of notice,—as much for the individuality as for the attractiveness of his compositions.

The distinctive features of the Italian, German, and French schools of song-writing can hardly have escaped any who has examined the structure of vocal music. The Italians demand flow and sweetness in the *cantilena* to display the vocal expression of the singer, who has to bear a part superior in importance to that of either poet or musician. The Germans put the singer last: he must be subordinate—a mere interpreter—the lyrist and the musical constructor claiming the first honours, in equal proportions; and the latter manifesting greater value for propriety of adaptation, than charm of melody. In the French *romance* the piquancy of the sentiment is the first desideratum, the captivating cast of the rhythm the second, and so that the vocalist can deliver his words with the proper innuendo or archness, and the composer arrange the notes of the scale so as to make heads nod and feet dance, it is little regarded if the singer's organ be ever so nasal or *criarde* (a perfect *orgue de barbarie*), or if the musician use forms and phrases as familiar as were Mr. Jenkinson's "Sanconiathon, Manetho, and Berosus" to the worthy Dr. Primrose. Perhaps, it may be theorized, that a song, to be perfect, should unite Italian melody, German intellectual solidity, and French *esprit*. A few specimens of this rare manufacture are in existence. The 'Ave Maria' of Schubert is one, and yet the distinctive characteristic of this is German intensity; the two-part 'I Marinari' of Rossini another, in which southern melody is still predominant By way of a French contribution, the well-known romance from the 'Guido et Ginevra' of Halévy may be specified;—the touch of rhythmical affectation which pervades the melody, making up its quota of nationality, without which no work can excite any peculiar or permanent interest.

Herr Lindblad's music is welcome to us, as possessing a character of its own, neither German, Italian, nor French. What this is, there may be some difficulty in defining, but we think that the reader will be helped to our idea, if he be familiar with the cast of the indigenous Swedish and Russian melodies. A collection of the former—'Der Norden-Saal'—edited by our composer, was published at Berlin many years ago, which is full of interest and value. The airs, essentially as wild and unworldly as the Styrian and Tyrolean tunes more familiar throughout Europe, have rhythms as clearly marked; while, though stamped by one prevailing character, they are less monotonous. Who is there, indeed, that knows not how to arrange a *Jodeln* or *Ländler* which shall pass for genuine? whereas, we suspect, that the cleverest Proteus, unless a countryman of Herr Lindblad, would find it difficult to fabricate a melody which should bear company to the 'Der Kloster Raub,' or the elvish 'Lied vom Necken,' in the artless but effective rise and fall of the melody, in the quaint simplicity with which the common tones of the minor scale are employed, and in the singular yet symmetrical forms of the burden. If these wild and ancient tunes be admitted to have any spirit of their own, the same, we are sure, will be detected in the two numbers of original '*Lieder*' before us. They appear to us to bear as close a relation to the collection which preceded them, as the admirable Scottish *scherzo* in Mendelssohn's last symphony, to the lilts and strathspeys of Johnson's 'Musical Museum,' or as Mozart's pianoforte Sonata in the style of Handel, to the concertos and overtures of the composer whose manner—nay, whose mind—was assumed so happily. They have more tune than many of the contemporary German songs, are more popular, yet still are totally devoid of that common-place flimsiness, a horror of which has driven so many a student from the sweet melody of Italy, and the distinct rhythm of France, to take refuge in crude harmonics, unvocal progressions, and over-elaborate accompaniments. 'Der Junge Postillon auf der Heimwege' might have figured in Adam's popular Opera, so neatly pointed is its form, while for freshness it surpasses the better-known *rondo* given to the Gil Blas of Lonjumeau. Thus, again, 'Der Greis am Wege,' 'Die Hochzeitfahrt,' 'Der Schlotfegerbub,' and 'Ein Sommermorgen,' have all a form, simple, catching, and, what is best, unborrowed, sufficient to justify their introduction into the lighter portions of any musical drama: they are, moreover, good to sing, the intervals easy, the vocal strains more continuous than in some of their German kindred, with a sufficiency of harmonic change, and appropriate accompaniment, to satisfy the ear soonest wearied betwixt alternations of tonic and dominant, and of the *arpeggio* swing, in which the modern *maestri* save themselves from labour with so sublime a contempt of invention. Other examples, such as the songs 'Altmodische Weise,' and 'Auf dem Berge'—are more eminent for the freshness and sweetness of their melodies, than for any speciality of rhythm; anything, indeed, of its kind, more graceful and charming than the last, we hardly remember. We must single out yet one more specimen, the 'Lied eines Mädchens aus Dalekarlien,' because it possesses, in perfection, the wild and pensive sweetness characteristic of the Swedish national song. Enough, we hope, has been said to bespeak the attention of all who are interested in the acquisition of novelty. How far Herr Lindblad has power over dramatic and orchestral resources, we have no means of gathering from this publication. As we are told that he studied under Zelter at Berlin, he must have reached that period of an artist's career when the peculiar direction of talent is for the most part decided. Still we should be glad to hear of an opera from his pen, and be disposed to augur favourably of the result.

DRURY LANE.—The entertainments provided by Mr. Macready for the troops of friends that rallied round his standard on the night of his benefit were repeated on Tuesday, to a less crowded and less enthusiastic audience, yet with an amount of success that promises a longer term of popularity than falls to the lot of mere revivals generally. 'Much Ado about Nothing,' one of the liveliest and most popular, as well as the most refined and best constructed of Shakspeare's comedies, has been banished from the stage for want of a *Benedick*; the last of the race being Charles Kemble. To restore this delightful play, and to essay his skill as a comedian, developing those lurking indications of the *vis comica*, which were first shown by him in 'The Lady of Lyons,' Mr. Macready ventured on *Benedick*; and though his version of the character is not the true one, it is more effective in its way, and certainly an original conception, as well as a carefully studied performance. The difference between Shakspeare's *Benedick* and Macready's personation is this: the poet has drawn a light-hearted, quick-witted, loose-tongued coxcomb, whose levity infects his gravest purposes, and who flouts at love out of his complacent self-love, which is the snare on which he is caught. Macready represents him as moody, saturnine, observant and reflective; earnest even in trifles, and as savage in his contempt of the sex as a misanthrope: hence he makes the character a series of self-contradictions, exhibiting the spectacle of a grave man of sagacity and firm purpose, flippant in speech, fickle in act, frivolous in manner, and snared in as slight a springe as ever caught woodcock. Nevertheless it awakens admiration for the talent shown in perpetrating the error; but it is one of those performances that require the allowance of a benefit night, though the dearth of sterling excellence gives a factitious value to a forcible and elaborate failure. Mrs. Nisbet's *Beatrice* is arch, sprightly, and graceful, but flippant, superficial, and alike wanting in refinement of style and depth of sentiment. Miss Fortescue, as *Hero*, is best in the joyous mood; she endured the false accusation of *Claudio* with something that looked like passive indifference, because there were no words of woe for her to utter; nor did Anderson, as *Claudio*, express emotions corresponding with his speech. Phelps, as *Leonato*, became the reverend signior well, and vented his grief and anger impressively, though too loud; W. Bennett, as *Antonio*, was earnest and undignified; Hudson, as *Don Pedro*, also wanted presence and manner to prevent his pleasantries from derogating from the dignity of his rank; and G. Bennett, as *Borachio*, was a more accomplished villain than his master *Don John*. Compton's *Dogberry* was hard and monotonous in its quaint drollery; but Keeley's *Verges* was the very impersonation of imbecile senility: his tremulous voice sounded as if it came from some remote corner into which his scattered wits had crept, and he looked as if he were watching them lest they should stray. The scenery and male costumes were characteristically sumptuous; but the ladies would insist on wearing modern English dresses instead of old Italian fashions. 'Comus' as a classic spectacle, with the poetry of Milton said and sung, is worthy of admiration; the musical portion of the performance is the least attractive, though H. Phillips sang 'Haste thee, Nymph' with jovial gusto. The rushing in of the bacchanal rout, with flashing torches, has a striking effect, but the yells ought to have been musical even in their dissonance, and the whoops that timed the dance, remind one too strongly of the Highland reel. Miss H. Faucit, as the *Lady*, delivered the blank verse with distinct and emphatic declamation; her proxy in the vocal part of her task was not correspondingly efficient; Miss P. Horton, both in speaking and singing, well became the attendant spirit.

MISCELLANEA

Paris Academy of Sciences, Feb. 20.—On Cancer, by M. Leroy d'Etiolles. The interest of the paper was the numerous practical observations made by this able surgeon on what he calls the statistics of cancer. He states that, in 2,781 cases of cancer of which he has the notes, cancer of the uterus figured for 30 per cent.; cancer of the breast, 24 per cent., of the lip in females, 11½ per cent., and in males, 26 per cent. The author does not hesitate to attribute this great disproportion between the two sexes to the use of tobacco.—A paper by M. Matteuci, on some experiments made on a living torpedo was next read.—M. Amusat read a paper on arterial and venous cicatrices.

On the Art-Unions.

That Picture Raffles will conduce to nourish
Design, or cause good Colouring to flourish,
Admits of logic chopping, and wise sawing,
But surely Lotteries encourage Drawing!

T. H., New Monthly.

Bottle Papers and a Bottle Chart.—Under this title a curious paper appears in the Nautical Magazine of this month. We confess that after examining the chart, it appears to us that the results are so contradictory that they prove nothing respecting currents. The course of the bottles cross each other in every direction, and though the vast majority of those bottles thrown over in northern latitudes are found on the coasts of France, England, and Ireland, and those in southern latitudes on the shores of one or other of the West India Islands, the fact only proves that a record of such discoveries is more likely to be made in those

Digitized by Google

localities than on the opposite coasts of Newfoundland, Labrador, or Africa. However, the subject is new and curious, and we shall quote what is said by the Editor, as well as some remarkable examples of the length of time that elapsed between launching the bottle and its discovery:—"We have occasionally laid before our readers, as they have come to hand, the particulars of papers found in bottles, sent adrift on the ocean, for the purpose of determining the direction and strength of currents. The device is one belonging to modern times, the earliest proposal of it we have met with being about the year 1801, and the date of the earliest bottles found being 1809. We shall not stop now to discuss the utility of these messengers, which would naturally involve the considerations of direction of the wind and sea, and the time they might lie unheeded on the strand to which they have been carried, but we are content to lay them before our readers with a chart to show their relative courses. Although we have levied contributions from every source within our reach, and would wish to have registered the track of every bottle found, there are no doubt many still that have evaded us. The columns of the table speak for themselves, but by way of brevity we have registered the latitudes and longitudes where the bottles were thrown into the sea in degrees and tenths."

Another great Blast at Dover.—Dover, March 2.—About half-past 4, another great blast took place at the South-Eastern Railway works, a little beyond the Round-down Cliff. This blast, as compared with that of the Round-down, was comparatively insignificant; and yet 7,000 lbs. were fired at the present explosion. The operations, were conducted by Mr. Cubitt, the engineer. The effect has been quite successful. About 50,000 yards of chalk have been dislodged. The operations were conducted similarly to the former, ignition being communicated by the voltaic battery. Nine chambers were formed in the cliff, about 90 feet from its top, the object being to blow away the crown of the cliff to render it safe for the railway carriages to pass on the sea-wall under it. The explosion was effected with very little noise and smoke. The instant ignition was communicated, the cliffs around trembled, and the immense mass of chalk burst out with a low booming noise, and the ruins were gently, though majestically, thrown down on the beach below; but, instead of like those of the Round-down, which shot out into the sea about 1,000 feet, they scarcely, we should say, extended 200 feet in any direction, after reaching the base of the cliff. Several hundreds of persons from the neighbourhood were present. This second great operation was performed without accident.

Police Stations.—The London City Mission have just presented about fifty volumes to each police station for the instruction of the men attached to it. These books consist of the sacred writings, select sermons, theological and moral works, together with the biographies and travels of good, moral, and religious men. The works can either be read at the station-houses, or taken home by the constables under certain restrictions.

To Correspondents.—An Artist—A. J. S.—Annie—A. R. A.—J. G. received.—A Student of Gray's Inn, No.—El Hadj must send his name, in confidence, as authority for the statement.—The Second of Mr. Howard's Lectures will be published next week.

NEW WORKS.

This day, in 2 vols. post 8vo. price 21*s.*, with a Map of Scotland, and Chart of St. Kilda, 20 Etchings on Steel, by Charles H. Wilson, A.R.S.A., from Sketches during the Voyage, by Sir Thomas Dick Lauder, Bart., and numerous Wood-engravings from the same Sketches, drawn by Montague Stanley, Prior, and Sargent, and engraved by Branston, Landells, and other Artists,

A VOYAGE ROUND THE

COASTS OF SCOTLAND AND THE ISLES.

By JAMES WILSON, F.R.S.E. M.W.S. &c.
Author of the Treatise on Angling in 'The Rod and the Gun.'

"Written in a flowing and animated style.... Those who wish to know Scotland in its Coasts and Islands, will derive from this work both instruction and pleasure; those who desire to know the value of their country and its institutions, as shown even in the most inaccessible parts of its remotest provinces, will ponder over its contents; and the general reader, who seeks only for that rational amusement which the personal narrative of a lively and intelligent tourist never fails to yield, will find it in these volumes."—*Edinburgh Review.*

This day, in a neat pocket volume, price 4*s.*

THE SCOTTISH PEASANT'S FIRESIDE.

A SERIES OF TALES AND SKETCHES,
Illustrating the Character of the Peasantry of Scotland.
By ALEXANDER BETHUNE, Labourer.

Mr. Bethune's former volume was thus noticed by the *Athenæum*—"It is the perfect propriety of his taste, no less than the thorough intimacy with the unobtrusive subjects he treats of, which gives Mr. Bethune's little book a great charm in our eyes." The work was reviewed in terms equally favourable by *The Spectator, Tait's Magazine, Chambers's Journal*, and other periodicals.

This day, in a thick volume, 8vo. price 16*s.*

CHEMISTRY OF ANIMAL BODIES.

By THOMAS THOMSON, M.D. F.R.SS. L. & E.
Professor of Chemistry in the University of Glasgow.

"The chymist who prefers his own investigation to the sometimes coloured views arrived at by others, will select the work we are now noticing as his text-boook and guide to Animal Chemistry, in preference to all others which have appeared in this country."—*Annals of Chymistry.*

Now completed, in 21 vols. 4to. illustrated by 506 Engravings on Steel, and many thousands on Wood, with a GENERAL INDEX of upwards of 68,000 References,

THE

ENCYCLOPÆDIA BRITANNICA.

Seventh Edition.

Edited by PROFESSOR NAPIER.

Lord Brougham, in his recent speech on the Copyright Act, when alluding to certain provisions respecting Encyclopædias, stated, in regard to the Encyclopædia Britannica, that "*he would take as an example, because he happened to know something about it, that great work that had been published under the superintendence of a learned and able Professor in Edinburgh University; and he would venture to say, that, without any exception, not even excepting that celebrated work, the French* Encyclopedie, *without even excepting that, there had been no compilation ever offered to the public, prepared by such a combination, such a union of the most celebrated literary names of the age they adorned—a work upon which vast sums of money had been expended in its printing, engraving, and publishing departments; and large amounts, never larger perhaps, in purchasing a copyright of the several articles which it contained. If any work deserved to be encouraged by Parliament, it was this; and if any work was not only valuable and useful, but absolutely necessary for the country, it was this.*"

The work has also been reviewed in the strongest terms of commendation by the *Quarterly Review*, the *Athenæum*, and many other of the most ably conducted and authoritative periodicals of the day.

In paper, printing, and embellishment, as well as in the literary value of its contents, the work is accommodated to the improved taste and advanced information of the times; and whether for the purpose of systematic study or occasional reference, the Proprietors are satisfied that the 7th Edition of the Encyclopædia Britannica will be found to be the most valuable addition which can be made to a modern library.

Adam & Charles Black, Edinburgh;
Longman, Brown, Green, & Longmans, London;
and sold by all Booksellers.

THE QUARTERLY REVIEW, No. CXLII., is PUBLISHED THIS DAY.

INTRODUCTORY LATIN DELECTUS: with a copious Vocabulary. By George Ferguson, A.M., one of the Masters of the Edinburgh Academy, Author of the Edinburgh Academy Latin Delectus, Latin Rudiments, &c.

The Introductory Latin Delectus is intended to follow the Latin Rudiments, and is more particularly adapted for those Teachers who use an intermediate Reading-Book between the Delectus and Cæsar or Ovid. The Vocabulary has been prepared with all possible care, and is believed to contain an explanation of every word, and of every difficult expression which occurs in the book—thus rendering the preparation of the lesson comparatively easy.

Oliver & Boyd, Edinburgh; Simpkin, Marshall, & Co., London

(*Publisher in Ordinary to Her Majesty.*)

PROF. DUNBAR'S GREEK AND ENGLISH LEXICON.

Lately published, in 1 thick vol. 8vo. price 40s.

A NEW GREEK-ENGLISH and ENGLISH-GREEK LEXICON, with an Appendix, containing Terms of Botany, Mineralogy, Natural History, &c. as used by the Greek Classical Writers. By GEORGE DUNBAR, A.M. F.R.S.E. and Professor of Greek in the University of Edinburgh.

The Appendix will be found exceedingly useful, especially to the Botanist and the Natural Historian.

The following testimony to the merits of the Lexicon, by the late venerable and highly-distinguished scholar, the Marquis Wellesley, was communicated to Lord Brougham, and transmitted to the Author, with his Lordship's permission to make whatever use of it he might think proper:—

"Kingston House, Knightsbridge.

"17th August, 1841.

"My dear Lord,—I am greatly obliged to you for having permitted me to see Prof. Dunbar's Greek Lexicon. It is infinitely the best work of the kind which I have ever seen. It has already been of great service to me, who, as you know, am an humble, but a most ardent votary of Greek literature. It will tend more to extend the study of Greek than any work now extant....

(Signed) "WELLESLEY."

LENT LECTURES.

I.

1 vol. 12mo. 7s. 6d. cloth,

SERMONS IN ROME, DURING LENT, 1838. By the Rev. JOHN HAMILTON GRAY, M.A., of Magdalen College, Oxford, Vicar of Bolsover and Scarcliff.

II.

12mo. price 7s. cloth,

A SERIES of THEOLOGICAL LECTURES, delivered in the Cathedral Church of Chichester, during Lent, in the years 1835, 36, 37, 38, 39, 40. By the late Rev. HENRY ATKINS, M.A., Prebendary of Wightring.

III.

12mo. price 3s. boards,

SIX LECTURES on the PARABLE of the PRODIGAL SON, delivered in the Parish Church of Bradford-Abbas, Dorset, during Lent, 1830. By the Rev. ROBERT GRANT, B.C.L., Vicar.

IV.

1 vol. fcap. price 3s. 6d. cloth,

THE LIFE and CHARACTER of HEZEKIAH CONSIDERED, in Six Lectures. Delivered during Lent, 1839, by WILLIAM NICHOLSON, M.A., Rector of St. Maurice, Winchester.

London: J. Hatchard & Son, 187, Piccadilly.

CHARLES F. BIELEFELD respectfully informs ARCHITECTS, BUILDERS, DECORATORS, &c. that he has re-published his Quarto Volume, with a Tariff, at a very reduced price, viz. 20s. (formerly 3l. 3s.) containing nearly 1000 patterns of ARCHITECTURAL ORNAMENTS in every style, principally from designs by eminent architects. The ornaments may be had manufactured in the improved PAPIER MACHÉ at the Works, 15, Wellington-street North, Strand. The book will be forwarded to the country on a receipt of a Post Order for 20s.

"This is unquestionably a most valuable invention."—*Literary Gazette.*

"We deem it a duty to make as widely known as possible one of the most admirable inventions of the present day; we allude to the Papier Mâché of Mr. Bielefeld," &c. &c.—*Court Journal.*

"A large Quarto Volume on the use of Improved Papier Mâché in Furniture, the interior Decoration of Buildings, &c., has been placed in our hands; and certainly until we had perused its preface, and glanced over its pictured contents, we had no conception of the number of purposes for which paper was available. Every possible description of Ornaments for ceilings, cornices, panelling, mouldings, &c., which, from the lightness and durability of the material, and susceptibility of high finish, are more than twice the value of any composition."—*Observer.*

"Mr. Bielefeld has shown not only the use of Papier Mâché, but its beauty, so clearly as to make his volume a sad temptation to persons of more taste than fortune."—*Athenæum.*

"Its lightness, sharpness of outline, and flexible tension of substance, render it, at all events, of incalculable value as a substitute for plaster and wood-carving, or rather as a *vast improvement* on either."—*Polytechnic Journal.*

Papier Mâché Works, 15, Wellington-street North, Strand.

MESSRS. COPELAND & GARRETT beg to acquaint the Nobility, Gentry, and Public, that they have OPENED an ENTRANCE to their PORCELAINE and GLASS WAREHOUSES from No. 37, south side of Lincoln's Inn-fields, by which the readiest access is secured, with the advantage of ample space for carriages to draw up and wait; appropriating the Portugal-street entrance to the mercantile and commercial departments of their business.

Portugal-street, Lincoln's Inn-fields, Jan. 2, 1843.

By order of the Board, G. H. WRAY, *Manager.*

Agents: R. Allan, Esq., 8, St. Andrew-square, Edinburgh; Messrs. H. Thompson & Co., Dublin; and John Harrison, Esq., Belfast.

ANNUITIES.—In the AUSTRALASIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY, Annuitants *participate in the profits of the Company*, and receive a rate of ANNUITY much more favourable than can be granted by any Company making its investments wholly in England. The Company is enabled securely to grant these favourable terms from the advantage it possesses of investing a portion of its funds at a high rate of interest.

Directors.

Edward Barnard, Esq. F.R.S.	C. E. Mangles, Esq.
Henry Buckle, Esq.	J. B. Montefiore, Esq.
John Henry Capper, Esq.	J. H. Ravenshaw, Esq.
Gideon Colquhoun, jun. Esq.	William Walker, Esq.

Solicitors—Messrs. Swain, Stevens & Co.

Bankers—The Union Bank of London.

Colonial Bankers—The Bank of Australasia, incorporated by Royal Charter, 1835, No. 2, Moorgate-street.

Secretary—Edward Ryley, Esq.

Prospectuses, with Tables, Forms of Proposal for the purchase of an Annuity or for making an Assurance, and every information, may be obtained by application at the Office of the Company, No. 126, Bishopsgate-street, City.

Felix Ladbroke, Esq.	George Smith Thornton, Esq.
H. Francis Shaw Lefevre, Esq.	

JOSHUA MILNE, *Actuary.*

LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to a participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving Incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.

Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office in Craig's-court, and at No. 65, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

ARGUS LIFE ASSURANCE COMPANY, 30, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.

In addition to the subscribed Capital of 200,000*l.* the assured have the security of the Company's Income of 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.

Division of Profits among the Assured.

Honorary Presidents.

Earl of Errol	Earl Somers
Earl of Courtown	Lord Viscount Falkland
Earl Leven and Melville	Lord Elphinstone
Earl of Norbury	Lord Belhaven and Stenton.
Earl of Stair	

Directors—Jas. Stuart, Esq. *Chairman.*

Hananel De Castro, Esq. *Deputy Chairman.*	
Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 46, Berners-street, attends at the Office daily, about half-past Two o'clock.

H. WALKER'S NEEDLES (by authority the Queen's Own), with the new large eyes, are easily threaded, even by blind persons, and work with great ease, having improved points, temper, and finish. The labels are correct likenesses of Her Majesty and His Royal Highness Prince Albert, in relief, on coloured grounds. H. Walker's improved fish hooks, sheel pens, hooks and eyes are recommended. For the home trade neat packages of needles or pens, from 1*s.* to 10*s.* value, can be sent free, by post, by any respectable dealer, on receipt of 13 penny stamps for every shilling value. Every quality, &c. for shipping. H. WALKER, Manufacturer to the Queen, 20, MAIDEN-LANE, WOOD-STREET, London.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

PERRING'S SAFETY WOOD PAVING.—An exclusive Licence for the Cities of London and Westminster, and the Metropolitan Boroughs, is engaged by THE LONDON WOOD PAVING COMPANY; Licenses for other localities on equally reasonable terms. Models at the Adelaide Gallery; the Polytechnic Institution; the Practical and Scientific Association, Vere-street; and at Mr. Leek's Offices, 2, Charlotte-row, Mansion-house, City, where further information may be obtained.

DESIGNS FOR TAPESTRY.—GIBBINS, 7, King-street, St. James's-square, respectully informs the public, he has just returned from the Continent with the NEWEST PAPER PATTERNS, patterns on canvas, wools, silks, and canvasses, from Berlin and Vienna, which, from the low continental prices, he can offer for sale at a great reduction in prices. An assortment of 10,000 designs for sale, and some beautifully-finished specimens of needlework, calculated for elegant presents.—7, King-street, St. James's.

ECONOMY—IMPORTANT TO HOUSEKEEPERS.

T. WILLIAMS, 11, Charing-cross, begs to call the attention of the Nobility, Gentry, and Public in general, to his extensive STOCK of HOUSEHOLD and STABLE BRUSHES (all made under his own personal inspection); also his superior HAIR, CLOTH, TOOTH, NAIL, and general TOILET BRUSHES, the whole of which he offers at remarkably low prices.—A large assortment of Combs, Perfumery, Sponge, Chamois Leathers, French Sieves, Stove Lustre, &c. &c. —OBSERVE, No. 11, CHARING-CROSS, opposite Spring-gardens.

PLATE ENGRAVED on REASONABLE TERMS.—J. PAYNE begs to inform the Nobility and Gentry that he has removed from 22, Fleet-street, to 16, Great Castle-street, Regent-street, where he will continue to engrave Silver and Plated Spoons and Forks, Table Knives, &c. with Crest or Cypher, in a superior manner, at 3*s.* per dozen. Waiters, Tea Sets, and other articles of plate engraved with Arms or Crest at equally reduced prices. Joshua Payne has engraved plate for several members of the Royal Family and many of the Nobility, specimens of which may be seen at his house, 16, Great Castle-street (one door from Regent-street), near the Polytechnic Institution.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and Name, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 1*s.* 4*d.* per quire: no charge for the die. Wafers from the die, 1*s.* per 100, or 6*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY —Terms: 3*l.* 3*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, Crests, &c. for book plates, in their proper HERALDIC COLOURS, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 4*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 7*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their Warehouses,

EGYPTIAN HALL, PICCADILLY, and 128, BISHOPSGATE-STREET WITHIN,

or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 16*s.*, 17*s.*, 14*s.* 12*s.*, and 8*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large, and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting books, Bibles and Prayers, gold and silver pencil-cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices.

ORANGE, LEMON, CITRON, and SHADDOCK TREES, Olive Trees; Arabian, Catalonian, and Azore Jessamine Plants; some choice Italian Vines, bearing a large black grape, called Uva Trogria; Italian Cypress Trees, and Double Roman Tube-rose Roots.—J. BUTLER has just received his Second Importation of these Trees and Plants from Genoa, which may be seen at 155, Regent-street, London. Persons sending from the Country can have them forwarded to any part. The prices of Orange Trees are from 10*s.* to 30*s.* each. Also fresh Seltzer Water from the Rhine every fortnight.

KEENE'S PATENT MARBLE CEMENT.—This cement, which exceeds every other in hardness, is intended for interior uses, where strength and despatch in execution are required. From the smoothness of its surface, it is an advantageous substitute for wood in its application to skirtings, architrave, mouldings, &c., as it resists the action of fire, and keeps back vermin.

The coarse qualities form a paving not distinguishable from stone in colour and hardness, but of one-third the price. The best white quality takes a brilliant polish, and the scagliola made from this cement has a peculiar richness of colouring. The imitations produced in it of Florentine and other Mosaics, encaustic tiles, &c., for ornamental paving, are unequalled in their effect and moderate cost.

Keene's Cement has been applied with success for the altars of Catholic and other churches both in England and Ireland; and to its use in the Royal palaces, and Government buildings, besides numerous public and private works, the patentees can refer with confidence.

Patentees and Sole Manufacturers, J. B. WHITE & SONS, MILLBANK-STREET, WESTMINSTER.

Agents for its sale are appointed in the principal cities of the United Kingdom.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s.	*d.*		*s.*	*d.*
Table Spoons and Forks, per doz.	16	6	Mustard Spoon	0	6
Dessert ditto, ditto	12	6	Tea Spoons, per dozen	5	6
Fish Knives	5	6	Gravy Spoons	3	6
Soup Ladles	6	6	Salt ditto	0	6
Sauce Ladles	1	6	Sugar Tongs	1	0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS, and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hard ware. A set of three full-sized Gothic paper trays, 35*s.*; a best Gothic border 30-inch Japan tray, 12*s.*; a dozen ivory table knives, 11*s.*; dessert ditto, 9*s.*; a pair of carvers, 4*s.* 6*d.* A Palmer's Candle Lamp, bronze or lacquered, 9*s.*; a solar ditto, to burn common oil without smoke or smell, 25*s.*; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1*s.* each; best ivory-handle razors, 8*s.* 6*d.* per pair.

41 and 42, Barbican, and at 16 Norton Folgate.

INFLUENZA, COUGHS, AND COLDS.

SIMCO'S ESSENCE of LINSEED is the most efficacious remedy ever discovered for the relief of persons suffering from Influenza, the two first doses generally arrest the progress of this distressing complaint, and a little perseverance completely removes it. Children's Coughs, as well as recent ones in adults, will be removed by a few doses (frequently by the first), and asthmatic persons, who previously had not been able to lie down in bed, have received the utmost benefit from the use of it. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate-street Without, London, and all Medicine Venders, in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each.

TO LADIES.

ROWLAND'S KALYDOR, under the *special patronage of Her Most Gracious Majesty* and the *Royal Family*.—A creamy, odoriferous preparation from *Oriental Exotics*, is now universally known as the *only* safe and efficient *protector* and *beautifier* of the Skin and Complexion. Its virtues are commonly displayed in thoroughly eradicating all *pimples, spots, redness, tan, freckles*, and other unsightly *cutaneous defects*, in healing chilblains, chaps, and in rendering the most rough and uneven skin pleasantly soft and smooth. To the *complexion*, it imparts a juvenile roseate hue, and to the *neck, hand*, and *arms*, a delicacy and fairness unrivalled. To Gentlemen, it allays the irritation of the skin after shaving. Price 4*s.* 6*d.* and 8*s.* 6*d.* per bottle, duty included.

CAUTION.—Ask for "ROWLAND'S KALYDOR," and see that these words are on the envelope, as much *pernicious* trash is now offered to the Public as "KALYDOR" by Perfumers of *apparent* respectability.

*** To protect the Public from fraud, the *Hon. Commissioners of Stamps* have authorized the Proprietors' signature to be engraven on the Government Stamp thus—A. ROWLAND & SON, 20, Hatton-garden; sold by them, and by Chemists and Perfumers.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years; he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON.

To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off. A few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.*, and 11*s.* per Bottle. *No other prices are genuine*. Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

THE LEGALITY of the ROYAL POLYTECHNIC UNION of LONDON is affirmed by the OPINION of FITZROY KELLY, Esq. Q.C.—The SONGS of SHAKSPEARE, illustrated by the Etching Club, are now ready for delivery to each New Subscriber for the present year.—Prospectuses may be had of the Honorary Secretary, Mr. R. I. Longbottom, No. 5, Cavendish-square, who receives subscriptions, and will show Mr. Kelly's opinion.

ART-UNION OF LONDON.

President,
H.R.H. the Duke of Cambridge.

Vice-President,
The Most Noble the Marquis of Northampton, P.R.S.

Treasurer—B. Bond Cabbell, Esq. F.R.S.

The SUBSCRIPTIONS for the present year WILL CLOSE on FRIDAY, the 31st inst. An immediate subscription is solicited, to enable the Committee to complete their arrangements. Every Member will receive, for each guinea subscribed, an impression of a Line Engraving by Mr. L. Stocks, from Sir A. Callcott's Picture, RAFFAELLE AND THE FORNARINA. Subscribers of five guineas may receive, if they prefer it, a Proof Impression of the Engraving in lieu of five Prints. The amount distributed by the Society last year for the purchase of Works of Art was 3,300*l*.

Finished Proofs of the Engravings for the years 1841 and 1842, THE SAINTS' DAY, after Knight, and UNA ENTERING THE COTTAGE, after Hilton, may be seen at the Office.

GEO. GODWIN, F.R.S. F.S.A. } Honorary
LEWIS POCOCK, F.S.A. } Secretaries.

Office, 4, Trafalgar-square, 9th March, 1843.

TO SCULPTORS.—The COMMITTEE of the ART-UNION of LONDON beg to notify that Prizeholders in the ensuing Distribution will be empowered to COMMISSION the execution, in MARBLE, of any Model which may be exhibited in either of the various Galleries, provided that the price of such work in marble was left, with the Model, at the first opening of the Gallery in which it is exhibited.

The Committee will require the Model so selected to be exhibited with the Prizes of the present year, and the finished work in Marble with the Prizes of 1844.

GEORGE GODWIN, F.R.S. F.S.A. } Honorary
LEWIS POCOCK, F.S.A. } Secretaries.

4, Trafalgar-square, 9th March, 1843.

THE GERMAN LANGUAGE in DRESDEN.—PROF. HUGHES, of the Royal Military Academy, Dresden, who has for upwards of thirty years resided in Germany, receives into his house and family (all of whose members, himself excepted, are Germans,) a few YOUNG GENTLEMEN, not under 16 years of age, who wish to become masters of the German language, for the acquirement of which with a good accent that capital affords such great facilities. His house is situated in Antons Platz, near the New Post Office. For terms and other particulars apply (post paid) to Mr. Nutt, German Bookseller, 158, Fleet-street; or to Mr. Highley, Medical Bookseller and Publisher, 32, Fleet-street. The most respectable references will be given.

TO THE AFFLICTED, OR TO INVALIDS.—A small genteel Family, who, for some years, have been accustomed to the CARE of INVALIDS, and whose house is very pleasantly situated, a short distance from Town, would be happy to RECEIVE A LADY. They offer every attention, with domestic comfort, that could tend to her happiness or restoration. The Advertiser would have no objection to a Gentleman, if accompanied by an Attendant.—For further particulars address to A. A., at the Gardeners' Chronicle Office, 3, Charles-street, Covent-garden, London.

STEAM to CONSTANTINOPLE, CALLING at GIBRALTAR, MALTA, ATHENS, SYRIA, SMYRNA, MYTILENE, and the DARDANELLES. For Passengers, Goods, Specie, and Parcels. The Peninsular and Oriental Steam Navigation Company will despatch the TAGUS (900 tons and 320 horse power), on a SECOND TRIP to the above places, from Southampton, on FRIDAY, the 28th APRIL, at 9 o'clock, A.M. Goods and Parcels must be at Southampton by the 26th April. Programme of the route, rates of freight and passage, and other particulars, may be obtained at 44, Regent-street, Piccadilly; also of W. & R. C. Carne, Falmouth; Earle Langston, Manchester: F. M'Gowan, 3, Burgh Quay, Dublin; and to secure Passages apply at the Peninsular and Oriental Steam Navigation Company's offices, 57, High-street, Southampton, and 31, St. Mary-Axe, London.

Library, 19, Holles-street.

Established in 1799, for Insurance against Loss or Damage by Fire, on the most equitable terms, and on a principle which conveys PERFECT SECURITY WITHOUT ANY RESPONSIBILITY whatever to the Insured, *at reduced premiums.*

Persons effecting Insurances for seven years, by one payment, are entitled to an IMMEDIATE RETURN, equal to 15*l*. per cent. on both premium and duty, WHICH RETURN IS CERTAIN AND NOT DEPENDENT on any contingency. Policies will not be charged for sums of 300*l*. or upwards, nor to persons *removing Insurances from other Offices.*

This office has always paid for damage by Fire from Lightning.

Receipts for the renewal of Insurances, may be had at the principal Offices in the Strand and Cornhill, London, and of their Agents in the Country, who will receive proposals for new Insurances.

Policies should be renewed within *fifteen* days from the day on which the premiums become due.

LOVELL REEVE begs respectfully to invite the attention of Amateurs to his COLLECTION of EXOTIC SHELLS, now newly assorted for the season, with many valuable additions. Gentlemen residing in the Country may have Specimens forwarded, named, and priced, to make selection from at their leisure.

On the 1st March was published (to be continued Monthly), price 10*s*. coloured, (size, Quarto,) No. II. of the

CONCHOLOGIA ICONICA: to include Drawings and Descriptions of every known Species of Shells, British and Foreign. No. III. on the 1st of April.

This elaborate work of conchological illustration (each Number of which contains eight full quarto plates of shells, with a separate leaf or more of letter-press to each), will not only include figures and descriptions of all the species of shells at present existing in the public and private cabinets of England and the Continent, but of a mass of new and interesting objects collected by Mr. Cuming during his fourteen years sojourn in the Pacific; and by Professor Forbes during his scientific researches amongst the islands of the Grecian Archipelago; together with many of great novelty collected in H.M.S. *Sulphur* during her late voyage round the world.

Lovell Reeve, Bookseller and Naturalist, 8, King William-street, Strand.

With 64 Plates by Howard, and numerous Engravings on Wood by Landseer and Sargent.

VI.

In small 8vo. price 5*s.* 6*d.* cloth lettered,

The NATURAL HISTORY and ANTIQUITIES of SELBORNE.

By the Rev. GILBERT WHITE, A.M.

A new edition, carefully revised, with Notes by EDWARD BLYTH. A Map of the Locality, beautifully engraved on steel, and copiously illustrated with highly finished Engravings on Wood, and an interesting account of the state of Selborne in the summer of 1836, by Mr. MUDIE.

VII.

In 8 vols. super-royal 8vo. price in Sets reduced to Ten Guineas, half-bound morocco,

PAXTON'S MAGAZINE of BOTANY,

and Register of Flowering Plants. Each Volume contains 48 Plates, beautifully coloured from Nature. The Text comprises Botanical Descriptions of the Plants figured; the time of their Introduction; the best Mode of Culture; and every other particular essential to their perfect growth. Every beautiful Plant newly introduced worthy of notice and general cultivation, is described, and, if of sufficient importance, accurately figured.

VIII.

In one thick vol. royal 8vo. price 18*s.* cloth lettered, and illustrated with 27 Etchings on Steel, by Mr. T. Landseer, 24*s.*

CUVIER'S ANIMAL KINGDOM,

Arranged according to its Organization.

By the late BARON CUVIER, Member of the French Academy, and of the Royal Societies of London, Berlin, Petersburgh, &c.

Translated from the last French edition, and brought down to the present state of knowledge.

The MAMMALIA, BIRDS, and REPTILES. By Mr. Edward Blyth.	THE MOLLUSCA. By George Johnston, Esq. M.D.
THE FISHES. By Mr. Robert Mudie.	THE CRUSTACEA AND INSECTS. By J. O. Westwood, Esq. F.L.S.

IX.

In 10 vols. super-royal 8vo. price 7*l.* 10*s.* cloth, and 8*l.* 8*s.* half-bound morocco,

THE BRITISH CYCLOPÆDIA

OF

THE ARTS, SCIENCES, LITERATURE, GEOGRAPHY, NATURAL HISTORY, AND BIOGRAPHY.

The Division of the Work into Four Sections was adopted as a more natural arrangement of subjects, and for the accommodation of purchasers whose taste or pursuits might render the whole work unnecessary. In its present form, each Division forms a complete Work on branches of knowledge closely and naturally connected together.

First Division. ARTS AND SCIENCES. 2 vols. cloth lettered, price 30*s.*	*Third Division.* NATURAL HISTORY. 3 vols. cloth, price 45*s.*
Second Division. LITERATURE, GEOGRAPHY, and HISTORY. 3 vols. cloth, price 45*s.*	*Fourth Division.* BIOGRAPHY. 2 vols. cloth, price 30*s.*

London: Wm. S. Orr & Co. Paternoster-row.

NEW WORKS
PRINTED FOR

Longman, Brown, Green and Longmans.

I.

CRITICAL AND HISTORICAL ESSAYS

CONTRIBUTED TO *THE EDINBURGH REVIEW.*

By the Right Hon. Thos. Babington Macaulay.

3 vols. 8vo. *On Thursday next, the 16th.*

*** This work is the copyright of Messrs. Longman and Co.; and they give notice to persons importing and selling an American edition of Mr. Macaulay's writings, that they will protect their rights by law.

II.

LAYS OF ANCIENT ROME.

By the Right Hon. Thos. Babington Macaulay.

Third Edition, 8vo. 10*s.* 6*d.* cloth.

III.

THE LIFE OF A TRAVELLING PHYSICIAN,

From his first Introduction to Practice: including Twenty Years' Wanderings through the greater part of Europe; a long Sojourn in Poland and Russia; with Notes of Events, Descriptions of Scenery, and Sketches of Character.

3 vols. post 8vo. with three coloured Plates.

Just ready.

*** The Second Edition is enlarged by the introduction of more than two hundred and fifty pages of fresh matter; and the work now forms a complete history of the Order of the Temple, from the time of its foundation in Palestine, to the period of its abolition by the Pope and the Council of Vienne. A full and interesting account is given of the establishment of the Knights Templars in Great Britain, and of the foundation of the Temple in London.

IV.

THE KNIGHTS TEMPLARS.

By Ch. G. Addison, of the Inner Temple.

Second Edition, 1 vol. sq. crown 8vo. with Illustrations, 18*s.* cl.

By the same Author,

THE TEMPLE CHURCH.

Square crown 8vo. with Five Plates, 5*s.* cloth.

Also,

A full and complete Guide,

HISTORICAL AND DESCRIPTIVE,

TO THE

TEMPLE CHURCH.

(Abridged from the above.) Square crown 8vo. 1*s.* sewed.

V.

A DICTIONARY OF PRINTING.

By William Savage,

Author of 'Practical Hints on Decorative Printing,' and a Treatise 'On the Preparation of Printing Ink, both Black and Coloured.'

One thick volume, 8vo. with numerous Diagrams, 1*l.* 6*s.* cloth.

It has been the intention to give in this publication a faithful and clear account of the Art of Printing, as now practised in the Metropolis, chiefly derived from the Author's long experience in London, during which period he has executed some of the finest Works that ever issued from the British Press; this has been accompanied with a great mass of information connected with the art, rendering it a Guide to the Apprentice and the inexperienced Young Workman; and a useful Book of Reference to the experienced Workman, to the Master Printer, the Overseer, and the Reader, in the Printing-office; and to the Literary Man, and in the Library, for all matters relating to, or connected with, Printing.

"Few Printers, we are persuaded, however skilful in their Art, or enthusiastic in its pursuit, are aware of the mass and variety of amusing matter, not to speak of useful hints and information, to be found in this very useful and curious Dictionary."—*Monthly Review.*

"We heartily recommend the work to all in any way connected with literature, who will find it of great service as a book of reference."—*Literary Gazette.*

NEW BOOKS AND NEW EDITIONS,
PUBLISHED BY

JOHN W. PARKER, West Strand.

BY AUTHORITY.

THE PHYSICAL and MORAL CONDITION of the CHILDREN and YOUNG PERSONS employed in MINES and MANUFACTURES.

Illustrated by Extracts from the Reports of the Commissioners for Inquiring into the Condition of the Children and Young Persons employed in Mines and Collieries, and in the Trades and Manufactures not included under the Terms of the Factories Regulation Act. 2*s.*

A MANUAL FOR TEACHING

MODEL DRAWING from SOLID FORMS:

the Models founded on those of M. Dupuis; combined with a POPULAR VIEW of PERSPECTIVE, and adapted to the Elementary Instruction of Classes in Schools and Public Institutions, as taught under the Sanction of the Committee of Council on Education. By BUTLER WILLIAMS, C.E. F.G.S., Director of the Drawing Classes at Exeter Hall, Professor of Geodesy in the College for Civil Engineers.

Handsomely printed in 8vo. and illustrated by Shaded Engravings of the Models, and numerous Woodcuts, 15*s.*

Also,

INSTRUCTIONS in DRAWING,

for the Use of Elementary Schools, abridged from the foregoing 'Manual for Teaching Model Drawing.' By BUTLER WILLIAMS. With numerous illustrative Woodcuts, and Outline Figures of the Models, 3*s.*

A GRAMMAR of VOCAL MUSIC,

for the Use of Public Schools and Classes of Adults. Founded on the Method of Wilhem, and adapted to English use under the Sanction of the Committee of Council on Education.

By JOHN HULLAH. Royal 8vo. 7*s.* bound.

The GRAMMAR of VOCAL MUSIC is, in its plan and general details, the same Work as the MANUAL of WILHEM'S METHOD of TEACHING SINGING; but the Words of the Songs are, for the most part, different, and more particularly fitted for the Use of Adult Classes: considerable additions, also, have been made both to the theoretical and practical portions.

Also,

ILLUSTRATIONS to HULLAH'S VOCAL GRAMMAR.

(Size 3 feet 8 by 2 feet 6.) The Set of Thirty, price 2*l.*

A SYSTEM of LOGIC, Ratiocinative and Inductive;

being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. 2 vols. 8vo. 30*s.*

AN INTRODUCTION TO THE STUDY OF

CHEMICAL PHILOSOPHY; being

a preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S., Professor of Chemistry in King's College, London. With numerous Illustrations, the 2nd edition, revised and much enlarged, 21*s.*

The PHYSIOLOGICAL ANATOMY

and PHYSIOLOGY of MAN; with numerous Original Illustrations. By R. B. TODD, M.D. F.R.S., and W. BOWMAN, F.R.S., of King's College, London. To be completed in Three Parts. Part I. 7*s.*

PRINCIPLES of MECHANISM;

designed for the Use of Students of the Universities, and for Students of Engineering generally. By R. WILLIS, M.A. F.R.S., Jacksonian Professor of Natural and Experimental Philosophy in the University of Cambridge. With 250 Woodcuts, 8vo. 15*s.*

The MECHANICS of ENGINEERING,

intended for use in Universities and in Colleges of Engineers. By the Rev. Professor WHEWELL, B.D. F.R.S., Master of Trinity College, Cambridge. 8vo. 9*s.*

The THEORY and PRACTICE of ARITHMETIC.

By W. H. CRANK, Mathematical Master at St. Mark's College, Chelsea. Strongly bound, 4*s.*

STUDENT'S MANUAL of ANCIENT HISTORY;

containing the Political History, Geographical Position, and Social State of the Principal NATIONS of ANTIQUITY. By W. C. TAYLOR, L.L.D. M.R.A.S.

By the same Author,

STUDENT'S MANUAL of MODERN HISTORY;

the Rise and Progress of the Principal EUROPEAN NATIONS, their Political History, and the Changes in their Social Condition. Second Edition, enlarged, 10*s.* 6*d.*

London: John W. Parker, West Strand.

LONDON, SATURDAY, MARCH 11, 1843.

REVIEWS

The Banquet of Dun na n-gedh, and the Battle of Magh Rath. Translated from the original Irish, by John O'Donovan. Printed for the Irish Archæological Society.

THIS legendary tale is a valuable accession to the scanty stock of materials we possess illustrative of the condition of Ireland previous to the Anglo-Norman conquest. Like some of our old English ballads, the tale which it recites rests on a very narrow basis of historical fact; but it is nevertheless valuable, from the illustrations it affords of manners, customs, and feelings, which enable us to estimate the degree of civilization to which the people had attained when the poem was produced. The learned editor believes that the legend was written immediately after the Anglo-Norman invasion, assigning as reasons for fixing this date, that the title of "earl" is given to one of the kings of Ulster, and that the style of the work exhibits that turgid redundancy, arising from the extravagant use of epithets, which characterizes the last and most corrupt age of native Irish literature. So many Gaelic scholars have insisted that this profusion of epithet is a poetic beauty of a high order, that we shall quote a specimen of this peculiarity, which is indeed not only the besetting sin of ancient Irish poetry, but also of modern Irish eloquence. The following is the description of a very moderate waterfall on the river Erne, near the town of Ballyshannon.

"The furious, headlong, foaming, boisterous cascade of Buadh, which is the same as the clear-watered, snowy-foamed, ever-roaring, particoloured, bellowing, in-salmon-abounding, beautiful old torrent, whose celebrated, well-known name is the lofty-great, clear-landed, contentious, precipitate, loud-roaring, headstrong, rapid, salmon-ful, sea-monster-ful, varying, in-large-fish-abounding, rapid-flooded, furious-streamed, whirling, in-seal-abounding, royal, and prosperous cataract of Eas Ruaidh."

It is, however, as an historical illustration, rather than a literary composition, that we are to examine this work, and our attention is first directed to the character and position of the clergy in Ireland, after the conversion of the island to Christianity. As Ireland was the only part of Western Europe which escaped the flood of Northern barbarism, the successive waves of which swept away all the vestiges of ancient civilization, crowds of priests and monks fled thither from the continent, and were received with the most generous hospitality. The country received the name of "the island of saints," and hence some have hastily inferred that it also became the island of learning, intelligence, and good government. But in this legend the clergy appear more like Pagan Druids than Christian ministers: they are represented as soothsayers, diviners, and interpreters of dreams, ready to pronounce a fearful curse on the slightest provocation, and able to control fate in procuring the fulfilment of their imprecations. Civil life appears to have been unknown; the kings are not above the average of Indian chiefs, and the people, or rather the clans, know of no law but brute force.

It will be convenient to connect the illustrations of manners which we are about to extract by a brief outline of the story. Domhnall, king of Ireland, had a remarkable dream, which so alarmed him that he resolved to consult a celebrated monk, named Maelcobha, to whom he was related by marriage. The following is the poetic version of the conversation between the king and the monk:—

Domhnall.—I have seen an evil dream,
A week and a month this night,
In consequence of it I left my house,
To narrate it, to tell it.
My whelp of estimable character,
Ferglonn, better than any hound,
Methought assembled a pack
By which he destroyed Erin in one hour.
Pass thou a true judgment upon it,
O Maelcobha, O cleric,
It is thou oughtest readily,
Thou art a seer and a true cleric.
Maelcobha.—The son of a king and a greyhound whelp
Show the same courage and exploits;
They have both the same propensity,
And in dreams are [denote] the same thing.
The son of Ulster's king of high authority,
Or the son of the king of the province of Connaught,
Cobhtach,—will oppose thee in every way,
Or his playmate, Congal Claen.
Domhnall.—That Cobhtach should oppose me
It is cruel to say, for it is difficult;
And the comely Congal would not rise up
Against me for the world's red gold.
Maelcobha.—A counsel which shall injure no one
From me to thee, O grandson of Ainmirè:
To fetter them for a full bright year;
Thy prosperity will not be the worse for it.
Domhnall.—Alas, for the judge who came to the decision,
For which remorse would seize me;
Should I do the deed, 'twould not be joyful,
I would not consult sense or reason.

So confident was the king in the fidelity of his foster-son, Congal, that he invited him to a feast, given to all his vassal chieftains. Collectors were sent out to make provision for this banquet, and they were directed to collect as many goose-eggs as possible, the royal purveyors being particularly deficient in that rare delicacy. In the course of their search the collectors came to a hermitage in Meath, tenanted by an old woman: the sight of a flock of geese in front of the cell induced them to enter it: they found a large vessel of goose-eggs within, and seized it without ceremony. The old woman informed them that these eggs belonged to "a wonder-working saint of God's people," Bishop Erc of Slaine, whose custom it was to remain from morning until night immersed up to his arm-pits in the river Boyne, reading his psalter, which lay open before him on the strand: after such penance, his favourite dinner was "a goose-egg and a half and three sprigs of water-cresses from the Boyne." The royal collectors, who were "plebeians in the shape of heroes," thought even this fare too dainty for the aquatic bishop, and marched off with their prize.

"The holy patron, Bishop Erc, of Slaine, came to his house in the evening, and the woman told him how he was plundered. The righteous man then became wroth, and said: 'It will not be good luck to the person to whom this kind of food was brought; and may the peace or welfare of Erin not result from the banquet to which it was brought; but may quarrels, contentions, and commotions be the consequence to her.' And he cursed the banquet as bitterly as he was able to curse it."

The consequence of this curse to Ireland, says the bard, was that the country "was not one night thenceforward in the enjoyment *of peace or tranquillity.*" This is clearly an anticipation of Moore's stanza on the modern saints of Ireland:—

What more from her saints can Hibernia require?
St. Bridget of old, like a dutiful daughter,
Supplied her, they say, with perpetual fire,
And now her saints keep her in endless hot-water.

Bishop Erc's malediction took effect in the very midst of the banquet; a goose-egg on a silver dish was placed before every one of the chiefs, but when Congal was served, "the silver dish was changed into a wooden one, and the goose-egg into the egg of a red-feathered hen." Congal was enraged; "his heroic fury rose, and his bird of valour fluttered over him, and he distinguished not friend from foe." A regular battle ensued, until at length he rushed from the palace, followed by all his vassals, after having defied the king, and menaced him with immediate war.

Domhnall, being a man of peace, sent "twenty-four saints," to remonstrate with Congal, "each saint having the intercessory influence of a hundred;" but Congal refused to listen to them, menacing them with instant death if they ventured to enforce their remonstrances by excommunication. A division of poets was then sent, but their mission was equally inefficacious. Congal returned to Ulster, and by the advice of his uncle went to seek auxiliaries from the kings of Wales and Britain. Another stranger arrived at the same time as Congal at the British court; this unknown prince had met with the royal poet on his road, and being a lover of minstrelsy he made acquaintance with him, and won his favour by a singular act of friendship:—

"A heavy shower fell, consisting of intermingled rain and snow, and he put his shield between the poet and the shower, and left his own arms and battle dress exposed to the snow. 'What is this for?' said the poet. 'I say unto thee,' replied he, 'that if I could show thee a greater token of veneration than this, thou shouldst receive it for thy learning, but as I cannot, I can only say, that I am more fit to bear rain than one who has learning.' The poet was thankful for this, and said to him, 'If thou wouldst think proper to come with me this night to my house, I shall procure food and a night's entertainment for thee.' 'I think well of it,' replied the other. They repaired to the poet's house, and got a sufficiency of meat and drink there."

Banquets appear to have been perilous places in those days: the unknown youth accompanied the poet to a feast given by the British king in honour of Congal's arrival, and there a scene occurred which we must leave the Irish author to tell in his own words:—

"Before entering the palace the poet had told him [the unknown youth] if a bone should be brought on a dish in his presence, not to attempt breaking it, for there was a youth in the king's household to whom every marrow-bone was due, and that if one should be broken against his will, its weight in red gold should be given him, or battle in single combat, and that he was the fighter of a hundred. 'That is good,' said the other, 'when this will be given I shall do my duty.' He stopped not till a bone was brought on a dish to him, and he put a hand on each end of it, and broke it between his two fingers, and afterwards ate its marrow and flesh. All beheld this and wondered at it. The hero to whom the marrow was due was told of this occurrence, and he rose up in great anger, and his heroic fury was stirred up to be revenged of the person who had violated his privilege, and ate what to him was due. When the other had perceived this he flung the bone at him, and it passed through his forehead and pierced his brain, even to the centre of his head. The king's people and his household rose up to slay him in revenge for it; but he attacked them, as attacks the hawk a flock of small birds, and made a great slaughter of them, so that their dead were more numerous than their living, and the living among them fled. He came again, and sat at the same poet's shoulder, and the king and queen were seized with awe of him, when they had seen his warlike feats, and his heroic rage and champion fury roused. But he told them that they had no cause to fear him unless the household should again return into the house. The king said that they should not return. He then took his golden helmet off his head, and fair were his visage and countenance, after his blood had been excited by the fury of the battle."

The queen recognized this youth as her son, (whom she had sent out some years before as a knight-errant,) by a ring which he wore on his finger: and so excited was she that she "cast her royal *callad** into the fire, and screamed aloud." In this recognition the king refused to join, because three different adventurers, each claiming to be his absent son, and each having a hundred brave attendants, had presented themselves before him successively, and he had sent each to travel round Britain for a year. Soon afterwards the three candidates appeared; two of them were slain by the prince, and the third confessed his fraud, after which the king recog-

* *Callad*, either a cap or a wig. A learned pundit at our elbow inquires whether this be the origin of the angry threat "If you do so and so, I will throw my wig in the fire," which is commonly used to children in Ireland.

Digitized by Google

nized the stranger as the rightful Conan and his legitimate heir. The command of the auxiliaries granted to Congal, was intrusted to Conan, and the two princes felt themselves able to face a world in arms.

Domhnall did everything in his power to divert Congal from the war, but when his efforts failed, he set before his nobles, in a sensible speech, the trifling nature of the offence, and the large offers of compensation which he had made. One of his bards put this manifesto into verse—the only means of ensuring its circulation in a land where reading and writing were little practised. The composition is more creditable to royal logic than bardic poetry:—

Behold ye *the conduct of* Congal of *Cuailgne* * !
What is the difference at all between
The egg of the red-feathered hen,
And the egg of the white-winged goose?
There is little difference of meat
Between the hen egg and the goose egg;
Alas for him who destroyed all Erin
For a dispute about one egg!
The full of seven strong vats was offered
Of goose eggs together,
And an egg of gold along with them
On the top of each vat.

The prevalence of pagan superstitions in the armies on both sides is fully shown in the following passage, which is at the same time remarkable for the caution with which the bard insinuates his scepticism of the supernatural powers of the clerical diviners:—

"In the mean time the soothsayers, the revealers of knowledge, and those who had delivered predictions, were contradictory and doubtful, in consequence of the length of time and stubbornness with which the heroes on both sides maintained the field without yielding or giving way on either side. Wherefore the predictions of their philosophers and wise men became uncertain and doubtful to some of them on either side, they having renounced and disbelieved their own demoniacal sciences of magic, in consequence of the incessant successive rallyings and dispersions of the forces on either side in the contest; so that their diviners and wise men could do no more than remain in a state of suspense and indecision, until they should learn on which party the success and prosperity of the battle would descend and tarry, and which of them the battle-terrific Beneit [Bellona] would more inspire with her vigors."

The long description given of the battle is about as uninteresting as a versified gazette of killed and wounded: in the end Conan and Congal are slain, with all their followers, save one, named Sweeny, who went mad, and another of unknown name, who remained a prisoner.

There passed not alive of the host over the sea,
Which had come with Congal, son of Scannal,
But one hero who went frantic
Upon the sea, and one fettered to his leg.

The adventures of mad Sweeny are usually subjoined to the account of the battle in the Irish manuscripts. We regret their omission in the translation, as they would have thrown light on the social condition of Ireland in the Middle Ages.

* *Cuailgne*, pronounced Cooley.

The Fifth Political Word addressed to the House of Lords. By Viscount Wellesley. Mitchell.

It may be necessary to introduce Viscount Wellesley to our country readers as the gentleman on various accounts heretofore well known to them, and in poetic annals to be known to all future ages, as the

Long Tilney Wellesley Long Pole

of the Rejected Addresses;—his polyonymous appellation having been recently cut down to its present peace establishment, by his father's succession to the honours of the peerage. The Viscount having thus obtained a *post obit* lien upon the patience of the Upper House of Parliament, his right to inflict upon its members a preliminary exercise, for the better accommodating the back to its future burden, has become less disputable; always, however, leaving to the said right honourable assembly their Englishman's privilege, of foregoing the proposed discipline, and neglecting to read 'The Fifth Word,' should they be so disposed.

In political matters, our institutions are wiser, than in respect to those of law—inasmuch as they reject no evidence, however suspicious its source, assigning to each its more or less of probability and credence. Allowing, then, to all men their right to hear evidence, we must still express a desire, that our political good men and true, in the discharge of their jurymen's functions, would pay a little more attention to the moral weight which antecedents give or take away from professed leaders and teachers. We think, for instance, it would tend materially to public prosperity, and more still to public peace, if those, who, at different stages of their existence, have swerved round in opinion from black to white, arriving, like angels, from one extreme to its opposite without passing through the intervening space, were branded with some hall-mark, denoting the value of their versatile conclusions. He whose whole creed is to-day the reverse of what he propounded yesterday, must know that he was, or is, egregiously wrong; and if vanity prevents such a one from mistrusting his own powers of judgment, after such self-conviction of incapacity, he ought to be taught modesty. Our hall-mark might be found serviceable in another way—thus, demonstrated incapacity in private life should detract from a man's claim to credence as a director of public policy; for he who has proved himself unequal to rule his own little kingdom, has small right to take up public time and attention, by interference with the concerns of the nation.

But what, our readers may ask, has all this to do with the publication before us? and we can only answer by claiming the critic's privilege to set down useful truths *à propos de bottes*. If our remarks should be found to shoot wide of 'The Fifth Word' and its mouth-piece, there are plenty of men and authors to whom they do apply, so that, in any case, we shall not have shed our ink in vain.

As for the Word itself, we do not class it among those words of might that will move mountains, nor think that it will work greater miracles than the four which have preceded it. We feel, therefore, no necessity for departing from our general rule of keeping clear of party politics, or for saying much more on the present occasion, than that the book concerns the foreign relations of this country, and the true mode of dealing with them; and the fundamental canon employed is a short one, and may be thus enunciated: "Whatever is done by one set of ministers is, and must be, wrong: all that has been effected or designed by another set, is as inevitably right." This is the only moral we have been able to discover; and if the author is less than satisfied with the result, let him console himself that having enforced on the unfortunate critic the duty of perusing the work, he has already received a full measure of punishment.

Second Report and Appendices of the Children's Employment Commission.

[Second Notice.]

We glanced last week, in our gleanings from these Reports, at two of those branches of industry which supply the elegancies of life. Let us now turn from St. James's, with its millinery and laces, to the regions of the forge and anvil. Perchance we shall find in the grimy labours of the iron towns, toil less fearful and devastating than attends the production of the light articles which the frivolity of fashion requires; for there is no proportion between the toil and character of industrial employment and its remuneration. Often, the easiest work, requiring the least physical effort, seems attended by a prolonged absence of rest and sleep far more oppressive than the heaviest labour, and the extreme exertion of strength. In fact, muscular toil checks its own duration; and it is its duration, and the consequent absence of rest, rather than the presence of exertion, which injures the body. Even heavy physical labour is often good, rather than bad for health. It tires before it has time to hurt; and this impossibility of continuing such toil for many hours secures rest. Hence we find iron forgers, masons, carpenters and blacksmiths, living long lives in sturdy strength and health. But no one, it seems, has ever known a milliner long-lived and either healthy or hearty, doing, nevertheless, the lightest possible work, needing neither exertion nor muscle. She sinks beneath sameness of posture, duration of employment, and want of rest. We must not measure severity of labour by the strength it requires, but by the reverse, except where a high order of skill is necessary to maintain a monopoly of supply. But where poverty has to fight its own way, the heaviness of the work is always, as far as it goes, a protection to health, and often to the wages of the workmen, for, without a sufficiency of food, he would be unable to maintain the requisite power of muscle.

There are, however, attached to many of the heavy employments, lighter matters of detail, and preparatory or finishing work, comparatively light, in which children are employed at fearfully long hours, and undergo all the miseries of light and prolonged work. The trades of which we have now to speak, in some instances, exhibit these varieties.

The Trades of Wolverhampton District, which, in a great degree, assimilate to those of Birmingham, are vividly described by Mr. R. H. Horne, together with the moral condition of the persons employed in them. They consist chiefly of the manufacture of ironmongery in all its branches. Japanners and tin-plate workers, and founders of brass and workers of steel, also abound; and in these branches large numbers of children are employed, who begin work at 8 or 9 years old. The whole of this swarthy population are ironmongers of one sort or another, and engaged in the various branches of the Wolverhampton business. The population of that town alone is 36,382, and the trade extends to Walsall, Willenhall, Wednesbury, &c.

The manufacture of the Wolverhampton wares is, in great measure, like those of Sheffield, Birmingham, &c., carried on by small masters (of whom there are 260 among the locksmiths alone) in whose little dens in nameless alleys, groups, or, as Mr. Horne calls them, "nests' full" of children are employed, in the making and finishing of the smaller goods: the goods, when finished, are then sold to the large dealers. In these alleys, the bulk of the artizans work and live. They open out of the streets at every fifth or fourth house, and are seldom above a yard wide: the filth of the alley flows "streaming all over the passage."

"Having made your way," says Mr. Horne, "through the passage, you find yourself in a space varying in size with the number of houses, hutches, or hovels it contains. They are nearly all proportionately crowded. Out of this space there are other narrow passages, sometimes leading to other similar hovels. These are the dwellings and workshops of the poorest of the working classes. Where there are the largest number of these they have the appearance, after going through the narrow dark passage or burrow, of a sort of rabbit-warren; one or two of them may almost aspire to the resemblance of a colony of beavers, but wanting the green banks and the fresh air."

Occasionally these nests of houses possess the

Digitized by Google

luxury of a pump, of which the handle narrowly escapes the window behind it, as it discharges its water at the opposite door. The floors of the hovels are seldom paved, and all within is squalid and dilapidated.

"In process of time, as the inhabitants increased in number, small rooms were raised over these workshops, and hovels also built wherever room could be found, and tenanted, first perhaps as workshops, and gradually by families also."

This results from the pressure of the growth of population, and the difficulty of finding room for building,—the property being mostly private, or belonging to the Church. The furniture is in perfect keeping with the abodes, and the inmates with both:—

"In one of the hovels of Stafford-street it appeared that a man, his wife and child, and *a donkey* all slept together. The hovel had but one room; the man was seated on the threshold of the door, as I was passing one evening; the woman and child were in bed on the ground, and the donkey was standing upon some straw close beside her."

The Stafford Street alleys are, we hope, an exception. The "best specimens" of them, according to Mr. Horne, are distinguished by the inviting names of "Pudding Bag and Hellhouse Yard." That the town is not devastated by fever, appears to be owing to the plentifulness of water and its sloping site, for there is a total want of artificial drainage.

Equally wretched are the workshops of the small masters, forming often part of the dwelling-houses in these alleys. At a large nail-workshop, where "a great number of heavy iron machines were working in every room on each floor,—the building was in so shattered a condition that every particle of it was in a constant state of creaking and groaning vibration. The flooring was so broken that in many places I could look down into the room below through the gaping and rotten planks. The upper floor had been shored up with props from time to time." *

The machinery could only be passed by being stopped, so closely was it packed, without being boxed or guarded. The children "seldom," the master stated, "lose a hand," from the tip punching machine, for "it only takes off a finger at the first or second joint—sheer carelessness—looking about them—nothing but carelessness." It appears, however, that there are other places where it is thought not altogether superfluous to guard against the carelessness of a young child, and that the precaution is successful.

The hours of work seem to range, throughout the whole district, from between seven in the morning and eight at night, and are often exceeded, especially by the children. The processes in which they are employed vary greatly, and their treatment likewise: they appear to fare best in the tin-makers' and japanners' shops, less so with the locksmiths and screw-makers, and worst of all with the nail-makers—the process being injurious, and the treatment often barbarous. "The unvarying mechanical nature," says Mr. Horne, "of all these processes during the whole day, added to the simple mechanical certainty of the results, is laborious to a degree that wearies, and indeed wears out the soul with the body." The children are generally apprenticed to the adult with whom they work, and whose servant they become. Where the children are tolerably well treated, they seem willing to acknowledge it. Anna Beddoes, aged twelve, for instance, working at Messrs. Rytons', japanners, "likes it very well—her master treats her kindly; is sure he does: get 2*s.* a week: * * hopes she is not to be fetched away by this here—by his (Mr. H.'s) doing anything at her." The candour of these and like avowals give only too much reason to credit statements of an opposite character.

"No sort of care" appears to be taken of the children "after their labour is over:" they stroll about in the streets, too tired to play, and retire early to their wretched beds. A general deformity seems to prevail among them, owing to the constant use of the file, and other cramping postures. All are more or less sickly, meagre, and ill-formed, especially the girls, whose bladebones are so displaced "as to resemble the back of a grasshopper." The stature is stunted, and the age of puberty retarded.

"Young lads of 15 and 16 are the size of ordinary English schoolboys of 12 and 14, but not by any means so strong and healthy as the latter. Many of these poor manufacturing girls of 15, 16, and 17, so far from possessing the external developements corresponding with commencing womanhood, presented (when they happened to be straight) such figures as might be sawed out of two deal boards put together. Their long, melancholy faces and vacant stare seemed to be half conscious of the progressive injury to nature whereby they earned their daily bread, but ignorant of the cause. Some few had a look of hopelessness, as though they had once known what it was to hope: the great majority seemed reckless, or totally indifferent."

Their health is generally doomed before labour begins. Whilst babies their nutriment consists of the breast night and morning, and Godfrey's Cordial, *i. e.* laudanum and treacle, in the interval. During the day they are left to the tender mercies of children of from five to eight years old. The use of Godfrey's Cordial seems to be common at Wolverhampton; and Mr. Henry Coleman, surgeon, affirms that "many infants die from its effects."

"Priscilla Hatton, aged '10 years,' works at home at nursing: the child is one month old. Is considered a good nurse by her mother; the child is a good child, but it squeaks a little sometimes when her wants tittee: mother gives it a tea-spoonful of Godfrey's Cordial, about three times a-day; sometimes she [witness] gives the child a tea-spoonful of Godfrey's Cordial when mother's out, and the child is noisy and restless; always knows where to find the Godfrey's Cordial; takes a little herself sometimes, because it's nice: it makes her go to sleep too as well as the child, and it's very nice."

Children are further injured by the drunken and dissolute habits of the parents themselves. "Perhaps the majority are drunk once a week," and "with few exceptions all are improvident;" they have too much to eat for two or three days, and are half starved the next four to make up for it. They appear, in short, to be a population living in reckless indifference to all the ordinary restraints of prudence, and to most of the habits of civilization.

There is a curious custom in these districts of accepting loans from the master on terms which constitute a *quasi* vassalage. The loan is usually of an amount which few improvident or poor men can well repay: it is usually spent in a round of debauchery, within a week or two after its receipt. This money is lent on a written contract, whereby the workman hires himself to the master to work solely for him, his executors, administrators and assigns, until such advances, or any future advances, shall be repaid by weekly instalments, which the master is at liberty to deduct from his wages. Sometimes the period of service is limited, but even when it is, the man can seldom resist the temptation of a fresh loan, if offered, and he is much oftener anxious to receive the instalment himself of 1*s.* 6*d.* per week, than to get out of debt. The object on the part of the master, of course, is to control the period of service; and when they part by mutual consent the man is handed over to his new master; the old debt like a chain about his neck, being also transferred from one to the other. A new loan is often given by the fresh master, and an accumulating debt created, from which the man has no means of absolving himself. Even if he had the sum at command the master may refuse to receive it in one payment, but may insist on the service contingent on repayment by weekly instalments. The men often, under such circumstances, refuse to continue their service, and no less than 240 have been sent to jail within four years for this very offence, the master having obviously a legal right to insist on the fulfilment of the exact terms of the contract, as regards service as well as payment. For if a man agrees to work until he has paid his master 52*s.* by 1*s.* per week, and at the end of the year any sum remains unpaid, the stipulated mode of payment applies just as much to this portion as to the other, inasmuch as the service is not limited to the year, but is to last until, by that specified mode of payment, the debt is discharged. The prolonged service cannot be dissevered from the prolonged payment; they are both of the essence of the contract. In fact, the man legally * sells himself, and is regarded as sold. The service of the child is often sold together with that of his parent; and in one case, where a master died, his heir came into and took possession of the workmen, along with the goods and chattels. The power of the masters is further secured by the prevalence of the "Tommy" shops and the truck system, which by enabling the masters to increase the price of goods, puts an easy means of diminishing wages in their power. At the same time, such is the animal condition of the workpeople, that the wives themselves admit, that it is well they have only the means of getting goods with their pay-tickets, for otherwise they might, by squandering away money payments on drink, be wholly without food. The "Tommy" is, therefore, often a means of saving them from absolute destitution.

It appears that diseased meat is very commonly purchased; smothered pigs, premature veal, and bad fish, forming no inconsiderable portion of the offal food of this semi-barbarous people. Mr. Peter Law, landlord of the Star and Garter, says—

"The meat they buy is a sort of carrion, quite unfit for human use. There are *meat-conners*, who ought to seize all this bad meat, and burn it—but they do not. Does not know why they do not. The bad meat is chiefly that of premature calves, or of cows that have died of some disease, most commonly of diarrhœa. Sheep often drop dead in the fields, from a disease in the head, and are sold to certain butchers, who deal solely in diseased animals. Some of them sell horse-flesh steaks for beef-steaks. Can attest this as a fact; knows where it is still done repeatedly. Fish, which he knows has arrived four days in the town, is bought by certain masters for their apprentices, in order to give them a change, by a treat of fish, as the masters call it. Knows many boys, who live upon this diet, who are wretchedly thin."

The town of Willenhall, which is three miles from Wolverhampton, is described as the most singular place Mr. Horne has ever visited, wholly unique in its revolting characteristics. It is in trade a sort of off-shoot of Wolverhampton, absorbed in the craft and mysteries of lock-making. It appears, in all respects to be the sink of the district; a sort of "lower deep," devised for the express purpose of disabusing the visitor of these grimy regions of his natural mistake in supposing that nothing can be worse than Wolverhampton. The population is 8,695, of whom all, save eight persons, are engaged in the trades of the place.

Mr. Edward Wright, factor, thus describes the skill, cheapness, and characteristics of the work. He

"Thought that the Willenhall men were like no-

* The warning of the Commissioner was laughed at; and a few days after this place fell, and killed one child, and maimed others.

* The legality of these foolish contracts is established by the case of Wallace *v.* Day and another, 2 M. & W. 273.

Digitized by Google

body else; they were capital workmen—each one wedded to his own sort of work, and the place he lived in. If any of them were taken away, they came back. Some factor of Brussels once took over about five-and-twenty of them; they got each 3*l.* a-week, or more; yet they all came back. First one came—then another—at last they all returned to Willenhall, like a flock of rooks. The cheapness of their work beats everything of the kind anywhere else: a padlock, which is sold at the ironmongers in London for 1*s.*, is made and sold by the Willenhall men for 1½*d.*, including all the material, labour, everything, or 1*s.* 9*d.* per dozen; the factors sell them to the London ironmongers at 2*s.* per dozen. Other things are in the same proportions. Their abject state compels them to sell for almost anything in competition with each other. They continually sell their work for the value of the iron; sell it by its weight. Thinks they often sell it for less than its value as iron, getting the iron on trust."

The dwellings and shops are generally situated at the end of narrow alleys, and surrounding peculiarly filthy middens. We will not transcribe the loathsome pictures drawn in the Reports of the general filth of the town and dwellings, its gutters of abomination, or its stagnant ponds of filth—"reservoirs of leprosy and plague," from which, a surgeon adds, that there are enough "exhalations to fill a whole country with fever." It is not astonishing that "typhus fever is very prevalent in the town." The inhabitants of this place are thus sketched by Mr. Horne:—

"In bodily appearance they are haggard, dirty, lank, and ricketty. They look smoke-dried and grim. The knuckles are prominent and knotty, and the right hand and wrist have a peculiar rigid turn or twist. The left knee projects like a knot in a tree, the right knee bends inward, and the right ankle has a corresponding inclination. The mouth hangs despondingly and purposeless, and the eye, when not illumined by intoxication, is sunken, dull, and unobserving."

From a constant habit of standing in the same posture at the vice, one leg is crooked, familiarly termed "the hind leg," and both together form the letter K.

"The right hand, also, has frequently a marked distortion. Almost everything it holds takes the position of the file. If the poor man carries a limp lettuce, or a limper mackarel, from Wolverhampton market, they are never dangled, but always held like the file. If he carry nothing, his right hand is in just the same position."

These gentlemen maintain a strict monopoly of the hands and hearts of the ladies of Willenhall, repelling the perils of extraneous rivalry with unquestionable prudence.

"They keep up a system of intermarriages. A locksmith once seriously assured me, that if anybody not of the town 'was to try to marry a Willenhall girl, the men would turn out and pursue him, and kill him.' This was no doubt an extreme assertion, but there is some foundation for it."

The system of work at Willenhall is to do nothing for two or three days but drink and carouse, and then work for sixteen or twenty hours a day the remainder of the week. Their time seems to be pretty equally divided between drinking and filing. Children of both sexes, perched on blocks, work with the men as soon as they can hold the file: they are apprenticed to their masters, and occasionally sold by them from one to another, and often brutally used.

The evidence is all given in the exact words of the young Vulcans themselves, and is borne out in substance by other witnesses. One is beat with a whip with four lashes to it, tied in knots: the master of another boy—

"Has cut his head open five times—once with a key and twice with a lock; knocked the corner of a lock into his head twice—once with an iron bolt, and once with an iron *shut*—a thing that runs into the staple."

These children are required to work from 6 till 10 or 11 at night.

A journeyman thus speaks of a shop searched some time since for the body of a missing apprentice, supposed to have been murdered there:—

"Has seen Robert Jones beat the boys dreadful, with a stick; sometimes give them punches in the face with his fist, till they bled shameful. Good boys they were to work, too, as ever he saw; never impudent to the master; never turned out a word amiss to their master; the boys dare not tell anybody. The wife and all, Mrs. Jones, is just as bad as the master; she would lay hold of the hair of boys before breakfast, and lug them as long as she could stand over them; she also punched them in the face with her fist, like a man fighting with another man. He left Jones's workshop because he could not bear to see him leather the boys in that way; and told him so."—As this witness uttered the last words (says Mr. Horne), it seemed as if the recollection of what he had seen made him turn sick and faint. He turned quite pale. He was a very decent journeyman."

These horrid statements are nowise overcharged. There are abundant instances of a desire to make the least of a bad beating. The boys are hardened by brutality, and anything but given to complain:—

"One boy told me that his master did not beat him much; *only* with a stick—or some thick ropes—or the handle of the hammer. Another boy, under the same circumstances, told me 'he was pretty well treated!' and the master of a third '*only* laid it on for five minutes at a time.'"

Kicking with nailed shoes, violent beating with ash sticks, knotted ropes, and hammer handles, and wrenching the ears till they bleed, seem ordinary punishments. There are no magistrates in this lawless place, and no redress for the children.

It must not be supposed that these children are learning a trade: the subdivision of work is such that they learn merely to file, not to be locksmiths. There is no future workmanship and its profits to look forward to; they are only fitted for and doomed to the same dull drudgery for life.

The poverty of numbers of these people is extreme. Scenes thus described present themselves frequently:—

"I have entered the houses and hovels of journeymen locksmiths and key-makers, indiscriminately and unexpectedly, and seen the utmost destitution; no furniture in the room below but a broken board for a table, and a piece of plank laid across bricks for a seat; with the wife hungry—almost crying with hunger—and in rags, yet the floor was perfectly clean. I have gone up stairs, and seen a bed on the floor of a room seven feet long by six high at one side, but slanting down to nothing, like a wedge, where a husband, his wife, and three children slept, and with no other article in the room of any kind whatever except the bed."

This internal cleanliness seems to be a redeeming virtue; almost the only one Mr. Horne appears to have found in this sink of filth, cruelty, and crime.

The moral condition of the population is thus summed up: "Moral feelings and sentiments do not exist." "*They have no morals.*" Actual vices are, with the exception of drunkenness, checked by poverty of blood and constant exhaustion, which leave neither time, nor inclination, nor stamina for the excitement of the imagination or the senses. "They are protected by their injuries."

To say that the children are all but universally and utterly ignorant—that their minds are a perfect blank—that they neither know nor are attempted to be taught what futurity means—that they are openly and avowedly heathen in religion, and devoid of instruction in all secular knowledge, would be short of the fact, and indicate a position more hopeful than the truth warrants. There is, unhappily, just that miserable apology for schooling, which consists in occasional incarceration in a Sunday school; and that half-perception and recollection of a few dislocated notions, secular and religious; and stray names often confused together in the memory in profane and shocking jumble, which is far worse than complete ignorance; for it satisfies the belief, and cherishes the delusion, that such children are being educated. The torpid benevolence, which might be moved by a conviction that a generation of Pagans was growing up around it, is lulled and eased of the trouble of exertion, by the mock show of those Sunday schools. In order to avoid the extremes of the case, we shall select specimens of the evidence only of the Sunday school children in these populous districts.

William Benton—"Thinks that's his name; can't spell it rightly. Age, don't know justly—mother says he's turned 18. Can't read or write; can tell some of his letters. Goes to a Sunday-school sometimes. Is of the Baptist school religion, *whatever that is.* Never heard of Moses; never heard of St. Paul. Has heard of Christ; knows who Jesus Christ was—he was Adam. Doesn't care much about going to school, if he could."

Another boy has not made quite so much progress, and has not yet, being perhaps of a less accommodating faith, made up his mind as to an exact creed, though he—

"Goes regular to the Methodist Sunday-school, and has been there six years regular; cannot write; they don't write there; never heard of Solomon, nor of Herod, nor St. John the Baptist; does not know what religion he is; never heard of Samson or Goliath, &c.; works from about six in the morning till ten at night, more or less as work comes in."

Stephen Toort, aged 17, having had the advantage of education in a free school, though his reading has not extended to Solomon, &c., thinks he can state that Pontius Pilate was an apostle: "has heard that read."

Another, not equally gifted—"Can read easy words; cannot write. Does not know who Jesus Christ was, but has heard the name of it. Never heard of the Twelve Apostles. Never heard of Samson, nor of Jonah, nor of Moses, nor Aaron, &c. Has attended a Sunday-school regularly for five years."—William Southern, aged 17, "Can read easy words; not write. Has attended a Sunday-school regular nearly six years. Knows who Jesus Christ was, he died on the cross to shed his blood to save our Saviour. Never heard of St. Peter or St. Paul. Six farthings make 3*d.*"—Another, aged 19, "Has attended a Sunday-school regularly these five years. Never heard of Joshua; there were Twelve Apostles; St. Peter was one, Moses was another, Jonah was another, Job was another; cannot mention any more that he recollects. Samson was the strongest man. Does not know the name of the Queen. Twenty farthings are 6*d.* Wishes he could write, can't get on properly without it."

Where they do not learn the Catechism, the advantages and knowledge gained are not so great. Henry Wood is going 17:—

"Can read a little in the Testament; likes the large letters at the top of chapters best for reading. Cannot write; they don't learn in these parts. Leads a hard-working life—sometimes 14 or 15 hours a-day, with about an hour or an hour and a half out in the course of the day. Does not know how many Disciples there were; does not know who Jesus Christ was—thinks he was an apostle; they don't learn the Catechism here, else he could tell about him, but thinks he was a king of some kind, of London, a long time ago. Does not know how many inches make a foot."

After citing cases of so extraordinary a character, it is due to Mr. Horne, as well as to the effect such facts ought to produce, to add his assurance that—

"None of the depositions here written down are to be attributed to confusion or timidity. If the witness were timid or confused upon any question, I either waited till it was over, or else gave up the point. Some of the extreme and almost incredible statements (such as the witness thinking that Pontius

Digitized by Google

Pilate, or Goliath, were Apostles; that the witness had never heard the name of Jesus Christ, &c.) are the result of repetitions of the same questions, especially in the case last mentioned, either under a different form, or after an interval during which I had asked other questions."

But amongst all this frightful ignorance, there was, it seems, "a general knowledge of the lives of Dick Turpin and Jack Sheppard, not to mention the preposterous epidemic of a hybrid negro song."

The boy who cut his examination short, with the frank assurance that he was "no judge of nothin," gave the pith of the matter. The utter indifference of the masters and parents to education or improvement, and the shameless avowal of it, are among, perhaps, the worst features of the case. The zeal of some of the clergy and ministers is swamped in the flood of animalism around them. Animal, merely animal, are these large and growing communities. It by no means appears that there is anything fiendish or even wilfully and wantonly vicious in their character. They are living, however, out of the pale of almost all the humanities which demarcate the position and conduct of man from brute, and there they are allowed to live; and there is, in our eyes, no crime among them one half so great as in the classes above them. The indifference of the civilization around and about it, is a far greater sin than the mere brutality of neglected misery. It must not be thought that the nature of these poor people is incapable of culture. They are shut out from the softening influences even of nature's commonest scenes, and are obviously fashioned by the circumstances of their position:—

"You will find poor girls who had never sang or danced; never seen a dance; never read a book that made them laugh; never seen a violet, or a primrose, and other flowers; and others whose only idea of a green field was derived from having been stung by a nettle."

We have dwelt at length on this scene. It is, we find, a portraiture of a very extensive district. Much of the evidence, as to moral and social habits, is of too revolting a description for our columns. There is no exaggeration in the facts we have cited, for they are borne out by other witnesses, equally searching, though less powerful in description than Mr. Horne.

The truth is plain, that in the heart of England there has arisen, and is daily growing, a vast community toiling in serfdom, adding the vice of drunkenness to the habits of animals, recognizing few of the distinctions which civilization has established between the sexes, or in the relations of society; subsisting in great measure on carrion, and systematically plying their offspring with poison; ignorant as ignorance itself; living without morals, and dying without hope.

We would not willingly close this picture without extracting the only ray of light it contains, springing from an infant and instinctive perception of a Providence more merciful than man, beaming through the gloom and terror of present suffering:—

"Many of the children told me they always said their prayers at night, and the prayer they said was, 'Our Father.' I naturally thought they meant that they repeated the Lord's Prayer, but I soon found that few of them knew it. They only repeated the first two words: they knew no more than 'Our Father!' These poor children, after their laborious day's work, lying down to sleep with this simple appeal, seemed to me inexpressibly affecting. Having nothing but harsh task-masters in this world, or 'working under their Father,' it was probably the only true sense in which they could use the words."

The Reports extend to nearly every manufacture in the kingdom. Those on the Cutleries of Sheffield, the Printfields of Lancashire and Scotland, the Potteries, the Glass works, and the Tobacco manufacture, are replete with interest; and though the varieties of circumstance and condition are widely different in each, there is a disease pervading them all which we cannot contemplate without serious apprehension. The best hope of safety arises from the publicity of the peril afforded by these Reports, for whilst they unplume the complacency with which we have been prone to regard ourselves, we shall scarcely fail to derive more substantial benefit from the lesson thus taught us, that "the dark chaos of hunger and ignorance" cannot be left "weltering uncared for at our feet," with security either to the moral vigour or physical prosperity of the nation.

American Criminal Trials. By Peleg W. Chandler. Vol. I. Boston; London, Maxwell.

"In selecting these cases for publication," the author states himself to have been,—

"—chiefly governed by a desire to present those, which might be interesting to the American reader, not only as illustrative of the morals and manners, but as connected with the religious or political history, of the periods in which they occurred; and, in preparing them for the press, he has attempted to give an account of each case, after a careful examination of all the facts which might throw light upon it, in the form of a narrative, accompanied by such general remarks and reflections as naturally suggested themselves."

The perusal of these lines relieved us from the heavy load of suspicion under which we took up the volume, that it would prove another instance of the bad spirit which has crept into modern literature, of administering to the morbid exciteability of the reading public. Doubtless, within the limits here prescribed, the revival of the memory of such adjudicated cases as have deeply interested the feelings of a contemporary public, has its uses; affording admirable landmarks for tracing the intellectual and moral progress of opinion, while they test, with considerable accuracy, the true value of the institutions involved in the several discussions. Not only are the best interests of humanity forwarded by rehabilitating the character of the victims of contemporary injustice, but the course of future tribunals is cleared by the calm lights which a disinterested posterity brings to bear on past errors. But of scarcely inferior importance is the philosophy which may be extracted from such reading, as illustrative of human nature in the social masses; a reading which forms the most efficient remedy against those attacks of popular monomania, to which nations from time to time are susceptible. The criminal annals of nations offer, in fact, a striking portion of that most neglected chapter in all bygone historians, the history of the people, of their habits and usages, their wants and wishes, and often of the manner in which the natural gratification of them has been restrained by bad laws. Thus, in the narrative of the Quaker prosecutions in Massachusetts, recorded in the volume before us, we have a striking and a startling case of the infirmity of man's nature—of persecution for opinions inflicted by men who had themselves fled to the wilderness to avoid persecution—and of the necessity of building up the strongest walls, both legal and moral, to separate the desire and the right to serve God after our own lights, from the desire or the right to enforce the practices we hold pleasing in ourselves, upon the will of our neighbours. Who shall say that such warnings are no longer necessary—that these things are obsolete? What are the applications of Lynch law, and the persecution of the emancipators of America, but cases of the like overweening idolatry of self, in matters of opinion, against which reason and philosophy cry aloud and cry in vain?

Another point of still more painful interest is here laid bare in the history of the New York Negro Plot:—

"In the year 1741, the city of New York was thrown into the most intense excitement and alarm, by the rumor of a plot by the negro population to burn the city and massacre the inhabitants. There had been frequent insurrections in different parts of the country. The Spanish government made direct efforts to induce the slaves to revolt. Liberty and protection had been proclaimed to all fugitive negroes from the English by the governor of Florida, and he had actually formed a regiment from the negro refugees, appointing officers from among themselves, allowing them the same pay, and clothing them in the same uniform with the regular troops of Spain. In 1738, a serious revolt took place in South Carolina, and a large number of the insurgents suffered the last infliction of human power and vengeance. As early as 1712, there had been an insurrection of the slaves in New York, who fired a house and murdered several citizens before they were dispersed by the soldiers. Recollection of this, and a general distrust of the negro population, rendered the citizens of that city peculiarly suspicious of their movement, and when in 1741, the cry was raised of a Negro Plot, there ensued a scene of confusion and alarm, of folly, frenzy and injustice, which scarcely has a parallel in this or any other country. In February of that year, the house of a merchant, named Hogg, was robbed, and suspicions were entertained of John Hughson, who kept a low tavern where negroes were in the habit of resorting. This man had an indented servant, Mary Burton by name, about sixteen years of age, who gave information against him, and he confessed that a part of the goods were brought to his house, which he delivered up to the magistrate. Soon after these occurrences, the government house in the fort was discovered to be on fire, at mid-day, and was burnt, together with the king's chapel, the secretary's office, the barracks, and the stable. The fire was satisfactorily enough accounted for, but other fires occurring in quick succession, on different days, and some of them being undoubtedly the work of incendiaries, great alarm was excited."

We have not space to follow, step by step, the progress of this insanity. We may state that a Spanish vessel, manned with negroes, had been made a prize, and the men been condemned as slaves:—

"One of them had been bought by the owner of a house in which fire was discovered, and a cry was raised among the people, 'the Spanish negroes, the Spanish! take up the Spanish negroes!' They were immediately incarcerated, and a fire occurring in the afternoon of the same day, the rumor became general, that the slaves in a body were concerned in these wicked attempts to burn the city. The military were turned out, and sentries were posted in every part of the city, while there was a general search of the houses, and an examination of suspicious persons. The lieutenant governor, at the request of the city authorities, offered a reward of one hundred pounds and a full pardon to any free white person who should discover the persons concerned in these incendiary acts, and freedom with a reward of twenty pounds to any slave who should make the same discovery. The offer was tempting, and, at the ensuing session of the superior court, Mary Burton, the servant of Hughson, made a statement before the grand jury to the effect, that three negroes, Cæsar, Prince and Cuffee, were accustomed to meet at her master's, and had made a plan to burn the whole city and massacre the inhabitants. She had seen a large number of negroes at the same place, who were all in the conspiracy, and there were in her master's house a quantity of fire arms. The only white persons concerned were her master, his wife, and Peggy Carey. The former was to be king, and Cæsar was to be governor. At one of the meetings she heard Cuffee say, 'that a great many people had too much, and others too little;' and he intimated that such an unequal state of things should not long continue."

This miserable testimony is in exact conformity with the established evidence in the working of all plots. Then follows a lengthened account of the manner in which fear and avarice were combined to involve a long list of innocent persons in the conspiracy—how the

Digitized by Google

cry of No Popery was mixed up with the main question, and how the lawyers gave utterance, under the delusive excitement, to the most monstrous and abominable calumnies, alike divested of common sense and common morality. The author thus sums up the story:—

"A day of thanksgiving to Almighty God was observed, by public command, 'for the deliverance of his majesty's subjects here from the destruction wherewith they were so generally threatened by the late execrable conspiracy.' • • The excitement soon subsided, however, and the prosecutions were becoming unpopular, more especially as Mary Burton, the common informer, began to give out intimations against people of consequence in the city. The last act of the tragedy was the payment to this wretched creature, by the city authorities, of the reward of one hundred pounds, originally offered to any one who would disclose the plot. The whole number of persons taken into custody on suspicion of being engaged in the conspiracy was over one hundred and fifty. Of these, four white persons were hanged; eleven negroes were burnt, eighteen were hanged, and fifty were transported and sold, principally in the West Indies. Several persons who were suspected made their escape out of the colony. Thus ended the famous negro plot of New York. Upon a review of the evidence, as reported by one who had implicit faith in the existence of a conspiracy to burn the city and murder the inhabitants, we have no difficulty in pronouncing the whole thing to have been a complete delusion. The numerous contradictions, the glaring inconsistencies of the witnesses, and the monstrous perversions of law and evidence on the part of the magistrates, rendered argument upon the subject entirely unnecessary."

This "plot" is likened, with much justice, to the famous conspiracy of Titus Oates: it has, also, great and striking resemblances with the story of the "Anointers" [*see Athen.* No. 644]. Against the occurrence of such accesses of popular monomania, no attainable amount of education could always protect us; but it is satisfactory to know, that with the advance and diffusion of knowledge, the evil effects of these panics have been materially mitigated. On the occurrence of cholera, there was a strong tendency among the populace to attribute that infliction to the evil practices of individuals; and in Dublin, we believe, the physicians, for a day or two, ran some risk of outrage at the hands of the mob. But the growth of the fanaticism was nipped in its bud by appeals to common sense, and no serious consequences resulted from the momentary delusion. The calmness of the suffering manufacturers last summer, affords still more decisive evidence of improving wisdom in the people. We are not aware that this volume will possess much interest for the lawyer; nor, for more general purposes, does it offer all the utility that might have been given to it. The work is, however, but an attempt; and it is likely, that in its progress through future volumes its execution may be improved.

A Pedestrian Tour in Calabria and Sicily. By A. J. Strutt. Newby.

Mr. Strutt is one of a family of artists, the son of Mrs. Strutt, whose narrative of a residence in Switzerland we noticed some months ago (Nos. 790-1). He was induced, it appears, to undertake this pedestrian excursion into the wilder parts of Calabria, "much more by a desire to make himself acquainted, in his profession as an artist, with the scenery and costumes of that remarkable country, than by any idea of authorship." Finding, however, "that his route and mode of travelling gave him an opportunity of becoming familiar with scenes and manners hitherto almost undescribed," he has been tempted to give the public the benefit of what, in their first intention, were merely "a few letters addressed to his own family." This, it is to be regretted, he has done without the addition of such interest as his volume would have derived (and greatly needs) from the contributions of his Sketch-book. If the "opportunity of becoming familiar with scenes and manners" necessarily implied the faculty of seeing and describing them, there is no doubt that a journey of this description, out of the beaten tourist-track, might yield materials able to have supported their pretensions to the picturesque on grounds purely literary: but it is difficult to imagine a traveller, having health (making a perpetual proclamation of itself in an obtrusive appetite), animal spirits, and the habits of an artist, more poorly furnished than Mr. Strutt, for a profitable (so far as the reader is concerned) wandering, even amid the free-hearted hospitalities of the wild Calabrias, or through the rich corn-fields and abundant pastures of sunny Sicily. For a ramble through any of those ruder scenes, where the commissariat is at all of a doubtful character, (were it possible to suppose our author so far deserted by a wise instinct as to be involved in any such adventure,) he would have a faculty too much. All things seem to have made him hungry—all passions and sensations—fear and gladness, pain and pleasure alike—to have resolved themselves into a craving for food. With the dark spirit of the Pontine Marshes he did fearless battle, so soon as he could entrench himself in the larder: the desolation of that spectre city, Pœstum, is emphatically presented in the fact, that its neighbourhood could furnish no better supper than one "of small fish stewed up with vinegar and garlick." The pain and terror, and subsequent anxiety and fatigues attendant on an attack by banditti, are more than compensated for by their accidental introduction of the author to a perfect land of milk and honey: the "two hundred columns" of the Benedictine convent at Palermo, and the "bill of fare of the dinner" given him therein, divide his notice of that institution, the latter occupying by far the larger share: the wreath of thin blue smoke, rising through the clear air of the sea-bound Calabria, catches his artist-eye with instant suggestions of the kitchen: and all the odours of Sicily have not a chance of disturbing his unerring apprehension of that one which brings him directly up to the stew-pans. In short, costume and cookery seem to have been the joint and leading objects of interest with our tourist. Nothing can be more meagre, common-place, and uncharacteristic than his descriptions of scenery; and for any information, save that which is received by, and addresses itself to, the eye, the reader must look beyond these pages. Our sole acquaintance with the people, amongst whom he found himself, save some characteristic traits which we casually glean for ourselves, from here and there a fact stated, (and this, by the way, let it be admitted, is one of the best and neatest methods of conveying information, where the facts are skilfully marshalled for the purpose, and necessarily suggest their inferences—an art far beyond our author's) is derived, for the most part, from such one-sided *generalities* as the following:—"the Calabrians have a peculiarly sombre look, go wrapped in dark brown or black cloaks, and wear hats of ultra-sugar loaf form; the women, on the contrary, display the gayest possible colours, and their coarse stuffs take admirable folds:" and with this and the additional fact that they will steal where they can, the reader might lay aside the volume for all further knowledge (thence to be derived) of the Calabrians!

Over the Campagna, along the Pontine Marshes, and, indeed, throughout the whole of the Basilicate, our author is on comparatively beaten ground; and it is, therefore, of less importance, that he has left no new impression and brought none away. He touched the shore of the Mediterranean at that most delicious of retreats, *Mola di Gaeta*, with its orange and lemon groves, and its hedges of aloes, and *dined* on the site of one of Cicero's nineteen villas—at the hotel whose sign, in Lady Morgan's day, was the Roman orator, "in a purple mantle and lemon-coloured sentimentals," but which our author did not see. Calabria was entered at La Rotunda, and thence every step of the way furnished him with material for his collection of costumes. Our readers will understand, from what we have said, that the entire itinerary offers us little which we can extract for their edification; but we will give some account of a Calabrian adventure which befel our author, the only one that has the air of the locality about it, and in the course of which we gather all the suggestions respecting the country that the book conveys. In the *Campo Danese*, on the road to *Castro Villari*, our artist and a friend, who was his associate in this tour, were overtaken by three young Frenchmen, amateur-travellers like themselves, with whom they joined company, parting again only in Sicily: and they subsequently fell in with two French commercial travellers, "who, traversing Europe, one with silks from Lyons, and the other with Neapolitan counterpanes, had chosen this road to go," also, "into Sicily." Availing themselves of the light carts in which these "bagmen" journied, *our* travellers, and their new friends, were induced to diverge from the direct route to Reggio, for the purpose of seeing Catanzaro, a town situate about six miles from the coast of the Adriatic, to which place the *commis voyageurs* were proceeding. Hence they proceeded to Caraffa, a village inhabited by Albanians, and holding out to our author, the temptation, that its "costume is, *dit-on*, the richest thing imaginable." The origin of these Greek villages, singularly scattered over the different provinces of Calabria, furnishes one of the very few scraps of information that his volume contains:—

"We learned," he says, "that they are in part the descendants of an army of Albanians, sent by Scanderbeg to the succour of Alphonso, King of Aragon and Naples, which never returned to its native land, and in part of a much more recent colony, invited over by Carlos, the third great grandfather of the reigning king; who, in order to increase the population of the Calabrians, gave to every Albanian family willing to come and settle therein, a pair of oxen, a house, and a small portion of land, with five-and-twenty ducats for *les frais du ménage*. These conditions were sufficiently alluring to procure for the country the advantage of some thousands of settlers, who were dispersed about and formed villages of three or four hundred souls; not being allowed, for very politic reasons, to congregate in any one place in greater numbers. Their language has thus been preserved, and although the men have laid by their costume, and become entirely Calabrian as to externals, the women have shown more attachment to their national finery, and still continue to wear the rich dresses of their female ancestors."

How our author and his companions fared among the Greeks of Caraffa must be told in his own words:—

"This morning, then, after having taken leave of our friends, the two French traders, and Mr. S——, we set out, well schooled, we imagined, as to the way we should pursue, and confident of our own prowess in case of attack, more particularly as P—— had received from Mr. S—— a present of a broad-bladed Calabrian *pugnale*. Descending from the heights of Catanzaro, we continued by steep foot-paths, until we came to the banks of a stream, which we waded as usual, and found on the other side a cessation of the beaten track, a circumstance the more inconvenient as we saw nobody who might guide us; we therefore continued in what we considered to be the right direction, and ascending a hill side, soon fell in with a kind of path, which, however, upon inquiry proved not to be the right one; as some shepherds

Digitized by Google

told us we must leave it, and make for a ridge, which they pointed out at some distance, where we should fall in with the veritable way to Caraffa. Accordingly we continued ascending, until, fatigued with our fruitless search, we gladly espied two women above us, watching our motions from the corner of a field, and of them we resolved to inquire anew. P—— and F—— advanced towards them for that purpose, when, to our no small disappointment, we perceived that the women, without waiting to hear what we wanted, fled up the hill at our approach, and when we called to them not to be afraid, they only replied by a shrill whistle, that might be heard far around; this sound, so famed in all annals of brigandage and robbing, might have awakened some alarm in us, but our moment of apprehension was not yet arrived. Hopeless of bringing these fair ones to reason, P—— and F—— entered some vineyards on the slope, whilst De W——, J——, and I, descended towards a kind of cottage, in the valley below; each in the hope of meeting some one that might inform us of our road. We had not got within forty yards of this cottage, which seemed to be an abode of cowherds, before we saw, come out from behind a low wall, several men, some of them armed with guns; a circumstance so common here, that it did not excite the least suspicion in us; and it was only when we observed that the foremost of them cocked his piece, and held it as a sportsman does when expecting the game to rise, that we began to suspect their sinister intentions. When, therefore, at about thirty paces, distance, De W——, who was foremost, called out to ask the way to Caraffa; to which the men only replied, handling their arms, *che volete?* and upon our repeating the question, they raised their guns, and roaring out *ah! aspetta brigante*, advanced hastily upon us.

> The which when De W—— did espy,
> He basely turned his back to fly;

and J—— and I, wisely thinking with Falstaff, that discretion was 'the better part of valour,' were not slow in following his example. We had no sooner turned to the right about, than we heard a discharge behind us, which, fortunately, not wounding any of us, only gave fresh impetus to our speed, and we rapidly gained the ridge from which we had just descended. Our pursuers, in the meantime, following with shouts, and seeming to increase in number at every step, fired again, still without effect, as we mounted the slope. * * Now and then I cast a glance behind, and observed with joy that the chace was in our favour, when I marked one rascal take so true an aim at me that I dropped instantly, in order to avoid the discharge which came a second after: I heard the peculiar angry whistle of the bullet immediately over my head; the next instant I was on my feet again. * * The Fates, however, ordained it otherwise, for the fellows who arrived first at the summit of the ridge, whistled so significantly, that numbers of labourers and *foresi*, gathering from all parts of the vale into which we were descending, and snatching their axes and *zappe*, came upon us so speedily in flank, that we plainly saw flight would soon be vain. Having, therefore, our old enemies behind us, our new ones on the left, a steep hill precluding escape to the right, and only new foes and fresh hills appearing in front, J—— and I stopped to call a hurried council of war, in which we determined to submit, happy if we escaped with the mere loss of baggage; we halted under a fine oak, and J——, who was purse bearer, having slipped our money and pistol into a bush, the villains soon came up, and to all we could say, replied only by brandishing their weapons, and shouting *à terra, à terra*. As delay only increased their fury, we were obliged to throw ourselves on the ground, and accept such terms as they should offer; and hard terms they were. Our knapsacks were immediately seized, and pillaged before our eyes, each getting what he could; whilst others, standing round us, commenced beating us with their *zappe*, and the backs of their axes. * * The blows came thick and threefold; my left arm suffered woefully in protecting my head, and all my left side was dismally belaboured. Poor J—— was no better served; three fellows had pounced upon him, one of them claiming him as his exclusive prey, 'Quest' è la mia cacciata;' the others, however, would not allow this, and cried out, 'No, no, siamo tre.' The three soon increased around him; stretched beside me, he received the attention of a whole circle of scoundrels, who wounded him on the shoulder and wrist with axes; and one, raising his heavy *zappa*, was going to bestow a blow on his head, which would have effectually relieved him from all further anxiety, had not another man, coming behind, forcibly staid his hand, and then stooping down and telling J—— not to be alarmed, inquired of him where his money was. At this moment a great scuffle took place amongst our aggressors themselves; we were pulled up by one party, dragged down by another, whilst each struggled to get absolute possession of our persons. I thought we should have been torn to pieces in the rescue; for a rescue it seemed to be from the fury with which it was disputed."

This seasonable rescue turned out to be a party of the Urban guard, a body, says our author, resembling "the National Guard of France, and for which most useful institution the country is indebted to Murat, whilst he held the throne of Naples." The rescued party were subsequently joined by their two companions, who had hid in the vineyards, also escorted by Urban guards, and protected by Don Domenico Cefale di Cortale, a great proprietor and chief in the neighbourhood, exercising, beneficently, a powerful and patriarchal influence over the rude people amongst whom his estates lie, who, having accidentally come that very morning from his residence at Cortale, to visit some vineyards, took the whole party under his protection, carried them home with him, and undertook to recover some fifty or sixty ducats, which the brigands had found in the bush where our author's friend had deposited them. For this purpose a perfect drama of negotiation and manœuvres, composed of threats, persuasions, nocturnal searches and imprisonments, was begun: its narrative extending over about seventy of our author's pages, exhibiting some of the characteristics of these tribes graphically enough. An extract here and there is all we can find room for:—

"On retracing our steps, we found Don Domenico, a tall portly man, with a benevolent cast of features, standing in the midst of the pillagers, of whom he forbade any one to leave the spot until everything should be restored to us; and his own amazing influence in the country, where he is feared and respected as a prince, was almost sufficient to enforce his orders, even without the presence of his guards. Presently one man slowly withdrew to fetch his part of the spoil, and returned with my knapsack lank and empty, and called all the saints to witness that there was nothing in it when he took it. Don Domenico, however, knew too well how to deal with these gentry to give up so easily the research; and by menaces, remonstrances, and promises, he succeeded in inducing them to bring back all the things of which we gave him an inventory, and which we soon saw mysteriously making their appearance from different hedges and hiding places. * * *Enfin* we got back everything except a pistol, a dozen of piastres, and various small things belonging to De W——, a powder horn, a pair of stockings, and our unfortunate fifty-nine ducats, which no efforts could bring to light. Our protector, Don Domenico, generously assured us, that if he failed in procuring them, he would himself furnish us the means of continuing our journey, and he offered six ducats on the spot to any one who would point out the robber that kept possession of our cash. But 'honour among thieves,' all were silent. Having done all that was possible, he judged it better to defer the proceedings for the present, and told the pillagers to consult among themselves on the matter; that he gave them until the next day, when, if the money were not forthcoming, he would have every one of them put into prison."

Having passed the night at a hospitable mansion in the neighbourhood, our travellers set off on the following morning for Cortale, taking the scene of yesterday's action in their way:—

"Here we dismounted, and in a short time had the pleasure of witnessing the arrival of some of our enemies, who, overawed by the presence of Don Domenico and his Urbans, listened in silence to the charges preferred against them, and contented themselves with denying them *in toto*. A kind of patriarchal tribunal was erected, and our protector, seated in the midst of a circle of short thickset thieves, all clothed in black, with the never failing axe stuck in their broad leathern belts, performed, with admirable tact and *sang froid*, the parts of witness, judge, and jury; and difficult parts they were to play; for the lying scoundrels swore with the most horrible oaths that they had done nothing, seen nothing, and stolen nothing: 'ma niente per Dio, niente;' yet, when worked upon by menaces or promises, one or two of them brought back some of the still wanting property, they only laughed at their previous barefaced assertions, and said that they had found it they knew not where or how. The examination lasted a long time, and the fellows got so excited accusing each other, retorting and reviling, that I began to think it would end in a general action; particularly when Don Domenico, provoked by the obstinacy of one of his own herdsmen, seized a great stick, and administered him such a personal correction, as fully repaid him for any part he might have taken in beating us yesterday. Half a dozen piastres and a few minor articles restored to De W—— were the result of this scrutiny; but none of our unfortunate gold made its appearance, and as it was now getting late, the court broke up, and the prisoners went their ways."

On the morning succeeding their arrival at Cortale our travellers were engaged with the authorities making their depositions, and the rest of the day was filled up with Mr. Strutt's favourite employments, feasting and costume-sketching. Here is a group of sitters from Caraffa:—

"After dinner we had the honour of a visit from three of the first women of the village, who had been invited by our host in order to display the richness of the Caraffa costume; and now came sailing in with all the conscious dignity of their splendid gala dresses; taking their places, to our great delight, directly in the middle of the room. It is difficult to describe to you the singular group; one glance at my sketch, hasty as it is, would give you a much better idea of it. On the left stood the first of these ladies; her gaudy embroidered cap, covered with a white drapery, or veil, always assumed by the women here on going to mass, falling low behind, and looped up to a crimson girdle; her large, loose, Eastern looking white sleeves, one of the peculiar characteristics of the Albanian costume, richly worked with yellow and blue silk; her heavy flowered green silk dress turned up, and displaying three petticoats, one white, one red, and one blue, with a white border, from under which peeped her coloured leggins and naked feet. The second of these three graces was seated, and displayed the Caraffa cap in all the glories of its crescent form, of its scarlet cloth, embroidered in various patterns, with gold, silver, and silk, and of its long crimson ribbons, pending behind. This cap is the trophy of married women; they put it on, for the first time, on the bridal day, and it is to be seen on their heads, at home and abroad, ever after. This lady's neck was adorned with numerous corals and necklaces; the sleeves, and open part of her *camiscia*, were richly worked; her shoulder-straps, body and girdle, of gorgeous colours, whilst her yellow flowered apron, turned on one side, discovered a beautiful brocaded pink silk dress, stiff enough for the most fashionable of our great grandmothers. The last of the trio was Petronilla Jaccia, notorious as having been the wife of a brigand, whose expeditions she had frequently accompanied, and whose infamous exploits she had vigorously seconded and shared. Petronilla is exactly what romantic young ladies would imagine a bandit's bride to be; tall, dark, with regular features, black eyes, and no inconsiderable portion of sullen beauty. * * The bold husband, who led her into such dangers, is no more; he was murdered by some of his men, a few years ago; and Petronilla, collecting the spoil his valour and her own had won, retired to her native village, where she at present resides, one of the richest and most consequential of its inhabitants. This little knowledge of her history, communicated to us, *sans façon*, in her presence, despite of her dark looks, made us pay particular attention to the heroine, whose erect position, and dig-

Digitized by Google

nified indifference, challenged our pencils. Over her cap, a long black veil, hanging down her back, showed that she was in mourning for her deceased lord; the large sleeves of her *camiscia*, embroidered like the others, hung so low as entirely to conceal her hands; the rich scarlet and yellow body of her dress was partially hidden by a singular ornament, having the appearance of a breastplate and backpiece, covered with sparkling silver and gilt work; the rest of her attire resembled that of the other two in material and richness of pattern; and the effect of the whole group was very striking."

To proceed, however, with the adventure of the ducats. A nocturnal expedition, by a large party of Urbans, was directed against Caraffa, and four of the robbers were secured and lodged in prison. The affair was subsequently taken up by the judge of Nicastro, the chief town in the district, and a body of the provincial gens d'armes was sent to join in the search. Finally, the governor of the province interfered, and, for the purpose of putting an end to the detention of the travellers, sent an order on the parish bursar, for the amount of their loss, and this they were about to get cashed, when the missing ducats themselves made their unexpected appearance, yielded up at length (after all appeals had failed to the honesty of the possessors, or the treachery of their confidants) to the representations and prayers of the parish priest. Some pages onward, a little passage occurs of that suggestive kind so rare, as we have said, in these volumes, and which may give another notion of the *agrémens* of travelling, unless in sufficient numbers, among the Calabrese:—

"To a passer-by, who inquired whither we were bound, Vincenzo, seemingly as a matter of course, answered 'to Nicastro:' whereas we were going in a directly opposite line, towards Pizzo. I was amused at this little specimen of Calabrian frankness; but no doubt he had excellent reasons for it." At Monteleone—

"The Frenchmen were, of course, very anxious to see the tomb of Murat, whose unfortunate landing here caused his capture and death. We accordingly proceeded to the church where he is buried, but instead of the sepulchral monument which we expected, we were only shown a square stone in the middle aisle, covering one of the entrances of the common burying ground, situate, as usual in Italy, under the church. There, without cenotaph, and lost amid the common herd, lies 'il re Joachimo.' The town of Pizzo, for its devoted loyalty to the legitimate sovereign, was presented with the statue of King Ferdinand, which now graces its principal piazza."

At Reggio, our travellers embarked for Messina: but Mr. Strutt's sketches of Sicily are even more barren than the Italian portion of his tour. The only feature of Messina described at any length is the Mother Church:—

"The roof is of wood; it was restored by King Manfred, the original one having been consumed by fire in 1254, at the funeral of Conrad, the son of the Emperor Frederick II. On that occasion, the funeral trophy, or Catafalco, as it is called, which was placed in the centre of the nave, was so high that the lights on the top caught the rafters, and the roof, the catafalco, and the body of the prince were all consumed together; forming a funeral pile which had been little anticipated at the commencement of the ceremonies."

Taormina, "seated aloft, with its ruined churches, convents, and venerable stone pines, mingled with palms and orange trees," and "the mouldering castle, perched upon a domineering eminence above the town, numerous other commanding summits crowned in the same manner, and, above all, Etna, softened by distance into a deep violet colour," yields a few pages more graphic than usual. From Catania, that city of modern splendour and antique memories, our author has brought away no impressions worth recording; and the *Biscari* Museum, the Greek theatre, and the Benedictine monastery, are each dismissed in a few words: *such* words as do not awaken any anxiety in the reader, who has heard nothing of the Catanian wonders before, to have more. Even Etna, which the travellers ascended, furnishes our author with nothing of novelty, either in the way of incident or reflection, though it extracts from him one of the best bits of description in the work.

Syracuse, says our author, "presents many points of resemblance to an eastern town, particularly in its narrow streets, its high houses, and roofs sometimes ending with pilaster cupolas, sometimes perfectly flat, decked with flowers, and serving as an evening *promenade* or *gazebo* to the inhabitants. One view of these flat roofs, with a couple of melancholy tufted palms, rising above them, as seen from one of the high windows of our inn, struck me as very characteristic." And he says little more, save that the travellers fired a pistol into the ear of Dionysius, washed their *blouses* in the Fountain of Arethusa, and had an English *beef-steak* with their swordfish and thunny at a *trattoria* in the town. From Syracuse, Mr. Strutt returned to Naples—of which city, both on this and his former visit, we are fortunately spared all description—subsequently, and very unexpectedly, he sailed again for Sicily, to visit Palermo, under high patronage; where his time and pages are so entirely occupied with balls and visits and feastings of one kind or another, that the reader loses even the little interest which he had in the proceedings of the author, and gladly leaves him to travel back to Rome by himself.

Lights and Shadows of Whigs and Tories. By a Country Gentleman. Boone.

THE lovers of anecdotes of public men will find in this volume some pleasant reading. The style of the book itself is loose and affected, but as the style of a country gentleman, it claims immunity from criticism, and the claim shall be allowed. We shall do no more than make a few extracts. In remarking on Sheridan's oratory, the author notices one of the faults commonly found with it,—that of self-repetition, and observes:—

"The habit of repeating oneself will grow upon every one, whether author, composer, actor, or orator; it saves trouble, and is very convenient. Pitt, who did not suffer from poverty of language, or lack of ideas, never, for the last ten years of his life, spoke on foreign policy, without introducing 'indemnity for the past, and security for the future.' Cicero, in his 'Oratio de Lege Manilia,' closes eleven sentences with 'nec esse videatur;' and in his 'Divine Philippick,' he cannot resist the temptation of reciting his own execrable poetry. Nay, Canning, who abounded in humour, repeated more than once an indifferent joke concerning Bynkershoëk, the celebrated publicist. That Sheridan required great preparation is certain; that many of his repartees were previously rehearsed admits of no doubt; and that he did apply to his own use the jests of others, we have some striking instances."

Amongst the testimonies to the effect of Sheridan's greatest speech, which we find here collected, is that of Burke, who pronounced it to have "eclipsed all the eloquence of ancient and modern times." The speech must doubtless have been a wonderful effort of rhetoric, but when we recollect Burke's equally extravagant commendations of Miss Burney's novels, and his general habit of exaggeration, whether in praise or censure, we cannot receive his evidence on a point of criticism with too much caution.

Sheridan was an actor, like most men who have obtained oratorical celebrity. There is a great deal more of histrionic talent amongst the qualities essential to rhetorical triumphs than is generally supposed. Instead of "action, action, action," we might better read "acting, acting, acting." The greatest speeches on record are very far from being amongst the greatest efforts of the human mind. The hand and the eye have, perhaps, a larger share in oratorical exploits than the intellectual powers. Of Lord Chatham's theatrical abilities, the following anecdote is given:—

"Foote said to Garrick that a new performer was to appear shortly, who would eclipse every one 'What is his name?' Garrick eagerly exclaimed. 'William Pitt.' 'Aye, Foote, if you engage him at the Haymarket, Drury Lane and Covent Garden must close.'"

There is a good deal of truth in the following remarks on Burke, but the author sadly misquotes the passage he introduces from the speech on American taxation:—

"Edmund Burke was a native of Ireland, he was educated there, and had the misfortune to belong to the University of Dublin; notwithstanding this calamity he was an excellent scholar, and deeply imbued with knowledge of every description; he not only possessed an exuberant fancy, but a sound judgment, a masculine understanding, and a mind truly philosophical; the only blemish was his depraved taste; his description of a motley administration, in which he concludes, with 'here a bit of white, there a bit of black, like patches in a truckle bed;' and his comparison of the Duke of Bedford with a whale, in his letter addressed to that nobleman and Lord Lauderdale, are instances of the utmost depravation of taste. Again, his conduct in the House of Commons during a debate on the war of 1793, when he threw a dagger on the floor, must be deemed a specimen of barbarism, such as no aggregate meeting of Irishmen could equal, even when under the influence of liquor. His unhappy temper, over which he had no control, and his extreme vulgarity of manner, combining the coarsest Irish accent with the most revolting pronunciation, must have been serious drawbacks on his success as an orator. His ignorance, too, of Latin prosody, was a grave offence, and justly so, in the House of Commons: besides he was too diffuse, it would be unjust to call him prolix, and his speeches were more the charges of a judge, than the orations of a senator. Men do not like to be lectured or advised."

A collection of parliamentary extravagancies would be curious. Burke's dagger has been repeatedly imitated in the House of Commons. A quartern loaf was once produced in debate for a like effect; and, at a still later period, an iron mask was exhibited to amaze the senate.

Mr. Burke was certainly deficient in Latin prosody, and, we believe, the deficiency is a common one amongst eminent men of the same country. Prosody is not, perhaps, enough attended to in the University of Dublin; but, on the other hand, it is made far too much of in our English colleges. In a note upon the passage last quoted, we find a saying of one of our shrewdest men upon this subject:—

"The Reverend Sidney Smith says, 'that a man seldom recovers from the effects of making a false quantity on his outset in public life: Burke on one occasion, in the quotation "magnum est vectigal parsimonia," pronounced the second syllable of "vectigal" short, and it was remembered to the day of his death.'"

A false quantity in Latin would appear to be much worse than a false step in judgment, or even morals. We suspect there are instances of men who have committed the latter, and recovered from the effects; but for confounding an *iambus* with a *spondee!* there is no forgiveness at Oxford.

Burke committed worse faults than those of Latin quantity. The writer, after giving that eminent man full credit for his public talents and deserts, observes:

"Never was man so inconsistent with himself: the writings of the last seven years of his life appear to have been written in reply to his former productions. A few painful reflections intrude. If Burke had the philosophy of Cassius, it is to be feared he had also the 'itching palm.' When his party was in office, the place he selected was that of Paymaster of the Forces, which yielded an income of ten thousand a-year, and required but little toil. When he joined Pitt he was rewarded by a pension of three thousand a-year for three lives. This was not all, with the baseness of a Saxon deserter, he fired on the ranks from which he fled, renounced all his former friendships, reviled Fox, advised his impeachment, although not ten years previously he had pronounced on him one of the most highly-wrought panegyricks in the English language, and declared it to have been the fruit of 'twenty years' meditation.' On his deathbed he refused to see Fox. Where was his philosophy? where his Christianity?"

With some remarks upon the minor traits of Mr. Grattan's character, we part with the Country Gentleman:—

"His manner was very peculiar. His gestures would, in another, be deemed extravagant, and his pauses might be thought protracted. But this eccentric manner set off his peculiar style;—there was such a harmony in all the parts of his speeches—such a consistency in his conduct, that his blemishes seemed beauties. One of the great charms of his character was his simplicity. He had much playfulness of manner, a gentle, yet a buoyant spirit; the heart of a child, the soul of a demi-god. In private society he was a most agreeable companion; abounding in anecdote and reminiscences of all his distinguished contemporaries and predecessors. He possessed great facility in sketching a character in few words, or describing a peculiarity. On one occasion, it having been remarked that there were not any accurate likenesses of Pitt, whether in sculpture or in painting, but that there were many of Fox, he said, 'there never was a good likeness of Pitt, or a bad one of Fox; *his* countenance expressed every virtue that a man could possess; Pitt's features had no expression but that of drunkenness.' Having been questioned as to the personal appearance of Sir William Grant, he replied, 'a face of iron, and a wig of stone.' Can anything be much happier than his description of the late Lord Ellenborough?—'Eastern principles and Northern manners.'"

OUR LIBRARY TABLE.

The Scottish Heiress, 3 vols.—The first chapters of this tale—nay, the first volume—gave us the comfortable impression of a reality in place of a manufacture; but the remaining portion is so inferior, that we could easily believe it to have been added by another hand. Kenneth Clyne, the hero, at the outset, might claim cousinship with Scott's Alan Fairford: and the Scottish heiress, whom he delivers from the menaced loss of her inheritance by a union of bravery with acuteness, is worthy of her champion. But, alas! his bravery and her beauty could not come to a complete understanding at the end of the first volume: hence mysteries, vicissitudes, adventures. Our hero is sent to seek his fortune in London, and is made to repair it by successes as a dramatic author, which come just at the moment when they are called for. The author of 'The Scottish Heiress' is obviously better acquainted with the "practicabilities" of Crawdale Close—an Edinburgh Alsatia—than the ways of the "Lane" and the "Garden," where, to make the best of matters, the gain is only to be reached by triumphing over as many obstacles as circled the Golden Fleece of fable. Though, in part, we like the Don Quixote of the tale, we are not at all content with its Sancho Panza: he is a bad cross between Sam Weller the incomparable, and some of the humble friends and followers of Capt. Marryat's heroes. The strength of the story lies in the law and the low life of Auld Reekie, the rest being but "leather and prunella."

Love and Literature: being the Reminiscences, Literary Opinions, and Fugitive Pieces of a Poet in Humble Life, by Robert Story.—Mr. Story's volume is dedicated "To the one thousand individuals, of both sexes, and of all ranks and parties, who, by patronizing the work, have evinced their approval of its author." A thousand readers is, already, a large public, for pages of manufacture so exceedingly light as these, in days when there are so many books to read, and men are interested in economizing time, by reading and *thinking*, or reading and *learning*, in a single process. The verse is smooth enough, and the prose runs trippingly on—as it might for any given number of reams, or miles, for all the weight it has to carry; but the author's "opinions and reminiscences" were scarcely worth jotting down.

Salopia, The News-Room, and other Poems, by J. W. Bythell.—This volume is presented as "the last offering of an humble muse." We are always glad to congratulate an author when we can; and as we could not possibly do so on the poems themselves, we do it on his determination to publish no more of them.

On Ministerial Responsibility—[*Die Verantwortlichkeit der Minister*], by R. Mohl.—A treatise of 726 closely-printed octavo pages, on a subject which, however open to discussion, has been practically settled in England for two hundred years, will hardly find many readers here. In Germany, the interest in constitutional questions is more recent; and an essay, no longer needed on this side of the channel, may deserve and find immediate attention in Wurtemburg. The work of Herr Mohl seems composed with creditable industry, and with a due sense of the importance of this great safeguard of representative governments. It is, moreover, temperate in its tone; and—a rare merit in Germany—is arranged with considerable judgment. The author first investigates the general principles on which responsibility is founded, the persons to whom it is applicable, and the cases in which it should be enforced; then goes on to treat of the manner of proceeding, and the nature and degree of the punishment in various circumstances; and concludes with an historical summary, containing a notice of all the principal cases of ministerial prosecution, in the sense of this law; of which England alone, till the present, furnishes any examples. Herr Mohl has studied and freely used the labours of foreign writers on this important subject; and may be commended for having usefully contributed to the growing stock of political knowledge in Germany. The work may also be read with advantage in our own country, by those who take pleasure in discussions of constitutional law.

An Enquiry into the Principles of Human Happiness and Human Duty, by G. Ramsay, B.M.—Mr. Ramsay's book is a mingled yarn of good and ill: there is much of good sense, good feeling, and good suggestion in it, to be picked out by a judicious reader; but there is also much of common-place, inconclusive reasoning, misplaced adornments and meretricious fine writing. Still, in the present state of the public mind, and in the absence of a sounder and better work, we cannot say that it is unprofitable reading, or unfitted to promote a progress towards better things.

ROYAL ACADEMY.

Professor Howard's Lectures on Painting.

LECTURE II.—DESIGN.

HAVING noticed the relation of Painting to the other liberal Arts, and briefly considered its intellectual and inventive capabilities, I proceed to speak of the technical elements by which it operates, *Form*, *Chiaroscuro*, and *Colour*, by whose aid the Painter is enabled to effect his imitations, embody his conceptions, and bring before us the whole scope and power of the art.

The distinguishing and permanent characters of objects are most conspicuous in their forms, and hence *Design*, or *Drawing* (which is the power of defining forms with taste and accuracy) has always been esteemed the true basis on which Painting should be founded. It has, therefore, the earliest and strongest claim on the student's attention. In the technical use of the term, *Drawing* is more especially applied to the delineation of the human figure, an adequate knowledge of which is the first and chief desideratum of our art. "The proper study of mankind is man," and this dictum, at least with regard to his physical qualities, is even more applicable to the painter than to the poet. The best commentary on the structure and symmetry of the human figure is to be found in the remains of ancient sculpture: these, by universal consent, still supply the finest examples of form, and are, in all academies, first placed before the student, as the safest guides in teaching him *how to look at Nature*, and opening his mind to the value of *style*, the meaning of which term I shall now endeavour to explain.

Gifted with a spirit of investigation, as well as a perception of the *beautiful*, beyond any other people, the Greeks adopted as a fundamental maxim, that imitative Art should refine upon ordinary Nature; divest her of all that is coarse and repulsive; contemplate her under her most favourable aspects; and even strive to enhance her attractions, and elevate her to the desires and conceptions of the mind. Setting out on this principle, they aimed at representing man, not as he is too often seen, disfigured by accident, disease, or habits, but as he appears on a wide and *collective* survey. Perceiving that no individual possessed in himself all the perfections that were to be met with in others of the same class; that one seemed redundant, another deficient, either in some proportions of the figure, or in the symmetry of its various parts, they concluded that the true generic character of man was to be found in the centre of these diversities, and to be estimated from an average of those essential qualities which are seen in different degrees throughout the species; and by selecting only the most complete models, and combining their various graces, they sought to arrive at a degree of beauty strictly natural, though not existing perhaps in any single specimen of Nature herself, and thus restore her to that original perfection, the elements of which they seemed everywhere to trace.

In pursuing these philosophical inquiries, they were singularly aided by the institutions, habits, and climate of their favoured country. The beautiful was not only recognized and sought after as the highest excellence in Art, but they endeavoured to make Art re-act upon Nature, and improve the race in its germ:—their pregnant women were brought to gaze upon the finest statues, in the hope that their imaginations being in that state strongly impressed with ideas of beauty, a correspondent effect would be produced in the forms of their offspring. Public competitions were also instituted in various parts of Greece, when prizes were awarded to the most beautiful of both sexes, according to the decision of the painters and sculptors. These contests must occasionally have brought before them examples of all that was lovely; and the daily exercise of their youth in the gymnasia, afforded better opportunities of becoming acquainted with the human form, in action and repose, than have ever occurred to artists since. Fortunately for us, they availed themselves effectually of all those advantages, and, by profound investigation, gradually discovered that refined mode of treating the human figure in its various *classes*, which is called *style*. Thus trained, Polycletus produced his celebrated *Doryphorus*, which was considered so perfect a standard of the true proportions and symmetry of man, that it was called the *canon*, or rule, and is said to have been followed as such by all the succeeding sculptors of antiquity. But

Digitized by Google

their efforts ended not here. Prompted by that aspiration after the sublime and beautiful which distinguishes and dignifies Grecian Art, and desirous of giving the greatest stimulus to religious worship, they strove by refining on the most admirable collated specimens of our nature, by omitting everything unessential or degrading, and developing still more what seemed to aggrandize and ennoble, by simplifying the forms, and bringing them a little nearer, perhaps, to those geometrical types on which they appear to be founded; by perfecting the symmetry of the proportions and the harmony of the lines, they spiritualized man, invested him with *ideal beauty*, and exalted the human into an emblem of the divine. On this foundation arose the Jupiter and Minerva of Phidias, the Juno of Polycletus, the Venus of Praxiteles, and many other master-pieces of art, which, unhappily, we can now estimate only from the celebrity they achieved in that enlightened nation of philosophers and critics: but the Belvedere Apollo, though produced at a later and less favourable period, is, alone, sufficient to explain and justify their theory, and to convince us of their power of raising our ideas above humanity, in the representation of celestial natures.

What Pliny relates of Zeuxis, that he employed five different models for his Helen, in order to compare, select or combine their several beauties, was probably the practice of all the great painters of antiquity, (the same, at least, is attributed to Apelles,) and is a proof that they concurred in the system of the sculptors.

When our great philosopher, Bacon, laughs at this system, he seems to have forgotten his own precept with regard to poetry (which I had occasion to cite in my first lecture, as equally applicable to the graphic arts,) that "it accommodates the images of things to the desires of the mind," for, with all deference to this pre-eminent man, this is the very principle on which the Greek artists proceeded so successfully. Zeuxis can never be supposed, in studying his Helen from so many different females, to have aimed at making up a fanciful, incongruous something, neither existing nor possible in nature; he had, no doubt, chosen them from that class of forms to which he considered Helen to belong, with the intention of comparing and blending in his work those several but homogeneous beauties which were more developed in one individual than in another. The general conception of what was essential to the character, he had doubtless formed from his previous observation of what Nature partially displays in her best specimens, and he referred to her to confirm or correct his knowledge; after which, he no doubt still refined on all these models, harmonized their varieties, and raised his work into poetry (without which he could not have produced a Helen) by giving her that *ideal* perfection which Nature herself suggested.

The *Beau-Ideal* is so little known or felt among us that the term, though not unfrequently used, is, perhaps, scarcely understood. I believe, in the present day, many think it has nothing to do with Nature, but means something *merely* imaginary.

The vulgar error of supposing that nothing can be *natural*, but what is drawn from an individual type, though it has been so repeatedly exposed, is apt to start up again; and hence it should be our constant care that we understand the term *Nature* aright. The casual particularities of our models are so many deviations from *Nature*,—while the theory of the ancients, had it not been well founded on Nature, would not have led to the production of works so universally admired, nor have stood, as it has done, the test of ages.

We often hear Art reproached with being conventional, as if that were not reconcileable with truth; but we should remember that Art must be, in some degree, conventional, for if it proceed not on any rules or established principles, it is not art, but merely experiment. *Style* is *Nature* rectified by her own permanent standard, and restored to her original perfection; it is based on sound philosophy, and not only applicable, but essential to all the imaginative arts, and, when supported and informed by taste and feeling, can never fail to please. The *Beau-Ideal* is Nature *par excellence*.

Beauty was considered by the Greeks as the highest aim and attribute of fine art. The examples they have left (though few of their most celebrated works have come down to us) throw more light on this subject than is to be found elsewhere, and prove how well they understood its principles.

No quality, perhaps, has ever been more extensively discussed than that of the beautiful, and few with less satisfactory results. It has been ascribed to everything that delights us—fitness, propriety, harmony, perfection; some have believed it to consist entirely in mental associations, deny it to be inherent in objects themselves, and assert that it exists only in the feelings of the beholders. I shall not pretend to investigate this metaphysical mystery; each of these opinions may be worthy of the student's examination, as all may be concerned in the problem; but the beauty we have to do with is that which is expressed by *form*, and it will be difficult, I think, to convince those whose professional studies render them most conversant with a great variety of forms, that some of these are not more agreeable than others in their natural effect upon the eye, without reference to any associations of the mind, as certain sounds confessedly are to the ear: and hence a consideration of what appears to be the *abstract* value of *forms*, and the preferability of one to another (from whatever cause it may arise) deserves to occupy no slight portion of the artist's attention.

Many fanciful reasons have been assigned for considering the sphere, or circle, as the most perfect of figures. Dr. Darwin attributes our love of this form to the recollection of the maternal breast which sustained us in infancy; others to its being the form of the world we inhabit. But without disputing these associations (which perhaps seldom enter an artist's mind when looking at that form), the *sphere* displays in its ever-varying, yet uniform contour, the most complete harmony, with a rich diversity of *chiaroscuro*, under every circumstance of illumination, combining that "agreeable impression on the sense with a feeling of *perfection* in the mind," which Mengs thought to be included in the painter's idea of beauty. It may be observed, too, that there is a particular fitness in that shape to be received through the circular aperture of the eye, and ovals, spirals, lines principally converging (and which prevail in all beautiful compositions of form), may perhaps be agreeable to us from a similar adaptation to the organ of vision. Even the *entasis*, or swell in the outline of a column, which is a slight movement towards the concentric, may please from the same physical cause, and account for its adoption; while, on the contrary, eccentric curves opposed to each other have always a harsh and discordant effect, and are shunned by the best designers.

Of rectilinear forms, the most simple, such as the square and triangle, are the most effective; these are suited to subjects of a grand or severe character; and that they help to impress correspondent feelings (whether from association or some hidden virtue), the noble productions of architecture seem to prove.

All theories admit *proportion* to be an essential constituent of beauty. Proportion, indeed, seems to be a primary and universal *law*; not confined to forms, but the occult regulator of all the quantities and subdivisions of nature, hitherto perhaps better understood in the divisions and harmony of the musical scale, than in any other element. Unless on the supposition that it contains in itself some inherent but unexplained charm, I know not how to account for the satisfaction afforded us by the proportions of some architectural mouldings and compartments, in preference to others, where no associations of the mind can be readily shown to exist. It is connected with the mystery of numbers, and is, perhaps, the principle of *harmony* itself. Pamphilius, when he recommended the study of *arithmetic* to his scholars, may have meant to inculcate the science of *proportion*.

At any rate, the Greeks must have been thoroughly aware of its importance, as their works abundantly show. The relative proportions of the human figure, as adopted by the ancients, have been partly preserved by Vitruvius, and many of the moderns have proposed other and more elaborate systems, derived from their observations of nature and art. These proportions seem to be founded on geometrical principles. Thus, the height of the figure from the crown of the head to the sole of the foot is equal to the extreme width of the arms extended horizontally, that is, from the tips of the fingers of one hand to those of the other (involving the principle of the *square*). If the arms are raised above the head obliquely, and the legs widely separated, the limbs become radii of a *circle*, of which the navel is the centre; the breadth of the figure is about a fourth of its height, on which I need not here enlarge. With these and other proportions which have been laid down by the best masters, and as they are to be found in the Greek statues, it is expedient for the student to be acquainted; they will assist him materially in understanding the human figure, its symmetry and form; but afterwards, in the *practice* of his art, he will do well to follow the precept of Michael Angelo, and rely more upon his eye and feeling than on the compass.

To do this safely, he must become thoroughly sensible of the characteristic appearances of both sexes: the ample shoulders, narrower loins, muscular limbs, and greater height of the male; and the rounded, delicate, and undulating contour of the female; the dignity and beauty of both in action, or at rest, together with that *grace* which "the hand that formed them on their shape hath poured;" and still more especially "the human face divine" must be the object of his unremitted study, wherein Nature seems to have collected all her resources to gratify the mind and heart. In the female face are assembled the most exquisite proportions, with every possible diversity of curvature, line, and surface—the extremes of contrast, with the most perfect harmony.

The eyebrows, eyes, and mouth, range at right angles with the nose, a fixed and central feature, blending into the forehead above, and projecting below, narrow at the point, and gently spreading at the nostrils; the concave recesses in which the eyes are sheltered, are opposed to the convex brow, and cheek bones; the breadth of forehead and cheeks to the smaller features—the circular eyeballs, enshrined in oval orbits (sometimes flashing with unrivalled brilliancy, sometimes more or less veiled by their moveable lids, edged with a silken fringe)—the flexible and finely moulded lips, alternately closed or separated, or decked with wreathed smiles, occasionally revealing the double row of polished teeth—the hollow beneath the mouth suddenly contrasted by the rounded and tapering chin—the whole circumscribed and united by an oval contour, displaying, in a small compass, a variety, fluency, and entireness of form to be found in no other object.

The face, besides being a school of symmetry, is also the chief seat of expression—an index to the emotions of the soul; and if we take into the account the unrivalled chiaroscuro of the eyes, and those celestial hues which are peculiarly its own, with its decoration of curled or flowing hair, it may be said to exhibit a concentration of all that is beautiful in human nature. Were a similar analysis extended to the body and limbs, we should find a correspondent and not less wonderful variety and harmony pervading our whole structure.

The Greeks had acquired so thorough a knowledge of the human form and its essential principles, that in the coarsest specimens extant of their sculpture, the general proportions are usually good, and at least seem grounded on a correct theory; while among the moderns, it is remarkable how much celebrated artists have varied from each other, and from themselves at different times, in regard even to the bulk and general forms of their figures. The Greek heroes are represented of a taller proportion than those of the Romans, as we may see in the metopes and statues of the Parthenon, in the Meleager, and in the outlines on their painted vases, as compared with the Antinoüs and the relievos of the arches of Trajan and Titus; a difference probably found in the forms generally presented to the observation of the sculptor in each country: or it may have arisen partly from the more poetical feeling of the Greeks, and their wish to aggrandize Nature. Zeuxis is said to have made even his females large and majestic (in accordance with Homer), and such is their general character on the Fictile Vases. The forms of Michael Angelo, if we may trust San Gallo's copy, at Holkham, of the celebrated Cartoon of Pisa (which has every appearance of great accuracy), were at first slender. This is confirmed by Marc Antonio's engraving from one of the groups in that composition (in the drawing of which he is supposed to have been assisted by Raffaelle), and it is observable also in his 'Pietà,' in St. Peter's, 'Bacchus,' and all his earlier works. In the meridian of his powers, when he painted the ceiling of the

Digitized by Google

Capella Sistina, he displayed the most perfect style of design that has ever been attained by the moderns. His 'Adam animated by the Deity,' is of a noble proportion, and the true mean between excess and deficiency: but his figures afterwards became more heavy, and in some of his latter productions even gross. The figure of Lazarus, in the National Gallery, originally outlined by him, is one of the finest specimens of style in drawing which our country can boast of possessing.

Raffaelle set out with the meagre forms of his master, Perugino, on which his natural taste and constant attention to Nature led him gradually to enlarge; and upon seeing the works of M. Angelo in the Vatican, he at once adopted the grander style, which is to be found in his subsequent productions. Some of the figures in the Cartoons appear sufficiently *bulky*, but in the Farnesina he has fallen into decided clumsiness. Such instances (and I might add others even amongst those who were best acquainted with style) show the necessity of watchfulness, lest, in seeking grandeur, we fall into caricature; and that it is necessary even for the ablest and most experienced artists to keep the best examples always in mind.

The style of the Carracci, in the Farnese Gallery, is heavier than that of the Antique, and comparatively vulgar, but always displays a great practical knowledge of the human frame and a power of drawing, which indeed belongs, more or less, to all the well trained artists of that school, as may be seen in two of the original Cartoons for this work, now in the National Gallery. This is generally characterized as the Academic style, which long prevailed on the Continent. The drawing of Lodovico Carracci, and Guido, is more refined, and often very pure and expressive,—that of Domenichino very perfect, but less animated. Poussin, amongst all the moderns, best conceived the generic style of the ancients, and learned to see it in his model; he sometimes reached considerable elegance and dignity, but perhaps rarely if ever the beautiful. Though the purest, and even the most ideal designer (after M. Angelo), he studied all his figures from Nature, as we may see by a number of his painted studies from the living model, which still remain; and his example is strongly to be recommended.

As often as we observe in Nature beauty and grandeur of form, I am persuaded that we shall invariably find them in unison with the system of the Greeks, which the student, therefore, like Poussin, should labour thoroughly to acquire, that he may know how to study from casual models, without being misled. I would not be misunderstood as advising him to follow the style of the antique rigidly and implicitly on every or any occasion; in some subjects it would obviously be absurd. Painting neither requires nor admits of the same attention to forms as sculpture; in the latter they constitute the whole art—in painting, though the most important, they are still but a part of it, and demand a different treatment. The elements of style, however, are the same in both arts, and can nowhere be so advantageously studied as in the works of the ancients. Witness the prodigious diversity which they succeeded in giving to their deities of heaven and hell, of earth and sea; their allegorical personifications, their nymphs, fauns, satyrs, scenic masques, and monsters, on all of which they stamped a distinct poetical character, ranging from the grotesque to the sublime, without departing from their system or losing sight of nature. With this rich mine, the historical or poetical painter cannot be too familiar. He will find it amply repay his severest labour, and furnish him with hints of the most valuable kind. What Gibbon said of the Greek language, is equally true of Greek art, "that it could give a soul to the objects of sense, and a body to the abstractions of philosophy."

In endeavouring to attain a competent knowledge of the human form, and become a good designer, the student will find it indispensably necessary to make himself well acquainted with the auxiliary sciences of anatomy and perspective. The first will always afford him a clue to the general proportions and symmetry of the figure; the skeleton will explain the permanent forms of the joints and bony parts, and an acquaintance with the attachments, shapes, and offices of at least the exterior muscles, will much facilitate his intelligence of those changes which are so constantly taking place in their appearance. Without perspective, he will not be able to draw any object with truth, or to give it its proper place. Even the correct foreshortening of a limb, and still more that of a whole figure, implies a considerable knowledge of this science. Albert Durer, in his treatise on Symmetry, has laid down diagrams for this purpose, though I do not conceive they will be found of any advantage to the student, whose eye, when properly trained, should be his chief guide. But this work may be pointed out as a singular example how far the eye of a man of rare genius and knowledge may be misled from Nature by the use of ill-adapted models; the individuals he has employed for that purpose are of so meagre and repulsive a character, that his forms offend in an opposite extreme, from the want of style, as much as the exaggerated productions of Goltzius and Sprangher do by their abuse of it.

Next to the forms and proportions of the human figure, the student should make himself master of its powers of motion and natural balance. Much useful instruction on this subject may be found in the works of Da Vinci, Flaxman, and others, and much may be derived from the valuable demonstrations of our learned Professor of Anatomy; but a persevering study of Nature alone can teach us the infinite variety of action of which the human machine is capable. All motion proceeds from an alteration in the balance of the parts of a body round its centre of gravity, as that changes with respect to its basis of support. By these alterations certain muscles are immediately brought into exertion, to place the limbs in such positions as are necessary to sustain the figure; these, again, are soon relaxed, and others employed to carry on the action or vary the attitude. In violent exercises, or sudden efforts, the utmost extent of anatomical capability is often called for, and the poise and shape of the figure changed with a rapidity and diversity truly wonderful. To preserve in every case this requisite balance, and to represent with truth and character the relative degree of muscular exertion necessary to all the parts, is one of the greatest tests of the artist's skill, and may be justly considered as a main *instrument* of *expression* in painting; for whatever passion or meaning may be conveyed in the face, unless accompanied with consistent motions and gestures, and a due equipoise of the figure, the intention will necessarily be contradicted and destroyed. It is this evident unity of purpose, and the accordance of every part (even to the fingers and toes) with the expression of the countenance, that gives such a natural and captivating effect to the works of Raffaelle; as it was a still more profound knowledge of the construction and powers of the human frame, that enabled M. Angelo to delineate every variety of action and position of which it is capable, with an energy, feeling, and character peculiarly his own.

Correggio, though he had a much less intimate acquaintance with the figure, and did not excel as a draughtsman, has, however, in his large compositions, ventured on the boldest foreshortenings, availing himself of small models, made expressly for him, which he suspended in the air, and copied. These contrivances may assist those who have science enough to employ them safely, but must be used with a cautious attention to perspective. Rubens possessed a thorough knowledge of the anatomical structure of the human figure, and thence derived his extraordinary facility in invention and composition. It was this which enabled him to give the reins to his vigorous imagination in its most aspiring flights; although from deficiency of taste, his personages are often so coarse, (not to say brutal), that in spite of their daring energy, they never excite any feeling of the sublime, at which in many instances he aimed: they want spirituality. No painter proves the value of *style*, by its absence, more than Rubens.

But I proceed to *Expression*. With the Greeks, as I have shown, beauty was the paramount principle in art. Feeling it to be that quality of all others which most permanently delights us, they were careful never to abandon it altogether, even in works which required grand or terrific character, and strong *expression*. Some of the moderns have in consequence thought them deficient in the latter important faculty of the art. But this is true only with respect to their treatment of certain general subjects, where expression was not called for. In a chorus of nymphs, for instance, the ancients never aimed at more than a placid cheerfulness, and that sisterly likeness remarked by Ovid: in such representations discrimination of character, or force of expression, would have been out of place,—the intention of the artist was to personify the deities of streams or groves as gentle beings, possessed of more than human beauty, with less than human passion. They were not intended to be dramatic. The poets seem to have adopted their ideas of these divinities from the painters and sculptors, to whose representations they often refer. In the Muses, we find the particular sentiment, which belongs to each, more developed, though an imperturbed beauty still predominates, expressive of the refined and tranquil pleasure attending the cultivation of art and science; but in that noble composition in alto relievo of the destruction of the children of Niobe, (which may be seen on the staircase,) though its beauty is almost lost in the badness of the copy which has come down to us, every figure in its action and gesture is eminently *expressive*. In the group, as it is called, of the same subject at Florence, of which the Academy is so fortunate as to possess casts, a variety of powerful expression is also exhibited in the highest perfection. In Niobe herself, we see intensity of anguish combined with the most exquisite forms; and her beauty, instead of being impaired by this union, is exalted to sublimity. I am adverting here rather to the marble bust of Niobe, in the possession of Lord Yarborough, (an antique duplicate of that at Florence,) which appears to me, in this respect, an unrivalled work of art. Were the grief of the Laocoon more violent than it is, we should lose that dignified mental struggle with his fate, which approaches to the sublime, and moves our pity, far more than the contortions of features, which appear in some of the works of Andrea Mantegna, true as those are to the ordinary expression of excessive passion. Excessive passion soon becomes ugly and repulsive. The true aim of art is not "to harrow up the soul," but to excite our sympathy, which cannot co-exist with pain or distaste. This very able master has fallen into the error, against which Hamlet cautions the actor, of "tearing his passion to rags," and was not aware that "in the very torrent, tempest, and whirlwind of his passion, he should beget a temperance that may give it smoothness,"—a precept of our great poet no less applicable to painting than to the drama. The mind is to be stimulated, not irritated or offended. The expressions in M. Angelo's 'Last Judgment' are terrific and sublime beyond anything in painting; but he has avoided the vicious extreme of Mantegna, and proved how well style and expression may be combined.

The changes of countenance and of form, which show the workings of the soul, are partly *instinctive*, and consequently more violent and unrestrained, as man is found in a condition less removed from that of the savage. In a refined state of society, they are modified or disguised by education, rank, or station, and they are varied and influenced in *all* cases by individual character and temperament. The effect of these modifications is so great, that no artist can succeed in this difficult but most interesting quality of art, who has not deeply studied them in nature, and from those painters and poets who have best reflected her in their productions; but to do this, the artist must be gifted with a natural susceptibility, which study cannot impart: he must *feel* strongly, and thoroughly *identify* himself with his subject, or he cannot hope to excite similar feeling in others.

The more obvious features of Anger, Fear, Hope, Joy, Hatred, have been given by Lebrun, and are probably known to you all. They are coarse and general, and therefore intrinsically of little worth, but may be useful as landmarks to beginners. Valuable hints may be derived on this subject (as well as on every other relating to art,) from the precepts of Da Vinci, and still more from the examples in his admirable 'Cena.' The heads which he has introduced in this unique work are, we know, diligently selected from nature; but they are refined and aggrandized by style, regulated by poetical propriety, and animated by the impassioned feelings differently excited in each individual by the circumstances of the event. Surprise, astonishment, indignation, intense affliction, hypocritical calmness, and sublime sorrow, are here

Digitized by Google

brought together in such a chain of modulated passion, as cannot, I believe, be paralleled in any single picture. These feelings are displayed, not merely in the countenance, but in the balance of the body, turn of the head, actions of the hands, and every slightest gesture of the figure; and hence they appear to live.

The works of Raffaelle abound in fine specimens of this great power of communicating passion, and of displaying the emotions of the soul in the countenance, as we may see in the Cartoons around us. In the combination of expression with character, he is only surpassed in the 'Last Supper' of Da Vinci, and some of the mighty productions of M. Angelo. No other artist has given the world so many and such varied examples of a true and appropriate sentiment in the several actors of his drama; and it is from this cause that *none* has maintained so strong a hold on the sympathies of mankind.

Expression always implies, or is accompanied with some approach to *character* or *physiognomy*, which is an habitual cast of countenance, derived partly from original conformation, partly from the frequent exercise of the muscles of the face in the same manner, the traces of which at length become strongly indicative of the temperament and moral feelings of the individual, and are therefore highly necessary particulars of study for the historical painter.

Beauty is felt in undulating lines and harmonious proportions, while character (which may be considered its antagonist) depends on a more decided opposition of lines, and more angular forms; the greater the energy and distinctness required by the subject, the more direct and positive this contrast must be. Thus beauty has been happily called "centripetal," and character "centrifugal." Character and beauty, however, may be combined in various degrees; but in the system of the Greeks, the latter is the central form, from which character diverges, but never entirely departs: when the two are skilfully blended, the result is especially delightful.

One of the most agreeable qualities of art, and intimately connected with my present subject is *Grace*. Grace, if it may be found without beauty of countenance, cannot exist without symmetry of form. It consists chiefly in the natural balance of the figure, and that just degree of motion called for by the occasion which "o'ersteps not the modesty of nature;" unconscious and unconstrained, it appears to indicate a native innocence, tranquillity and suavity of *mind*; an association which true grace always awakens, and this *moral* charm seems a part of its essence. It is conspicuous in the artless positions and gestures of children, and seems to arise spontaneously from that beautiful construction of the human frame which, in all easy action, presents a harmonious undulation of the parts, only to be counteracted by deformity or affectation. It may be said to dwell in the exquisitely delicate flexions of the head upon the neck, in the flowing lines of the arms, the rising or falling, advancing or retiring of the shoulders; in the facility with which the body turns upon the hips, and in all the smooth and gradual changes which are for ever taking place to preserve the equilibrium of the figure, or obey the gentler impulses of the mind. Without possessing feelings in unison with the graceful, the student will, perhaps, never be able to appreciate this desirable quality of art, and without a just knowledge of the physical powers of the human figure he cannot hope to express it.

Grace is everywhere conspicuous in the works of the ancients, as might be expected, from their assiduous cultivation of form. Nothing can be more simple, easy, and natural than the positions of most of their statues. We see no affected contrasts—no attempts at what is emphatically called *attitude*—no waste of effort. And when graceful *movement* was required, as in their dancing or floating nymphs, nothing can be more beautifully expressed.

The most frequent examples of grace among the moderns are to be met with in the works of Raffaelle, Ludovico Carracci, Parmegiano, and Correggio, though both the latter, by attempting to carry it too far, occasionally fell into affectation, than which it has not a more irreconcileable foe. Flaxman and Stothard, in our own country, may be held up safely, and exultingly, to the student, as possessing this fascinating quality in its greatest purity.

When accompanied with evident refinement, grace assumes the character of *Elegance*, which is the antithesis of vulgarity, and seems to occupy a place between grace and dignity. It may be termed *cultivated* grace.

Dignity, which partakes somewhat of this quality, is combined with more formality: it indicates self-possession, and perhaps a degree of conscious value, which connects it with pride, authority, and high station.

These, and all the other shades of character, which combine with and assist expression, are among the greatest charms of our art, and the highest distinctions of the artist, and must be the more diligently studied, as they are rather to be felt than described.

In treating of *forms*, next to the human figure, the theory of *drapery* demands attention, and here again we are deeply indebted to the antique. The ancients, who employed drapery to decorate, and not conceal, the human figure, have, in their sculpture, left us most excellent examples of various kinds, in motion and at rest (some large and ample in its folds and texture, some of extreme delicacy). The student should carefully investigate these, for although painting does not, perhaps, always require the same degree of precision and definition, yet he may gain from the antique, better than from any other source, an insight into the principles on which it should be adjusted; and by reference to nature, and to the demands of his own art, obtain a knowledge of its true theory.

The revivers of painting in Italy very early perceived the importance of drapery, which usually forms so large a portion of their works, and we find, even in Giotto, good examples of their progress in this branch of composition, derived from ancient remains. Masaccio carried it still further, on whom Fra Bartolomeo, Raffaelle, and M. Angelo improved; neither of these eminent artists, however, can be said to have always preserved that purity of taste in their draperies, that simple and natural, but scientific and beautiful, arrangement of the folds, which is invariably found in the works of the Greek sculptors. Albert Durer has produced some very grand examples of drapery, which must no doubt have been derived from nature; and though in seeking to give it character, he sometimes tortured it till it became elaborate and artificial, he well deserves to be studied. The Carracci adopted a simple and fine style of drapery; their successors, from imitating one another, rather than referring to nature, gradually fell into a corrupt, though broad and imposing, manner, which long prevailed throughout Europe, but which our continental neighbours have since done much towards reforming. Flaxman (whose feeling and science ever went hand in hand) was a great master in this department of art; the adjustment of his drapery is usually admirable, and the precepts he has left on this subject in his lectures, cannot be too carefully studied, as they are founded on the truest principles.

In acquiring a knowledge of the mode in which folds are naturally generated and spread, according to the coarseness or fineness of the material employed, the lay figure will be found of considerable service, at least when the drapery is represented at rest; but the effects of motion upon it can only be learned from repeated and careful observation of nature, and the best examples of art. The student must endeavour to comprehend the *rationale* of drapery; how it is naturally affected, by raising or extending a limb; in what degree the weight of the material counteracts, by its *vis inertiæ*, the effects of more or less violent motion; how the folds originate from those points where it is held, enlarging as they recede, spreading where unconfined, or changing their course where they meet with resistance. He should pursue them carefully through their whole progress,—attending duly to those sudden terminations technically called *eyes*, which are often so effective and characteristic. A knowledge of all these particulars will afford him opportunities of turning drapery to a very great account in historical or poetical compositions. I should strongly recommend him not to be content with a superficial acquaintance with this, or any other portion of the art, whatever it may be convenient for him to omit at any time, for the sake of breadth, or from some overruling necessity, should proceed from a thorough intelligence, and not ignorance, of the point, and be nothing more than the judicious sacrifice of one principle to any other more urgent or expedient.

I have now pointed out to the student the principal circumstances connected with *form*, as the leading and most important element of Painting. I have endeavoured to show that beauty, character, grace, grandeur, motion, energy, and expression, (the most intellectual and noblest qualities of our art,) all depend on drawing, which deserves therefore to be the determined aim of the student's systematic and persevering application. He must labour strenuously to render his eye mathematically true, his hand firm, prompt, and obedient, that he may transcribe with readiness and fidelity all the appearances of his model. In acquiring this power, I would impress on his mind as an exercise of the most improving kind, an accurate study of *outlines*. A true circumscription of the mass, gives a more characteristic idea of any object than the filling up of the interior, (which is comparatively a much easier task,) to fix with accuracy and feeling the precise contours of the human figure, to determine infallibly its lateral boundaries, composed of the edges of so many interweaving muscles, to make an exact section of these implies in itself a considerable elementary knowledge, and affords incontestable evidence of a good draughtsman. The student may at the same time be advantageously employed in acquiring an intimacy with the most approved ancient statues; by making careful studies of these in different views, he will at once advance in his power of imitation, obtain a knowledge of style in the principal varieties of the human form, and be prepared to understand them in nature. When thus initiated, but not till then, he cannot devote himself too assiduously to the study of the living model, which, if properly pursued, will confirm him in the principles he has acquired from the antique. And here I feel it a duty to caution him against a practice which (derived perhaps from a mistaken view of a passage in the writings of Reynolds) has become so prevalent of late in the Academy, that of throwing aside the crayon too hastily, for the more seducing use of oil colours. These afford a more expeditious mode of imitation, but which, for that very reason, is to be distrusted; they lead, perhaps, to breadth, but at the expense of what is termed *drawing*. No one who knows the difficulty of oil painting will be disposed to think that the student can begin it too soon, provided he has laid a good foundation in a competent knowledge of the human figure, and the power of making out the nicest details; but this I am persuaded is only to be done by a long and laborious use of the crayon. Experience has shown that if this foundation be not laid in early life, it can never be done afterwards, when the other requisites of his art will crowd upon the painter's attention: and the deficiency, he may be assured, will not fail to prove matter of serious regret, and a formidable impediment to him during his whole career. A finished drawing should give so accurate and forcible an idea of the surface and contours of his subject, that a sculptor might be able to model from it as correctly as from the original itself. This is the true criterion of the draughtsman's ability, and, when acquired, may be carried on with comparative ease in oil colour.

In studying from the living model, I conceive it desirable for the student to adhere to Nature with great fidelity, and not to be over anxious to correct what he may find in the individual before him where it differs from the antique. It is desirable that he should be acquainted with the diversities of Nature, and her various details as well as her generalities. Raffaelle's practice in this respect is well known, from the drawings he has left behind him, in which the individualities of his model are copied just as he saw them. It is afterwards by comparing his studies with each other, and with the antique, that the artist whose taste is well formed will refer each to its proper class, and elicit style without deserting Nature. Believing drawing to be the only foundation on which a painter may safely build, I feel it incumbent on me to urge its importance on your attention, and the more strongly, as the English school has never been distinguished for this quality in any eminent degree, and as at present (I regret to say) its value seems less than ever appreciated. The student may rest assured that it is worth any and every exertion to become an able designer; for without facility in shaping out his ideas, the artist will never be able to do justice to his own conceptions; on the contrary, the

Digitized by Google

want of this power will operate as a positive check to his invention. I cannot, I think, put this more strongly to your minds, than by adverting to the examples of two of the Presidents of the Royal Academy. Reynolds, it is well known, always regretted his want of drawing, and the not having had in his youth those opportunities of acquiring it which are best afforded by an academic education. It was this that made him say, the production of an historical picture was too great an effort for him. On the other hand, Lawrence triumphed in the possession of what Reynolds felt the want of; and I have heard him declare, that he never could be sufficiently grateful for the strictness with which his father, in early life, had obliged him to apply to drawing. He could not but perceive the facility it gave him, not merely in delineating the features, and insuring likeness, but in catching those intellectual varieties and fugitive graces of his sitters, for which he was so remarkable. Whenever the student then is tempted to relax in this particular, he may do well to recollect that the high and deserved reputation which this distinguished painter obtained throughout Europe, was chiefly owing to his great skill in *drawing*.

CHARACTERS IN 'CYMBELINE.'

Imogen and Posthumus.

The true subject of 'Cymbeline' is, the trial of heroic affection in the breast of a wife, and its triumph, not only wrought in the deepest sympathies of mankind at large, but in the fortunes of the heroine herself,—a triumph, not merely over all the worst adversities,—not merely over the most cruel doubts and suspicions conjured up by diabolical art in the breast of a noble-spirited husband,—but, more glorious far, over the disbelief in all conjugal virtue, held and professed by a voluptuary of the first order in refinement and accomplishment.

In bringing ourselves to feel, as well as understand, the character of any one of Shakespeare's more ideal heroines, we should begin with considering the very form and sound of her name; for in them we shall commonly find the key-note, as it were, to the whole rich piece of harmony developed in her person, language, sentiments, and conduct. In the present instance, resolving to give, in one delightful being, "a local habitation and a name" to

> ——all the qualities that man
> Loves woman for, besides that hook of wiving,
> Fairness which strikes the eye,—

resolving to give to this sweet ideal of feminine excellence all possible prominence and elevation, by combining it with, and making it proof against, the possession of the most exalted rank,—it would seem as if the very revolving in his mind of this intended quintessence of feminine beauty and dignity, physical, moral, and intellectual, had caused his inmost and most exquisite spirit to breathe out spontaneously the name of *Imogen*—a word all nobleness and sweetness, all classic elegance and romantic charm. "Sweet Imogen," ever and anon, throughout this drama, comes delicately on our ear, even as the softest note swept fitfully from an Æolian lyre. And as "her breathing perfumes the chamber," even so does her spirit lend fragrance, and warmth, and purity, and elevation, to the whole body of this nobly romantic play.

Her personal beauty is of a character which so speaks the beauties of her soul,—her mental lovelinees so perfectly harmonizes with her outward graces,—that it is difficult, nay impossible, to separate them in our contemplation. In this case, most transcendently, do we find the spirit moulding the body, the sentiment shaping the manner, after its own image, even to the most delicate touches. This meets our apprehension at once, even if we look upon her with the eyes of Iachimo, the unsentimental though very tasteful eyes of the elegant voluptuary and accomplished connoisseur. It was not her external charms alone, however peerless, that could daunt a man like him; it was the heavenly spirit beaming through them at every point.

> All of her that is out of door, most rich!
> If she be furnished with a mind so rare,
> She is alone the Arabian bird, and I
> Have lost the wager. Boldness be my friend!
> Arm me, audacity, from head to foot!
> Or, like the Parthian, I shall flying fight;
> Rather, directly fly.

His rapturous commendations of her beauty that follow in the same scene, might, indeed, be set down to the account of deliberate and designing flattery: yet we cannot but feel that the enthusiastic language in which they are expressed could be inspired in a man of his character, only by a sincere perception of the most exquisite loveliness, adorned with such "neat excellence":—

> Had I this cheek
> To bathe my lips upon; this hand, whose touch,
> Whose every touch, would force the feeler's soul
> To the oath of loyalty; this object, which
> Takes prisoner the wild motion of mine eye,
> Fixing it only here, &c.

At all events, his exclamations over her in the sleeping scene must be regarded as a disinterested homage to her soul-illumined charms, the power of which detains him, in admiration, even from his perilous task of noting the decorations of her chamber:—

> Cytherea,
> How bravely thou becom'st thy bed!—fresh lily!
> And whiter than the sheets! That I might touch!
> But kiss; one kiss!—Rubies unparagoned,
> How dearly they do't!—'Tis her breathing that
> Perfumes the chamber thus: the flame o' the taper
> Bows toward her; and would under-prop her lids,
> To see the enclosed lights, now canopied
> Under these windows—white and azure, laced
> With blue of heaven's own tinct!.....
> .....On her left breast
> A mole cinque-spotted, like the crimson drops
> I' the bottom of a cowslip!

Was ever the victory of silent beauty, elegance, and purity, over the awe-struck spirit of a sensualist, so exquisitely painted or so nobly celebrated as in these lines! It is not "the flame o' the taper" that here "bows toward her," but the unhallowed flames in a voluptuary and a treacherous breast, that render extorted yet grateful homage to that lovely, spotless, and fragrant soul!

This passage exhibits to us the beauty of Imogen surrounded by all its appropriate feminine adornments, amid the elegancies of a court, like the rose yet blooming in its native garden. How charmingly do the words of Pisanio, when instructing her how to assume her male disguise, prepare us for the contemplation of the same sweet flower, drooping and faded in the wilderness!

> Nay, you must
> Forget that rarest treasure of your cheek,
> Exposing it (but, O, the harder heart!
> Alack, no remedy!) to the greedy touch
> Of common-kissing Titan; and forget
> Your laboursome and dainty trims, wherein
> You made great Juno angry.†

How romantically pleasing the change from the Italian voluptuary's image of the sleeping Cytherea, to the British outlaw's expressions:—

> But that it eats our victuals, I should think
> Here were a fairy.....
> By Jupiter, an angel! or, if not,
> An earthly paragon!—Behold divineness
> No elder than a boy!

Yet how identical the spirit of beauty that inspires the exclamations of two so very different admirers! How exquisite, again, the contrast, at once, and analogy, between Iachimo's description of the "fresh lily, and whiter than the sheets," and that given us by Belarius and his two youths, of their "sweetest, fairest lily," the seemingly dead Fidele!—

> *Belarius.* How found you him?
> *Arviragus.* Stark, as you see:
> Thus smiling, as some fly had tickled slumber,
> Not as Death's dart, being laughed at; his right cheek
> Reposing on a cushion.
> *Guiderius.* Where?
> *Arv.* O' the floor;
> His arms thus leagued: I thought he slept, and put
> My clouted brogues from off my feet, whose rudeness
> Answered my steps too loud.
> *Gui.* Why he but sleeps.
> If he be gone, he'll make his grave a bed;
> With female fairies will his tomb be haunted,
> And worms will not come to him.
> *Arv.* With fairest flowers,
> While summer lasts, and I live here, Fidele,
> I'll sweeten thy sad grave: thou shalt not lack
> The flower that's like thy face, pale primrose; nor
> The azured hare-bell like thy veins; no, nor
> The leaf of eglantine, which, not to slander,
> Out-sweetened not thy breath.

Exquisite sweetness and harmony of *voice*, again, were not to be forgotten by Shakespeare among the endowments for such a heroine—so fondly conceived a type of feminine perfection. How finely is the idea of this gift of hers conveyed to us in the simple exclamation of Cymbeline on hearing the first words that she utters on reviving after Posthumus has struck her—

> The *tune* of Imogen!

† This passage forms one of the dramatic no less than poetic beauties which seem needlessly suppressed in the present acting.

And Pisanio, when instructing her how to present herself in disguise before Lucius, the Roman commander, says to her,—

> Tell him
> Wherein you are happy—which you'll make him know,
> If that his head have ear in music.

And Arviragus tells us of Fidele,—

> How angel-like he sings!

The words of Guiderius immediately following this observation of his brother's, are remarkable in two respects. They show the graceful propriety with which the poet could ascribe to his ideal princess a familiarity with the most ordinary branches of domestic economy; and exhibit at the same time the inimitable art wherewith he could lend ideal dignity to one of the homeliest qualifications;—

> But his neat cookery! He cut our roots in characters;
> And sauced our broths, *as Juno had been sick,*
> *And he her dieter.*

Even her "foolish writer," the booby coxcomb Cloten, is made sensible that

> She hath all courtly parts more exquisite
> Than lady, ladies, woman: from every one
> The best she hath; and she, of all compounded,
> Outsells them all.

That the moral and intellectual beauty of his heroine are conceived by the dramatist to be as ideally exalted as her personal graces, we must proceed to show, by fully examining those relations between her and the principal hero, Leonatus Posthumus, which form the nucleus of the story. It is the more indispensable to do this, because a critic of so much authority as Hazlitt has told his readers, in speaking of Imogen, that "Posthumus is only interesting from the interest she takes in him; and she is only interesting herself from her tenderness and constancy to her husband;"—which is equivalent to saying, that Imogen is interesting to us only because she is herself interested for a man who does not deserve it. How terrible an abasement is here made of the real conception which the dramatist exhibits of both characters—more especially of that of the heroine,—a little close attention to the developement of the drama itself will discover most convincingly. In order to judge rightly respecting the dignity of Imogen's love—to see whether, in directing her choice, her intellect had not an equal share with her heart—we must, of necessity, first of all consider the personal qualities wherewith the poet has distinctly and emphatically endowed his hero.

We first hear of him, from the introductory information given by one of the courtiers to some inquiring visitor, as "a poor but worthy gentleman." The same speaker terms him

> ——a creature such
> As, to seek through the regions of the earth
> For one his like, there would be something failing
> In him that should compare. I do not think
> So fair an outward, and such stuff within,
> Endows a man but he.

We are not, however, left to judge of him from these general though decided commendations: the same impartial narrator thus gives us his history and character in full:—

> His father
> Was called Sicilius, who did join his banner
> Against the Romans, with Cassibelan;
> But had his titles by Tenantius, whom
> He served with glory and admired success:
> So gained the sur-addition Leonatus:
> And had, besides this gentleman in question,
> Two other sons, who, in the wars o' the time,
> Died with their swords in hand; for which their father
> (Then old and fond of issue) took such sorrow,
> That he quit being; and his gentle lady,
> Big of this gentleman, our theme, deceased
> As he was born. The king, he takes the babe
> To his protection; calls him Posthumus;
> Breeds him, and makes him of his bed-chamber;
> Puts him to all the learnings that his time
> Could make him the receiver of; which he took
> As we do air, fast as 'twas ministered; and
> In his spring became a harvest: lived in court
> (Which rare it is to do) most praised, most loved;
> A sample to the youngest; to the more mature,
> A glass that feated them; and to the graver,
> A child that guided dotards: to his mistress,
> For whom he now is banished,—*her own price*
> *Proclaims how she esteemed him and his virtue;*
> *By her election may be truly read*
> *What kind of man he is.*

The poet, we see, takes good care to let us know, at the very outset, that his heroine has made the *wisest* as well as the most generous and most amorous choice of a husband—that, without forgetting the princess, she has chosen as a noble and cultivated woman—making personal merit in her lover the *first* consi-

Digitized by Google

deration; and that she has not been mistaken, for that all the world confirm her judgment. We may, then, take Imogen's own word for it, when afterwards, in describing her husband's person, she talks of

> His foot Mercurial, and his Martial thigh;
> The brawns of Hercules; and his Jovial face,—

epithets which inevitably remind us of those words of Hamlet,—

> A combination and a form, indeed,
> Where every god did seem to set his seal,
> To give the world assurance of a man.

And we see that she is thoroughly justified in saying to her father,—

> Sir,
> It is your fault that I have loved Posthumus:
> You bred him as my play-fellow; and he is
> A man worth any woman.

The opening conversation had already informed the auditor that everybody, except her step-mother and the foolish prince her suitor, regarded Imogen as being in the right, and her father in the wrong.

> He that hath missed the princess, is a thing
> Too bad for bad report.

Imogen herself, then, may well speak as she does in the following dialogue:—

> *Cym.* That might'st have had the sole son of my queen!
> *Imo.* O blessed, that I might not! I chose an eagle,
> And did avoid a puttock.
> *Cym.* Thou took'st a beggar; would'st have made my throne
> A seat for baseness.
> *Imo.* No—I rather added
> A lustre to it.

Indeed, she has not only all the good feeling, but all the right reasoning, on her side.

The brief experience which the dramatist gives us of the words and behaviour of Posthumus before his departure into exile, maintain this character; yet, even in these opening scenes, we find indications of that superior *harmony* of qualities in Imogen over her husband—that steady intellect, ever beaming serenely (as has been somewhere said of Heloise) over even the darkest and most troublous agitations of passion and affection in her breast—which we find developed in the course of her following eventful story.

The conduct of Posthumus in his exile has commonly been taxed with gross impropriety in his making the wager with Iachimo respecting the virtue of his wife, and with rash credulity in accepting the Italian's own account of the success of his experiment. These combined imputations tend so seriously to lower the dignity of Posthumus's own character, and, by implication, to impugn the judgment of Imogen herself as regards her exalted estimation of him, that in justice to the dramatist, who has not escaped censure on this account, we must at once proceed to examine how far the charges against him upon this score are really grounded.

In Shakespeare's time, Italian craft was no less proverbial in England than Italian voluptuousness. The character of Iachimo is a sort of compound of the Roman epicureanism of the Augustan age, in which the story is laid, with the Machiavellianism in domestic as well as public life which prevailed in Italy in the dramatist's own day. Now, the character of the noble British exile is made by Shakespeare to present, in both these points, a perfect contrast, being distinguished by purity of manners and open directness of conduct. Iachimo himself, in his confessing scene, places this contrast emphatically before us.

> A nobler sir ne'er lived
> Twixt sky and ground.....
> .....The good Posthumus
> (What should I say? he was too good to be
> Where ill men were; and was the best of all
> Amongst the rar'st of good ones)—sitting sadly,
> Hearing us praise our loves of Italy
> For beauty that made barren the swelled boast
> Of him that best could speak;—for feature, taming
> The shrine of Venus, or straight-pight Minerva,
> Postures beyond brief nature; for condition,
> A shop of all the qualities that man
> Loves woman for; besides that hook of wiving,
> Fairness which strikes the eye:.....
> .....This Posthumus
> (Most like a noble lord in love, and one
> That had a royal lover) took his hint;
> And, not dispraising whom we praised (therein
> He was as calm as virtue), he began
> His mistress' picture, which by his tongue being made,
> And then a mind put in't, either our brags
> Were cracked of kitchen trulls, or his description
> Proved us unspeaking sots.....
> Your daughter's chastity—there it begins!—
> He spake of her as Dian had hot dreams,
> And she alone were cold: whereat I, wretch!
> Made scruple of her praise, and wagered with him
> Pieces of gold, 'gainst this which then he wore
> Upon his honoured finger, to attain
> In suit the place of his bed, and win this ring
> By her and mine adultery.

To estimate the shock which the mind and feelings of this "noble lord in love, and one that had a royal lover," must have received from his first encounter with the bold-faced Italian libertine, let us revert for a moment to those exquisite parting scenes whose impression was freshest of all in his heart. Their finest, sweetest spirit is breathed in those concluding lines of Imogen, which it is no more possible to grow weary of citing or of reading, than it is to tire of hearing the repeated notes of the nightingale:—

> I did not take my leave of him, but had
> Most pretty things to say. Ere I could tell him
> How I would think on him at certain hours,
> Such thoughts and such; or I could make him swear
> The shes of Italy should not betray
> Mine interest, and his honour; or have charged him,
> At the sixth hour of morn, at noon, at midnight,
> To encounter me with orisons, for then
> I am in heaven for him; or ere I could
> Give him that parting kiss which I had set
> Betwixt two charming words, comes in my father,
> And, like the tyrannous breathing of the north,
> Shakes all our buds from growing!

Shall it be said, we may ask by the way, that a heroine who can so think, and feel, and speak, is interesting *only* from her affectionate constancy to her husband—that she has no intellectual charms inherent and independent of any affection whatsoever, notwithstanding that it is affection which stimulates their most beautiful developement? On the other hand, how must the man who had enjoyed the glorious fortune to be brought up with such a being as his "play-fellow," and now to have her as his newly wedded wife,—whose sole intercourse with the sex had been at once so virtuous and so delicious,—have been startled and irritated by the notions and sentiments which he heard put forth by the unscrupulous though elegantly cultivated man of the world, whose experience of the sex, though otherwise miscellaneous, had been exclusively among the vicious. What a transition, good heavens! from the fragrant out-pouring of the soul of Imogen, to Iachimo's "If you buy ladies' flesh at a million a dram, you cannot prevent it from tainting."

The truth is, that Posthumus, under the first shock and provocation of this revolting encounter, behaves both modestly and patiently—"as calm as virtue," according to Iachimo's penitent admission. He does not propose the wager: it is forced upon him by the scoffs and taunts of the Italian; and is accepted at last with a view to punish them,—first, by the repulse which his addresses are sure to sustain,—secondly, by the loss of his property,—and thirdly, by the duel which is to follow. They who have so violently objected against the husband's proceeding in this matter, have judged of it according to the cool, calculating habits of feeling belonging to the modern time,—ignorant of, or overlooking, the true character of that chivalric love, that truly religious faith and devotion of the heart, which Shakespeare found it here his business to paint. Iachimo, in his repentance, gives the right version of the matter;—for, according to the code of chivalry, so far from its being regarded as an insult and profanation on the husband's part, to permit such an experiment to be made upon the constancy of his wife, it was looked upon as the highest test of his confidence in her virtue, and therefore as the most decided homage that he could pay to it; and the attempting seducer, in such a case, was afterwards to be called to account by the husband, not so much for the attempt itself, as for the *disbelief* in the lady's fidelity, which it implied. Therefore says Iachimo,

> He, *true knight*,
> No lesser of her honour confident
> Than I did truly find her, stakes this ring;
> And would so had it been a carbuncle
> Of Phœbus' wheel; and might so safely, had it
> Been all the worth of his car.

This account, which absolves Posthumus from impropriety and rashness in this proceeding, is given, let us remember, by the same accomplished man of the world who, but that he is stricken with remorse, has every interest in representing him as much as possible to have been in the wrong. In the present instance, too, it must be borne in mind, that the lady is a princess, surrounded by all the personal safeguards of a court, and therefore secure against there being offered to her the slightest personal violence.

So far concerning Posthumus's wager and his challenge. In another paper we shall speak of his character as shown in the course of his deception, his despair, his revenge, and his repentance.

OUR WEEKLY GOSSIP.

THE Anniversary Meeting of the Literary Fund Society took place on Wednesday last, Mr. Hallam in the chair. The Report proved, in the most satisfactory manner, that the public begin, justly, to appreciate this excellent institution. The subscriptions and donations which, in 1838 (the only account we can immediately refer to) amounted to 973*l.*, have this year reached 1,452*l.*, and the Council have thus been enabled to add 462*l.* to the permanent fund. The following is an Abstract of the Accounts:—

Receipts.

	£.	s.	d.
Rents	49	18	4
Dividends	801	11	3
Subscriptions and donations	1,452	3	0
Legacy	100	0	0
	2,403	12	7
Balance, Jan. 1, 1842	183	16	5
	2,587	9	0
Deduct expenditure	1,794	1	1
	793	7	11
Purchase of stock	462	10	0
Balance, Jan. 1, 1843	330	17	11

Expenditure.

	£.	s.	d.
Forty-six grants for relief	1,255	0	0
Rent of chambers	140	0	0
Incidental expenses	370	10	1
Balance of anniversary account	28	11	0
Total expenditure	£1,794	1	1

The Report having been received, the following most gratifying letter from the Russian Ambassador, Baron Brunow, was read, announcing that the Emperor of Russia had transmitted to the Society a donation of 1,000 silver roubles:—

> Ashburnham House, February 13, 1843.
>
> Dear Lord Lansdowne,—I feel much pleasure to inform you, that the statement of the proceedings of the Literary Fund Society, communicated to me some time ago by the Secretary of that Society, has been submitted to His Majesty the Emperor, by the obliging care of the Minister of Finances, Count Cancrine. Highly appreciating the benevolent views of this Institution, His Imperial Majesty has been most graciously pleased to contribute towards the fund by a donation of 1,000 roubles silver. H. E. the Minister of Finances informing me of this imperial donation, has remitted the amount of the above sum, viz. 155*l.* 18*s.* 5*d.*, to Messrs. Harman & Co., to whom I beg to enclose an order requesting them to hold this sum at your Lordship's disposal.
>
> Believe me, with the highest esteem and regard,
> Dear Lord Lansdowne, faithfully yours,
> (Signed) BRUNOW.

The officers of the Society were re-elected. The Earl of Arundel and Surrey, and Mr. B. B. Cabbell, were added to the list of Vice Presidents; and the Hon. C. A. Murray, Dr. Fraser, Mr. G. P. R. James, and Mr. Noble, were elected to fill the vacancies in the Committee.

The portraits of Her Majesty and Prince Albert, recently painted by M. Winterhalter, have been exhibited at Messrs. Colnaghi and Puckle's, previously to their being engraved by Mr. Foster (the admirable engraver of Raphael's 'Graces') and M. Louis. M. Winterhalter appears to have thought more of the sovereign than of the woman, and the portrait of Her Majesty is distinguished rather for its marked character than its attractiveness. The Queen wears a rich but simple evening dress; her hair is but slightly decorated; a couple of roses hang from one hand; the other hand, and the arm and elbow which it clasps, are deliciously painted, as regards texture and finish; the colour we are less able to pronounce on, owing to the artificial light in which the portrait is exhibited. Altogether there is a completeness in this work, calculated to sustain the reputation of the painter of The Decameron, and make it a worthy object of occupation for Mr. Foster's burin. The portrait of Prince Albert is in every respect less satisfactory.

The sovereigns of other countries having contributed to adorn the persons of two or three print-publishers, the subjects of this country are invited to deck their sideboards with plate. This is no joke, but a fact, a circular having been sent round soliciting "guineas" towards purchasing a piece of plate to be presented to Mr. Moon! This strange proceeding is not without precedent; for in the window of a

Digitized by Google

tea-shop in Oxford Street is exhibited a huge silver teapot, which was bought out of the pence contributed by the customers. The seller of tea was rewarded with a teapot, and the seller of copper-plates is to be complimented with silver plate; which will make as good an advertisement for the printseller as the teapot has done for the tea-man. The idea is ingenious; and, as the "Distribution" system was not confined to Fine Arts, but extended to Hams and Tongues, we would suggest, that the old Ham and Beef Shop at the corner of St. Martin's Court, should be furnished with a silver dish, by way of setting an example.

An Italian painter, Lecchi, who is said to have discovered the art of colouring Daguerréotypes, has just arrived in Brussels with the intention of copying the pictures of Rubens, Vandyck, &c.

Prof. Schwanthaler, of Munich, has just completed the models of two statues of Tilly and Wrede, as also a model of the Goethe memorial, intended for Frankfort. Abbondio Sangiorgio, of Turin, has just completed models for two bronze equestrian statues of Castor and Pollux, to decorate the entrance of the Place Royale in that city. This artist is already known by his contributions to the sculpture of the "Arca della Pace" at Milan. The heirs of Goethe ask 70,000 thalers of the government for his house and collection, which, as we have mentioned, it was proposed to purchase as a national memorial. The sum is considered rather exorbitant.

The King of Prussia, following the example of our Queen, has lately got up a splendid pageant, in which the princes and princesses of the royal family represented the court of Duke Alphonso at Ferrara, in the time of Tasso, followed by a series of *Tableaux Vivants*, and concluded with a ball. Cornelius furnished the designs for costume, Raupach the poetry, and Meyerbeer the music for the occasion. The Berlin papers speak with enthusiasm of the magnificence of the scene. The subjects of the *tableaux* were taken from the 'Jerusalem Delivered.' Amongst those particularly admired were the angel Gabriel appearing to Duke Godfrey of Bouillon; the army of the Crusaders getting the first sight of Jerusalem; Erminia with the shepherds clad in Clorinda's armour; and Erminia and Vafrin finding Tancred in a swoon near the lifeless body of Clorinda. The Prince Royal has also given a grand concert, after which he presented to M. Meyerbeer a baton, in massive gold, beautifully embossed; to M. Liszt, a silver vase, ornamented with a medallion in gold; to M. Rubini, a gold snuff-box, set with diamonds; and to Mdlle. Tuczeck, a rich *parure*. His Majesty also presented Rubini with the large gold medal, an honour which is only conferred on individuals of the highest merit, and also a superb antique gold ring, richly set in brilliants.

Letters from Munich state that the King of Bavaria is building in the park of his summer palace at Aschaffenburg, near Wurtzburg, a house, which will be an exact copy of the famous house of Castor and Pollux, at Pompeii, brought to light in 1839, under the direction of the distinguished German archæologist, Herr Zahn. The magnificent mosaics and fresco-paintings, the altar, furniture, utensils, all, in short, that is curious in the ancient building, will be reproduced with the utmost exactness in the Aschaffenburg structure, so as to furnish a correct notion to the moderns of the domestic life of the old Romans.

In breaking up a part of the road between Florence and Arezzo, near the upper Val d'Arno, an Etruscan tomb has been discovered, unfortunately in a very damaged condition. An inscription has, however, been found in a tolerable state of preservation. Nearly half a pound of gold and an engraved seal ring have been also discovered in it. The stone of which the tomb is composed is not of the kind found in the neighbourhood, but resembles the stone of Chiusi. One of the bassi-relievi represents, it is supposed, the Rape of Proserpine.

The principle of Association, applied to the reproduction and conservation of literary specialties —which has already established itself in the Parker, the Camden, the Shakespeare and other societies, is about to be extended to a new department of literature. Under the title of the "Sydenham Society," the medical profession is making arrangements "for the purpose of meeting certain acknowledged deficiencies in the diffusion of medical literature, which are not likely to be supplied by the efforts of individuals." A leading object of all these societies, is the recovery and care of mouldering literatures—not, however, as with the old aristocratic associations, in the mummy form, and for the purpose of being shut up in their ancient cerements, in lordly cases beyond the reach of the profane, but with a view to their revivification. The black letter, in the new principle, is valued, not for itself, but for the treasures it incloses; and the *lacuna* which time has wrought, is looked upon as a misfortune to be, as far as possible, supplied, not as enhancing the value of what remains. In the face of associations like these, the absurdity has no chance of sustaining itself, which raised the value of books, as the Sibyl did hers, because leaves were torn out. In short, as opposed to the mystification and charlatanism of mere bibliomania, and its doings, misnamed publication, the design of these societies is the breaking of all the seals which time and casualties have laid upon the apocalyptic character of knowledge. Of the success awaiting the one whose prospectus is before us, there should be no reasonable doubt. Its purposes are described to be—Reprints of Standard English Medical Works, which are rare and expensive—Miscellaneous Selections from the Ancient, and from the earlier Modern Authors, reprinted or translated—Digests of the most important matters contained in old and voluminous authors, British and Foreign, with occasional Biographical and Bibliographical Notices—Translations of the Greek and Latin Medical Authors, and of works in the Arabic and other Eastern languages, accompanied, when it is thought desirable, by the original text—Translations of recent foreign works of merit—Original works of great merit, which might be very valuable as books of reference, but which would not otherwise be published, from not being likely to have a remunerating sale.

A memoir of the late Archbishop of Tuam by the Rev. J. D. Sirr, is announced as forthcoming; also 'Lives of the Princes of Wales,' by F. Williams; Steam Voyages on the Moselle, the Elbe, and the Lakes of Italy, &c., by the late Michael Quin; a Chinese tale, entitled 'The Rambles of the Emperor Ching Tih in Këang Nan; translated by Tkin Shen, a Student of the Anglo-Chinese College, Malacca: with an Introduction by James Legge, D.D., Resident of the College,' and 'The Home; or, Family Joys and Family Cares,' by Frederika Bremer; translated by Mary Howitt.

At the *Third Concert* of the Parisian *Conservatoire*, the novelties were, a symphony by M. Schwenke, which was performed with moderate success, and a new pianist, M. Schachner, who was received very coolly. The *programme* of the *Fourth* comprised one of Mozart's fine motetts, two choruses from 'The Seasons' of Haydn, and a violin solo, by Mdlle. Ottavo. While talking of the violin, we may say that Signor Camillo Sivori, the miniature *fac-simile* and pupil of Paganini, has had a success in Paris, inferior to that gained by other artists who have shown themselves richer in individuality, though poorer in executive power. We have never changed our opinion that the school of Paganini is not destined for a long life, and that its influence is not worthy to be perpetuated. Our obliging correspondent "The Old Subscriber" reminds us, that in Paganini's country a taste for German music is beginning to gain ground—a fact anything rather than wonderful, to those who are familiar with the unmelodious monotony of modern Italian composition. At all events 'Der Freischutz' has been making a *furore* at Florence. On the other hand, 'Il Reggente,' Mercadante's last work, has been well received at Turin. Meanwhile Donnizetti is again at work for the *Académie Royale* at Paris:—and Rossini, it is said, will ere long absolutely make the effort of a journey from Bologna to the French metropolis. Surely the King of the French, and M. Leon Pillet, and M. Duprez—might, by combining command, commission and entreaty, break the spell of the composer's indolence: the matter is one of European interest in these meagre days for Opera. The secession of Madame Rossi Caccia and of M. Roger from the *Opéra Comique* is announced as about to take place; and it is now past doubt that the violin professorship at the *Conservatoire* is divided between MM. Alard and Massard.

Our notice of dramatic events naturally follows in the march of civilization round the world: and this day introduces a new field to the notice of our readers. In the *Friend of China*, a Hong Kong journal, Messrs. Dutron, Quoi, & Co. announce that the erection of a Theatre Royal in that town advances rapidly: and the editor has a note of his own, in which he adds,—"The actresses arrived last week; *their beauty and talent are surpassed only by their spotless virtue.*" From Hong Kong to Paris is an easy step in modern life: and there we learn that the Tribunal of Première Instance has declared itself incompetent to entertain Mdlle. Maxime's complaint against M. Victor Hugo and the Administration of the *Théâtre Français*, referring to the famous decree of Moscow in 1812, which directed that all disputes between actors and theatrical managers should be definitively decided by the Judicial Council of the *Théâtre Français*. The actress appealed to the Cour Royale, which has, however, confirmed the judgment, and orderred Mdlle. Maxime to pay the costs.

Since our last, we have received further accounts from Germany of the activity of Mendelssohn. A new overture to 'Ruy Blas' is spoken of as an excellent work—and the composer has also been employed on choruses to the 'Œdipus Coloneus,' and scenic music to 'The Midsummer Night's Dream' and 'The Tempest' of Shakspeare. These may be taken, we hope, as so many approaches nearer and nearer to the opera, which is one day to be written by him. The German musical stage stands in need of some new interest. At Frankfort the management has been reviving the 'Cendrillon' of Isouard, for want of any more popular novelty. There is to be a grand musical festival at Gotha in June.

We gave last week, in our Report of the papers read at the Geographical Society, Mr. Schomburgk's interesting account of his exploring journey to the source of the Takutu, and mentioned that he returned to Pirara in May. We are now, through the kindness of a friend who has obligingly forwarded to us a copy of the *Guiana Herald*, enabled to bring down our account to a much later period. It appears that in September the party again set out to explore the south-western boundary, and ascended the Cotinga River, up to its source at Roraima, a spot which Mr. Schomburgk had before visited in 1839, having then reached it by a different route. Those who have seen Mr. Schomburgk's beautiful Views of the Interior, will recollect the sketch of that extraordinary scene, where the sandstone hills, extending for about ten miles in a westerly direction, rise abruptly, and, in some instances, quite perpendicularly, to the height of about seven thousand feet above the level of the sea. The temperature, at the base of this natural wall, a little before sunrise, did not rise above 51 or 51½ degrees. Indeed, another agreeable evidence was furnished of the temperate nature of the climate here, in the abundance of blackberries, everywhere growing wild about this spot. The inhabitants of this region are Arecuna Indians, a collateral tribe of the Macousi,—the language of the two bearing the same similarity to each other as the Spanish does to the Portuguese. Mr. Schomburgk represents them as a strong and well made race of beings, and of a warlike disposition. They had recently had some bloody family feud, caused by some Helen of these wilds, in which had been slain several of the tribe, whom Mr. Schomburgk had known, when last at this place, in 1839. At this point the party separated. Mr. Schomburgk's brother, and Messrs. Goodall and Frere, returning to Pirara, while the Chevalier, attended by three canoe-men, and some Indians, struck across the country, traversing the savannahs and forests, to reach the Cuyuni; and prosecuting his researches, and scientific observations, by the way. In this journey, Mr. Schomburgk fell in with several plants and flowers which he had never before seen, or read of. He likewise saw some hundreds of acres of plantains growing quite wild, and so luxuriantly, that he represents some of the trees as being as thick as a man's body, and growing to the height of forty and fifty feet. Suckers, from these plantain trees, Mr. Schomburgk has brought to Georgetown with him, and expresses a wish that they should be cultivated, as he is confident that the disease, which so affects a large portion of the plantain cultivation on almost every estate where it is grown, has never yet tainted these wild fields. Mr. Schomburgk represents his own, and the party's health, as being

Digitized by Google

generally good during their long sojourn in the interior, although all had occasional attacks of fever, and at times suffered greatly from want of food. We may add, as a pleasant conclusion to his labours, that on his arrival in Georgetown, Mr. Schomburgk found awaiting him, a letter from M. Jomard, President of the Geographical Society of Paris, informing him that the Medal of the Society had been awarded to him for his researches in British Guiana.

BRITISH INSTITUTION, PALL-MALL.
The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS is OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1s.: Catalogue, 1s.
WILLIAM BARNARD, Keeper.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virtù. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

SCIENTIFIC AND LITERARY

ASIATIC SOCIETY.

Feb. 25.—Sir George Staunton, Bart., in the chair.—The Secretary read a Report upon the state of the Bhíls, or mountaineers of Rajputána, by Capt. Hunter, commanding the Mewar Bhíl corps. The mountaineers of Hindústan differ in almost every respect from the Hindús of the plains. They are bound by no rules of caste; they do not follow the Brahmanical religion; they speak peculiar languages; and their usages and practices are quite distinct from those of Hinduism. Many of the peculiar habits of the Bhíls, or mountaineers of the north-west provinces of Hindústan, have been admirably depicted by the late Colonel Tod, in his work on those provinces, all of which tend to the idea, that these people are descendants of the primitive dwellers in India, who possessed it before the coming of the Brahmanical tribes by whom they were reduced to submission. It appeared, from the investigations made on the occasion of a claim put forth by the government of Odeypore in 1826, to allegiance from certain hill chiefs, which claim was referred to the British agent in Mewar, that no allegiance had been rendered by any of these chiefs for a period far antecedent to the time of the reigning Rana of Odeypore, which had lasted nearly half a century; and that according to the principle of the British government, the independence of these chiefs was established; but that if they should be unable to restrain their subjects from outrage on the subjects of Great Britain, we should then be bound in justice to enter into negotiations with them on the means of enabling them to do so. Treaties were, in consequence, made with some of these chiefs in 1828, by which this object was effected; and much insight into the habits of the population was gained. It appears, that the country inhabited by the Bhíls, on the south-west of Mewar, is populous and fertile, and that much cultivation is carried on; that the chiefs have very little revenue; in fact, little more than what they can exact by force, and that in general, the people consider what they give as a pure benefaction, to which the chief has no right whatever. The country is naturally very strong; and the difficultics of military operations are much increased by scarcity of water, and the want of cattle and carriage. In some of these hills the chiefs and population are of the same caste; and the writer thinks there would be no difficulty, on the part of the former, to restrain the people from plunder and outrage, if they should be so inclined; but in other parts the chiefs are entirely Rajpúts, having nothing in common with the Bhíls, but a participation in the same lawless practices. The Hindús attribute the origin of the Bhíls to a wicked and ugly son of Mahadeo, who slew the god's favourite bull, for which crime he was banished to the hills, where he became the parent of the Bhíl race. They are looked upon as the most degraded of outcasts; and have been considered as born only to prey upon their fellow-creatures—a notion which has had no small effect in producing those habits of plunder which have made them the scourge of the more settled tribes in their vicinity. There are two divisions of Bhíls, the mountaineers and villagers. The latter are cultivators, more affluent than the mountaineers, and generally more humane, and less reckless of their own and others' lives. The writer stated, that the licentious and predatory habits of the Bhíls were greatly aggravated by the anarchy which prevailed throughout the country of the Rana of Odeypore, at the period of British mediation, when all persons, from prince to peasant, were thieves and robbers, and the government a tissue of cheatery and oppression, without a semblance of law and justice. But since that time a great experiment has been made, and is still making, by the British government, to effect an amelioration, both of the moral and physical condition of these outcasts, by organizing regular regiments of them, giving them constant employment and full pay, and gradually training them to habits of industry, discipline and sobriety. As far as it has proceeded, the appearances are decidedly in favour of the full success of this experiment. A great obstacle to improvement among the Bhíls, in times past, has been the levying of *Rekhwalee*, or protection money, on travellers passing through their country. This is a sum levied by the chiefs on all persons, for whose safety, as well as security from plunder, the chief then becomes responsible. Perhaps, to say the truth, this *rekhwalee* is little more oppressive or unjust than the transit duty payable to more regular governments; and it is certainly the principal mode of raising revenue adopted by the Bhíl chiefs. But the unavoidable irregularities of such a mode, and the opposition of the Hindú nominal sovereigns, who cannot admit the right in the Bhíl chiefs, contribute to make it objectionable. In 1818, when the Rana of Mewar was in alliance with us, an endeavour was made for its abolition; and a treaty was entered into with the Rana and subordinate chiefs for this object, but it was of very short duration. Several chiefs refused it altogether; and those who agreed to it very soon declared their inability to restrain their Bhíl dependants, and things returned to the ancient footing. In 1828, when the British government interfered more directly, the abolition of the *rekhwalee* tax was not insisted on, as it appeared that the only substitute would be a more direct plunder; but the amount to be levied was put under certain regulations, and the traveller, in return, was to be furnished with a guide and escort, as long as he was in the country, and such is the practice at this day. The Bhíls of Mewar are particularly good-looking; and many of the females handsome, and remarkable for the elegance of their form. The women are faithful to their husbands; accompany them on marauding expeditions, and sometimes aid them in battle armed with slings, in the use of which they are very expert. The men are faithful to their chiefs in all cases, without the smallest advertence to right or wrong; they carry them about when old and feeble, and cannot be induced to betray them by hope of reward or fear of punishment. This fidelity has been felt by us in our military expeditions against them, all our movements being at once made known to their chiefs, while we have never, in any instance, been able to obtain information regarding their numbers, position, or motions. The arrow of a Bhíl chief is used sometimes as a draft for money. In one instance, on receiving a visit, one of these men wishing to make a present, drew an arrow from his quiver, saying "Take this to any village of Kotah, and demand nine rupees;" and the draft was duly honoured at sight, whenever it was presented. The paper concluded with the expression of the writer's regret at the difficulty of obtaining information respecting this strange people, and his hope, that on a more lengthened investigation, he shall be able to furnish something more valuable on their history, customs, and character.

ORIENTAL TRANSLATION FUND.—*March* 8.—Sheets of Ibn Khallikhan's Biographical Dictionary, of Mr. Gayangos's Mohammedan Dynasties of Spain, of Mr. Troyer's Translation of the Dabistan, and of the Chronicles of Zabarí, were laid on the table, and it was announced that the Dabistan would be completed in the course of the year. A translation of a Sanscrit work on medicine, with notes, by an English physician and physiologist, was offered to the Committee, and referred to a sub-committee for examination. Sir Gore Ousely offered the Lives of the best Persian Poets, with specimens of their compositions, to the Committee, and submitted a portion of it for consideration. It was resolved, that this valuable work be accepted with the warmest thanks, and that it be printed and published with all convenient speed. The portion read was an account of the origin of the Shah-Nameh,—the great national epic of Persia, selected from the most authentic histories and traditions.

INSTITUTION OF CIVIL ENGINEERS.—*Feb.* 28.—The President in the chair.—The Marquis of Northampton, President of the Royal Society, was presented on his election as an Honorary Member.

The first paper read was 'A Description, by Mr. Hogg, of the Roofs over Buckingham Palace, covered with Lord Stanhope's Composition.'—This covering, which is composed of tar, chalk, and sand, boiled and mixed together, was introduced by Mr. Nash for covering the fire-proof arched roofs carried by cast iron beams over the Palace; it was also used at the Pavilion, &c.; it is laid on wooden joists, and slates or tiles are imbedded in it while fluid; by which a waterproof roof is formed, that is very durable, demands little repair, and possesses many advantages over roofs covered with metal.

The next paper was by Mr. D. Bremner; it contained a description of the bridge over the River Wear, on the line of the Durham Junction Railway, which connects the city of Durham with Newcastle, South Shields, and Sunderland, and is now destined to form a portion of the chain of railway towards Edinburgh. It is built on the spot originally selected by Mr. Telford for a bridge on the line of the projected great road to the North. It was designed by Messrs. Walker and Burgess, after the model of Trajan's Bridge, at Alcantara, and, with some modifications to suit the locality, has been constructed under Mr. Harrison, the engineer of the Railway, by Messrs. Gibb, of Aberdeen. The bridge consists of four nearly semicircular arches of 160 feet, 144 feet, and two of 100 feet span respectively, with three arches of 20 feet span, each at either end forming abutments. The total length is 810 feet, by 21 feet wide, and from the top of the parapet to the top of the foundation, at the point of the greatest depth, is 156 feet 6 inches. It is entirely constructed of freestone from the Pensher quarries close adjoining. The means employed by the contractors for executing the work, appear to have been complete. The north arch, of 100 feet span, containing about 980 tons of stone, was entirely turned in twenty-eight hours, by two of the cranes employed in laying the stones; giving an average weight of 17½ tons of stone laid by each crane per hour. The bridge was commenced in 1836 and finished in 1838, occupying 714 working days, and cost about 35,000*l.*

The last paper was by Mr. Bishopp, describing the American "Bogie" engine, used on the Birmingham and Gloucester Railway. The peculiarities in the construction of these engines, and the apparent superiority which they have been stated to possess in surmounting with a heavy load the inclined plane over the Lickey at an angle of 1 in 37½, have rendered them objects of curiosity, and many inconsistent statements have been made relative to them. The Paper described their internal construction, which was fully illustrated by a series of drawings; and it appeared that the general summary of the work done by them was, that with a maximum load of 8 waggons weighing 53¼ tons, exclusive of engine and tender, the engine ascended the incline at a speed of between 8 and 9 miles per hour—that with 6 waggons weighing 59½ tons, the speed was between 10 and 11 miles per hour—that with 5 waggons weighing 33 tons, the speed increased to between 12 and 15 miles per hour—and that in assisting the ordinary trains of 7 passenger carriages, the usual speed was about 13½ miles per hour. The expense of the assistant locomotive establishment at the Lickey, including all charges upon it, was about 1,980*l.* per annum, but had since been reduced. It was stated, that although some changes and alterations had been made in the mechanism of the engines since they arrived from America, the increasing economy in their use must not be attributed entirely to the changes, the chief of which was suppressing the separate tender, and placing the supply of water and coke upon the foot plate of the engine, and turning the waste steam into the water reservoir, thus heating it for the use of the engine; an economy of fuel was certainly thus arrived at; but the chief cause of improvement con-

Digitized by Google

sisted in the better general management of the engines by the drivers, and constant attention to the condition in which the machines were kept. Captain Moorsom promised the details of the actual cost, extending over several half-yearly statements.

March 7.—The President in the chair.—H.R.H. Prince Albert was elected by acclamation an Honorary Member.

The discussion was renewed upon the American locomotive engines, and it appeared that their efficiency in surmounting such an acclivity as 1 in 37, with heavy loads, was incontestable, but that the quantity of fuel consumed by them was greater than was usual with English made engines. In a comparative trial of various engines on the inclined plane, an American "Bogie" engine, with a cylinder 12½ inches diameter, driving wheels 4 feet diameter, weighing 14 tons, conveyed a gross load of 54 tons up the incline at the rate of 12 miles per hour, while the best of the English engines, with a 13 inch cylinder, 5 feet driving wheels, weighing 12 tons, drew 38 tons up the plane at a speed of 6 miles per hour. It was shown that very material improvements had been made in the engines since their arrival in England, and that the steam ports were so large as to waste steam considerably: but it was argued, that even with all the disadvantages they might possess, it was cheaper to use them than stationary engines, at such inclined planes as that at Euston Square, at the Box Tunnel, and other places; the annual cost of which was given.

The paper read was by Mr. Macquorn Rankine, 'On the Causes of the Fracture of the Railway Axles.' He contended that it was not proved that the fibrous texture of the iron underwent a gradual change into a crystallized structure: his opinion being, that the process of deterioration was gradual, without losing the fibrous texture; that the fractures, as shown by numerous examples, appeared to have commenced with a smooth incision all round at the shoulder, or recess, turned for the bearing against the body; this incision increased in depth according to the age of the axles, until the still fibrous portion in the centre became too weak to support the shocks, and sudden fracture occurred. Several reasons were given: among them was, that the vibratory movement being suddenly checked in its passage from the smaller journal to the larger body of the axle, the shock first caused a separation of the molecules, and that a recurrence of this produced the incision which had been noticed in all the broken axles. A practical means of remedying this was instanced: it was by turning all the journals with easy curves in the shoulder, and not at right angles, and that they should be forged in that form, in order that the fibre might be continuous. In the discussion which ensued, the effect of vibrations on pieces of ordnance and on muskets on firing, was instanced as bearing on the subject; and a decided approval was given to hollow axles, as being less likely to be affected by concussion than solid ones, as the vibrations would pass freely through them.

The following gentlemen were elected:—The Chevalier W. F. Conrad (engineer of the Amsterdam Railway), as a Member: Messrs. W. Maxwell, J. J. Stephens, J. Samuda, E. M. Perkins, J. Hall, R. Wilkins, W. J. M. Rankine, G. H. Birkbeck, E. B. Baker, S. B. Moody, and H. Grisell, as Associates.

ASHMOLEAN SOCIETY.—*Oxford, Feb.* 27.—Dr. Daubeny in the chair. Prof. Twiss read a paper, 'On the Phenomena of Glaciers,' chiefly in regard to the observations of Prof. Agassiz. The author passed some days with M. Agassiz, last autumn, at the Hôtel des Neuchatelois,—a tent erected upon the medial moraine of the Glacier of the Lower Aar, at an elevation of 7,500 feet, and witnessed the experiments in operation for determining the structure and the movement of the glacier. He has since been favoured with communications, from M. Agassiz, of the most important facts ascertained during his sojourn on the glacier last year, and was thus enabled to present a detailed account of them. Having discussed the general features of a glacier, and pointed out the distinction between the Névé and the Glacier Proper,—the former consisting of compact snow in its highest regions, and of granulated snow at its junction with the Glacier Proper, which itself may be distinguished into white ice, or Névé infiltrated with frozen water, and blue ice, the most compact form of frozen water,—he proceeded to explain the chief superficial phenomena, such as tabular blocks, gravel cones, honeycombed surfaces, and moraines. The two first-named appearances are produced, in the one case, by the portions of ice immediately under the blocks of stone being protected from the rays of the sun, and thus assuming a pillar-like form as the surrounding surface is melted away; in the other case, by masses of gravel being deposited by eddies of surface water, which have descended along the line of the glacier's inclination, and so sheltering the ice immediately beneath them, which assumes a conical form. The honeycombed surfaces are produced by detached pebbles, which retain their heat after the sun has ceased to act on the general surface, and thus sink gradually beneath it. The moraines, which may be distinguished into lateral, medial, and terminal, are mural ridges of rocky fragments, which are carried along on the surface of the glacier, from the spot where they are continually falling from the rocks at the sides, in lines generally uninterrupted to the foot of the glacier. The first and last kinds are seen on all glaciers, but the medial moraines are peculiar to compound glaciers, which are made up of two or more converging glaciers, whose inner lateral moraines unite at the point of junction, and form a medial moraine. Thus, the lower glacier of the Aar is made up of not fewer than twenty distinct glaciers, and has, therefore, a corresponding number of distinct medial moraines, which may be traced along the whole line of the glacier, though some of them are ultimately confluent. Prof. Twiss then proceeded to explain the structure of the ice by means of a lithographed plan of the glacier of the Lower Aar, which M. Agassiz has had prepared from a larger plan made by M. Wild of Zurich, one of the engineers who conducted the trigonometrical survey of Switzerland, as well as by a panoramic view, from a drawing by M. Bourkhardt, of Neuchatel. Both of these gentlemen were companions of M. Agassiz on the glacier this summer. In this plan the transverse lines of stratification are distinguished in red from the longitudinal blue bands, or lines of infiltration, and the gradually distorted curvature of the former, originally horizontal in the higher Névé, according to the irregularities of the valley along which the glacier descends, is carefully traced out. The distinct character of the blue bands is made evident, and it is seen that the several portions of the compound glacier preserve their own centres of motion under slight modifications, and that there is no fresh system of blue bands verging to a common centre after the junction of two glaciers, and intersecting the original lines, as would be the case if these bands were produced by the centre of the glacier moving faster than its edges, which has been proposed as an explanation of their formation. The term lines, or bands, of infiltration, has been assigned to these blue bands, as expressive of their formation by the infiltration of water along the line of the glacier's inclination. M. Agassiz has counted ninety-two transverse bands of stratification between M. Hugi's *cabane* and the line of junction of the Névé and the Glacier, and conceives them to represent the number of years during which this portion of the glacier has been formed, as the whole distance included by them would amount to the probable sum of the annual advances of the glacier, calculated upon an average of 250 feet, with some allowances. This portion of the subject was concluded by an explanation of the capillary interstices which appear to pervade the most compact ice, and through which, as through a sieve, the surface water is continually percolating during the heat of the day, but which remain empty during the night, as ascertained by an interesting experiment with coloured liquid, detailed by M. Agassiz, in a paper communicated to the French Institute, and published in the 'Comptes Rendus' for August, 1842.

The movement of the glacier was then discussed. M. Agassiz has ascertained, by the observation of five points on a transverse section of the glacier, that the centre moves considerably faster than the sides; in the proportion of about 5 to 3 on the southern side, and of 2 to 1 on the northern; and that the ablation of the centre, from melting and evaporation, when compared with that of the southern side, was as 3 to 2. He has likewise ascertained, by observing as many points on a longitudinal section, that the rapidity of motion is not influenced, apparently, by the angle of inclination, nor does it increase in a uniform scale as you descend the glacier, for the second point moves faster than the first, but the third slower than the second; again, the fourth, at a greater inclination, moved still slower than the third, but the fifth much faster. Such was the result of observations for a whole year: the daily motion of this glacier had been likewise accurately noted down for 22½ days. Professor Twiss then proceeded to examine the various theories in explanation of the movement, such as the sliding theory adopted by De Saussure, the semi-fluid by Professor Forbes, which was the subject of discussion last year at the meeting of Swiss naturalists at Altorf, the dilatation by M. Agassiz, and the intus-susception by M. Elie de Beaumont, and discussed the chief objections to each, more particularly those advanced by Mr. Hopkins, of Cambridge, against the theory of expansion; several of which would apply as well to the form of it propounded by M. Elie de Beaumont, as to that advocated by M. Agassiz, both of which are modifications of the general theory of infiltration, differing in their point of view, according as, on the one hand, the raising of the temperature of the glacier itself by the percolation of the surface water, or, on the other hand, the diminution of the temperature of the water from the cold of the glacier, through which it percolates, is more particularly insisted on. He showed that the natural cascades (*couloirs*) and artificial borings in the glacier, do not preserve their verticality, and that the fissures, under certain circumstances, close up again; both of which facts would be at variance with the hypothesis assumed by Mr. Hopkins, as well as the circumstance that the capillary interstices have been ascertained by experiments with coloured liquid to penetrate to a great depth. The author concluded with calling the attention of the Society to the striæ which the glacier may be seen to groove, as it advances, upon the rocks at its edges, and to the strong analogy between them and ancient striæ on higher levels, which are observed on the sides of most of the great Swiss valleys, at an elevation of from 9000 to 7000 feet, descending continuously, and more strongly marked at the heads of the valleys; neither of which facts can well be accounted for on the theory of torrents: and in regard to the erratic phenomena, which some geologists attribute to the operation of ancient glaciers, he observed, that the hypothesis of glacier action advanced to explain the deposit of large angular blocks above rounded stones, was singularly illustrated by the phenomena observed in connexion with glaciers of the present day; namely, the angular blocks on their surface and the rounded stones beneath them, the grinding of which contributes to give the turbid colour to the water which issues from them.

PHILOLOGICAL SOCIETY.—*Feb.* 24.—Separate reports upon the claims of Prof. Bopp and James Grimm, drawn up by Prof. Wilson and J. M. Kemble, Esq., respectively, were read by the Secretary. The following Candidates were elected—viz. Lord Lyttelton, E. T. B. Twistleton, Esq., Rev. J. Scholefield, and J. Payne, Esq.

The following communications were read:—'On the origin of the phrase *Wager of Law*,' by Prof. Carey.—The word *loi*, in the Norman Customary, has the sense of *trial*. Chapter 67 treats—"*Des querelles e des Loix parquoy les querelles doivent estre finées.*" Beyond this there is a division of such *Loix* into these: *a. De loi qui est faicte par record; b. De loi prouable; c. De loi apparissant.* Of these the first meant *Trial by Record;* the third *Trial by Battle;* and the second (in one of the two kinds into which it was divided) *Wager of Law:* its equivalent, in the Customary of Normandy, being the *Loi de deresne.* As being the best known, it is sometimes called *simple loi*, and sometimes merely *loi*, the word being unqualified by any epithet. If the defendant denies the engagement, *La loi doivt estre gaigée*,—words equivalent to the English term *Wager of Battle.*

'On the Classification of the Chinese Roots,' by J. F. Davies, Esq.—The whole of the Chinese written language is reducible to 214 radical characters. Of these, the number expressing the names of the human species and its relations, were 14; of mammalia, 8; of other animals, 7; of vegetables, 13; of minerals, 5; of parts of animals, &c., 28; of other objects in

Digitized by Google

nature, 26; of objects in art, 41; of numbers, 5; of qualities, 30; of actions, 36; (undefined, 36). Total, 214. This classification of the characters according to the objects represented, was the following up of a hint of Abel Rémusat's. Beyond this, it was added, that the number of words in the current Chinese was about 11,600; and a very elaborate table exhibited the amount to which each of the 214 radical characters entered into composition, so forming the 11,600 words constituting the Chinese language. Amongst these, *man* entered into 478; *woman* into 243; body (or person) into 158; *dog* into 136; *tree* (or *wood*) into 493, &c. A lengthened discussion followed the reading of this latter paper.

ELECTRICAL SOCIETY.—*Feb.* 18.—A lecture 'On Animal Electricity' was delivered by Mr. H. Letheby, in illustration of the views respecting the identity between the electric power of certain fish, and their nervous energy. Mr. Letheby illustrated his opinions by diagrams and dissections, as well as by experiments, tending to show, that the extraordinary power possessed by these fish is derived from the immense mass of nerves by which the electric organ is supplied; a mass far exceeding the mere animal wants of the organ, and far beyond what are furnished to any other function in the animal economy.

Feb. 21.—Mr. Pollock communicated to the Society, as the result of a long series of experiments on Electric Phosphorescence, that this phenomenon does not occur in cases of conduction and chemical change; that colour often operates as conduction, that it is an effect of induction, and is the act of restoration of equilibrium between the particles which have undergone this influence. The Secretary gave a brief description of some drawings he had taken of a fracture of a Leyden jar during a powerful discharge.

ENTOMOLOGICAL SOCIETY.—*Feb.* 6.—The minutes of the anniversary meeting having been read, the late President, W. W. Saunders, Esq., delivered an Address on the progress of Entomology at home and abroad during the past year, which was ordered to be printed for distribution. The President announced, that the Rev. F. W. Hope had resolved to offer two prizes of five guineas each, for the best memoir on the insects injurious to market gardeners, and for a complete bibliographical synopsis of English works on Entomology. Mr. Longley exhibited a remarkable hermaphrodite specimen of the common vapourer moth. The following memoirs were read, 1. 'A Decade of new Coleoptera from Assam,' by Capt. Parry; 2. 'On the means by which the Honey-bee finds its way back to the hive,' by Mr. Newport; 3. 'Notice of the occurrence of *Trypodendron lineatum*, a new British wood-boring beetle,' by M. Desvignes.

MEDICO-BOTANICAL SOCIETY.—*Feb.* 22.—Earl Stanhope, President, in the chair.—A communication from Mr. Ley was read, 'On the *Cannabis Indica*,' the Indian hemp; from which it appears, that although not in medicinal use in England, this plant is possessed of extraordinary powers, as a sedative, narcotic, and anti-spasmodic remedy. The resin collected from it is in general use, as an intoxicating agent, all over the East, from the furthermost confines of India to Algiers. The intoxication, which is of the most cheerful kind, lasts about three hours, when sleep supervenes; it is not followed by nausea or sickness, nor by any symptom, save slight giddiness, worth recording. The subsequent effects are depression of spirits, and relaxation of the muscles in a remarkable degree; and yet the litheness attending that relaxation, the free perspiration on the skin, and the increase of appetite, have made some old rheumatic persons speak of it as of the elasticity of youth. The hemp resin is most useful in spasmodic and convulsive diseases, and in tetanus it has been the means of cure in the majority of cases, and it has relieved much of the severity of hydrophobia, although it did not avert the fatal termination. It may be safely employed wherever opium is indicated. From a series of experiments on dogs, instituted in the native hospital of Calcutta, by Dr. O'Shaughnessy, we may conclude that it will prove a direct antidote—the first of its class—to strychnia, one of the most violent poisons nature affords.

MEETINGS FOR THE ENSUING WEEK.

SAT. Asiatic Society, 2, P.M.
— Botanic Society, 4.
MON. Geographical Society, half-past 8.
— Royal Academy, 8.—Sculpture.
TUES. Meteorological Society, 8.—Anniversary.
— Institution of Civil Engineers, 8.—'A Method of laying down Railway Curves,' by W. J. M. Rankine.—'Description of a Contractor for Railway Springs,' by W. J. M. Rankine.—'On the Strength of Carriage Bodies as affects the safety of Railway Travelling,' by W. J. M. Rankine.
— Zoological Society, half past 8.
WED. Statistical Society, 3. Anniversary.
— Society of Arts, 8.—Mr. Cassella 'On an improved Pluviameter, or Rain-Guage.'—Mr. Smith 'On his new Instrument for teaching the Principles of every description of Drawing.'
— Microscopical Society, 8.
THUR. Royal Society, half-past 8.
— Royal Academy, 8.—Painting.
— Society of Antiquaries, 8.
FRI. Royal Institution, half past 8.—Mr. Owen 'On Moorish Architecture as illustrated by the Alhambra.'
— Botanical Society, 8.

MUSIC AND THE DRAMA

CONCERTS OF ANCIENT MUSIC, NEW ROOMS, HANOVER SQUARE.—The FIRST CONCERT will take place on WEDNESDAY NEXT, March 13, commencing at half-past eight o'clock. The Rehearsal on Monday morning, the 13th, at twelve. The Subscription, Six Guineas; without Rehearsals, Five Guineas. Single Tickets for the Concerts, One Guinea each; for the Rehearsals, Half-a-Guinea each; applications for which to be made through Subscribers only, to C. Lonsdale, Musical Circulating Library, 26, Old Bond-street. Principal Singers, Madame Caradori Allan, Miss Birch, and Mrs. Alfred Shaw; Messrs. Hobbs, Hawkins, Machin, and H. Phillips. Leader, Mr. F. Cramer. Conductor, Sir Henry R. Bishop.

ST. JAMES'S THEATRE.—*French Plays.*—Rarely has *artiste* appeared in London more richly endowed with the requisites for popularity than Mademoiselle Plessy. Her beauty, the charming coquetries of her dialogue, the lady-like repose of her demeanour, are one and all to be numbered in our list of stage rarities. Her very consciousness, too (not a general characteristic of French actresses) is calculated to endear her to an English audience; and as we are by no means so unsympathetic as to cry "*Fudge*" after the fashion of Mr. Burchell, at that which our neighbours take for truth, we, too, are delighted with our fair guest. There is no resisting her good looks and her graces in 'Le Portrait Vivant'—a dainty *petite* comedy of the Regency, in which she looks a romantic Princess of France to the life, assumes pretty airs of command, and indicates a concealed *penchant* for her secretary with a good taste and delicacy which are thoroughly artistic. Here she is at home. When she attempts the repertory of Mademoiselle Mars, we like her less, being unable to forget, that as regards *substance*, depth and *finesse* in action, conception, and diction, she is but an exquisite enamel miniature compared with a complete and life-size oil painting. We cannot leave 'Le Portrait Vivant' without complimenting M. Cartigny on the English French he gets rid of as the puzzled *Sir* John Bull, who comes to Paris to marry his daughter. It is farce of the best and truest quality.

The name of Sheridan Knowles again figures in the play-bills; on Monday last one of his dramas was performed at each of the great theatres; 'Love' at Covent Garden, and 'Virginius' at Drury Lane; and a new play by him is in rehearsal at the latter. Macready's *Virginius* has been stamped on the popular recollection by Jackson's admirable sketch of him in the part, which is one of the best modern portraits of an actor in character, for it hits the point between theatrical exaggeration and individual peculiarity. We were desirous of reviving our impressions of that fine piece of acting, but the claims of two performers, untried on the London stage, attracted us to Covent Garden, and instead of having pleasurable tears drawn from us by the sorrows of the Roman father, we were forced to painful laughter by the strange antics of the serf *Huon*, whom a Mr. Paumier attempted to personate, without the skill requisite to counterbalance personal disadvantages, or give effect to an intelligent reading of the part. Mrs. Ryder, who played Miss Ellen Tree's part, is an experienced actress, who never offends against propriety, but neither does she rise to the height of tragic expression and dignity. 'Oberon' is to be performed on Monday for Mr. Bunn's benefit.

MISCELLANEA

Earthquake.—Late arrivals from the West Indies bring fearful though imperfect accounts of an earthquake which appears to have been felt in many islands widely distant, though its destructive influences have, so far as known, been principally confined to Antigua. Nothing has been heard from Dominica, Martinique, St. Lucia, or Gaudaloupe. But as it is known that no damage has been done in Barbadoes or St. Vincent's to the southward, nor much at St. Thomas' to the north, it is assumed that the centre of the commotion has been at Gaudaloupe; and the captain of a merchant vessel reports that he was sailing near the coast at the time and saw clouds of dust and smoke, &c., ascend from the island; that he could discern the people running out of their houses and dropping on their knees; and that the deck of his vessel was so covered with dust or ashes that he could write his name with his finger upon it. After this our home earthquakes seem almost ridiculous: yet we shall record that a smart shock was felt at Lochgilphead, near Greenock, at 40 minutes past eight o'clock, on the evening of Saturday week. The shock was accompanied by a loud noise, as of many carts of stones being emptied on the streets, or several coaches passing. Many of the inhabitants ran in great alarm to their doors, to ascertain the cause of the disturbance. A farmer, who resides two miles and a half from Lochgilphead, mentions that the same sensation was felt at his house as at the village. He says that his very dog participated in the general alarm, as he started to his feet from the hearth in the greatest consternation.—*Glasgow Courier.* The German papers also mention that, about ten in the evening of the 18th ult., a shock of an earthquake was felt in the environs of Leipsic, and repeated several times during the night, attended by a noise like the rumbling of a heavy carriage over a wooden bridge. The last shock was so violent, that many houses were shaken, and the inhabitants roused from their sleep. The atmosphere was quite serene.

MSS.—M. Féron, the Conservator of the Archives of Pau, has just discovered, amongst some other curious documents, the *Cahier journalier des dépenses de la Princesse Catherine*, sister to Henry IV. Each page begins thus: "This — day of —— for the usual expenses of Madame, of her suite, and part of that of the Queen at Pau." The following is the expense for Wednesday, Nov. 7, 1571: "To C. Malmouché, the Queen's baker, for 36 dozen of loaves, 7 livres 16 sous. To Jounchim, purveyor, to pay 120lb. of mutton, 7 *l.* 16 *s.*, 30lb. of beef for boiling, 30 *s.*, 17lb. of veal 21 *s.*; 16lb. of fresh pork, 24 *s.*; 10 capons and 4 chickens, 56 *s.*; 4 fowls, 1 partridge, and 1 woodcock, 22 *s.*; 2 rails and 4 blackbirds, 5 *s.*; 2 dozen of larks, 16 *s.*; 1 river-bird and 1 calf's pluck, 7 *s.*; 2 mutton paunches, 6 *s.*; 1 quarter of a hundred of eggs and 12lb. of bacon, 38 *s.*; 5lb. of candle, 15 *s.* To the Equerry for 3 quarterons of sugar, 18 *s.*; and salt to corn the beef, 6 *s.* To confectioner, for 2 bakings, 9 *s.*" Friday only was observed as a fast day, and on one of those occasions we find the following articles put down: "To 2 pikes of 1 foot 4 inches and of 1 foot 2 inches, 38 sous. To a carp of 1½ feet, and 2 of 1 foot 4 inches, 40 *s.* A hundred of gudgeons, etc." These items, the authenticity of which cannot be called in doubt, prove both the lowness of the prices at that period, and the regularity with which accounts were kept by the first houses in the kingdom.

German Railroads.—The *Allgemeine Zeitung* publishes an account of the railway travelling in Germany in the year 1842, on the twenty-one railways now open in Germany. The number of persons who have travelled by railroad, *in toto*, during that year, are 6,867,994. On some of the best known lines the numbers have been,—Cologne and Aix la Chapelle, 317,766; Dusseldorf and Elberfeld 384,946; Leipzig and Dresden, 382,284; Leipzig and Magdeburg, 544,621; Vienna and Gloggnitz, 1,151,393; Berlin and Frankfort (in two months) 35,274; Mayence and Frankfort, 809,012. A railroad from Cologne to Bonn will, it is said, be completed this year: and one from Cologne to Berlin, through Dusseldorf, is in contemplation. The income of the German railroads, by passengers and freight, has been 14,967,349 florins.

TO CORRESPONDENTS.—A Curate: the articles on the History of Wood Engraving appeared in the Part for May, 1839. They contained the illustrations referred to, altogether thirty-one engravings. You must order the Part through your bookseller, as there are no stamped copies remaining.—Z.—J. J.—Don Quixote—A. H. P.—Juvenis—A. S. M.—received. X. Y. Z. should have sent his name in confidence to authenticate the statement.—G. M., probably next week.

INDIA.

Preparing for immediate publication,

HON. E. EDEN'S SKETCHES of the Native Princes and People of INDIA, lithographed by LOWES DICKINSON.

Dickinson & Son, 114, New Bond-street.

In 2 vols. small 8vo. with 14 Portraits, price 18s.

THE HISTORY of the REFORMED RELIGION in FRANCE.

By EDWARD SMEDLEY, M.A.

Late Fellow of Sidney Sussex College, Cambridge.

Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In 8vo. price 1s.

THE SEES of ST. ASAPH and BANGOR; an Article reprinted from 'The British Critic and Quarterly Theological Review,' of January, 1843; with Additions.

Rivingtons, St. Paul's Churchyard, and Waterloo-place.

BUTLER'S OUTLINE MAPS.

GEOGRAPHICAL and BIOGRAPHICAL EXERCISES, with a Set of Coloured Outline Maps, designed for the use of Young Persons.

By the late W. BUTLER.

And Enlarged by his Son, the late JOHN OLDING BUTLER.

24th edition, price 4s.

John Harris, corner of St. Paul's Churchyard.

VETERINARY ART.

Now ready, price 6s. Part I, Vol. III. of

HIPPOPATHOLOGY: comprising The DISEASES of the BRAIN and NERVES, and of the EYES of HORSES.

By WILLIAM PERCIVALL, M.R.C.S.

Veterinary Surgeon First Life Guards.

London: Longman & Co. Paternoster-row.

NATURALIST'S LIBRARY—BRITISH FISHES.

This day, fcap. 8vo. price 6s. with 36 coloured Plates, and Portrait, and Memoir of Bondelet. Vol. I. of The

NATURAL HISTORY of BRITISH FISHES.

By ROBERT HAMILTON, M.D. F.R.S.E. &c.

Being Vol. 37 of Sir W. Jardine's 'Naturalist's Library.' The Concluding Volume will be published before Midsummer.

S. Highley, 32, Fleet-street, London; W. H. Lizars, Edinburgh; Curry & Co. Dublin.

Post 8vo. 3s. 6d.

THE CONCLUSION of LIEUT. EYRE'S JOURNAL (the CAPTIVITY and RELEASE of the PRISONERS), is NOW PUBLISHED.

John Murray, Albemarle-street.

Now ready, with a Map, post 8vo. 15s.

MR. MURRAY'S HAND-BOOK for CENTRAL ITALY; including the CITIES of ETRURIA, ROME, and the PAPAL STATES.

Also, just published,

Mr. Murray's Hand-Book for Northern Italy—The States of Sardinia, Genoa, and the Riviera, Venice, Lombardy, and Tuscany. With a Map, post 8vo. 12s.

John Murray, Albemarle-street.

Now ready, illustrated with 100 Engravings, price 5s. cloth,

LECTURES on ELECTRICITY; being an Elementary Course of Instruction, written in a familiar style and divested of technicality, upon this interesting and delightful branch of science. From its practical character, this is the only work on the subject in the English language adapted for tuition, and calculated to become a class book.

By WILLIAM STURGEON,

Lecturer to the Victoria Gallery of Science, Manchester; Editor of the 'Annals of Electricity,' &c.

Similar volumes upon Galvanism, Magnetism, and Electro-Magnetism, will speedily follow.

London: Sherwood, Gilbert & Piper, Paternoster-row.

MRS. L. H. SIGOURNEY'S LAST NEW WORK.

This day is published, price 12s. 6d. (elegantly printed in royal 32mo. gilt, with a beautiful Plate of Abbotsford, and Vignette of the Luxor, at Paris.)

PLEASANT MEMORIES of PLEASANT LANDS; being Poetical Records of her Visit to the Classic Spots and most Eminent Persons in England, Scotland, and France. By Mrs. SIGOURNEY.

London: Thomas Allman, 42, Holborn-hill.

This day is published, in one volume royal 4to. with 18 Engravings and several Woodcuts, handsomely bound in cloth, price 15s.

THE NATURAL PRINCIPLES AND ANALOGY OF THE

HARMONY OF FORM.

By D. R. HAY,

Decorative Painter to the Queen, Edinburgh.

By the same Author, the 4th edition of

The Laws of Harmonious Colouring, adapted to Interior Decorations, &c. With 8 Coloured Diagrams, price 7s.

William Blackwood & Sons, Edinburgh and London.

CRABB'S GERMAN EXTRACTS.

17th edition, 12mo. 6s. cloth,

EXTRACTS from the BEST GERMAN AUTHORS, with the English words at the bottom of the page, and a Dictionary at the end for translating into English. By GEORGE CRABB. 7th edition, revised and much improved by the Rev. J. G. TIARKS, Ph. D.

Longman & Co.; R. Baldwin; Whittaker & Co.; Simpkin, Marshall & Co.; Dulau & Co.; Duncan & Malcolm; and D. Nutt.

CRABB'S GERMAN DIALOGUES.

6th edition, 12mo. 3s. 6d. cloth,

ELEMENTS of GERMAN and ENGLISH CONVERSATION on FAMILIAR SUBJECTS. By G. CRABB. 8th edition. With Additions and Corrections, by ADOLPHUS BERNAYS, Ph. D. &c.

London: Longman & Co.; Whittaker & Co.; J. G. F. & J. Rivington; Dulau & Co.; Simpkin, Marshall & Co.; J. Maynard; Souter & Law; and Houlston & Stoneman.

WENDERBORN'S GERMAN GRAMMAR.

12mo. 8s. bound,

WENDERBORN'S PRACTICAL GERMAN GRAMMAR, in which each rule is systematically, clearly, and concisely explained, and immediately followed by proper exercises, for the use of English students of the German Language. Edited by D. BOILEAU. 10th edition, enlarged and improved.

London: Longman & Co.; Whittaker & Co.; Dulau & Co.; Simpkin, Marshall & Co.; Duncan & Malcolm; Black & Armstrong; E. Hodgson; and Capes & Co.

Just published, in elephant 4to., with descriptive letter-press, and a copious Consulting Index of the Latitudes and Longitudes of 45,000 Places, price, half-bound Turkey morocco extra, only 3l. 3s.; or without the descriptive letter-press, 2l. 10s.

GILBERT'S MODERN ATLAS.

The universal approbation bestowed upon this Atlas of the World, has induced the proprietor to prepare a new and improved edition. The letter-press, by Mr. Mudie, has been carefully examined, and the Maps have undergone thorough revision. Two new features have been added:—The divisional Maps of the Continents each have a scale showing the lineal dimensions of the respective countries in contrast with England, exhibiting the difference in their respective sizes. The same Maps also have the Points of the Compass, within the circle of which is introduced a miniature Map of the quarter of the globe in which the country is situated,—showing at a glance the position and area each particular empire or state occupies in comparison with the continent to which it belongs.

It is without presumption confidently anticipated that the present edition of this unique, elegant, and highly esteemed work will add to its reputation, and command an extensive and permanently increasing sale.

The work may also be had in 35 Monthly Parts, at 1s. 6d.; or without the descriptive letter-press, in 40 Monthly Parts, at 1s.

Just published, in 180 pages full-sized 18mo., price in cloth only 2s., or handsomely bound, with the Maps coloured, 3s. 6d.

GILBERT'S OUTLINES OF GEOGRAPHY.

With Ten superior Steel Plate Maps.

"This is the cheapest and best got up educational book we have seen for a long time. It is really a delightful thing to know that for so small a price, heads of families may place in their children's hands (ay, and in their own too), a book so full of useful knowledge admirably communicated, and illustrated by accurate, neat, and very pretty Maps. We venture to predict that it will become a permanently established book."—*Church and State Gazette.*

"We have no hesitation in recommending this little work as the most comprehensive of its kind; it contains nothing superfluous; its arrangement is philosophical and well adapted for instruction, and the maps and illustrations are in the highest style of art."—*Atlas Neesp.*

Also, in small 4to. price 1s. 6d. sewed.

THE MAPS OF THE PRECEDING WORK ENGRAVED IN OUTLINE,

ON THE SAME SCALE;

With Plans of Projections, and an Index of the Latitudes and Longitudes of 2,100 Places.

Well suited for exercises in Map Drawing, and for educational purposes.

In 4to. coloured, price only 5s. bound,

GILBERT'S MODERN CHILD'S ATLAS.

CONTENTS:

1. World in Hemispheres, with Views of the Mountains, Waterfalls, and Rivers—2. The same Map engraved in outline—3. Map of Europe—4. Ditto in outline—5. Map of the British Isles—6. Ditto in outline—7. Map of Asia—8. Ditto in outline—9. Map of Africa—10. Ditto in outline—11. Map of North America—12. Ditto in outline—13. Map of South America—14. Ditto in outline—15. Map of Australia—16. Ditto in outline—17. Map of the principal Lakes—18. Map of the World in the time of Noah—19. Map of the World in the time of our Saviour—20. Diagrams of Projections—21. The copious Consulting Index of 2,100 Places.

The whole accompanied by Descriptive Letter-press, and forming an instructive and cheap work.

"Of the two preceding works we can speak with entire satisfaction; the Maps are executed with great beauty and precision, and the filling up of the Outlines will prove a salutary exercise."—*Baptist Magazine.*

London: JAMES GILBERT, 49, Paternoster-row.

WORKS PUBLISHED ON COMMISSION.

The Town and Country Trade supplied with all the Periodical Publications and New Books.

In demy 8vo. price 8s. 6d. cloth, with a Map,

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.

By WILLIAM DESBOROUGH COOLEY.

"A truly classical work.....This work, well considered, is historical rather than geographical and ethnographical: it is unquestionably the only truly critical work hitherto undertaken and completed on the subject."—Count Gråberg da Hemsö, in the *Revista Europea*, May, 1842.

"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated.....The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. ...The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.

"We owe all our accurate knowledge of the early movements of the Moors and Arabs in Negroland to the researches of the judicious Cooley. 'The Negroland of the Arabs' well deserves perusal."—*Friend of Africa.*

"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*

London: J. Arrowsmith, 10, Soho-square; and all Booksellers

PROF. DUNBAR'S GREEK AND ENGLISH LEXICON

Lately published, in 1 thick vol. 8vo. price 42s.

A NEW GREEK-ENGLISH and ENGLISH-GREEK LEXICON, with an Appendix, containing Terms of Botany, Mineralogy, Natural History, &c. as used by the Greek Classical Writers. By GEORGE DUNBAR, A.M. F.R.S.E. and Professor of Greek in the University of Edinburgh.

The Appendix will be found exceedingly useful, especially to the Botanist and the Natural Historian.

The following testimony to the merits of the Lexicon, by the late venerable and highly-distinguished scholar, the Marquis Wellesley, was communicated to Lord Brougham, and transmitted to the Author, with his Lordship's permission to make whatever use of it he might think proper:—

"Kingston House, Knightsbridge.

"17th August, 1841.

"My dear Lord,—I am greatly obliged to you for having permitted me to see Prof. Dunbar's Greek Lexicon. It is infinitely the best work of the kind which I have ever seen. It has already been of great service to me, who, as you know, am an humble, but a most ardent votary of Greek literature. It will tend more to extend the study of Greek than any work now extant....

(Signed) "WELLESLEY."

Imported by Wiley & Putnam, Stationers'-court.

2 vols. 8vo. 15s. cloth.

THE PHILOSOPHY of NECESSITY; or, the Law of Consequences as applicable to Mental, Moral, and Social Science. By CHARLES BRAY.
"The topics have a current interest, and are handled with sense in the view and eloquence in the composition. The statistical and other facts connected with the condition of the masses, in the author's examination of the present state of society, are well selected and skilfully displayed, without any disposition to exaggerate either in the statement or the conclusion. The different plans proposed for the benefit of the people by the friends of Reform, Free Trade, Emigration, Education, and Religion, are criticised with keenness, but without bitterness, and the inevitableness of their partial operation exposed."—Spectator.
London: Longman, Brown, Green & Longmans.

LONG ANNUITIES, & ANNUITIES TERMINABLE IN 1859.

THE FAMILY ENDOWMENT and LIFE ASSURANCE and ANNUITY SOCIETY, continue the above Annuities after their expiration, on payment of an annual Premium until 1859 inclusive.—Particulars may be had at the office, No. 12, Chatham-place, Blackfriars, London.
Capital 500,000l.
Trustees—William Butterworth Bayley, Esq. Henry Porcher, Esq. | Martin Tucker Smith, Esq.
John Casenove, Secretary.

DISEASED AND HEALTHY LIVES ASSURED.

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall, London. Capital 500,000l.
This Office is provided with very accurately constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.
The extra Premium discontinued on restoration of the Assured to permanent health.
Increased Annuities granted on unsound Lives, the amount varying with the particular disease.
Members of Consumptive Families assured at Equitable Rates.
Healthy Lives are assured at Lower Rates than at most other Offices.
F. G. P. NEISON, Actuary.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 36, Bridge-street, Blackfriars, London: established 1823.
Empowered by Act of Parliament, 3 William IV.
Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.
The bonus declared in 1834 amounted upon an average to 16l. per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31l. per cent. on the premiums paid during the preceding five years.
Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.
CAMPBELL JAMES DOWNER, Sec.

COMMERCIAL and GENERAL LIFE ASSURANCE, ANNUITY, FAMILY ENDOWMENT, and LOAN ASSOCIATION, 112, Cheapside, London.

Prospectuses and every information to be had of
FRED. LAWRANCE, Resident Sec. 112, Cheapside.

AUSTRALASIAN COLONIAL AND GENERAL LIFE ASSURANCE AND ANNUITY COMPANY.
Capital, 200,000l., in 2,000 Shares.
Directors.

Edward Barnard, Esq. F.R.S.	C. F. Mangles, Esq.
Henry Buckle, Esq.	J. B. Montefiore, Esq.
John Henry Capper, Esq.	J. H. Ravenshaw, Esq.
Gideon Colquhoun, jun. Esq.	William Walker, Esq.

Bankers—The Union Bank of London.
Colonial Bankers—The Bank of Australasia, (incorporated by Royal Charter, 1835,) No. 3, Moorgate-street.
Physician—Dr. Fraser, No. 62, Guildford-street, Russell-square.
Solicitors—Messrs. Swain, Stevens & Co.
Secretary—Edward Ryley, Esq.
The advantages offered to EMIGRANTS to the Australasian Colonies by this Company are,—First, That no Extra Premium is charged for Residence in any of the Australasian Colonies, except in New Zealand. Second, That no extra Premium is charged to those who Assure for the Whole Term of Life, for one voyage out to the Australasian Colonies, and for one return voyage; and that Premiums may be paid and Claims settled in those Colonies. And to all persons who wish to Assure their Lives, the Company offers unusually favourable Rates of Premium, participation in Profits, and the guarantee of an ample subscribed Capital.
Prospectuses and full particulars may be obtained at the Offices of the Company, No. 126, Bishopsgate-street, City.

LONDON, EDINBURGH, and DUBLIN LIFE ASSURANCE COMPANY, 3, Charlotte-row, Mansion House, and 55, Chancery-lane, London.
Trustees—K. Kingsford, Esq.; B. Hill, Esq.; J. Bidden, Esq.
A more complete knowledge of the effects of different systems of Life Assurance enabled this Company, in 1839, to introduce various important improvements, all tending to the greater security, convenience, and ultimate advantage of the assured.
This is the only Company who give to the assured on the mutual principle the whole of the mutual accumulations, and also guarantee the sums assured.
This is the only Company who are bound by their Deed of Constitution not to dispute any policy, unless they can prove that it was obtained by fraudulent misrepresentations; and numerous cases, particularly a late decision in the Court of Exchequer, have shown how worthless may be a policy obtained from the most influential office unrestrained by this equitable principle.
This is the only Company who bind themselves to pay the sums in the policies, although the debts for which they were effected shall have been liquidated before the claims arise.
This is almost the only Company who grant in favour of creditors whole world policies, whereby the debt is secured, although the debtor should go beyond the limits of Europe.
The premiums, calculated according to the Carlisle tables, are lower than usual upon young lives where participation in the profits is not required; by a half-premium system, one-half of the premiums may be retained by the assured for the first seven years; and for short assurances, which at the option of the assured may be continued for life, the rates are as low as a due regard to complete security will permit.

Specimen of Ascending Table to assure 100l.

Age.	For First 5 Years.	For Second 5 Years.	For Third 5 Years.	For Fourth 5 Years.	For Life.

Now ready, at all the Libraries, in 3 vols.

HARGRAVE;

OR,

ADVENTURES OF A MAN OF FASHION.

By MRS. TROLLOPE,
Authoress of 'THE VICAR OF WREXHILL,' &c.

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

THE NEW SPORTING NOVEL.

Now ready at all the Libraries, in 3 vols.

HANDLEY CROSS;

OR,

THE SPA HUNT.

By the Author of 'Jorrocks' Jaunts and Jollities,' &c.

"We hope we have done enough [says the *Quarterly Review*, at the close of its notice of this work], to bring Jorrocks fairly before the non-sporting part of the public,—the others will not need our recommendation. His historian it must be obvious, is a writer of no common promise. The easy style in which the author of 'Handley Cross' arranges and draws out his characters, satisfies us that he might, if he pleased, take a high place among our modern novelists. He has a world of knowledge of life and manners beyond what most of those now in vogue can pretend to, and a gentleman-like tone and spirit, perhaps even rarer among them."—*Quarterly Review*, March, 1843.

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

WAVERLEY NOVELS, ABBOTSFORD EDITION.

Legal Advisers.

Sir Frederick Pollock, M.P. | William Hayes, Esq.

This Office unites the benefit of a Mutual Association with the security of a Proprietary Company, and offers to the Assured amongst others the following advantages:—

1. Credit until death, with privilege of payment at any time previously, for one-half of the premiums for the first five years, upon Assurances for the whole of life, a plan peculiarly advantageous for securing loans.

2. In loan transactions, the lender secured against the risk of the borrower going out of Europe.

3. Sums assured to become payable AT GIVEN AGES, OR DEATH, if previous.

4. Policies indefeasible; fraud alone, not error, vitiating them, and in case the Renewal Premium remains unpaid, the Assurance may be revived at any time within SIX MONTHS, upon satisfactory proof of health, and payment of a trifling fine.

5. Officers in the Army and Navy, and persons residing abroad, or proceeding to any part of the world, may be assured upon equitable terms.

6. Immediate Survivorship, and Deferred Annuities granted; and Endowments for Children and every other mode of provision for families arranged.

All the rates will be found to have been computed as low as is consistent with security. JOSEPH BERRIDGE, Secretary.

ARGUS LIFE ASSURANCE COMPANY, 20, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	Lewis Pocock, Esq.
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.

Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100,

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

John Chas. Burgoyne, Esq. | James Tilbury, Esq.
The Rev. Geo. Fisher, F.R.S. | John Walls, Esq.

Physician—Charles J. Roberts, M.D., 31, New Bridge-street, Blackfriars.
Surgeon—James M. Arnott, Esq. 2, New Burlington-street.
Solicitor—Thomas Burgoyne, Esq. 160, Oxford-street.
Bankers—Messrs. Cocks, Biddulph & Co. 43, Charing-cross.
Actuary—W. M. Browne, Esq.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1st JANUARY, 1842, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received was made to all Policies entitled to share therein.

FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and in such division all Policies on which two payments have been made, participate.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

UNIVERSAL LIFE ASSURANCE SOCIETY, LONDON, CALCUTTA, MADRAS, and BOMBAY.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy-Chairman.*

Colonel Sir Richard Armstrong, C.B. K.C.T. & S.	William Kilburn, Esq.
John Bagshaw, Esq.	Francis Macnaghten, Esq.
Augustus Bosanquet, Esq.	Robert Saunders, Esq.
Charles Dashwood Bruce, Esq.	Charles Otway Mayne, Esq.
Ellis Watkin Cunliffe, Esq.	James Duncan Thomson, Esq.
Raikes Currie, Esq. M.P.	Capt. Samuel Thornton, R.N.

The Directors of the Universal Life Assurance Society invite attention of Assurers to the returns afforded to Policy holders by their office, as detailed in the statement below, and having every reason to expect that the returns in future years will be equally favourable, the Directors recommend an early application to secure so important a benefit.

The following Table will show the operation of the Reductions made by the Society:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduction.	Annual Premium payable in 1840-41-42.
20	May 1834	£1,000	£19 6 8	£11 12 0	£7 14 8
30	—	1,000	24 8 4	14 13 0	9 15 4
40	—	1,000	31 10 0	18 18 0	12 12 0
50	—	1,000	42 15 0	25 13 0	17 2 0
60	—	1,000	66 11 8	39 19 0	26 12 8

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart. and Ald.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations, and these being verified by the experience of the Office during Forty Years, are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

FOUNTAINS, VASES, TAZZAS, FIGURES, &c. in Marble, Artificial Stone, and Parker's Cement, to be seen at WYATT, PARKER & CO.'S WHARF, Holland-street, Surrey foot of Blackfriars-bridge. Also, a large Collection of Chimney Shafts, Pedestals, Capitals, Consoles, Trusses, &c.

TESSELLATED and MOSAIC PAVEMENT, executed by WYATT, PARKER & CO., Albion Wharf, Holland-street, Surrey foot of Blackfriars-bridge.—W., P. & CO. invite the Public to INSPECT their SPECIMENS of TESSELLATED and MOSAIC PAVEMENTS, copied from the finest remains of Roman pavement, and also examples from modern designs. For brilliancy of colour, accuracy of form, and uniform hardness of material, these specimens are allowed to excel any of the ancient examples. The material is similar to that of porcelain, and highly vitrified, and the colours are throughout the entire body of the material. Baths and fountains may be lined with the tesseræ. It will bear the roughest ordinary usage, and attacks of the most severe frost, without injury, and can be as easily cleaned as a piece of earthenware. The tesseræ may be had gilt, or with flowers and other devices painted upon them, for inlaying table-tops or chimney-pieces, or for illuminating monuments. Floors are prepared in slabs, and laid with the same facility as Portland-stone paving.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, Crests, &c. for book plates, in their proper HERALDIC COLOURS, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 7*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their Warehouses,

EGYPTIAN HALL, PICCADILLY, and 178, BISHOPSGATE-STREET WITHIN,

or sent on application any distance free of expense. Superfine letter papers, 22*s.*, 18*s.*, 16*s.*, 12*s.*, 14*s.* 12*s.*, and 6*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large, and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting books, Bibles and Prayers, gold and silver pencil-cases, pencholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papetarie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

DESIGNS FOR TAPESTRY.—GIBBINS, 7, King-street, St. James's-square, respectfully informs the public, he has just returned from the Continent with the NEWEST PAPER PATTERNS, patterns on canvas, wools, silks, and canvasses, from Berlin and Vienna, which, from the low continental prices, he can offer for sale at a great reduction in prices. An assortment of 10,000 designs for sale, and some beautifully-finished specimens of needlework, calculated for elegant presents.—7, King-street, St. James's.

ECONOMY—IMPORTANT TO HOUSEKEEPERS.

T. WILLIAMS, 11, Charing-cross, begs to call the attention of the Nobility, Gentry, and Public in general, to his extensive STOCK of HOUSEHOLD and STABLE BRUSHES (all made under his own personal inspection); also his superior HAIR, CLOTH, TOOTH, NAIL, and general TOILET BRUSHES, the whole of which he offers at remarkably low prices.—A large assortment of Combs, Perfumery, Sponge, Chamois Leathers, French Sieves, Stove Lustre, &c. &c. —OBSERVE, No. 11, CHARING-CROSS, opposite Spring-gardens.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and NAME, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 12*s.* 6*d.* per quire: no charge for the die. Wafers from the die, 1*s.* per 100, or 6*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY —Terms: ½*l.* 3*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s. d.		*s. d.*
Table Spoons and Forks, per doz.	16 6	Mustard Spoon	0 6
Dessert ditto, ditto	12 6	Tea Spoons, per dozen	5 6
Fish Knives	5 6	Gravy Spoons	3 6
Soup Ladles	6 6	Salt ditto	0 6
Sauce Ladles	1 6	Sugar Tongs	1 0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of *his* New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 33*s.*; a best Gothic border 30-inch Japan tray, 12*s.*; a dozen ivory table knives, 11*s.*; dessert ditto, 9*s.*; a pair of carvers, 4*s.* 6*d.* A Palmer's Candle Lamp, bronze or lacquered, 9*s.*; a solar ditto, to burn common oil without smoke or smell, 25*s.*; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1*s.* each; best ivory-handle razors, 8*s.* 6*d.* per pair.

41 and 42, Barbican, and at 16 Norton Folgate.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headache, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the test of beauty; while as a *refresher* it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

ROWLAND'S ODONTO, or PEARL DENTIFRICE.—This is an efficient White Powder for the Teeth, solely prepared from *Oriental Herbs* of the most *delightful odour*, and of sovereign virtue for *strengthening, preserving*, and *thoroughly cleansing the Teeth*. It eradicates *Tartar* from the Teeth, removes *spots of incipient decay, polishes* and *preserves* the enamel—to which it gives a *pearl-like whiteness*: and, above all, from its *disinfecting* properties, gives SWEETNESS TO THE BREATH. As an *anti-scorbutic*, the *gums* also share in its transcendant powers. *Scurvy* is eradicated from them, a healthy action and redness are induced, that offer to the notice of the medical practitioner the most indubitable signs of their *healthful state*. Price 2*s.* 9*d.* per box, duty included.

☞ NOTICE—The Name and Address of the Proprietors, *A. ROWLAND & SON*, 20, *HATTON GARDEN, LONDON*, are engraved on the Government Stamp, which is pasted on each. Be sure to ask for "ROWLAND'S ODONTO." Sold by Chemists and Perfumers.

PICTURES OF HIGH QUALITY, THE PROPERTY OF A GENTLEMAN.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on THURSDAY, March 30, at 1 precisely,

TWENTY-FOUR PICTURES, the Property of a Gentleman; consisting of a beautiful Landscape by Hobbema from Baron Becker's collection at Vienna—the celebrated Chef-d'œuvre of Eglon Van der Neer, the Lying-in Visit, from the *Lockhorst* collection—the capital Camphuysen, the finest known, from Mr. Solly's cabinet—Banditti, by S. Rosa—The Holy Family, by Annibale Carracci—some admirable copies by Chatelain, and beautiful Specimens of the following Masters:

G. Romano	C. Muratti	Canaletti	N. Carta
Schelone	S. Ferrato	Teniers	Greuze
S. di Ferrara	Murillo	Backhuysen	David
Guercino	O. Marinari	G. Dow	Le Mercier.

May be viewed two days preceding, and Catalogues had.

THE WORKS OF SIR ROBERT KER PORTER, DECEASED.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on THURSDAY, March 30,

(By order of the Executrix),

THE ORIGINAL WORKS in OILS, by this highly distinguished Painter, comprise a fine Altar-piece, from the Apocalypse, originally designed for St. John's College, Cambridge; the original Oil Sketches of the Siege of Seringapatam and the Battle of Alexandria; a beautifully finished Picture of a Battle in the Commonwealth; also several interesting Portraits, numerous Water-colour Drawings, and Sketches of Military Subjects; Views and Costumes in Russia, the Peninsula, the East, and in South America, &c.; a Portrait, by Van Dyck, others by different masters; Proof Impressions of the Siege of Seringapatam and other Engravings after Sir Robert Ker Porter's Works; Books and Antiquities, comprising Coins, Babylonic Cylinders, &c., collected during his travels in the East, together with some small pieces of Plate and other offerings of respect presented to Sir Robert by distinguished individuals.

Further notice will be given.

THE ORIGINAL WORKS,

And EXQUISITE COPIES in OIL and WATER COLOURS OF F. W. WILKIN, ESQ. DECEASED.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on SATURDAY, April 1st, at 1 precisely,

By order of the Executors,

THE ENTIRE COLLECTION of the Works left by that most distinguished Copyist in Water Colours, F. W. WILKIN, Esq., deceased;

whose peculiar talent in *transferring* to Water Colours, with all the power of Oils, the Works of the great Painters, has given him a reputation unrivalled. The copies, in most instances the size of the originals, are from the most celebrated and favourite Works of

L. da Vinci	Carracci	Titian	V. Dyck
Raffaelle	A. Sacchi	Velasquez	Teniers
S. del Piombo	C. Dolce	Murillo	Sir Joshua
A. del Sarto	Guido	Rubens	West.

Also some Original Pictures in Oil, and a few by Old Masters.

May be viewed two days preceding, and Catalogues had.

CAPITAL PICTURES AND SUPERB OBJECTS OF TASTE AND VERTU, AND SMALL LIBRARY OF BOOKS, OF JOSEPH BOND, ESQ., REMOVED FROM ST. JAMES'S-STREET.

Messrs. CHRISTIE & MANSON respectfully inform the Connoisseurs and Public, that they will SELL by AUCTION, at their Great Room, King-street, St. James's-square, on FRIDAY, April 7, and following day, at 1 precisely,

THE COLLECTION of CAPITAL PICTURES by Italian, Flemish, Dutch, and English Masters, selected with considerable taste and judgment, from some of the celebrated sales which have taken place within the last few years, by JOSEPH BOND, Esq.

Among them will be found the celebrated chef-d'œuvre of Ruysdael, brought from Shasborough, and which formed the great attraction at the Earl of Lichfield's sale in St. James's-square—The exquisite Fruit Piece by Rachel Ruysh, from Sir Simon Clarke's Collection—An Interior, a fine work of Jan Steen—Apollo and Marsyas, a cabinet gem of Parmeziano—A Cattle Piece by Cuyp, from the Bishop of Meath's Collection—A Sea-port, a grand work of W. V. der Velde—Maddens, by Gainsborough; and fine Specimens of the following Masters:—

Baroccio	De Koning	Berghem	De Heem
Albano	F. Bol	Huchtenborg	Pannini
Carracci	V. de Helst	Tilborg	Claude
Georgione	Cuyp	N. Maes	Millé
Rotenhaemer	Hindius	Graesbeck	Zoffany
Holbein	B. Graat	Blankhoff	Morland.

Also, three superb Vases of Malachite, from Prince Paul Leven's Cabinet—Three fine Florentine Cabinets, formerly Prince Esterhazy's—Boule Cabinet, Tables, and Pedestal—Exquisite old Sevres and Dresden Porcelain—Bronzes—Marble Busts—Ormoulu French Clocks—Superb Marqueterie and Ebony Tables; and the elegant small Library of Modern Books, in Italian, French, and English Literature, in beautiful condition.

The Collection may be viewed four days preceding, and Catalogues had.

CAPITAL MODERN PICTURES AND FINE ITALIAN AND ENGLISH ENGRAVINGS, SOME BOOKS, AND BOOKS OF PRINTS.

By Messrs. CHRISTIE & MANSON, at their Great Room, King-street, St. James's-square, on WEDNESDAY, May 3, at 1 o'clock precisely,

(By order of the Assignees,)

THE COLLECTION formed by S. LANGTON, Esq. The capital MODERN PICTURES include three fine Specimens of Morland; Martin's Joshua; and beautiful Specimens of the following Artists:—

Cipriani	Lee, R.A.	Allen	Jackson
Diebrich	West	Ward	Corbould
Stephens	O'Connor	Linnell.	

Among the ENGRAVINGS are fine Proofs of the Works of Edelinck, Perfetti, Müller, Morghen, Volpato, Longhi, Richomme, Bettelini, Jesi, Desnoyers, Bartolozzi, Sharpe, Woollett, Heath, Reynolds, Brown; Landseer's Bolton Abbey, and Highland Drovers, proofs before letters; the Works of Wilkie, including a proof of John Knox, with the autograph of Sir David Wilkie; Cuitt's Etchings; and Etchings by German and Dutch Masters. Also some Books of Prints, including the Pilasters of the Vatican; the Pinacoteca de Bologna; Rossini's Views in Rome; Nash's Paris, India proofs; and some Modern Books.

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS, and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh; for IRELAND, J. Cumming, Dublin.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

UNIVERSITY OF LONDON.

NOTICE IS HEREBY GIVEN, That in consequence of the Death of the Rev. R. Murphy, M.A., the Office of EXAMINER in MATHEMATICS and NATURAL PHILOSOPHY in this University is vacant.

Candidates must send in their applications to the Registrar on or before the 30th of March; and the Senate will proceed to election on Wednesday, the 5th of April.

The Salary of the Office is 175l. per annum.

Somerset House, March 15, 1843. By order of the Senate, R. W. ROTHMAN, Registrar.

ARTISTS' BENEVOLENT FUND. Under the Patronage of THE QUEEN. Incorporated by Royal Charter.

The ANNIVERSARY DINNER will be held on SATURDAY, the 6th of MAY.

The Right Hon. the LORD JOHN RUSSELL in the Chair.

JOHN MARTIN, Secretary.

PUBLIC NOTICE.—ART-UNION OF LONDON.—The Subscribers are respectfully requested to take notice that the ANNUAL GENERAL MEETING, to receive the Report of the Committee, and distribute to the amount subscribed for the purchase of Works of Art, will be held at the THEATRE ROYAL DRURY LANE, (by the kind permission of W. C. Macready, Esq.) on TUESDAY, APRIL 25, at 11 for 12 o'clock precisely. His Royal Highness the DUKE of CAMBRIDGE, President, in the Chair.—Subscribers will be admitted on presentation of the receipt for the current year, at the entrance in Brydges-street. The LISTS WILL BE CLOSED on Friday, the 31st instant. An immediate payment is solicited.

4, Trafalgar-square, Charing-cross.

GEORGE GODWIN, F.R.S. F.S.A. } Honorary
LEWIS POCOCK, F.S.A. } Secretaries.

4, Trafalgar-square, 15th March, 1843.

*** The legality of the Art-Union of London has been fully established by the highest legal authorities.

ETCHING CLUB ILLUSTRATIONS of the DESERTED VILLAGE.—The Five Guinea Copies of this Work have been all disposed of, and the plates destroyed. Eleven of the Thirteen Guinea Proofs before Letters, and nineteen of the Ten Guinea Proofs remain, and may be obtained on application to the Secretary, Mr. Redgrave, Hyde Park Gate, Kensington-gore; or to Messrs. Longmans, Paternoster-row.

The Illustrations of Milton's L'ALLEGRO and IL PENSEROSO are in progress.

GOVERNESS INSTITUTION, 30, Soho-square.—Mrs. HINTON respectfully informs the Nobility, Gentry, and Principals of Schools, that she can introduce highly-respectable Ladies, properly qualified to fill every department in Education. Mrs. H. is much accustomed to tuition, and having resided many years on the Continent, is familiar with the French, Italian, and German Languages.—Schools transferred and recommended in England and on the Continent.—Letters must be free.

HOFWYL HOUSE, STAMFORD HILL, MIDDLESEX.—The Educational Plans at this Establishment are founded on the practice of PESTALOZZI, FELLENBERG, and other celebrated Educators. The course of instruction is extensive and profound, embracing the Ancient and Modern Languages, the Mathematical and Physical Sciences, Geography, Astronomy, Chemistry, Drawing, Gymnastics, &c. THE TERMS for a complete course of instruction in English, with board, &c. are Twenty-four Guineas per annum. French, German, Italian, Greek, and Latin, each Three Guineas extra.

To render the instruction more real and effective, a select library is provided, and an extensive collection of philosophical and chemical apparatus, with cabinets of minerals and shells; a laboratory, bath, workshop, gymnastic apparatus, &c.—Prospectuses may be had of Messrs. Jones & Co. 20, Lower Holborn; or of the Principal, as above.

THE FIRST CHORAL MEETING of the UPPER SINGING SCHOOLS, taught under the sanction of the Committee of Council on Education, will be held at EXETER HALL, on WEDNESDAY NEXT, March 22, 1843.

PART I.—SACRED MUSIC.

Hymn for the Queen—'O King of Kings'..... *Kreutzer.*
Motett, Semi-chorus—'O be joyful in the Lord' *Palestrina.*
Psalm, harmonized (in the ancient manner, with the melody in the tenor,) by..... *Ravenscroft.*
Canon, Semi-chorus—'Awake, thou that sleepest'..... *Horsley.*
Hymn, (Workmen's Upper School)—'O God that madest Earth and Sky'..... *Hullah.*
Psalm, (Female Voices)—'My Shepherd is the Lord.'
Motett, Semi-chorus—'Thou art beautiful'.... *Giovanni Croce.*
Magnificat, chanted—The Chant by Dr. Cooke.
Hymn—'Give to us peace in our time, O Lord'.. *Russian Hymn.*

PART II.—SECULAR MUSIC.

Song in honour of Peace—'Freemen, rejoice'.. *Purcell.*
Part Song, Semi-chorus—'Day-break'..... *Moscheles.*
Part Song, (Workmen's Upper School)—'The Smith at his toil'..... *Kreutzer.*
Madrigal, Semi-chorus—'Since first I saw your face'..... *Ford.*
Chorus—'Sing loud a joyful strain'..... *Gluck.*
National Song—'The hardy Norseman.'
Glee—'Come, let us all a-Maying go'..... *Atterbury.*
National Anthem—'God save the Queen.'

Tickets, for the Platform, price 7s.; for the Upper Platform, price 5s.; and for the Western Gallery, price 3s., may be obtained of Mr. Parker, Publisher, 445, West Strand, between the hours of 12 and 5 daily.

INTERESTING and CLASSICAL EXCURSION.—STEAM to CONSTANTINOPLE, calling at GIBRALTAR, MALTA, ATHENS, SYRIA, SMYRNA, MYTILENE, and the DARDANELLES. For Passengers, Goods, Specie, and Parcels. The Peninsular and Oriental Steam Navigation Company will despatch the TAGUS (900 tons and 300 horse power), on her next trip to the above places, from Southampton, on FRIDAY, the 28th APRIL, at 9 o'clock, A.M. Goods and Parcels must be at Southampton by the 26th April. Programme of the route, rates of freight and passage, and other particulars, may be obtained at 44, Regent-street, Piccadilly; also of Earle Langston, Manchester: F. M'Gowan, 3, Burghquay, Dublin; and to secure Passages, apply at the Company's offices, 37, High-street, Southampton, and No. 51, St. Mary-Axe, London.

EMIGRATION.—LAND SURVEYING in the COLONIES.—Mr. HENRY CASTLE, Lecturer on Land Surveying and Levelling, at King's College, London, author of a treatise on the same subjects, and formerly Boundary Commissioner to the Home District, Upper Canada, is forming a FIELD CLASS for instruction on the peculiar method of SURVEYING in NEW COUNTRIES. Fee, Five Guineas for the course of three months.—Apply at No. 30, Queen-square, Bloomsbury.

TWO HUNDRED POUNDS coming in.—An opportunity offers for an actively-disposed person to become PARTNER in a respectable and agreeable line of business, in which his services will be required. A knowledge of the paper trade, or printing business, would be an advantage, but is not absolutely necessary.—Apply by letter, stating real name and address, Y. Z., Mr. Betts', 7, Compton-street, Brunswick-square.

TERMS of SUBSCRIPTION to CHURTON'S LIBRARY, 26, HOLLES-STREET.

FOR A SINGLE FAMILY, 4, 5, or 10 guineas per annum.

FOR A BOOK SOCIETY, 6, 8, 10, 13, or 16 guineas per annum.

Any number of Members can join in the same Book Society subscription,—no charge is made for Box or Catalogue. The standard collection consists of 25,000 volumes, and every New Work is added the day it issues from the press.

Full particulars, and Hints to Secretaries of Book Societies, sent by post.

Library, 19, Holles-street.

BULL'S NEW SYSTEM FOR FAMILIES AND BOOK SOCIETIES.

FAMILIES paying 6l. 6s. the year have all the New and Standard Works they order: 12 vols. at a time in Town, or 24 Country: Catalogues and Boxes, free of expense, and Two Guineas' worth of the New Books to KEEP, at the end of each year.

SOCIETIES can subscribe at the rate of 14s. per Member only. The New Post Catalogues, with full particulars, sent *gratis* and *post free*. Apply to Mr. BULL, Librarian, 19, Holles-street.

PLAIN HINTS FOR READING SOCIETIES.
NOW READY, Gratis and Post-free,

HINTS FOR THE FORMATION OF READING SOCIETIES.—The plan advocated in this little pamphlet will effect two important objects, that of adding to the supply of the current literature the choice of all the most valuable Works in the various Languages, and that of extending the choice of New Books to the entire production of the press; it is especially adapted to Provincial Readers, as, by a small annual subscription, the perusal of all the New Works as they appear may be obtained.

Saunders & Otley, Publishers, Conduit-street.

NOTICE TO BOOK-BUYERS.

Now ready, and may be had GRATIS on application, or will be forwarded to all parts of the Kingdom on Gentlemen favouring the Publisher with their address, and inclosing eight postage stamps,

J. R. Smith, 4, Old Compton-street, Soho, London.

LOVELL REEVE begs respectfully to invite the attention of Amateurs to his COLLECTION of EXOTIC SHELLS, now newly assorted for the season, with many valuable additions. Gentlemen residing in the Country may have Specimens forwarded, named, and priced, to make selection from at their leisure.

On the 1st March was published (to be continued Monthly), price 10s. coloured, (size, Quarto,) No. II. of the

CONCHOLOGIA ICONICA: to include Drawings and Descriptions of every known Species of Shells, British and Foreign. No. III. on the 1st of April.

This elaborate work of conchological illustration (each Number of which contains eight full quarto plates of shells, with a separate leaf or more of letter-press to each), will not only include figures and descriptions of all the species of shells at present existing in the public and private cabinets of England and the Continent, but of a mass of new and interesting objects collected by Mr. Cuming during his fourteen years' sojourn in the Pacific; and by Professor Forbes during his scientific researches amongst the Islands of the Grecian Archipelago; together with many of great novelty collected in H.M.S. *Sulphur* during her late voyage round the world.

Lovell Reeve, Bookseller and Naturalist, 8, King William-street, Strand.

TO THE AFFLICTED, OR TO INVALIDS.—A small genteel Family, who, for some years, have been accustomed to the CARE of INVALIDS, and whose house is very pleasantly situated, a short distance from Town, would be happy to RECEIVE A LADY. They offer every attention, with domestic comfort, that could tend to her happiness or restoration. The Advertiser would have no objection to a Gentleman, if accompanied by an Attendant.—For further particulars address to A. A., at the Gardeners' Chronicle Office, 3, Charles-street, Covent-garden, London.

PICTORIAL HISTORY OF FRANCE.

NOTICE.—The first Volume of this Work being now ready, Subscribers possessing the early Parts are informed that after the 30th of April it will be impossible to complete their Sets, as the stock will then be formed into perfect Volumes, and only sold in that state.

The Work will be completed in TWENTY MONTHLY PARTS, price 2s. 6d. each, illustrated by upwards of Four Hundred magnificent Designs by JULES DAVID.

London: Wm. S. Orr & Co. Amen-corner, Paternoster-row.

MESSRS. COPELAND & GARRETT beg to acquaint the Nobility, Gentry, and Public, that they have OPENED an ENTRANCE to their PORCELAINE and GLASS WAREHOUSES from No. 27, south side of Lincoln's Inn-fields, by which the readiest access is secured, with the advantage of ample space for carriages to draw up and wait; appropriating the Portugal-street entrance to the mercantile and commercial departments of their business.

Portugal-street, Lincoln's Inn-fields, Jan. 2, 1843.

11.

A TREATISE on the MECHANICAL PRINCIPLES of ENGINEERING and ARCHITECTURE.

By the Rev. HENRY MOSELEY, M.A. F.R.S., Professor of Natural Philosophy and Astronomy in King's College, London.

One volume 8vo. with Woodcuts and Diagrams, 24s. cloth.

"The work of Mr. Moseley is an elaborate, profound, accurate, and elegant, abstract and purely mathematical disquisition, on the theoretical principles of mechanics, and will serve to increase the author's high reputation as a mathematician." *Athenæum.*

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, West Strand.

THE MUSIC in SCORE to be sung

on Wednesday, March 22, at the FIRST CHORAL MEETING of the UPPER SCHOOLS, instituted on the METHOD of WILHEM, under the SANCTION of the COMMITTEE of COUNCIL on EDUCATION, by JOHN HULLAH. Royal 8vo.

A SYSTEM of LOGIC, Ratiocinative and Inductive;

being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. 2 vols. 8vo. 30s.

A MANUAL of CHRISTIAN ANTIQUITIES;

or, an Account of the Constitution, Ministers, Worship, Discipline, and Customs of the Early Church; with an Introduction, containing a complete Chronological Analysis of the Works of the Antenicene Fathers. Compiled from the Works of Augusti and other Sources. By the Rev. J. E. RIDDLE, M.A. SECOND EDITION, in a large 8vo. volume, with a copious Index, 18s.

BIBLE CYCLOPÆDIA, a Comprehensive Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings.

In 2 vols., illustrated by several Hundred Woodcuts, price 2l. 10s.

The FOURTH VOLUME, price 4s. 6d., with Portraits, of

LIVES of EMINENT CHRISTIANS.

By the Rev. R. B. HONE, M.A., Vicar of Hales Owen. Containing Lives of John Bradford, Archbishop Grindal, and Judge Hale.

MEMORIALS of ERNEST THE PIOUS, First Duke of Saxe-Gotha, the Lineal Ancestor of Prince Albert.

By the Rev. THOMAS LATHBURY, M.A. Fcap. 8vo. 6s.

Dedicated, by permission, to His Royal Highness Prince Albert.

A THEORETICAL AND PRACTICAL SYSTEM OF

ARITHMETIC; comprising all the usual Rules, with their Proofs;

Scales of Notation; the Construction and Use of Logarithms; Mensuration of Superficies and Solids: Formula for Calculating the Horse-power of Steam-Engines, Water-Wheels, &c., together with much useful Information never before introduced into Treatises on Arithmetic. Designed for the Use of Schools and self-taught Students. By W. H. CRANK, Mathematical Master, St. Mark's College, Chelsea. Strongly bound, 4s.

BY AUTHORITY.

THE PHYSICAL and MORAL CONDITION of the CHILDREN and YOUNG PERSONS employed in MINES and MANUFACTURES.

Illustrated by Extracts from the Reports of the Commissioners for Inquiring into the Condition of the Children and Young Persons employed in Mines and Collieries, and in the Trades and Manufactures not included under the Terms of the Factories Regulation Act. 2s.

II.

OFFICIAL INFORMATION on CHARITIES.

—DIGESTS of the REPORTS made by the COMMISSIONERS of INQUIRY into CHARITIES, containing Analytical Digests of Returns of Charities for Distribution amongst the Poor; Digests of Grammar Schools; Schools not Classical; and of Charities for Education not attached to Endowed Schools. Arranged in Counties from the Returns presented to both Houses of Parliament, by Command of Her Majesty, and issued in a detached Form with a view to Local Circulation, at the following prices:—

REVIEWS

Memoirs and Correspondence of Francis Horner, M.P. Edited by his Brother, Leonard Horner, Esq. Murray.

"He died before he had reached his fame;"—this tribute to the memory of youthful heroes, so common in the verses of the Northern Scalds, would have been an appropriate epitaph for the subject of the memoir before us. His talents and character were of that kind which demand time and attention to be appreciated; but which, when once comprehended, ensure and maintain respect. He had little brilliancy, but he compensated for this deficiency by simplicity, integrity, and independence of mind. In his writings and speeches there is a fund of honest thought, such as could only be produced by a man who thought for himself, and who laboured earnestly to arrive at truth, without yielding to the temptation of gratifying a clique on the one hand, or dazzling a populace by rhetorical display, on the other. At the age of nineteen he sketched a rule of conduct, from which he rarely deviated in after-life, and though the form in which it is expressed displays some youthful immaturity, the substance is equally valuable and practical:—

"I often look forward to a rule of conduct, which I hope no circumstances may ever induce me to abandon; and it is this, to connect myself with the exclusive interests of no political party whatever. A man's independence must be best preserved, and his duty to the public best performed, by attaching *himself*, not to any set of political characters, but to that system of measures which he believes most conducive to the public welfare. It seems a reasonable duty, at all times, rather to lean towards the ruling ministers; for no administration can act with the energy that it ought, unless it can trust to the countenance of respectable people. But I have long since imbibed an opinion (which, whenever it occurs, I find more strongly impressed upon me), that every form of government is to be valued in the proportion of its affinity to those principles of rational freedom, which impose no further restraints than the common security makes necessary, and establish nothing that can operate as a check upon the exertions of worth and talents."

His opinions of political party are further developed in a letter written after the death of Mr. Fox; they are even more applicable to the present political aspect of affairs than to the ministerial crisis by which they were suggested:

"I look upon what has been called Mr. Fox's party, the remains of the old Whig faction, as extinguished entirely with him; his name alone kept the fragments together, after the party had been long ago broken to pieces. At the same time, I cannot resist the conviction, that, in spite of appearances, there is in the middling order of people in this country a broad foundation for a popular party, constituted by the opinions, interests, and habits of those numerous families who are characterized by moderate but increasing incomes, a careful education of their youth, and a strict observance of the great common virtues. No doubt, this is the genuine democracy, if they preserve their weight in that public voice, which government must obey. Many circumstances have occurred of late years to depress the just influence of that order of men; and it is melancholy to think, that they are the very circumstances which have brought other free governments to an end—an overgrown foreign trade, the dependencies proceeding from too bulky a system of finance, and an augmentation of the military force on account of foreign danger. These causes, I am persuaded, have already both undermined our institutions, and vitiated the sentiments and character of the nation. At the same time, it does strike me very forcibly, that the great number among whom wealth is diffused in considerable yet equal portions, the tolerably good education that accompanies it, the strength of physical and moral forces that are thus combined in a population to which both order and freedom are necessary, form a new case very different from any former example; and it is from this aspect of our condition, that I take my hopes of there being still a chance of defending successfully the liberties of England, chance enough to make it a reproach for ever against the present age if it does not make a trial at least."

As these volumes consist of letters never intended for publication, and a journal irregularly kept, we are not to expect in them any continuous narrative of events, but rather incidental commentaries on the men and things belonging to a period which is beginning to take its place in history,—the early part of the present century, "when George the Third was king." Our extracts, like the volumes themselves, must be desultory, and we shall therefore quote, without lengthened remark of our own, some sketches of character, and reflections on events, which possess an enduring interest. No introduction is necessary to the name of Mr. Horner's playfellow and brother student, whom he thus notices in a letter to the Rev. Mr. Hewlett:—

"Had you any conversation with Brougham? He is an uncommon genius, of the *composite order*, if you allow me to use the expression; he unites the greatest ardour for general information in every branch of knowledge, and, what is more remarkable, activity in the business, and interest in the pleasures of the world, with all the powers of a mathematical intellect. Did you notice his physiognomy? I am curious to know your observations on it."

Mr. Horner was a diligent student of Lord Bacon's works, and imbued with the spirit of his philosophy. Referring in the private journal to Bacon's account of the evil effects of premature system upon the progress of science, and the superior advantage of distributing our knowledge in detached aphorisms, Mr. Horner makes the following very judicious remarks on Adam Smith's celebrated work:—

"Did not Adam Smith judge amiss, in his premature attempt to form a sort of system upon the wealth of nations, instead of presenting his valuable speculations to the world under the form of separate dissertations? As a system, his work is evidently imperfect; and yet it has so much the air of a system, and a reader becomes so fond of every analogy and arrangement, by which a specious appearance of system is made out, that we are apt to adopt erroneous opinions, because they figure in the same fabric with approved and important truths. That illustrious philosopher might therefore have contributed more powerfully to the progress of political science, had he developed his opinions in detached essays; nor would he have less consulted the real interests of his reputation, which indeed may have been more brilliant at first, by his appearance as the author of a comprehensive theory, but will ultimately be measured by what he shall be found to have actually contributed to the treasures of valuable knowledge."

The following brief comment on the Discourses of Sir Joshua Reynolds is worth quoting:—

"He is one of the first men of genius who have condescended to inform the world of the steps by which greatness is attained: the unaffected good sense and clearness with which he describes the terrestrial and human attributes of that which is usually called inspiration, and the confidence with which he asserts the omnipotence of human labour, have the effect of familiarizing his reader with the idea that genius is an acquisition rather than a gift; while with all this there is blended so naturally and so eloquently the most elevated and passionate admiration of excellence, and of all the productions of true genius, that upon the whole there is no book of a more *inflammatory* effect."

The lovers of literary history will be gratified to learn something of the origin of the *Edinburgh Review*, which was projected by Mr. Horner, Mr. Jeffrey, and the Rev. Sydney Smith. Its first number appeared in November 1802, and in the preceding April Mr. Jeffrey thus writes to Mr. Horner:—

"I must first tell you about the Review, that you may be satisfied it holds the first place in my affection. We are in a miserable state of backwardness, you must know, and have been giving some symptoms of despondency; various measures have been tried, at least, against the earliness of our intended day of publication; and hints have been given of a delay that I am afraid would prove fatal. Something is done, however, and a good deal, I hope, is doing. Smith* has gone through more than half his task. So has Hamilton†. Allen‡ has made some progress: and Murray§ and myself, I believe, have studied our parts, and tuned our instruments, and are *almost ready to begin*. On the other hand, Thomson‖ is sick. Brown¶ has engaged for nothing but Miss Baillie's Plays; and Timothy** has engaged for nothing, but professed it to be his opinion the other day that he would never put pen to paper in our cause. Brougham must have a sentence to himself; and I am afraid you will not think it a pleasant one. You remember how cheerfully he approved of our plan at first, and agreed to give us an article or two without hesitation. Three or four days ago I proposed two or three books that I thought would suit him; he answered, with perfect good humour, that he had changed his view of our plan a little, and rather thought now that he should decline to have any connexion with it."

It was in the first number of the *Edinburgh Review*, that Mr. Horner put forth those views on the Currency which he subsequently embodied in the report of the Bullion Committee. The article did not excite so much attention on its first appearance as it afterwards obtained, but it served to break up the ground in one of the most valuable fields of political economy. Mr. Horner's note in his journal, on the success of the new review, evinces a very modest sense of his own merits, and a warm appreciation of those of the editor:—

"Before I proceed to speak of my own studies, I shall make a short memorandum with respect to the reception which the first number of our Review has met with in Edinburgh, for we have not yet got an account of its fate in London. Upon the whole, I do not think we have gained much character by it; it is considered as respectable enough in point of talents, but the severity, in some of the papers it may be called scurrility, has given general dissatisfaction. In the next number, we must soften our tone, and be more indulgent to folly and to bad taste. Jeffrey is the person who will derive most honour from this publication, as his articles in this number are generally known, and are incomparably the best: I have received the greater pleasure from this circumstance, because the genius of that little man has remained almost unknown to all but his most intimate acquaintances. His manner is not at first pleasing; what is worse, it is of that cast, which almost irresistibly impresses upon strangers the idea of levity and superficial talents. Yet there is not any man, whose real character is so much the reverse; he has indeed a very sportive and playful fancy, but it is accompanied with very extensive and varied information, with a readiness of apprehension almost intuitive, with judicious and calm discernment, with a profound and penetrating understanding. Indeed, both in point of candour and of vigour in the reasoning powers, I have never personally known a finer intellect than Jeffrey's, unless I were to except Allen's."

Our next extract shall be an amusing sketch of a debate in the days of the Addington administration:—

"Windham attacked the minister most fiercely last night; in a speech of indignant self-defence, he asked if he had not given the House eight out of the nine motions which the honourable gentleman sup-

ported? The idea, of the *Doctor* having given the House eight *motions* tickled the whole patient so irresistibly, that he was made quite angry. Kinnaird laughed so much louder than the rest, that he turned towards him, and said he claimed the protection of the chair; if the gentleman had anything to object to in his conduct, he begged him to do it on his legs. Jekyll is a mischievous fellow; he says that Grey, in wording his motions, had duly attended to the decorum of professional expression; he had moved for the papers relating to the retention and evacuation of the Cape."

Mr. Horner early took an active interest in the affairs of Ireland, and the question of Catholic Emancipation. In reference to these he relates two anecdotes which we do not remember to have seen in print before, and which possess some historical importance in the annals of party:—

"Remember what Hume tells us of the conduct of Elizabeth to the Catholics, who in her time were really dangerous; now it is a certain fact, that the few of the present peers and gentry of England, that adhere to that persuasion, have been treated with indignity and distrust. They held a meeting for an address to the king, adding to the usual forms of loyalty an expression of regret that, by the laws of the land, they could not contribute their personal services: Lords Petre, Arundel, and Kenmare (of Ireland), were the leading names. From delicacy alone, a draught of their address was previously communicated to one of the Secretaries of State, and it was returned with the passage I have alluded to expunged. The consequence was, that no address was presented. This was before the rebellion broke out in Ireland. Since that event, a plan has been suggested by the Prince, that he should go to that country with Moira, Lord Hutchinson, and Sheridan; in such a disease, even desperate remedies and quack medicines ought to be tried, and I really believe that the humbug popularity of Sheridan and Moira might have a healing effect, especially if assisted by the more substantial measure of emancipation, which hazards nothing against us, gives the Irish almost all they ask, and nothing more than in justice they ought to have had long ago. The Doctor, or some other of his compeers, said of this scheme with great decency, that it was as much as their places were worth to hint at it."

After Mr. Horner had been for a short time at the English bar, some of his friends became anxious that he should be introduced into parliament, and as a preliminary, he was invited to an opposition dinner given by Earl Fitzwilliam. The reflections entered in his journal state the reasons which induced him to join the Whig party, and they are every way too remarkable to be omitted:—

"Almost from my first entrance upon the study of law, I considered politics as an ultimate object and a concurrent occupation. Political adventure is a game which I am disqualified from playing by many circumstances of my character; and which I am resolved to decline. But some share in public business, acquired by reputation and supported on an independent footing, is a fair object, and almost the only reward that stimulates me to the law. Without belonging to a party, there can be no efficient participation in public affairs. If an honourable man sees no formed party among the factions of the state, by whom his general ideas of policy are maintained, he will shrink from them all, and attempt only individual efforts to explain and enforce his views. But in the general maxims and principles of Mr Fox's party, both with regard to the doctrine of the constitution, to foreign policy, and to the modes of internal legislation, I recognize those to which I have been led by the results of my own reflection, and by the tenor of my philosophic education. And I am ambitious to co-operate with that party, in labouring to realize those enlightened principles in the government of our country; however I lament some violences and mistakes in the conduct of Opposition on particular occasions, and however much I suspect the characters of some who have at times been very near Mr. Fox's person. All my feelings carry me towards that party; and all my principles confirm the predilection. Into that party, therefore, I resolutely enlist myself; with very feeble hopes of its ever being for any long period triumphant in power. There is a low prudence, in rearing the fabric of one's fortunes, which fixes the ambition (if it may be called by so proud a name) on the actual possession of places and emolument; and there are some living instances which prove this to be quite a sure game, provided there are never any compunctious visitings of principle or personal regard. There is a more virtuous discretion, which limits a man's schemes of exertion to his professional sphere, and to the honest accumulation of large profits and small praises, such as the English bar seems almost infallibly to bestow on diligent abilities. But there is a more elevated prudence, which does not stop at affluence in its prospect, but ventures to include the chances of lasting service to mankind, and of a good name impressed upon the history of the times."

Mr. Windham's character of Pitt, which Mr. Horner has recorded in his journal, is graphic and forcible:—

"Mr. Windham, speaking of Pitt, described him as being without affectation in the least, much above vanity. He considers him as having suffered greatly by having been introduced too soon to office, and losing the opportunities of seeing men and manners, except as a minister, not the most favourable way (Mr. Windham added) of seeing men: had he only seen them for a little while, as his father did, in the army. In preparing his measures, he thinks more of the House of Commons than of their operation; satisfied if they will look well in statement—like those improvers of ground, who will build you a house that shall look most picturesque to spectators on the outside, though within it be incommodious. Mr. Windham instanced the Parish Recruit Bill, and said this was the most satisfactory solution he had been able to give of Pitt's failure in this and many other plans, when Mr. Fox had observed to him, that surely these were occasions on which it was Pitt's interest to summon all his talents. Speaking of his going through military details—military cars, rockets, catamarans, &c., Windham observed, that Pitt's judgment on such matters was generally bad, though he had a great talent in stating them. On another occasion, with Ward and John Ponsonby, when there was a great deal of conversation about the exercises and sports of the common people, the impolicy of suppressing them, &c., and when we ran over the names of the different public men in the state and the law, whose opinions upon such a point of policy might come to be of importance, I hazarded Pitt's name,—'Oh!' exclaimed Windham, 'Pitt never was a boy; besides, such questions won't conduce to make a minister.'"

The following instance of Fox's respect for his great rival deserves to be made known; it took place when the Whigs discussed the propriety of proposing an amendment to the address during the illness of the Minister:—

"A few hours before going down to Westminster there was a Meeting at Mr. Fox's house of a few of the principal persons of Opposition; Cowper was there: Fox stated to them that he thought it impossible they could enter into the discussion; he could not, while they had the idea that Pitt was in extremities; —'*mentem mortalia tangunt*,' he said. Cowper described him as appearing to feel very sensibly the calamity of his distinguished rival; and he described it by saying, that Fox appeared to feel more than Lord Grenville, who was present also."

Mr. Horner's opinions on the state of Ireland (written in 1806) are honourable to his character, as a zealous philanthropist and enlightened statesman. They are calculated to suggest painful but obvious reflections on the evils which have since arisen from the delay of the great measures he earnestly recommended:—

"My anxieties are fixed upon quite another subject from that which occupies your letter—Ireland; where there is the fairest and surest opportunity of doing good, not only against the present danger, but through all the succeeding ages of this country, and where there are the materials of unceasing agitation, perhaps of some fatal explosion, if that opportunity be neglected. Since the present administration came into power, they have adopted a new set of maxims for the government of that injured country, and have enforced them by including Catholics in their distribution of patronage, as well as by repressing, as much as possible, the hostile and malignant spirit of the Orangemen. While Mr. Fox lived, whose power the Catholics regarded as a pledge that as much would be done for them as was practicable, the continuance of this impartial and mild spirit of administration might have anticipated the effects of more decisive measures; but now, some of these are absolutely necessary, in order to renew a pledge which they lost by his death. It is something, that ministers have been able to crush the late disturbances, without stepping out of the forms of the law; and to my mind, this is a contrast with the proceedings of former governments, that would alone attach me to the present. But I am persuaded the time is now come, when that which ought to have been bestowed long ago, as an act of justice to that country, must be conceded as a precaution for our own security. You know where the difficulty lies upon this subject; with our gracious sovereign again, and the bigots of the church establishment. Whether our ministers have determined anything upon the subject, I do not know; I speak only of my own wishes and fears. I shall regard it as a fatal oversight, if another session of parliament shall pass away, without a most decisive measure being adopted with regard to the church revenues of Ireland, and the rights of Catholic subjects to rise in the army and the state."

Mr. Horner reprobated strongly the concession made to royal prejudices by the Grey and Grenville ministry, in withdrawing the bill for admitting Catholics into the Army and Navy; he was of opinion that they should immediately have resigned, and not waited to put the King more clearly in the wrong, by depriving him of any plausible pretext for a change of administration:—

"Nothing but the impatience of the king's advisers to get into power, or his own impatience to get rid of the reformers and abolitionists, perhaps the Duke of York's to stop the reformation of barrack abuses, could have so blinded a practised artist in cabinet-making, like the king, as to make him overlook the advantage he would have gained, by keeping them, with their withdrawn bill, a little while longer in office, to be thrust out on the next opportunity."

There is much pithy wisdom in the following recommendation of a work for review to Mr. Jeffrey:—

"The mention of the Presbyterians puts me in mind of a book, which I read last summer, and which has not been reviewed yet; the Memoirs of Colonel Hutchinson, one of Charles the First's judges, by his widow. It is a composition of much merit in various respects, and would give you an excellent opportunity for that characteristic criticism, which you ought to be very vain of; the personages who play what they thought a most important part in that day, are brought forward with strong effect; and the fanaticism of the times exhibited so far in a new light, that you see it in alliance with elegance of manners and accomplishments, mitigated by them, and corrupting them. If you could review Mrs. Hutchinson without quizzing her, which I rather doubt, you might give a very gratifying and useful impression of the practicability of accommodating, even to the sternest times of civil war, the same domestic virtues, and the same love of letters and the arts, which thrive best, no doubt, in tranquillity. I do not mean that those times are coming to us; *we* shall live on in the tranquillity of a vulgar servitude and degeneracy."

Byron, in his 'English Bards,' has immortalized the outcry which was excited by Brougham's article on Cevallos, in the *Edinburgh Review;* Jeffrey himself was startled by the commotion, which he thus amusingly describes:—

"I see by the Courier that the combustion which the review of Cevallos has excited here has spread in some degree to London. I am convinced, too, that it has damaged us a little; and am so much persuaded that it is necessary for us to make more than an ordinary exertion at this crisis, that I take courage to do that which is now very painful to me—to solicit your aid in my day of need. The Tories having got a handle are running us down with all their might;

Digitized by Google

and the ghosts of all the miserables we have slain are rising to join the vengeance. Walter Scott and William Erskine, and about twenty-five persons of consideration, have forbidden the Review to enter their doors. The Earl of Buchan, I am informed, opened his street door, and actually *kicked* it out!"

The brief notice of Brougham's entrance into parliament, expresses some doubts of his discretion, which certainly was not very manifest in his career as a contributor to the *Edinburgh Review*:—

"Brougham never could have found a more fortunate moment for setting out upon his career; which, though it may appear less brilliant at first, on account of the expectations which are formed of him, will be very speedily distinguished; and, upon the whole, I would predict, that, though he may very often cause irritation and uncertainty about him to be felt by those with whom he is politically connected, his course will prove, in the main, serviceable to the true faith of liberty and liberal principles. For him, personally, it will be very fortunate, if he has some probationary years to pass on the Opposition side of the House."

One more instance of Horner's dread of the indiscretion of his old playfellow occurs in a letter to Mr. Jeffrey:—

"Brougham has been too useful and powerful an ally, to make it easy for you to point out any change you might wish for; but when I recollect the many admirable articles he formerly gave you upon more general subjects, I own that I regret very much that he should misplace his compositions so much, as to print in the Review what he ought to speak in the House of Commons. I wish very much that Brougham and I were upon such a footing that I could state these things to himself; but that has been long otherwise: a consideration which more than any other has made me backward in stating them to you. But I have been latterly so much urged by other persons to use my influence with you, that I have been induced to make that effort upon this occasion."

Hitherto Mr. Horner had been rather a spectator of the political drama than an actor on the stage; we have next to view him in his part of that perpetuated cast, "Cash, Corn, and Catholics." His views on these subjects are well deserving of examination, but the task must be reserved for some future opportunity.

So addled in our craniums meet
Popery and Corn, that oft we doubt
Whether this year 'twas bonded wheat,
Or bonded Papists, they let out.

Criminal Jurisprudence, in relation to Cerebral Organization. By M. B. Sampson. Highley.
The Plea of Insanity in Criminal Cases. By Forbes Winslow. Renshaw.

THE strong excitement which at present prevails in the public mind on the subject of insanity, in its relation to criminal jurisprudence, gives an unwonted value to the above publications, and entitles them to special attention. Since the latter end of the eighteenth century, there has existed a growing distrust in the efficacy of punishment, and more especially of death punishments. But the question has been treated too much in isolation; on the one part by an inadequate consideration of secondary punishments, on the other by overlooking the influence of physico-moral causes. There has arisen, of late years, consequently, a reaction of opinion, partly from disgust at the silly sentimentalities of the pseudo-humane, and partly from the disappointment of those who have expected entire results from partial causes. At this moment, the returning disposition to unreasoned severity is receiving a sudden increase, through a recent most deplorable event; and it would not be too much to say, that it amounts almost to a monomania of cruelty, if downright refusal to think calmly had not more to do with the state of things, than incapacity to exercise that function. However, we rejoice to see that the question has been discussed with calmness and dignity by the law Judges, and we have confidence in the influences of their reproof.

Of the relation of insanity to criminal jurisprudence, not only are the general public in a state of profound ignorance, but the very lawyers and doctors have the science of the subject to create; it is not therefore surprising that men, women, and children, under the influence of quick passions, should talk nonsense. With false and imperfect data, to what conclusion less than erroneous can the wisest dialectician arrive?

The prevalent error of the moment resolves itself into two formulæ; first, that a madman who can reason correctly on subjects disconnected with his peculiar delusions, is, and ought to be, held a responsible agent; and, secondly, that, mad or not mad, it is desirable to hang the criminal, for the better impressing a salutary terror on others similarly affected. For the first of these errors we are indebted to the lawyers, with Lord Hale at their head, who, having defined madness, in complete ignorance of the entire subject, have reasoned *à perte de vue* on their own dictum, straining law, evidence, and metaphysics, to suit the necessities of every special case as it has arisen, to a sort of guess-work approximative justice. The late decision in the case of M'Naughten we hold to have been in strict accordance with truth and right reason, and, considered as a precedent, it constitutes a practical advance in the right path. Still, it is impossible to look at the discordant and vague language employed by all parties, without being satisfied that there was more of empiricism than of sound theory in their conclusions.

For ourselves, we are satisfied that unsoundness of mind does not so much consist in the want of power to distinguish right from wrong, as in the want of the common and ordinary power of sane persons to act in correspondence with the conviction. The primary affection we believe to be a morbid derangement of some natural desire, some impulse or affection, which may merely hurry the party with more or less of violence in some given direction, or may also suggest delusive ideas and sensations, or affect the entire functions of the brain, and suspend all control over the thoughts. But in a train of phenomena like this, in which disease may be aggravated by almost imperceptible gradations, who shall presume to decide where responsibility ends and immunity begins? On this subject, Mr. Winslow quotes from the *Edinburgh Law Journal* a passage that fully explains our views:—

"If it be true that there is none of the phenomena of yet imperfectly understood human nature, over which hangs a thicker veil to the general eye, than the phenomena of mental aberration, what are we to think of making distinctions, and drawing the line of responsibility with perfect confidence, as if all were clear between partial and total insanity. We humbly but earnestly suggest, that instead of deciding for responsibility in partial insanity, it is both more just and more merciful to doubt as to that essential, when disease of mind, to a palpable and considerable amount, is proved. It is more just and more merciful in such a case to take care of the accused and of society by his confinement, than to run the risk of putting to death an irresponsible agent. Insanity, as far as we have the means of perceiving, is a bodily disease; in other words, its visible and invariable condition is a morbid action of the brain, either structural or functional, a definition of the effect in feeling, and manifestation of a diseased brain, which shall be sufficiently comprehensive to include all the varieties of insane affection, is scarcely to be looked for; yet definitions are constantly sought after in courts of law, and the whole value of a witness's evidence is often made to turn on its relation to a standard which is in itself the merest assumption. It would be a safer rule for courts of law to direct their attention to the proof generally of diseased manifestations of the intellect and feelings; and when these are undoubted, to presume irresponsibility, because the contrary cannot be made sure of, and the balance of probability is greatly on the side of irresponsibility. If mercy is often extended to youth, to seduction, even to great provocation, how much more ought it to shelter diseases of the mind when clearly established."

This also is the opinion of Dr. Haslam, a gentleman whose practical experience entitles him to more weight, than the lawyers (influenced by a dictum once uttered by him in court, which they did not understand,) have been latterly accustomed to admit:—

"'If it should be presumed,' says Dr. Haslam, 'that any medical practitioner is able to penetrate into the recesses of a lunatic's mind, at the moment he committed the outrage; to view the internal play of obtruding thoughts, and contending motives, and to depose that he knew the good and evil, right and wrong, he was about to commit, it must be confessed, that such knowledge is beyond the circuit of our attainment. It is sufficient for the medical practitioner to know that the person's mind is deranged, and that such a state of insanity will be sufficient to account for the irregularity of his actions; and that in a sound mind, the same conduct would be deemed criminal. If violence be inflicted by such a person during a paroxysm of rage, there is no acuteness of metaphysical investigation, which can trace the succession of thoughts, and the impulses by which he is goaded for the accomplishment of his purpose.'"

The view here given of the subject is the more safe, inasmuch as responsibility itself depends on no easily defined condition: even when not complicated with the other imperfectly known state of madness. Responsibility is predicated of the sane, under many different degrees; but when two vague and ill-understood data are compared, it becomes utterly impossible to say, with accuracy, whether the one includes the other. For a further consideration of this question, we must refer the conscientious reader to Mr. Winslow's lucid and admirable little volume.

As to the other formula, the hanging mad homicides *in terrorem*, the very proposition is a despair; so grievous are the heartlessness and the folly of such a notion; so indicative is it of an imperfect, nay, a retrograde civilization. It is, indeed, a touchstone to try the extent to which even the educated part of the community have abdicated their privilege of reason. If it be a terrible and abhorrent necessity to take human life under the plea of justice, in cases of purely moral obliquity, is it not monstrous to visit with capital infliction a case of mere malady? Before, however, this question can be properly entertained, it is first necessary to prove that madmen could be serviceably influenced by example;—a conclusion jumped to by declaimers. It is with reference to this part of the question that Mr. Sampson comes to our aid, with much curious information respecting the homicidal monomania, which, he contends, renders death punishment especially inapplicable as a restraint on that morbid influence. In recommending this gentleman's work, we are not yet prepared to adopt his criterion, that "every person is sane to the requisite extent for the performance of social duties, so long as he possesses the mental power and disposition to act in obedience to the law," or in other words, that a criminal overt act is in itself a *pro tanto* proof of lunacy.

Neither would we be understood as standing sponsors for Mr. Sampson's phrenological doctrines. Phrenological arrangements can change nothing in human nature; and whether the brain be an organization, such as phrenology supposes, or not, the tendencies which the professors of that doctrine endeavour to explain, remain just what they were—acknowledged phenomena, undenied and undeniable; and there is further to be said for the author's reference to phrenology, that its advocates have materially aided in scrutinizing and popularizing the phenomena of volition, and have brought into prominent notice a variety of particulars, which had escaped the

Digitized by Google

observation of less interested investigators. It is, then, in the writings of this sect (and more especially in those of Mr. Combe) that a connected view of the whole subject can most easily be obtained. We beg, therefore, such of our readers as are interested in improving our criminal law, but are unfavourable to the "new science," to discard, as the judges say, that consideration from their mind, and simply to direct their attention to the evidence of Mr. Sampson, without reference to the technicalities with which he clothes it, as symbolical of his phrenological profession of faith.

Mr. Sampson then states, that whatever may be thought of the influence of example in other cases, death punishment is particularly inapplicable to the homicidal lunacy, because the morbid impulse to slay is closely connected with the suicidal tendency:—

"Those, he says, who will take the trouble to refer to any considerable number of cases of murder, will be struck by the remarkable fact, that the homicidal is almost invariably accompanied by the *suicidal* tendency; and hence, that persons, who are in the state of mind which renders them capable of attempting the destruction of a fellow-creature, are usually, at the same time, *desirous* of self-destruction. In a proportion of at least two out of three cases, this peculiarity is evidenced either by the circumstance that the individual has attempted suicide previously to the perpetration of the murder; that he has destroyed himself immediately afterwards; that he has given himself up to justice, expressing at the same time a desire to be hanged; or that by his conduct previously to the offence he has evinced the absence of any solicitude so to lay his plans as to enable him to escape from its consequences. On referring to the 'Annual Register,' I find that the murders recorded therein, as committed in Great Britain during a period of five years, from 1831 to 1835 inclusive, amount in all to thirty-one. Of these, in ten cases the perpetrators surrendered themselves to justice, expressing, in most instances, a perfect readiness, and sometimes an eager desire, to meet the fate that awaited them; in three cases the murder was followed by the immediate suicide of the culprit; in two cases suicide had been attempted previously to the perpetration of the homicide; and in five the parties showed by their general conduct the absence of any wish to escape from the consequences of the act: thus making a total of twenty out of thirty-one cases in which the desire for self-destruction was more or less clearly manifested."

Mr. Sampson then proceeds to examine his cases in detail, and adds ten others, which took place during the first four months of the past year. From these an inference may be drawn, that two thirds of the criminals are in a state generally recognized as insanity. Juries, indeed, commonly take the attempt at self-destruction as conclusive of lunacy; on which Mr. Sampson pens the following pregnant sarcasm:—

"It seems to be a cherished opinion amongst Juries, that it is one of the functions of a sound mind to impel its possessor to the crime of murder. In mere cases of Suicide—no matter if performed with the most unparalleled coolness—a verdict of 'Temporary insanity' is almost invariably rendered; but when it is proved that an individual has previously committed, or attempted to commit murder, all doubts regarding the healthy state of his mind are at once removed, and a verdict of *felo de se* is returned. Some time back, an inquest was held on a shoemaker named Silcox, who, calling upon a man and his wife with whom he was acquainted, rose up, after partaking of some elder wine, and stabbed and beat them to death. He then pursued a boy with the same intent, but, not succeeding, retreated from the house, and after mutilating himself, threw himself into a stream where he was drowned. This was pronounced *felo de se*. Had the case been that of some rich merchant who had destroyed himself in a calm and deliberate manner, after an unsuccessful speculation in the Stocks, it would doubtless have been 'Temporary insanity.'"

After adducing other corroborative facts tending strongly to generalize the inference, the author thus sums up:—

"It will be seen, that, in a large majority of the foregoing cases, the punishment of death was fully contemplated previously to the committal of homicide; and that the subsequent confession, and voluntary surrender, of the guilty party, in each instance, was, in fact, a sort of indirect suicide added to the first crime, and intended to form part of the transaction. In some cases, it seems, indeed, as if the murderer considered that, in surrendering himself to death, and gratifying the suicidal propensity, he achieved a kind of moral expiation of his crime; and that it was by contemplating this course that he reconciled it to his views of equity. In the remaining cases, where murder was followed by the direct perpetration of suicide, it will be seen that the latter act did not arise from remorse, or from any sudden impression that suicide had become necessary as a means of escape from the more fearful alternative of a public execution. In some instances attempts at suicide had *preceded the murder*; in each case the two acts appear to have been committed almost simultaneously; and not infrequently there is evidence that they both formed part of a premeditated course, and that the culprit had prepared himself and indeed entertained a desire for his own death."

The startling conclusion deduced by Mr. Sampson is, that so far from death being an appropriate punishment for murder, it is an additional encouragement, at least in those cases where murder has been long meditated, prepared, and (we may say) incubated, by a prolonged fixation of the mind on the one idea:—

"If it be true that this class of offenders are animated by a desire for self-destruction, to hold out self-destruction as a consequence of the act, must be as sure a way of affording a stimulus to its perpetration as would result if, in cases of theft, we were to 'punish' every offender by presenting him with a purse of money. 'There are many instances on record,' says Dr. James Johnson, 'where the monomaniac lacks courage to commit suicide, or cannot make up his mind as to the means of accomplishing it; under which circumstances *he has committed capital crimes with the view of being capitally punished*;' and, among the cases which I have quoted, there are several in which the prospect of this punishment appears to have operated as the sole motive to crime. Hence, I do not hesitate to express my belief that a remarkable diminution in the number of murders by which our country is annually disgraced would be the immediate consequence of its abolition."

The argument which is raised by the author against capital punishment, on the score of its demoralizing influence on the spectators, is not new; but he cogently urges the less known tendency of the spectacle of punishment, first, to inflame the destructive impulses of the multitude, and, secondly, to irritate the imitative tendency. Of the incalculable extent of such incentives, few are aware; but while we yet write, instances of the fact are daily occurring. One such, strikingly in point, the author cites on the authority of a correspondent:—

"A clergyman who has read the treatise on Criminal Jurisprudence would suggest whether the following fact is not connected with the general theory: Some years ago, in the north of England, a clergyman of the Church of England, in a town of moderate size, deemed it proper to preach a discourse to his parishioners on suicide. There had been no case of the kind occurring to induce him. Within three weeks afterwards *three* of his parishioners cut their throats."

It would be difficult to bring the injustice and impolicy of judicial infliction in lunatic cases nearer to a demonstration. But it will be asked, is every murderer to be discharged from penal consequences who can play off a few antics and mystify a jury? and we reply, certainly not. The question itself involves but an argument from abuse to use. What, (we may say with like reason,) is every man to be let off who can trump up an *alibi*? It is the business of the law functionaries to look to this, and by obtaining and sifting the best evidence, to come to a sound conclusion. Innocent men are not to be hanged for the encouragement of judicial idleness or incapacity. The deception, in truth, is not so easy—nothing, in fact, being more difficult than to simulate insanity, so as to deceive those conversant with the peculiarities of disordered minds; and for rare exceptions, they must be dealt with on their own peculiar grounds. In one word, the dangers now encountered by society from the overt acts of the insane are attributable chiefly to the difficulties thrown by public opinion in the way of precautionary measures affecting the liberty of the diseased. If conscientious physicians were supported in their efforts to restrain the lunatic, instead of being viewed with suspicion, fatal accidents would be far less frequent.

Letters on South America; comprising Travels on the Banks of the Paraná and Rio de la Plata. By J. P. and W. P. Robertson. 3 vols. Murray.

The authors of these volumes are already known to fame for their Letters on Paraguay and their account of Francia's Reign of Terror. They made a promise in the former of these works, contingent on its success, of giving a continuous history of their twenty-five years' residence in South America; and in fulfilment of this promise they have presented to the public the work now before us. A residence of five and twenty years in the regions which pour their waters into the Rio de la Plata—among the sequestered communities dwelling on the Paraná, with majestic and almost interminable forests on the one hand, and on the other, plains as level as the sea, and almost as boundless, extending westwards to the steep flanks of the Andes—where Spaniards, still nurturing ignorance, and breathing the pride of the sixteenth century, live intermingled with remnants of the red race, who cherish the memory of times now deeply sunk in the darkness of the past—a long residence in such scenes, trodden by such men, might, one would think, furnish many an original observation on the manifold resources of nature, or on that strange compound of subtlety and simplicity, the human heart. Volumes of anecdotes might be related of the rude energy and originality of character set in motion by the revolution in South America. But our authors do not seem to be impelled by the copious nature of their theme: indeed, they have hardly kept their promise. We find in their Letters on South America, an account of little more than a year's residence on the Paraná, with occasional glances, of a subsequent date, at the settlements on that river, a sketch of society in Buenos Ayres, and a very slight disconnected history of the revolution and consequent civil wars of the Argentine Republic. They are at some pains, in their introductory chapter, to vindicate their volumes relating to Paraguay from the charge of exaggeration, and they show that the same statements in their work at which doubting critics shook their heads, were at once believed and accepted on the testimony of others. But the fact is, that our authors have not yet arrived at the art of making a plain statement; they overload every little narrative with details, or rather with phrases, so many and so elaborate as to hide nature; their portraits are all caricatures: in fact, they aim at what is called fine writing; with them wood-fires cast "reflective scintillations on the glassy surface," &c., and the oppressed subjects of Dr. Francia live "in terrorem." They set less value on their material than on its manufacture; and—*sed motos præstat componere fluctus*—we must allay the rising storm of criticism. When our merchants abroad find leisure to describe the scenes of their enterprise, we ought perhaps rather to consider their lucubrations as

Digitized by Google

so much unexpected gain, and to relax in their favour the strictness of our critical tarif. In this spirit, then, we shall proceed to glance over the contents of the Letters on South America. In 1815, one of the authors landed at Corrientes, on the banks of the Paraná, with a large property in merchandise, which, owing to the disorganized state of the country, seemed more likely to be a source of danger than of gain to him. Gifts of money and of bottled porter insured his safety from day to day, but still there was reason to fear that some caprice or drunken freak "might give his body to the dogs and his property to the winds." He could see no chance of realizing his commercial hopes, when an unexpected ray of light thus broke upon him :—

"At this critical juncture I chanced to make the acquaintance of one of the most extraordinary, daring, and all but desperate men I ever knew. Sitting one evening under the corridor of my house, there came up to my very chair, on horseback, a tall, raw-boned, ferocious looking man, in Gaucho attire, with two cavalry pistols stuck in his girdle, a sabre in a rusty steel scabbard, pending from a besmeared belt of half-tanned leather, red whiskers, and mustachios, hair uncombed of the same colour, matted with perspiration, and powdered with dust. His face was not only burnt almost to blackness by the sun, but it was blistered to the eyes ; while large pieces of shrivelled skin stood ready to fall from his parched lips. He wore a pair of plain ear-rings, a foraging cap, a tattered poncho, blue jacket, with tarnished red facings, a large knife in a leathern sheath, a pair of potro boots, and rusty iron spurs, with rowels an inch and a half in diameter. His horse was a noble animal, and sweated profusely. His gored sides were panting, his nostrils distended ; he champed his enormous bit, tossing his head till he foamed at the mouth, and besprinkled both his own body and that of his master with froth. * * The Hibernian brogue, the mangled Spanish, the countenance when closely scanned, the carroty locks, and bright grey eyes, all revealed to me a son of the Sister Isle, transformed into a more fearful looking Gaucho than any native one I had ever beheld. When I had a little recovered from my surprise, I asked my strange guest who it was I had the honour to accost. 'Por Dios!' said he; 'don't you know Peter Campbell ?'—Cam-*bèll*,' he continued, laying a strong accent on the last syllable. 'Pedro Cam-*bèll*' (Paythro he pronounced it), 'as the Gauchers calls me? Troth, now, an' don't ye know me, Paythro Cam-*bèll?* An' ye never heerd of that name, then you're the only gentleman in the who'al country as has not.'"

The raw-boned red-haired Irishman, here so grotesquely caricatured, soon became the chief instrument of our author's success; and we think there is exaggeration as well as unkindness in the expression applied to him, of "all but desperate man." That he spoke bad Spanish is probable enough, being, as his name discloses, not of Milesian, but of Scottish descent; his English, also, may have been incorrect, though we can hardly believe that he uttered the cockneyisms which our authors ascribe to him. Notwithstanding the ridicule which might attach to his address, we cannot avoid perceiving, that he was not only an enterprising and dauntless man, but that he was also perfectly upright and honest. Considering the influence which he had acquired and maintained with Artigas, the chief of the republic, and the important services which he rendered to our authors, it can hardly be doubted that he had more character than could be represented in a rudely humorous sketch. Peter Campbell was in early life a tanner by trade; but enlisting in the army, he served in the expedition against Buenos Ayres, under General Beresford. Having deserted, with many more, from the invading force, he worked for some time at his trade in Corrientes. The revolution, which raised Artigas into power, called forth also into action Campbell's slumbering energies, and the gaunt Hibernian became the terror of the Gauchos, whom he heartily contemned. The revolution had despoiled the farmers; had dispersed their herds and flocks; had broken up the waggons, and sweeping away security of property, had completely put a stop to trade and intercourse throughout the interior. Campbell undertook to re-organize society, to repair the waggons, to collect produce, and to set again in motion the traffic of the estancias, or estates; the success of his efforts may be learned from what follows :—

"You may be able to form some idea of what our daily operations were, when I say, that during the nine months I stayed at Goya, from January to October, we shipped off from that port fifty thousand ox hides, one hundred thousand horse hides, and bales of wool and hair I know not how many. To collect all this produce ; to barter here ; to contract there ; to bring it from everywhere ; to have the hides weighed and piled up in the galpones on receiving them ; to see that they were cleaned, beaten, put in order, examined, classed and sorted on the quay ; then to ship them ; to keep the requisite number of men constantly together ; and, finally, to attend to our tropas of carts, and keep them moving (to say nothing of the daily levees held at my cottage), all formed an animated scene of activity and bustle."

Tame cattle are slaughtered in South America by horsemen with the laso. The mode of killing wild cattle is thus described by our authors :—

"For shelter during the night they invariably took to the woods, and the 'matanza,' or slaughter of them took place there during the summer months, and by moonlight. When the night was clear—and it was seldom otherwise—a number of men, varying according to the quantity of cattle collected, or hides wanted, put on a sort of front armour of hide, so as to enable them to scramble in among the thorny trees without lacerating their bodies. The woods consist almost exclusively of mimosas, including many varieties of the thorny acacia. When the men got in among the trees where the cattle were reposing, they crawled on their knees and hands among the sleeping tenants of the woods ; and armed with sharp knives, they stuck them in the throats, left them to bleed to death, and returned in the morning to flay them. These men carried, also, a kind of hide shield, to defend them in the event of an attack from any of the roused bulls, should they suddenly turn round upon them. There was a picturesque barbarity in the operation; but it was comparatively easy work to that of slaughtering the wild horses,—the noble and unrestrained, but nevertheless doomed tenants of their native forests. At the time of our sojourn in Corrientes, these wild horses and mares had so overrun the country, that it was not uncommon to find particular herds of them of five to ten thousand in number."

In order to kill wild horses, a corràl, or circular enclosure, is formed, capable of holding from five to ten thousand of them, and opening at its bottom, or opposite to the entrance, into another and smaller corràl. The wild droves are then pursued by about fifty expert horsemen into the larger enclosure, and are forced from time to time, by a feigned attack made on them, to rush into the small corràl, where, crowded together, they are easily dispatched by the bolas of the Gauchos. It is said, that often, in the course of these hunts, the jaguar (for this, we have no doubt, is the animal which our authors generally call the tiger), by aroused the clattering drove, and trying to flee with it, is trampled to death. However animated may be the pursuit of horses chased for slaughter, it never calls forth the display of equestrian skill and courage shown in taking young horses alive; when the Gaucho, fixing his eye on a promising colt, separates it from the drove, runs it down, then seizing and prostrating it with the laso, leaps from his saddle, and tames, or thinks he tames, the fallen animal by blowing into its nostrils. But to return to the hides, we have in the following passage an illustration, of which Adam Smith would have gladly availed himself, of the increase of value arising from demand.

"The dried *hide* became more valuable than the animal itself, for there was to add to the original cost all the expense of slaughter, curing the hide, carting, &c. For a great proportion of ours in Corrientes and Goya, we paid one dollar to ten rials the *pesada*, a weight of thirty-five pounds, equal to about three halfpence per pound. Three months afterwards they were sold in Buenos Ayres at about five pence halfpenny per pound ; and perhaps six months after that they were sold in Liverpool and London at from nine pence to ten pence per pound, to the tanners. Supposing one hide with another to give twenty shillings, it then produced exactly ten times the amount which the South American country gentleman received for the whole animal on his estate. No doubt many of the ox hides, or calf and horse skins thus sold and transported to England, found their way back to Corrientes in the shape of boots and shoes, when the estanciero discovered, that to be entitled to as much of his own original material, now metamorphosed by British manufacture and craft, as would cover his legs, he had to give up a score of good bullocks ; or that wanting a smaller portion to protect his feet, he must make over for it some forty or fifty good horses or mares. I have still in my possession a contract which I made in Goya, with an estanciero, for twenty thousand wild horses, to be taken on his estate at the price of a *medio* each ; that is to say, three pence for each live horse or mare. The slaughter of them cost three pence a head more; the staking and cleaning the hides, once more, three pence ; and lastly, a like sum for the carting to Goya, making the whole cost one shilling for each skin. Of this contract ten thousand animals were delivered ; the skins were packed in bales, and sold in Buenos Ayres at six rials or three shillings each, and they sold ultimately in England for seven or eight shillings ; that is, the skins sold for about 2,800 to 3,000 per cent. on the first cost of the horse from which the skin was taken. Such is the accumulative value sometimes of the produce which is taken from the hands of the grower in one country before it gets into the hands of the consumer in another."

Here we shall relate an anecdote bordering at once on the domains of natural history and of trade, and which, though not to be found in our authors' volumes, ought, we conceive, to have been there. Horses' tails have some value in commerce; they furnish the long and fine hair used in making the bows of violins and similar stringed instruments. A large proportion of the hair thus used is brought from South America. Yet it must not be supposed that the wild horses of the Pampas have tails flowing in silky tresses of twenty-eight inches in length (and shorter hairs are useless); on the contrary, their tails are torn, and ragged, and inextricably matted with clay and filth. But within the clotted mass, the inner growth of hair forms for itself a small spherical chamber, where it lies in regular folds, of greater length and much finer texture than belongs to the hair which grows exposed, and it has also the advantage of being colourless. One good horse-tail in London is worth as much as a dozen horses in the Pampas.

Besides the valiant Hibernian, Peter Campbell, our author sketches, in the same broad style, a French adventurer, a Yankee, and a Londoner. The Scot he omits, for obvious reasons. These overwrought caricatures, however, throw no light on South America; we prefer the following description as more germane to the matter :—

"There is in the general mass a class of men, of whom the habits are so peculiar, that we are tempted here to give some account of them. These are the Pampa Indians, an erratic but on the whole a peaceful tribe, whose general alliance with the natives of Buenos Ayres is not much interrupted. Among themselves, they are often implacable; and wandering on horseback over the Pampas, in small parties of forty or fifty, with their wives and children, they not unfrequently couch lances with their enemies. They are extremely fond of stealing whatever comes in their way in the open plain, and when they can do it with

Digitized by Google

impunity, they attack the huts of the estancieros, take the most valuable part of the property, and as many cattle as, compatibly with safety, convenience, and speed, they can carry off. They then bivouack under hides or mats for a season, and when they think that the affray has been forgotten or overlooked, they quietly saddle their horses, come in to Buenos Ayres, and pay a visit to the Director, headed by their cacique, he wearing a tawdry uniform coat, a sword, and cast-off cocked hat, of all which he is very proud, especially as they have been made him a present of by the Director. He then harangues the supreme chief of the state, receives from him a few dollars for himself and cavalcade, and hies him back to his bivouack in the purlieus of the city. This offers as good a picture of savage life as I ever saw. You might fancy yourself in the Pampas. See assembled in a large yard, not unlike the knacker's, the tattered and half naked Indians of the Pampas; two mares, which they have just killed for dinner, they are cutting up with more avidity than precision. They live almost entirely on mare's flesh, a dainty which they prefer to all others. Now comes the mâté, the cigar, and best of all, the raw spirits, which they never leave till finished. They then wrap themselves in their ponchos, each with his better half, if he have one, round a blazing fire in winter, and in summer under the light of the moon."

There is in this paragraph one remarkable inaccuracy; the state of La Plata is not at peace with the Indians of the Pampas, but, on the contrary, has been carrying on for some years a war of extermination against them. The popularity of Rosas, the present ruler of that state, among the peasants or Gauchos, is founded on his implacable hatred of the Indians. The estrangement of the Argentine government from Europeans in general, which attracts so much attention at the present moment, arises from the presumption that the latter sympathise with the Red Men, and are averse to the policy which counsels their extirpation. Our authors, having resided on the banks of the Paraná, in the neighbourhood of peaceable tribes of the Guarani race, probably paid little attention to the predatory movements of the Araucanian tribes, dwelling farther southwards. Yet he tells the story of a poor Spanish girl, surprised near Cordova, on the borders of Peru, by the Indians, and dragged into captivity. She was fortunate in catching the eye of Peter Campbell, when he visited the Indian huts, who forthwith restored her to liberty. In like manner, Rosas has recaptured some hundreds of Spanish women, whom the Indians had carried off from the Pampas; but he has used his victories with a harshness (the Indian prisoners being degraded to the lowest kind of servitude) which promises to perpetuate the animosity already existing between the two races.

During the revolutionary wars of La Plata, a body of Indian troops in the pay of the state, and led by one Andres, an Indian, though the adopted son of Artigas, took up their abode in Corrientes. The European residents, and especially the ladies, were of course not a little alarmed at the thought of being in the power of such a garrison. Nevertheless, the Indians conducted themselves like men of honour. In our authors' narrative, it is stated:—

"There was really much merit due to the Indians for their good conduct; for they had been suffering great hardships from want of clothing and food. They had frequently been compelled to boil pieces of dried hides and live upon them, not being able to procure even horse-flesh; and their clothing was truly miserable, many having only *chiripás* (or kilts), and those who had any farther clothing being still quite in tatters. Some were armed with muskets, some with spears, and others with bows and arrows; while bringing up the rear, and armed with the latter weapons of a small size, came about two hundred little Indian boys. It appeared they had been carried off at different times by the Correntinos, and treated as slaves. Wherever Andres found any of these children he liberated them, and seized upon a corresponding number of the children of the men in whose service he found them. The parents of the children thus taken away, not knowing what was to be their fate, were of course thrown into a state of great mental distress and alarm. After keeping the children prisoners for about a week, Andres sent for the mothers. He forcibly pointed out to them the cruelty and injustice of which they had been guilty towards the poor Indians, appealing to their own feelings of anguish as the best corroboration of his charge. 'Take back your children,' concluded Andres, 'and remember in future that *Indian mothers have hearts.*"

As soon as the Indian General entered the town, he hastened to the house of the principal English merchant, "to place himself at the feet of the Señora and Señoritas." That he fulfilled his promises to them appears from what follows:

"Nothing could exceed the respect, attention, and civility which we received from these men the whole time we were in Corrientes. The troops never passed us without presenting arms; and at the performances before mentioned, we had always seats placed at the right hand of the general, while the governor and his family sat on the left; nor were the performances allowed to commence till we arrived. The band, too, was sent every day to play for an hour before our house. We were not a little amused at their always addressing us as *paysanitos* (countrywomen), or *Indias rubias* (fair Indians). 'Were not,' they said, 'the ancient Britons Indians before they were conquered by the Romans? and was not Campbell one of themselves?'"

But though Andres was a general, and the adopted son of Artigas; although he was a humane and honourable man, yet he had a coloured skin; he was an Indian by race, and therefore was not entitled to the civilities of the thorough-bred Spaniards of Corrientes. When he gave a grand entertainment, he was mortified to find that no one came to it; and was informed, on inquiry, that the Correntinos did not care to see Indian dances. But it seems that he had the power to retort.

"Andresito had hitherto submitted to a great many overt acts of contempt from the town, and had really shown more forbearance than could have been expected from him; but now being completely roused, he took an extraordinary way of punishing his enemies. 'So they do not choose to come and see the Indians dance,' said he,—'well, let us try.' So the following morning (a very hot day) the drums beat to arms, and every man of respectability of the place, excepting Don Isidoro Martinez, old Duran, and my father, was marshalled into the *plaza* (or square), and there they were made to pluck up the grass and weeds, level and clean it from one corner to the other. They were kept at work the whole day, under the blaze of a scorching sun; and really, however sorry one might feel for the unfortunate labourers, there was something laughable in the Indian's whim. I suppose the square was never before, nor has ever been since, in such perfect order. While the men were thus employed, their wives and daughters were taken off to the barracks, and made to dance all day with the Indians,—a much more unpardonable affront than the manual labour imposed on the males."

Our authors' anecdotes of the revolutionary period in La Plata, are, for the most part, deficient in the vivacity which usually marks the fruits of personal experience. The general effect of the revolution was to bring forward the Creoles, who had hitherto formed an inferior class in society. Those who give attention to omens and strange coincidences, will remember with pleasure, that the first brilliant success attending the arms of the young republic, proceeded from the cordial union of Brown and White, the one an English seaman, the other an American. The great hero of South America, was St. Martin, who crossed the Andes, liberated Chili, and obtained a decisive victory over the royalists of Peru. For these grand achievements his grateful country rewarded him with a pension of 120*l.* a year! Among the singular incidents of that period, may be mentioned the fact, that a fine Spanish frigate (the *Mercurio*), anchored in the La Plata, was left high and dry, in consequence of that great river being *blown out* by the continued pamperos, or south-west winds.

The carnival amusements at Buenos Ayres are of a peculiar character. They begin with sly discharges of perfumed waters on visitors or passers-by; ladies on the roofs shower down into the streets their liquid salutations; but as the festival comes towards its close, the watery strife increases; pumps, syringes, and buckets are plied with activity, and torrents (not perfumed) rush in every direction. The poet's remark—

For gentle Dulness ever loves a joke,

is well exemplified in these *effusions*. We are told that the officers of a British frigate in the La Plata, once took their fire-engine ashore during the carnival at Buenos Ayres, and directed their "hissing water spout" with such effect as quickly to wash away all opposition. They cleared all the roofs, in short, those very roofs which had proved so fatal to General Whitelock and his host. We have no doubt, that a good practical joke would, in many cases, answer the ends of a bloody battle. But it is only during the carnival that the inhabitants of Buenos Ayres relax to this extent; they are too Spanish and punctilious to be habitually funny. Our authors, in speaking of the case of an attorney general, in Buenos Ayres, who was impeached for picking his teeth in the presence of the republican ministers, relate this whimsical anecdote:—

"Till lately, if a respectable person was walking through the streets of Buenos Ayres, and saw that another passed him without a salutation, or the taking off of his hat, he considered himself to be mortally affronted. This excess of courtesy and urbanity has been almost entirely suppressed, by the commerce and intercourse of foreigners: but in 1810, it existed, and there are still some lingering symptoms of it observable. Greetings to persons unknown are continued in the country; and a Gaucho is capable not only of hating one who thus neglects him by passing him without saying good morning, but to begin by picking a quarrel with him and to end by stabbing him. Thus it was not only held to be improper in Buenos Ayres to pick one's teeth, but, on the contrary, to be a grievous offence, and proving clearly the hauteur and insolence of the Attorney-general towards the Government. In every country, things are embodied into being and importance, from received ideas or adopted customs. In 1830, Señor Anchorena, minister of the Government, sent to prison a French engineer named *Ponce*, for not having taken off his hat to him in the street, with an order that he should not be liberated without making *three bows to the hangman. Ponce* acceded to this, bowing profoundly, as he was ordered to do, to this distinguished officer of justice; after which the Frenchman was liberated."

Experienced as the world now is in the arts of cruelty and torment, there is something novel in what follows:—

"The darkest scene of the tragedy remains to be shown. The father of the Carreras fell ill from grief and anxiety on seeing his two sons arrested and taken to Mendoza. While labouring under his mental and bodily afflictions, and confined to bed, the Buenos Ayres Government, with a refinement of cruelty which is perhaps without a parallel, allowed its officers to send to the old man an account of *the expences incurred in executing his two sons*, demanding payment of the same. He looked at the account; then thrust it under his pillow; refused all further consolation, and died two or three days afterwards."

As a counterpart to this, we must give a sample of Peter (*alias* Don or Admiral Pedro) Campbell's cruelty.

"Campbell, as you know, was much feared by the people, a look from him being quite enough to fill them with terror. On one occasion a poor fellow was brought before him for having committed some offence, which appeared to excite Campbell's anger to the highest pitch. He told the culprit he deserved

Digitized by Google

to lose his head, and, suiting the action to the word, he drew out his sharp knife, seized the man by his fine long platted queue, and severed it from his head, commanding him thereupon to be off. The poor wretch had quite expected to have his head taken off, and was not a little rejoiced to make his escape, minus only his tail."

Peter Campbell bore an inveterate hatred, it appears, to long queues, and whenever he caught Paraguayans, who wore these appendages, he made it a rule to clip their superfluous locks, or, in Hibernian phrase, to decapitate their tails. This circumstance throws some light, we think, on the valiant tanner's early history: he belonged, we suspect, to the body styled Croppies, and thence conceived that profound dislike of the ascendancy-pigtail, which subsequently extended to queues of even the most liberal and cosmopolitan shape and character.

Report of the Commissioners on the Employments of Children, &c.; with Appendices, &c.

CONDITION OF THE WOMEN AND THE FEMALE CHILDREN.

We have not yet exhausted the subjects of painful interest afforded by this remarkable Report. We might fill many pages with curious extracts, illustrative of facts and morals, and with the speculations to which they must give rise in every thinking mind—but, for the present, we shall confine ourselves to one particular part of the evidence, that which relates to the condition of the women and the female children. In doing so, we shall spare the feelings of our readers as much as possible—omitting, necessarily, the more revolting details. We shall not be accused, we think, of attaching undue importance to this part of the evidence. The press has lately teemed with works of which the condition, the destiny of women is in some form or other the subject,—'Woman's Mission,'—'The Women of England,'—'The Wives of England,'—'The Daughters of England,'—'Woman and her Master,'—'Woman, her Rights and Duties,' &c. &c. It is the popular theme of the day. Open one of these books—or indeed open any book whatever, of morals, physics, travels, history,—they tell us, one and all, that the chief distinction between savage and civilized life, between Heathendom and Christendom, lies in the condition and treatment of the women; that, by the position of the women in the scale of society, we estimate the degree of civilization of that society; that, on her power to exercise her faculties and duties aright, depends the moral culture of the rising generation—in other words, the progress of the species. They assume, as a principle, that in every class of Christian society there is what is called *domestic life*, and that this domestic life supposes as its primary element—the presence, the cares, the devotion of woman. Her sphere is home, her vocation the maternal (not meaning thereby the literal bringing forth of children, but the nourishing, cherishing, and teaching of the young). In all the relations between the sexes, she is the refiner and the comforter of man; it is hers to keep alive all those purer, gentler, and more genial sympathies, those refinements in morals, in sentiment, in manners, without which we men, in this rough, working-day world, would degenerate (*do* degenerate, for the case is not hypothetical) into mere brutes. Such is the beautiful theory of the woman's existence, preached to her by moralists, sung to her by poets! Let man, the bread-winner, go abroad—let woman stay *at home;* let her not be seen in the haunts of rude labour any more than in those of vicious pleasure—for is she not *the mother?*—highest, holiest, dearest title to the respect and the tenderness of her "protector, man!" We really beg pardon of our readers for repeating these truisms—we merely quote them here, to show that, while they are admitted, promulgated, taught as indisputable, the real state of things is utterly at variance with them. Our social system abounds with strange contradictions in law, morals, government, religion. But the greatest, the most absurd, the most cruel of all is the anomalous condition of the women in this Christian land of ours. We call it *anomalous* because it inculcates one thing as the rule of right, and decrees another as the rule of necessity. "Woman's mission," of which people can talk so well and write so prettily, is irreconcileable with woman's position, of which no one dares to think, much less to speak. A high authority, Sir James Mackintosh, says,—"If you would educate, begin with the women,"—that is, "begin with the mothers and first educators of men,"—a piece of advice which our legislators and political economists seem to have set aside wholly—even while laying down the principle that where women are ignorant, wretched, demoralized, and perverted from their true vocation, there society is poisoned in its very sources.

Dr. Grainger, in his Report, certifies,—

"That the education of the girls is even more neglected than that of the boys; that the vast majority of females are utterly ignorant; that it is impossible to overstate the evils which result from this deplorable ignorance. The medical practitioners of Birmingham forcibly point out the misery which ensues from the neglected condition of the women—improvidence, absence of all comfort, abandonment of children, alienation of all affection in families, and drunkenness on the part of the husband."

A witness thus deposes:—

"My own experience tells me, that the instruction of the females in the work of the house, in teaching them to produce cheerfulness and comfort at the fireside, would prevent a great amount of misery and crime. As a working man, within my own observation, female education is disgracefully neglected. *I attach more importance to it than anything else.*"

This is the evidence of a mechanic. Only a few days ago, an intelligent man of this class gave a similar statement to the writer. "Ten years ago," said he, "there were no such girls as you see now in my native town—at least very few; now they are in hundreds—girls who have no idea of anything in the world, but working for just as much money as will buy a gown to their back—girls without an idea of duty to God or man, without the sense of fear or shame."

From among such as these the men, debased as themselves, take to them wives; for there has existed in the lower, that is, the labouring classes, a necessity for marrying, such as the Malthusians have not dreamed of in their philosophy. "Jim!" said a nobleman, in our hearing, to a labourer who was ditching in his ground, a poor, pale, half-idiotic looking object, "I hear you have got married since I was down last: what could possibly put such a thing into your head, you fool? are you not ashamed? what can you expect but that you and your children will become a burthen to the parish?" "If you please, my Lord," replied Jim, twirling a ragged hat on his thumb, "I was, as one may say, *etten* up with varmint, and—I married a wife to keep me clean!" The plea was as unsuspected as unanswerable; it seems then, that among the agricultural labourers a man still marries in the hope that his wife will "keep him clean;" can he do so in the manufacturing and mining districts, where the female children are employed in guiding bobbins, making nails, "hurrying" coal-trucks from morning to night? where the young girls are described as hardened and demoralized into something worse than the worst men? "constantly associating with depraved adults, they fall into all their ways; drink, swear, fight, smoke, whistle, sing, and care for nobody." Another witness testifies that—"the women of some of the manufacturing districts are becoming similar to the female followers of an army. Wearing the garb of women, but actuated by the worst passions of men, in every riot or outbreak, the women are the leaders and exciters of the young men to violence. The language they indulge in is of the most horrid description; in short, while they are demoralized themselves they demoralize all that comes within their reach. It had been said that Englishmen would never exhibit one-hundredth part of the ferocity displayed by the French in 1780 and during the reign of terror, even if a similar crisis should occur, but it was difficult to say what the contagion of such examples and language would effect."

These future mothers of our labourers and operatives are described as wretched, diseased, debased, haggard, enfeebled creatures, whose offspring must, of necessity, be physically degenerate, who are not only incapable of performing the duties of a mother, but cannot be trusted with the lives of their own offspring; we gave, in a late number (*ante*, p. 229), that part of the evidence relating to the maltreatment of female infants, of the thousands set to work for twelve hours a day, for masters or for their parents, beginning their life of toil as early as three and four years old; the great majority before they are nine; of the numbers dosed to death with laudanum and treacle, "to keep them quiet," the excuse being, "that the mother is obliged to adopt this plan, because she has no time to attend to the child." Is she, therefore, a born monster? she *must* live: to live she *must* work, and make her children work as soon as they can use their little hands. We may shudder, and talk of the necessity of taking away the children to educate them, but by what right will you take the food out of the mother's mouth, procurable by no other means than through her own and her children's perpetual toil? what alternative do you leave her besides this course of unnatural cruelty and absolute starvation? These are questions to be asked and answered, or our merciful reforms are like to be only new forms of injustice and oppression. In extremity of want, "the pitiful mother hath sodden her own child." Go preach humanity to hunger! "Amid such abject wretchedness," says the Commissioner, "there is little hope of amending things;" and the only hope held out is a distant one—the better education of the women:—

"The first and most prominent suggestion is the better education of the females in the arts of domestic economy. To the extreme ignorance of domestic management on the part of the wives of the mechanics, is much of their misery and want of comfort to be traced. Numerous instances have occurred to us of the confirmed drunkard, who attributes his habits of dissipation to a wretched home."

The Commissioners, in the fifth section of their Report, thus sum up their view of the case:—

"The girls are prevented by their early removal from home, and from the day schools, to be employed in labour, from learning needlework, and from acquiring those habits of cleanliness, neatness, and order, without which they cannot, when they grow up to womanhood, and have the charge of families of their own, economize their husbands' earnings, or give their homes any degree of comfort, and this general want of the qualifications of a housewife in the women of this class, is stated by clergymen, teachers, medical men, employers, and other witnesses, *to be one great and universally prevailing cause of distress and crime among the working classes.*"

This is the *cause*, but where is the remedy? if to exist—to procure a pittance of food and hardly decent clothing, a young woman must toil incessantly at some handicraft from five years old and upwards, where and how is she to learn needlework, cookery, economy, cleanliness—and all the arts of *home?* These things are not taught in the "Sunday Schools," nor in the Dame Schools—and if they were, she has

Digitized by Google

no time to learn them, nor opportunity to apply them, being learned: she must toil in womanhood as in childhood—always toil, toil;—unremitting, heart-sickening, soul and body-wearing toil! Where is the use of instituting a system of education if you continue a state of things in which that education is useless?—which renders it impossible for the woman to practise what the child has learned? in which incessant labour is the sole condition of existence? The women of these classes have "*no home;*"—can we wonder that they have "*no morals*"?

Let us go a step higher, to the class immediately above them. Attorneys and apothecaries, tradesmen and shopkeepers, bankers' clerks, &c.: in this class more than two-thirds of the women are now obliged to earn their own bread. This is an obligation which the advance of civilization, no less than the pressure of the times, has forced upon them—an obligation of which womankind, in the long run, will not have reason to complain; meanwhile it is not of her just share of hardship in hard times, that the woman complains at present; but she may well think it a peculiar hardship, a cruel mockery, that while such an obligation is laid upon her, and the necessity, and the severity of the labour increases every day, her capabilities are limited by laws, or custom strong as law, or prejudice stronger than either, to one or two departments, while, in every other, the door is shut against her. She is educated for one destiny, and another is inevitably before her. Her education instructs her to love and adorn her home ("the woman's proper sphere!!")—cultivates her affections, refines her sensibilities, gives her no higher aim but to please man, her protector—and allows her no other ambition than to become a good wife and mother. Thus prepared, or rather unprepared, her destiny sends her forth into the world, to toil and endure as though she had nerves of iron; she must learn to protect herself, or she is more likely to be the victim and prey of her "*protector, man,*" than his helpmate and companion. She cannot soothe his toils—for like him she must toil: to live she must work—but by working can she live?

It ought to be no question whether those who are able and willing to work can live by their work, but here it is a question. In these middle classes, the opportunities afforded to men to gain a living are, compared with those of the women, as ten to one; yet the men tell us that the competition is so great, they find it difficult to maintain themselves, and to maintain a wife and children next to impossible. The increasing number of unmarried men—with their reading clubs, mechanics' institutes—we will say nothing of taverns, theatres, and other places of social resort—argues, of course, an increasing number of unmarried females, who not only have no opportunities of mutual improvement and social recreation, but if they be "respectable" women cannot even walk through the streets without being subjected to the insults of men also called and esteemed "respectable;" who are destined never to be either wives or mothers, though they have heard, from their infancy, that such, by the appointment of God, is their vocation in this world, and no other. Such may be their vocation, but such is not their destiny: no—they must go forth, to labour; to encounter on every side strange iron prejudices, adverse institutions, formed and framed in a social state quite different from that which exists at present—a state, in which the position of the woman was altogether different from what it is now. One of the greatest moral writers of the day has thus strikingly put the case. "A woman, from the uneducated classes, can get a *subsistence* by washing and cooking, by milking cows and going to service; in some parts of the kingdom by working in a cotton mill, &c. But for an educated woman, a woman with the powers which God gave her, religiously improved, with a reason which lays life open before her, an understanding which surveys science as its appropriate task and a conscience which would make every species of responsibility safe—for such a woman there is in all England no chance of subsistence but by teaching—that almost ineffectual teaching which can never countervail the education of circumstances, and for which not one in a thousand is fit,—or by being the feminine gender of the tailor and the hatter." "There are departments of art and literature from which it is impossible to shut women out. These are not, however, to be regarded as resources for bread. Besides, the number who succeed in art and literature being necessarily extremely small, it seems pretty certain that no great achievements in the domains of art and imagination can be looked for from either men or women who labour there to supply their lower wants, or for any other reason than the pure love of their work. While they toil in any one of the arts of expression, if they are not engrossed by some loftier meaning, the highest which they will end with expressing will be the need of bread." This is most true; but needlework and teaching the young, "the feminine gender of the tutor and the tailor," seem the natural employments of woman, and in harmony with all her instincts; moreover, she is willing to do or be anything which shall procure her a decent subsistence, and save her from becoming a burthen to those already overburthened: so driven by stern necessity from the *home* for which she was educated, she goes forth to struggle with the harsh destinies for which she was *not* educated. What shall she be? A governess? that is always the first thought; it is the only *genteel* profession open to her; accordingly the competition is here so enormous, that the chances against her are a hundred to one, even supposing her qualified. We shall not here enter into the statistics of governesses; it makes no part of the evidence before us; we shall merely observe, that in these educating days we do not pay governesses better nor estimate them more highly, but we require more of them: many a young woman who could, a few years ago, have obtained a situation as a teacher, cannot do so now. She has one other resource, she can be a dress-maker. In the first notice of this Report (*Athen.* No. 801), we gave a part of the evidence on the condition of the milliners: we will merely refer our readers back to a picture of hopeless suffering and quiet misery, derangement of health, loss of sight, and gradual extinction of the powers of youth and life; we refer our readers to the extracts already given from Mr. Grainger's report; and we shall merely add, that in this class the competition is so great, as to leave a poor young woman but little chance of earning her bread. As long as milliners can have girls to work eighteen hours out of the twenty-four, or sit up "three nights in the week through the season," they can do without more hands: no room for her here!—no, though she should be ready for 12*s.* or 15*s.* a week to wear her eyes out, and work her fingers to the bone. What shall she do? She can write a good hand and keep accounts; she might be a clerk or cashier, or an assistant in a mercantile house; but who would employ her? Who would countenance such an innovation on all our English ideas of feminine propriety?—and such it must be, as long as the woman is the licensed prey of the man, unprotected by opinion or by custom. We have heard that many women are employed in writing and engrossing for attorneys, but it is scarcely an acknowledged means of subsistence; they are employed secretly, and merely because they are paid much less than men. The young woman, tenderly brought up, who is discouraged by the difficulties, and, we will add, by the insults and the dangers to which her position exposes her, may shrink back into her poor home, if she have one;—if it be a kind home, to feel acutely her own helplessness; if it be an unkind home, to be taunted with cruel words, till no longer able to endure bitter dependence, she goes forth into the streets, or shrinks into a lonely garret to make shirts for 6*d.* a piece, "finding her own thread."

Is the picture exaggerated? Some may think so; but those who know the real state of things, know that it is so far from being overstated, that it rather falls short of the truth. This is what we mean when we speak of the *anomalous* condition of woman—a contradiction in itself, and disgraceful in the present advanced state of social opinion on every other subject. Every one admits the truth, every one acknowledges the hardship, but it remains unremedied, and "no man layeth it to heart."

In giving the evidence relating to the horrible condition of the girls employed in dress-making and needlework, we were led to inveigh against the luxury of dress; yet, on second thoughts, we do not see that a reform in gowns and caps would necessarily cure, or even ameliorate the evil: if our fine ladies were suddenly to be seized with a fit of economy and "late remorse," the immediate result would be, that hundreds of these poor girls, who now derive a wretched existence from their luxury, would then have no existence at all, or one still *more* wretched—more degraded—adding infamy to misery. Are we prepared for this? Have we any other alternative to offer them?

Education is the panacea offered for these crying evils; and truly, if we could swallow it at once, as we do a bit of bread, it might do some good; but it will be ten years, at least, before the best system of education can be made available—twenty before it can be seen in its effects. Meantime, it is publicly avowed in the council of our legislators, "that a generation is growing up around us more miserable, more debased than any previous generation for the last 300 years." Such a state of things will task public wisdom and private benevolence to the utmost. We have done what lay with us to awaken the feeling and startle the conscience of those in power, hoping earnestly that the keen and painful sense of national sin and shame, roused by the publication of this body of evidence, may lead to some good result;—and returning once more to the especial purpose of this article, we would ask one question of those best able to solve it: we would ask, what is the reason that in legislating in behalf of women (as in the recent case of the Custody of Infants' Bill), or in originating any measures, private or public, of which woman is the object, such strange, such insurmountable obstacles occur, as seem to daunt the most generous and zealous of their public advocates, and defeat all the aims of private benevolence, however well and wisely considered? It seems to argue something rotten at the very foundation of our social institutions, that such is so invariably the case.

The importance of the education of the women, the dreadful evils which spring out of their neglected and perverted state, are acknowledged; but in framing a national system of education, how will they meet the contradictions which arise out of the social position of the woman? a state of opinion, a licence of custom, which makes a home and a protection necessary to her, and a state of things which throws her into the midst of the world, to struggle and toil for her daily bread? We hear everywhere of Normal Schools, for the training of school-

Digitized by Google

masters: are there any Normal Schools for the training of school-mistresses? We hear of none. Are they less necessary? It appears by the whole tenour of this official evidence, that they are more so; but "they are fraught with difficulties and dangers,"—no one ventures to state openly of what particular nature, or even give them a definite shape to their own fancy, but every one shrinks from them.

Then, again, there are institutions for the reform and education of juvenile delinquents and outcasts—boys of course; but when the same attempt was made in behalf of poor wretched little girls, it failed. After struggling a few years with difficulties, such as no zeal could surmount, it was given up. It was gravely said, that when a boy of twelve or fourteen had been exposed to bad influences, the case was far from hopeless; but that a girl "early depraved, was depraved for ever." We deny this: it is a matter of opinion only, of which there is no proof,—for which there is no necessity in nature. It is the opinion which makes the necessity, and we look upon it as the most cruel, the most besotted among the prejudices, through which these poor little forlorn creatures (many of whom have been injured without any conscience or will on their own part) are suffered to rot and perish, body and soul.

It is not long since the Government opened a Female School of Design at Somerset House. In a state of things such as we have touched upon, it seemed no mighty effort that the advantages, already given to about 200 boys, should be extended to a few girls;—that a poor young woman should be enabled to obtain, at a small cost, the power of using a pencil, drawing ornaments, and inventing patterns, thus adding one more to their limited means of subsistence, and one particularly calculated for the quick fancy, the elegant taste, the neat ready hand of a woman. We happen to know that when the idea of this drawing school for women was first mentioned, it was met with cool derision, as a thing out of the question. It had to encounter such difficulties, sneers, petty objections, jealous interference, that it required some months of perseverance, on the part of one or two good-hearted and resolute men, to bring it to bear; and all this on the excuse of *morals* forsooth! One would have thought that half London was to be demoralized, because a class of twenty or thirty girls were taught to use a pencil, under the same roof with a class of boys, though the two schools are separated from each other by three stories! The reader, perhaps, pauses and doubts, and finds it difficult to be serious. We, who write, feel that such things have their serious, and even their tragic aspect. If there be *no* just cause for these fears and scruples, it is all ridiculous enough; but if there be just cause, it is monstrous.

OUR LIBRARY TABLE.

On the Poetics of Aristotle, and his Relation to Modern Dramatists—[*Ueber die Poetik des Aristoteles*], by Frederic von Raumer.—A short essay, in which the Berlin Professor, disclaiming any pretension to criticize the philosophy of Aristotle in general, attempts to effect something like a reconciliation of the opposite modern views respecting the merit and purpose of some particular canons laid down in the Poetics. The work he believes to be a genuine production of Aristotle's, and not, as some have asserted, an anonymous compilation from a work not his; or, as others have conjectured, a summary gathered by some disciple from his oral communications. But we doubt whether it is not a mere fragment of what the philosopher wrote or intended to write on the subject. The chief points noticed (for no regular commentary is undertaken) are the Aristotelian meaning of Imitation as a sole object of art, especially in the Drama; and the celebrated definition of Tragedy,—of which a series of versions are given, collected from the Latin, English, German, French, and Spanish. In these and the subsequent aphorisms, the essayist discusses the grammatical sense of the passage, as well as its philosophical meaning, with the general result (for it is impossible to report his conclusions in detail), that these canons of Aristotle have been too partially interpreted, and that his *dicta* on points of detail do not necessarily imply his rejection of larger views of Poetry as a whole. The tragic canon, after all, is left in some suspense as to its real meaning. The other subjects discussed are on Pleasure as the object of Tragic presentation (ἡδονή); on the relation of Ethics to Art; on the Unities, which are shown to have been prescribed in the narrow sense of French criticism; on the strife between Fate and Free-will as the essential element of Tragedy, and on the poetical treatment of historical persons and subjects. The attempt throughout is to enforce a more liberal interpretation, and to show that the dogmas of the Greek teacher have been too narrowly understood. Von Raumer even ventures to combat the opinion that the Aristotelian code really condemns what is now known as the romantic school of Tragedy, and discusses the probable judgments of the philosopher himself upon Calderon, Shakspeare, Goethe, and Schiller, giving reasons to show that his system would have led him to embrace much, if not all, that is peculiar and excellent in these authors. Finally, Von Raumer believes that Aristotle's theory (founded, he admits, on the specimens of dramatic composition extant at the time) will serve for modern tragedy far more completely than for comedy; and this because of the superiority, as Von Raumer thinks, of the latter over the Greek. In support of this view, he discusses, in an appendix, the Plautian Comedies (as copies of Grecian works), and finds, that in skilful construction, in probable unity of place and action, in moral decorum, and in genuine power of provoking laughter, the Latin imitator is not to be compared with Calderon, Molière, and Shakspeare. These views are maintained with much ingenuity and many reasons which we cannot discuss. The essay, altogether, will be interesting to the more learned of the critical class, for whom it is chiefly fitted.

The Conciliator of Manasseh Ben Israel, by E. H. Lindo, 2 vols.—The object of this work, written by one of the most eminent Rabbis of modern Judaism, is to explain and reconcile the apparent inconsistencies in various parts of the Old Testament. It is a valuable collection of Rabbinical opinions, intermingled with many original observations, and deserves the attention of Biblical students.

Sir Michael Paulet, by Miss Ellen Pickering, 3 vols.—This fiction escaped us on its first issue; but a good word never comes too late; and, perhaps, ours may be as serviceable when commending 'Sir Michael Paulet' to all Easter parties in country houses, as it would have been had we pointed him out as an eligible Christmas guest. Here is a *bonâ fide* romance: not such a one as clever Mrs. Gore, in her preface to 'Abednego, the Money-lender,' announces herself to have composed out of May Fair follies and Old Jewry miracles—but an old-fashioned tale of love, rivalry, mystery, doom, and retribution, laid in the year 1745, though with but a distant allusion to the Rebellion, and wrought up with a power which assures us that Miss Pickering's hand has not become wearied by its ceaseless occupation. Sir Michael Paulet is a hero of the Childe Harold school—less gloomy in mien, it is true, than Byron's Laras and Corsairs, but as inscrutable in his purposes, as tempestuous in his passions, and as unscrupulous in his actions, as the wildest of his predecessors. Capt. Greville, the lover, and Frances Evelyn, the heroine of the story, whose path Sir Michael crosses with peremptory lawlessness, are less strongly marked—fit rather to figure in such a Watteau-like group as gracefully opens the drama, than to move to and fro in its scenes of passion. But the strength of the novel lies with Nella, Greville's cousin, whom Nature has denied beauty, but recompensed with a double measure of affection, generosity, high-heartedness—all, in short, that makes woman "the ministering angel." The first idea of this character might, perhaps, be found in the Eugenia of Miss Burney's 'Camilla'—but the developement is Miss Pickering's own: and creditable to her as an artist. Marina, the Mexican, and the scenes in which she takes part, are more common-place and melodramatic; but the book, we have said, is a romance: and, whatever be the extravagancies it possesses, is one calculated to excite a strong interest.

War and Peace, by William Jay.—This essay has been extensively circulated in America, and has been republished here by the Peace Society. It is a castigation of the war-party in the United States; but the only part of it which possesses much interest in England, is the author's argument to prove that free trade is the true bond of unity between nations. His reasoning on this head is conclusive as far as it goes; but the argument is imperfectly developed, and the author's illustrations are not always appropriate to the reasoning.

The Shipwreck of the Dryads, in Letters to a Sister.—This little narrative may pair off with the well known story of the burning of the *Kent* East Indiaman. In both catastrophes, the gentle but high-toned fortitude of our countrywomen is calculated to arouse our national pride. Here, one of them narrates the perils and sufferings of shipwreck, as unaffectedly as she bore them heroically.

Love Letters of Mrs. Piozzi.—These letters are offered, as proof that Mrs. Piozzi, at eighty years of age, was in love with Conway, the handsome actor, who appeared at Covent Garden some twenty years since, and that she hoped to be loved in return. We have not come exactly to this conclusion; though certainly, if we lay aside all consideration of the relative ages of the parties, the letters may fairly enough be called 'Love Letters.' We doubt, however, whether Mrs. Piozzi was ever in love—she had not heart enough—she was a weak, vain, foolish woman, who loved excitement; a far cleverer actor than Mr. Conway; and in the scene before us, she played her part to admiration.

Comic Nursery Tales.—The Sleeping Beauty.—Between Mr. M'Clise and Mr. Tennyson, the charmed princess of this fairest of faëry legends is in great luck. Here she hath not been quite so well treated. The illustrations are grim, rather than humorous, and dry where a touch of grace and poetry would so charmingly have relieved the grotesque. In the verse, too (to adopt its own spirit), oddity sometimes runs into slipshoddity. But the artist and the poet, referred to in the opening of our paragraph, have probably made us fastidious as regards 'The Sleeping Beauty.'

Floral Fancies, and Morals from Flowers: with Seventy Illustrations by the Author.—Pretty, fantastic fables—some of them, however, far-fetched—in which the curiosities of Botany are employed to serve the cause of good morals. Some of the illustrations, too, are whimsical; but in all the idea is better than the execution.

Views of the Statics of the Human Chest, &c., by J. Jeffries.—This is a volume of considerable originality, displaying sundry novel physiological conclusions, which more or less affect the practice of medicine. It is therefore addressed exclusively to the scientific and professional public. The author is popularly known as the inventor of the Respirator; and a very false estimate of the publication will be formed, by those who, confounding together the ideas of advertisement and quackery, shall measure the book by their dissatisfaction with the instrument. We may add, that the author has advantageously introduced considerations of climate among the ordinary sources of physiological inquiry, in the discussion of his subject.

Hymns for the Christian Church and Home. Collected and edited by James Martineau.—Though this volume displays refined taste and diligent research, we can neither receive it nor recommend it with unqualified approbation. What was said in the last number of the *Athenæum* for 1842, concerning Mr. Ogden's musical publication (issued in connexion with the present volume), will apply to the selection before us. Not only has Mr. Martineau smoothed away from many of the hymns their doctrinal peculiarities, but he has modified not a few of the metres, to the injury of the compositions thus transmogrified; and not even the eloquence of his apologetic preface can reconcile us to a proceeding so entirely at variance with our notions of what is suitable and becoming in art and poetry.

Sabbath Evening Readings, by the Rev. D. Kelly.—A volume of trite common-places.

Digitized by Google

The Highland Note Book; or, Sketches and Anecdotes, by R. Carruthers.—A collection of articles originally published in the *Inverness Courier*. We have a kindness for all such miscellanies, as preserving fragments of local information with regard to antiquities, anecdotes, social peculiarities, and the like, which escape the notice of more ambitious historians. The present volume, too, is more than usually interesting, as giving us glimpses into Macbeth's country, the mountain and moorland fastnesses, in which the Young Chevalier's rebellion was closed, and the district swept by the Morayshire floods, made classical ground by the delightful narrative of Sir Thomas Lauder.

Knight's Cabinet Shakspere, Vol. II.—This is a remarkably neat and pretty edition, and will be acceptable to many as a "pocket-book;" and to many more who cannot afford the library editions, for it is to be completed in ten volumes at 2*s.* 6*d.* each, and is neatly bound in cloth with gay gilt edges.

Elements of Language, by G. Payne, L.L.D.—This book may be safely recommended to students, as a useful introduction to the principles of general grammar.

Elements of Universal History, by H. White, B.A.—This work has been compiled with care and skill; and is a useful addition to the list of school-books.

Parliamentary Companion for 1843, by C. R. Dodd, Esq.—*Vacher's Parliamentary Companion for* 1843.—Both useful works, the merits of which are well known.

A Love Gift—The Gift Book.—Stolen, instead of Gift, should have figured in the title-pages, for beyond the Prefaces we do not see that the editors have contributed a single line. We rank with those persons alluded to in the latter work, who think this field has been already sufficiently cultivated.

Methodus Medendi; or the Description and Treatment of the Principal Diseases incident to the Human Frame, by H. M'Cormac, M.D.—This English work with a Latin title, is a text-book for the use of students. Of the author's design, we shall leave him to speak for himself:—"As regards the present work, irrespective of the author's experience, a considerable amount of new and interesting matter from our own, as well as from foreign writers, will be found embodied. The pathology of many diseases has been simplified, and the diagnosis, it is hoped, further elucidated."

Treatise on Enlarged Tonsil and Elongated Uvula, by J. Yearsley.—The views entertained by this gentleman on the subjects of the present essay, are sufficiently known to the public, to render explanation on our part unnecessary. How far the author does or does not lie under the influence of the nothing-like-leather fallacy, we are not called on to decide.

A Practical Treatise on Pulmonary Consumption, &c., by Francis Cook, M.D.—The practical result of this treatise is a censure of the prevailing treatment of consumption by low diet and depletion, and a recommendation of directly invigorating means.

List of New Books.—Critical and Historical Essays, contributed to the Edinburgh Review, by the Right Hon. B. Macaulay, 3 vols. 8vo. 36*s.* cl.—Dalzel's Analecta Græca Minora, new edit. crown 8vo. 6*s.* bd.—Murray's Handbook for Travellers in Central Italy, with Map, 12mo. 15*s.* cl.—Knight's Ecclesiastical Architecture of Italy, folio, 40 plates, 5*l.* 5*s.* hf-bd. morocco.—The Definition of the Faith and Canons of Discipline, by the Rev. [Advertisement.]—In 2 handsome large 8vo. volumes, embellished with a fine Portrait, and 29 other Engravings, The LIFE AND TIMES OF SIR THOMAS GRESHAM, Knight, Founder of the Royal Exchange; including Notices of many of his Contemporaries. By JOHN WILLIAM BURGON, Esq. Now offered, for a limited time, at the very reduced price of 15*s.*, elegantly bound in cloth, and recently published at 1*l.* 10*s.* Memoirs of so eminent an individual should possess attractions alike to the Student in History, the Antiquary, and the Merchant; while it is but reasonable to expect that the name of Sir Thomas Gresham is sufficiently well known in this great metropolis, to make its citizens anxious to possess further knowledge of his character and personal history; more particularly when it is produced in such an elegant style, and at a price, as is almost incredible even in these days of cheap literature. London: Effingham Wilson, 18, Bishopsgate-street-Within, until the Royal Exchange is rebuilt. *** Please to order the edition published by *Effingham Wilson*, at 15*s.*

ROYAL ACADEMY.

Sir R. Westmacott's Lectures on Sculpture.

LECTURE III.

The Professor resumed his subject at the period of the establishment of the school of Phidias, in the fifth century B.C.

The battles of Salamis and Marathon having, he observed, secured to the Athenians their liberty, and placed at their disposal immense wealth, the temples, which had been destroyed in the Persian invasion, were rebuilt, and gratitude to Minerva, their tutelary divinity, suggested the erection of an edifice to her honour, which in the beauty and costliness of the materials, as well as in every refinement which the advanced state of the Fine Arts could supply, should surpass any that had before existed in Greece. With this feeling the Parthenon was built, and was enriched with the most perfect specimens of sculpture—illustrating the Panathenaic festival which had been instituted in honour of the goddess, and other subjects, mythological or historical, appropriate to such an edifice, and calculated to render it, at the same time, a worthy monument of the gratitude and piety of the Athenians, and of the political rank to which their valour and talents had raised their country.

To unbounded magnificence, and the spirit of sublimity which animated Pericles, were happily united a refined taste and equal judgment. Phidias, to whom was confided the accomplishment of this vast design, employed Callicrates and Ictinus as the architects: Alcamenes, Agoracritus, Colotes, and other artists of equal eminence, were associated with himself in its external decorations: while the statue of the goddess for the interior of the temple was reserved to be the work of his own hands. In contemplating what has been spared to us of these extraordinary examples there is an irresistible admission of their excellence. Of no other works has superiority been assented to with the same degree of unanimity; and certainly of all the known productions in Art, the sculptures of the Parthenon approach nearest to perfection. On examining these marbles, we are at a loss to decide whether the beauty and variety in the arrangement of the several parts, the choice of form, or the skill exhibited in the execution, most demand our admiration. The great care bestowed upon the latter, namely, the execution, strikes us with more astonishment when it is remembered that, in many instances, more especially in the eagles of the pediment, the greater part of the work must, from the position of the sculpture, have been totally out of sight; and those portions which could be fully viewed, were, at the nearest point of view, not less than 120 feet from the spectator. We learn, from the authority of several writers, that a custom prevailed of exposing works to public view before they were placed in the situations they were destined to occupy; and the ambition the artist would naturally feel to excel, may be adduced as a sufficient motive for the extreme finish throughout of these statues. But, we may reasonably infer, that a much higher feeling—the sanctity of the edifice, and the glory of being associated with a work proposed to surpass all others in magnificence, and to be raised in honour, not only of the divinity presiding over Athens, but, at the same time, the immediate protectress of the Arts themselves—would prevail over every other minor motive to call forth the highest energies of the artist. The form of this temple was hypæthral, or in part open to the sky. It was about 200 feet in length, 100 in breadth, and 53 feet in height to the base line of the tympanum, and 72 feet to the apex. The height from the ground to the metopes and Panathenaic frieze was about 46 feet. The latter received its light chiefly by reflection, and from between the columns of the peristyle. The entrance was at the east end, a custom, it appears, observed in all Athenian temples, in contradistinction to the Dorian Greeks, who entered at the west, and addressed the Deity with their faces towards the east, as is generally practised, at this time, in Christian communities.

The sculpture which decorated the eastern pediment represented the birth of Minerva; that of the western, the contest of Neptune with Minerva for the guardianship of Attica; while the goddess herself, in all the gorgeous display of chryselephantine sculpture, was placed at the western extremity of the interior; she was dressed in a tunic which reached to the feet, and over it were thrown the chlamidion and the peplos.

In reviewing the sculpture belonging to these pediments we can consider them abstractedly only, and as works of Art; the heads in all but one statue being either lost, or too much mutilated to allow of any observations or reasoning on individual character. The eastern pediment supplies this exception in the recumbent figure reclining on a rock, covered with a lion's skin. Whether it represents Theseus, or according to a later hypothesis, Cephalus, or whether the Idean Hercules be personified in this statue, the distinctive character which would apply to either of these heroes, is fully developed. Beauty, breadth, and strength, are united, conveying to the mind the powers of a god, without the distinctive quality which stamps him, in the ideal treatment of parts, his equal. The Professor observed, that there perhaps was no statue in existence which more fully exemplified the remarks he had made in a former lecture upon the adaptation of peculiar forms and treatment to the representation of subjects of a certain class or character, than that in the Elgin collection which has hitherto been called the Theseus.

In considering the draped groups,—the one supposed to represent Ceres and her daughter Proserpine, the other two of the Fates, (the third Fate being presumed to be intended in a fragment of a seated figure removed from the same pediment)—we can reason upon them only in reference to their harmony as compositions, or to their consent of form with action or position.

Referring to the Fates more particularly, it will be observed that as civilization advanced, taste became more refined; the elegantly minded Greeks abandoned the monstrous forms which early fable had associated with destructive or offensive moral qualities, and personified even the Gorgons and Harpies under pleasing forms; characterizing their properties by their actions and by appropriate attributes.

These groups are so nicely balanced, that it is difficult to make any distinction as to their comparative merits; it is in certain qualities only, that they differ: in their conception they are evidently the emanation of the same master mind.

The draperies of the Ceres and Proserpine are generally of a broader style than those of the group of the Fates, assimilating more with the treatment of the statue which has been called Iris, in the same pediment; both these works appear to be from the hand of the same artist.

The peculiar grace in the repose of the recumbent figure in the group of the Fates, the arrangement of the limbs, and the breadth and grandeur of its style, claim particular regard. She is represented in all the majesty of nature, and in the meridian of beauty; but a beauty of a lofty character, which, while it

Digitized by Google

calls forth our admiration, seems also to command our respect.

There is no example, in the whole range of Grecian art, that displays more unequivocally the knowledge possessed by the ancient artists of the construction of the human figure, or shows more decidedly their judgment in the choice of position for the developement of its physical elements, and, at the same time, their great skill in execution,—in which quality it surpasses all contemporary and later productions,—than the statue presumed to personify the Ilyssus. In the contemplation of this work, Art is forgotten in the truth of the imitation. No statue in the antique offers stronger motives for reflection. Let those who doubt the research of the ancient artists into the organization and economy of the human frame, and who would reduce their practice to a superficial imitation of form, attentively regard the Ilyssus, and their doubts will be dispelled. In this statue the most consummate practical skill is made subservient to the influence of mind. With regard to the sentiment or motive of this statue, the Professor declared his opinion to be in accordance with that of the celebrated antiquary Visconti, who led the way in developing the subjects of these marbles. The Genius of so favoured a stream as the Ilyssus, said to have been the resort of the Muses, must naturally have been considered as no indifferent spectator in a contest for the patronage of a country through which its waters flowed. The body of the figure is half raised, and is slightly leaning forward, expressing his participation in the general surprise at the miracle effected by Minerva, who has just caused the olive tree to spring from the ground. The weight is supported by the left arm; the right arm is extended, and most probably, as the broken portions would seem to indicate, rested upon or fell over the knee. The head, as is evident from the position of the mastoid and the line of the trapezius muscles, was directed towards the centre of the composition.

The Ilyssus presents a simple personification, the subject having no particular or palpable quality by which it could be symbolized. There is neither the elevation of Nature, as in the athlete, nor the absorption of the minor details, as in the hero, but simply the expression of the artist's individual feeling. In this statue Nature alone furnished the type; the sculptor's care was to ennoble it, and supply by sentiment the absence of attribute.

The difference or variety of treatment of subjects of a particular class, that discriminating quality which, it has already been observed, is found to pervade all works of the Greeks, is seen especially in the Ilyssus. He is represented in the vigour of manhood. The loss of the head is indeed to be lamented, but it requires no great exercise of fancy to determine the intentions of the sculptor. The influence of mind over matter was never more powerfully illustrated than in the contracted forms of the muscles of the diaphragm, marking the effect of the drawing in of the breath; while the general meaning or intention of the figure is fully indicated by the position of the skeleton, so to speak, and the tension and rigidity of the rectus and sartorius muscles of the right thigh; affording abundant proof that the artist was well aware that expression is not confined solely to the head, but that the emotions of mind are manifested throughout the whole muscular frame.

We have several specimens of basso relievo of the archaic age, executed on the same principle as the Panathenaic frieze, but few have reached us of precisely the character of the metopes of the Parthenon. That compositions had been similarly applied to buildings is evident, in the examples afforded us by the discoveries made by Messrs. Angell and Harris, of ancient sculptures, at Selinunte, in Sicily, the date of which may, with great probability, be fixed as early as 650 years B.C. The Professor then offered some observations upon the metopes of the Parthenon; first, in reference to their subjects, secondly, to their character, as applied to the building, and lastly, to their art.

Ancient Art, he remarked, revolved around a living national poetry, and the mythology of the Greeks afforded abundant resources for plastic creation, and no subject could be more agreeable to, or more popular with, the Athenians, than the exploits of Theseus, under whom they had acquired their highest reputation. The metopes which have been removed from Athens, and which now exist in the British Museum, refer to the quarrel which arose between the Centaurs and the Lapithæ at the marriage of Pirithoüs.

The mixture, or combination, of the human figure with that of the horse was, as we learn distinctly from the description in Pausanias of the chest of Cypselus, embodied as early as 660 years B.C. It was not, however, until the age of Phidias, that this monstrous application or configuration was conveyed under agreeable and beautiful forms; the early ages, as we find, having added to the human figure merely the hind quarters of the horse.

It is necessary, in order to reason upon the character and relief of these marbles, to consider the site, or position rather, of the temple of which they formed the decoration. It has been supposed, not only with respect to the Parthenon, but all great temples in Greece, confined within areas, that processions were so arranged as to approach them at the angles; consequently, that a view was commanded at the same time, both of the flank and end of the building. This being the case, the necessity of considering the just balance of relief, fitted to the points of view, was obvious; and it appears, that any other relief than that adopted in these sculptures, would have been less suitable for the purpose. Objects in lower relief would have been obscured by the projection of the triglyphs; and a higher style of relief would have broken the connexion of the triglyphs with the metopes.

From the inequality of the metopes, both in their composition and treatment, we might reasonably be led to doubt whether they were the emanations of the same mind. It is obvious they were not the productions of the same hand. In some will be found the highest qualities of the period to which they belong; in others may be traced the hard and severe style of the earlier schools; whilst others do not conform, either in sentiment, disposition, or style, with either. This may be accounted for. Phidias was an example of extraordinary genius, in advance, it may be said, of his own time; and although he retained the principles established at Ægina, and of preceding ages, he must be considered the founder, rather than the disciple, of a school. It is highly probable, also, that in the execution of the very extensive works on which he was employed, he would be compelled to call in the assistance of many artists with whom early habits and social associations would interfere to prevent their immediate adoption of his enlarged principles.

Several of the metopes offer, not only an agreeable variety in their compositions, but forcible examples of those abstract principles of representation, whether of human or brute character of form, which the Greeks sought for in nature, as immediately applicable to the distinguishing qualities they desired to embody. Thus, in the allegorical image of the Centaur, we find in the human portion not merely a different race of men from the Lapithæ, but we see expressed the character of a people; and this, not only in the brutal and ferocious aspect of the Thessalian, but in the quality and treatment of the general forms: in the round and healthy fulness of the body, in the knotty deltoid, and in the marked connexions of the bones, approaching, in a degree, the character of the Faun, and indicative of hardy and savage habits of life. The square and compact divisions of their bodies and limbs, the truth, beauty, and education of form, and the variety of the attitudes of the Lapithæ and the Athenians are finely opposed to the less elevated treatment of the Centaurs. The animal portion, from which the human body springs, is of the same unsubdued character, and its accordance with the human parts is finely exemplified in several of these relievi, but particularly in the victorious single Centaur, with the skin over his left arm. It is not the high conditioned, clean limbed Arab, which is seen in the Panathenaic frieze, but the strong-knitted, sinewy, and powerful muscle of an animal unused to restraint.

The greater part of these metopes may be considered perfect examples, as regards style; and they are equally remarkable for their execution, which is of that high quality which fully justifies us in attributing them to the hand of the greatest sculptor of the extraordinary period of Art to which they belong.

CHARACTERS IN 'CYMBELINE.'—II.

Posthumus and Iachimo.

They who are disposed to regard the dramatist as making Posthumus guilty of foolish credulity, in allowing himself to be convinced of his wife's infidelity by the evidence which Iachimo adduces, should attend to the sequel of that confession, from the mouth of Iachimo himself, of which, in our preceding paper, we have cited the former part. Still addressing Cymbeline, he says:—

> Away to Britain
> Post I in this design. Well may you, sir,
> Remember me at court, where I was taught
> Of your chaste daughter the wide difference
> 'Twixt amorous and villanous. Being thus quenched
> Of hope, not longing, mine Italian brain
> 'Gan in your duller Britain operate
> Most vilely; for my vantage, excellent, &c.

The sentence—

> Mine Italian brain
> 'Gan in your duller Britain operate,

shows us clearly the spirit in which the dramatist conceived the relation here subsisting between the deceiver and the deceived. He treats it as one illustration of the grand contrast presumed to exist between the open simplicity of the British character and the guile of the Italian. It is no defect of judgment in Posthumus, but the superabundance of craft in Iachimo, that is made to work this false conviction in the husband's mind. What says Iachimo himself on this point?

> My practice so prevailed,
> That I returned with simular proof enough
> To make the noble Leonatus mad,
> By wounding his belief in her renown
> With tokens thus, and thus; averring notes
> Of chamber-hanging, pictures, this her bracelet
> (O, cunning, how I got it!), nay, some marks
> Of secret on her person, that *he could not*
> *But think* her bond of chastity quite cracked,
> I having ta'en the forfeit.

So, in the chamber scene itself, he had anticipated the irresistibleness of these evidences. Taking off the bracelet, he says—

> 'Tis mine; and this will witness outwardly,
> *As strongly as the conscience does within*,
> To the madding of her lord. On her left breast
> A mole cinque-spotted, like the crimson drops
> I' the bottom of a cowslip: here's a voucher
> Stronger than ever law could make: this secret
> Will *force* him think I have picked the lock, and ta'en
> The treasure of her honour.

The same prevalent idea, as to the superiority of Italian cunning, appears in Imogen's exclamation to Pisanio, on their way to Milford-haven:—

> My husband's hand!
> That drug-damned Italy hath *out-craftied* him,
> And he's at some hard point!

as also in Pisanio's words to her:—

> It cannot be,
> But that my master is abused:
> Some villain, ay, and *singular in his art*,
> Hath done you both this cursed injury.

To show that, in fact, Iachimo has been elaborately delineated by the poet as a villain most "singular in his art," becomes requisite, in order to place the character and conduct of Posthumus in a light perfectly just and true.

In the banquet scene, indeed, wherein they first become acquainted, only one side of the Italian's character is brought out—the easy and familiar assurance of the libertine man of the world, sceptical as to all merit in men, and incredulous regarding feminine virtue. It is in his opening scene with Imogen that the powers of insinuation and deceit possessed by this "noble gentleman of Rome" begin to unfold themselves. Certain it is, that his very first glance at the princess whose virtue he has undertaken to assail, gives him an impression such as he has never before received from woman; and herein we find one of the master-strokes by which the poet exalts the ideal perfection of his heroine:—

> All of her that is out of door, most rich!
> If she be furnished with a mind so rare,
> She is alone the Arabian bird, and I
> Have lost the wager.

Already, indeed, his spirit quails before "the sun-clad power of chastity"; and he feels that the enterprise he has engaged in calls for all, and more than all, the resources of that *artful* and *tasteful* eloquence wherewith the poet has so exquisitely endowed him.

> Boldness, be my friend!
> Arm me, audacity, from head to foot!
> Or, like the Parthian, I shall flying fight;
> Rather, directly fly.

Digitized by Google

Yet, be it remembered, he has the advantage of that strongest of all possible recommendations to the good-will and the confidence of Imogen, that he bears to her the first letters she receives from her banished lord, and in them is commended to her by his own hand as "one of the noblest note, to whose kindnesses I am most infinitely tied. Reflect upon him accordingly, as you value your truest Leonatus." Well may she tell him, then,—

> You are as welcome, worthy sir, as I
> Have words to bid you; and shall find it so,
> In all that I can do.

How exquisite a masterpiece of insidious oratory do we find in his ensuing addresses! The engaging her curiosity and attention by the acting of abstracted astonishment—"What! are men mad?" &c.; then, the giving her to understand that he is occupied with a comparison between herself and some absent lady—

> It cannot be I' the eye; for apes and monkeys,
> 'Twixt two such shes, &c.

then the vague insinuation—

> The cloyed will,
> That satiate yet unsatisfied desire, &c.

until Imogen's question,—

> Continues well my lord? His health, beseech you?

informs him that he has succeeded in rousing in her breast obscure apprehension concerning her husband. Then we see the dexterity with which he touches this tender string, her anxiety for her husband's health and cheerfulness, till he makes his account of her lord's mirthful humour so naturally introduce the sentence wherein he attributes to him exactly one of his own voluptuary sentiments:—

> *O! can my sides hold, to think that man—who knows*
> *By history, report, or his own proof,*
> *What woman is, yea, what she cannot choose*
> *But must be,—will his free hours languish for*
> *Assured bondage!*

Then comes his "pity" for them both;—next, his more direct insinuation of her husband's infidelity—

> Had I this cheek
> To bathe my lips upon.....
> .....should I (damned then!)
> Slaver with lips as common as the stairs
> That mount the Capitol.....
> .....It were fit
> That all the plagues of hell should at one time
> Encounter such revolt!

To which she makes the beautifully characteristic answer—

> My lord, I fear,
> Has forgot Britain.

Up to this point the insinuator is successful, his suggestions appearing only in the guise of involuntary and undesigning exclamations. But in the very next sentence he begins to get out of his depth, and awaken her suspicions of him, by assailing her with direct flattery; and beautiful it is to watch the light, as to his true character, bursting more and more upon her mind. When he says—

> Not I,
> Inclined to this intelligence, pronounce
> The beggary of his change; but 'tis your graces
> That, from my mutest conscience to my tongue,
> Charms this report out,—

she answers, "Let me hear no more." But it is only in order that she should hear more, that he has told her so much already. He proceeds, according to her own expression, "to expound his beastly mind" to her, and so stands revealed in his true colours. When he first says "Be revenged," he staggers the belief of her husband's inconstancy, into which he had betrayed her.

> *If this be true,*
> *(As I have such a heart, that both mine ears*
> *Must not in haste abuse,)—if it be true,*
> How should I be revenged?

And when he arrives at the full disclosure of his object,—

> I dedicate myself to your sweet pleasure, &c.

how glorious is the flashing of the whole truth on her pure heart and her unclouded intellect:—

> Away! I do condemn mine ears, that have
> So long attended thee. If thou wert honourable,
> Thou would'st have told this tale for virtue, not
> For such an end thou seek'st, as base as strange.
> Thou wrong'st a gentleman, who is as far
> From thy report as thou from honour; and
> Solicit'st here a lady, that disdains
> Thee and the devil alike!

Our "false Italian," however, though repulsed and defeated, is not a whit disconcerted. His scheme of seduction, indeed, is extinguished; but in his "Italian brain" he has another scheme in reserve. The half of his estate to save—the diamond to win—his reputation for gallantry to sustain—and a perilous duel to avoid: these are powerful incentives to a man with little conscience. He, therefore, loses no time in making his peace with the lady; and with what admirable tact and self-possession does he apply the most delicate flattery to her admiration and affection for her husband:—

> O happy Leonatus! I may say,
> The credit that thy lady hath of thee
> Deserves thy trust; and thy most perfect goodness
> Her assured credit. Blessed, live you long!
> A lady to the worthiest sir that ever
> Country called his! and you his mistress, only
> For the most worthiest fit! Give me your pardon.
> I have spoke this, to know if your affiance
> Were deeply rooted; and shall make your lord
> That which he is, new o'er; and he is one
> The truest mannered, such a holy witch,
> That he enchants societies unto him:
> Half all men's hearts are his.
> *Imo.* You make amends.
> *Iach.* He sits 'mongst men like a descended god:
> He hath a kind of honour sets him off,
> More than a mortal seeming. Be not angry,
> Most mighty princess, that I have adventured
> To try your taking of a false report; which hath
> Honoured with confirmation your great judgment
> In the election of a sir so rare,
> Which you know cannot err. The love I bear him
> Made me to fan you thus; but the gods made you,
> Unlike all others, chaffless. Pray, your pardon.
> *Imo.* All's well, sir. Take my power i'the court for yours.

Then, harping on the same string, the interest that her lord has in the matter, follows his request, to have his trunk of pretended valuables taken under her protection; and her voluntary undertaking to keep it in her chamber.

That same bedchamber scene is surely one of the things most exquisitely conceived amongst all the exquisite conceptions of the Shakespearian drama. The involuntary homage rendered by sacrilegious villany to the very purity which it is plotting to slander, is imagined, not only in the highest poetical, but in the most powerful dramatic spirit. Iachimo's exclamation—

> Though this a heavenly angel, hell is here!

embodies the essence of the scene.

How admirably, too, both in this scene, and in the following one with Posthumus and Philario, are we shown the intimate combination, in this character, of the elegant voluptuary with the crafty deceiver; from which association results that self-possessed and insinuating eloquence with which this personage is so peculiarly gifted, and which we find exerted with art no less consummate in deluding the husband than it has been in attempting the seduction of the wife. Let us note the artful gradation by which he proceeds to lead the Briton to this false conviction. First of all, the letters which he delivers to Posthumus prove, that notwithstanding the speediness of his return, he has really visited the British court and the princess. Then comes his tastefully critical account of the decorations of her chamber—the tapestry—the chimney-piece—the ceiling—the andirons—becoming more and more close and particular, until Posthumus, after telling him at first—

> And this you might have heard of here, by me,
> Or by some other,

is led on to the admission—

> Let it be granted, *you have seen all this*, &c.;

and is so prepared by the belief that Iachimo, at all events, has actually had an opportunity of leisurely surveying the interior of his wife's bedchamber, to receive the full effect of his discovery of the bracelet.

Let us mark the subtlety of art with which this discovery is managed. Iachimo gives Posthumus at first, not the full view of it, but only a hasty and imperfect glimpse,—

> —— I beg but leave to air this jewel. See!
> And now 'tis up again: it must be married
> To that your diamond; I'll keep them.

The agitating effect of that glimpse upon the feelings of the husband can only be estimated by calling to mind, as he must instantly have done, the moment when he had last beheld the jewel in question, in that exquisite parting scene which had passed between himself and Imogen:—

> *Post.* Should we be taking leave
> As long a term as yet we have to live,
> The lothness to depart would grow. Adieu!
> *Imo.* Nay, stay a little:
> Were you but riding forth to air yourself,
> Such parting were too petty. Look here, love,
> This diamond was my mother's: take it, heart;
> But keep it till you woo another wife,
> When Imogen is dead.
> *Post.* How! how! another!
> You gentle gods, give me but this I have,
> And sear up my embracements from a next
> With bonds of death! Remain thou here,
> [*Putting on the ring.*
> While sense can keep it on! And sweetest, fairest,
> As I my poor self did exchange for you,
> To your so infinite loss; so in our trifles
> I still win of you. For my sake wear this;
> It is a manacle of love; I'll place it
> Upon this fairest prisoner.
> [*Putting the bracelet on her arm.*
> *Imo.* O, the gods!
> When shall we see again?

What then must be the agonizing tumult of emotion stirred in the exiled husband's breast by the momentary suspense into which this gesture of Iachimo's throws him, as to the identity of the bracelet which he sees in his possession! For the moment his whole soul is absorbed in *ascertaining* that identity:

> Jove!—
> Once more let me behold it!—Is it that
> Which I left with her?

It is this absorption of his attention, skilfully designed by his deceiver, and his stunning astonishment on the complete discovery of the fact, that leave his mind utterly unguarded, to receive quite passively Iachimo's artfully natural account of the acquisition,

> Sir (I thank her), that
> She stripped it from her arm; I see her yet:
> Her pretty action did outsell her gift,
> And yet enriched it, too: she gave it me, and said
> She prized it once.

And now the impostor has so far beguiled his victim as to make him absolutely *see* "the pretty action" delivering up the consecrated jewel, and feel as if he had no resource but to suppose she had intended it to be conveyed to himself:—

> May be she plucked it off
> To send it me.

And now that he has once admitted the idea of her having given it with her own hand, he is fast in the clutch of the fiend. Iachimo clenches his conviction by the simple rejoinder—

> She writes so to you, doth she?

thus turning the very heralds of her love into the most damning testimonials of her falsehood; so that in most logical consequence does Posthumus exclaim,

> O, no, no, no; 'tis true! Here, take this too;
> [*giving the ring.*
> It is a basilisk unto mine eye,
> Kills me to look on't!

His bias is now taken; he listens but faintly to his friend Philario's suggestion, that the bracelet may have been lost or stolen; and abandons it entirely on Iachimo's exclaiming, "By Jupiter! I had it from her arm,"—

> Hark you, he swears; by Jupiter he swears, &c.

Indeed, it should here be borne in mind, that this form of obtestation, in the age and country wherein this scene is laid, was a very different matter from swearing "by Jove" now-a-days: the oath by the father of the gods had a real and awful solemnity: and it is worthy of remark, that the dramatist, with subtle propriety, has made even the unscrupulous Iachimo employ it only this once, and in support of an assertion which, though not substantially, is literally *true*, "I had it from her arm." When Posthumus has hurried on to his conclusion, and given him the ring,—

> There, take thy hire; and all the fiends of hell
> Divide themselves between you!—

his Italian deceiver, like a perfect master of his art, seeing his dupe's imagination thoroughly on fire, thinks it worth his while to "make assurance doubly sure" by casting a little more fuel on the flame: describing to him the "mole, right proud of that most delicate lodging," and still asking, "Will you hear more?" until the unhappy husband is maddened into exclaiming,—

> I will kill thee, if thou dost deny
> Thou hast made me cuckold!

It is worth observing, too, regarding the question as to the reasonableness of Posthumus's conviction, that his own Italian friend Philario acquiesces in it at last, by saying to Iachimo "you have won."

Once arrived at this point, all the rage, despair, and desire of revenge, that we find bursting from the lips of the miserable husband, are intelligible enough. And here we must observe how seriously the acting play is mutilated by the entire omission of that soliloquy of Posthumus which immediately follows. Shakespeare's dramatic purpose in it is evident and essential—to lay clearly open to us that stormy deso-

Digitized by Google

lation, those volcanic heavings of a noble heart, our full conception of which can alone make us tolerate the purpose of sanguinary vengeance which is to be formed and pursued by his hero. That Elysian prospect of life which had opened to his view through the rich and roseate light of a noble and a happy love, is, by one dread thunderburst, darkened and devastated. By the force of contrast, the hell that now surrounds him calls up in more maddening brightness the smiling image of the heaven he has lost. Yet even here, from the very gulf of torture, the dramatist, in all his matchless and exquisite might, has drawn forth a tribute, the proudest and most delicate, to that purity and dignity of the very voluptuousness of virtuous love, which give the crowning charm to the interest of this delightful drama. No spirit less noble or less refined than that of Shakespeare himself, could have made the suffering husband's ruminations, on such an occasion, serve to cast the loveliest tints of all over the purity of Imogen—dewy and pearly—even as a reflection from the wings of Iris on the bosom of Venus:—

> Me of my lawful pleasure she restrained,
> And prayed me, oft, forbearance: did it with
> A pudency so rosy, the sweet view on't
> Might well have warmed old Saturn; that I thought her
> As chaste as unsunned snow!

Then the fierce contrast into which his imagination runs, as is ever the case when early faith in moral beauty is thus violently overthrown—

> This yellow Iachimo, in an hour—was't not?
> Or less—at first. Perchance he spake not, &c.:

all terminating in that fine tirade against the sex, which might serve as a standing text for all that amiable class of writers who are disposed to pen formal satires against feminine frailty, and contrasts so strikingly with the quiet answer, which, in the banquet scene, he had given to Iachimo's assertion of what he "durst attempt against any lady in the world,"—"You are a great deal abused in too bold a persuasion:" this is the man who is now worked up into telling us:—

> Could I find out
> The woman's part in me! For there's no motion
> That tends to vice in man, but I affirm
> It is the woman's part. Be it lying, note it,
> The woman's; flattering, hers; deceiving, hers;
> Ambitions, covetings, change of prides, disdain,
> Nice longings, slanders, mutability,
> All faults that may be named, nay, that hell knows,
> Why, hers in part, or all; but, rather, all;
> For, even to vice
> They are not constant, but are changing still
> One vice but of a minute old, for one
> Not half so old as that. *I'll write against them,*
> Detest them, curse them. Yet 'tis greater skill
> In a true hate, to pray they have their will—
> The very devils cannot plague them better!

But this, in the maddened husband, is the bitterness of mere despair; and the personal revenge which he meditates, should, in this, and all such cases, be regarded less as a murder than as a part of suicide. What says he in writing to his servant? "Thy mistress, Pisanio, hath played the strumpet in my bed; the testimonies whereof *lie bleeding in me.* I speak not out of weak surmises: from proof *as strong as my grief,* and as certain as I expect my revenge."—Revenge, alas! upon the dearest part of himself—made so by virtuous love in his own breast, and *therefore* never more to be made otherwise, even by her heaviest fault—to be destroyed, it may be, but assuredly to his own destruction:—

> Yea, bloody cloth, I'll keep thee; for I wished
> Thou shouldst be coloured thus. You married ones,
> If each of you would take this course, how many
> Must murder wives *much better than themselves*
> For wrying but a little.
> I am brought hither
> Among the Italian gentry, and to fight
> Against my lady's kingdom. 'Tis enough
> That, Britain, I have killed thy mistress. Peace!
> I'll give no wound to thee. Therefore, good heavens,
> Hear patiently my purpose: I'll disrobe me
> Of these Italian weeds, and suit myself
> As does a Briton peasant: so I'll fight
> Against the part I come with; so I'll die
> For thee, O Imogen, even for whom my life
> Is, every breath, a death: and thus, unknown,
> Pitied nor hated, to the face of peril
> Myself I'll dedicate.

After the battle, wherein he earns the praise of Cymbeline as "the poor soldier that so richly fought,"

> Whose rags shamed gilded arms, whose naked breast
> Stepped before targe of proof,

we find him pursuing the same desolate strain:—

> To-day, how many would have given their honours
> To have saved their carcases!—took heel to do't;
> And yet died too! I, in mine own woe charmed,
> Could not find death where I did hear him groan,
> Nor feel him where he struck. Being an ugly monster,
> 'Tis strange he hides him in fresh cups, soft beds,
> Sweet words, or hath more ministers than we
> That draw his knives i' the war. Well, I will find him:
> For, being now a favourer to the Roman,
> No more a Briton, I have resumed again
> The part I came in. Fight I will no more,
> But yield me to the veriest hind that shall
> Once touch my shoulder. Great the slaughter is
> Here made by the Roman, great the answer be
> Britons must take: for me, my ransom's death;
> On either side I come to spend my breath;
> Which neither here I'll keep, nor bear again,
> But end it by some means for Imogen.

And when his captors have thrown him into prison, comes the deep climax of his despairing and repentant resignation:—

> Most welcome, bondage! for thou art a way,
> I think, to liberty. .....
> ..... My conscience, thou art fettered
> More than my shanks and wrists. You good gods, give me
> The penitent instrument, to pick that lock;
> Then, free for ever! .....
> For Imogen's dear life, take mine; and though
> 'Tis not so dear, yet 'tis a life: you coined it.
> ..... And so, great powers,
> If you will take this audit, take this life,
> And cancel these cold bonds. O Imogen!
> I'll speak to thee in silence.

The total omission of these prison scenes in acting, is another great injury done to the dramatic interest as conducted by the poet. There may, indeed, be valid theatrical reasons for suppressing the vision of Posthumus during the slumber which is supposed to terminate his soliloquy: but the suppression deprives us of the solemnly pathetic effect of that simple chorus, which is plainly introduced in order, by recalling the whole tenor of the story, to remind the auditor that the hero is much more unfortunate than criminal, and to relieve our feelings by announcing an approaching deliverance from adversity,—at the same time that curiosity is kept alive by the mysterious terms in which the prediction is made. The attendant music adds to the soothing solemnity of the scene. How beautiful, too, is the plaintive simplicity of the ballad verses reciting his fortune, chanted by the apparitions of his deceased relatives, not one of whom has he seen in life. Thus, his father Sicilius:—

> Great Nature, like his ancestry,
> Moulded the stuff so fair,
> That he deserved the praise o' the world,
> As great Sicillus' heir.

Then, one of his brothers, who had fallen in battle against the Romans—

> When once he was mature for man,
> In Britain where was he
> That could stand up his parallel;
> Or fruitful object be
> In eye of Imogen, that best
> Could deem his dignity?

Next, his mother—

> With marriage wherefore was he mocked,
> To be exiled, and thrown
> From Leonati's seat, and cast
> From her his dearest one,
> Sweet Imogen?

Then, again, Sicilius—

> Why did you suffer Iachimo,
> Slight thing of Italy,
> To taint his nobler heart and brain
> With needless jealousy;
> And to become the geck and scorn
> Of the other's villany?

Now, the second brother—

> For this, from stiller seats we came,
> Our parents and us twain,
> That, striking in our country's cause,
> Fell bravely and were slain;
> Our fealty, and Tenantius' right,
> With honour to maintain.

And now, again, the first brother—

> Like hardiment Posthumus hath
> To Cymbeline performed:
> Then, Jupiter, thou king of gods,
> Why hast thou thus adjourned
> The graces for his merits due—
> Being all to dolours turned? &c.

In fact, both the sufferings and the deserts of the hero have now reached their climax; nor could they be more affectingly recalled to us than by thus evoking the spirits of his kindred, whose deaths had left him, at his very birth, a brotherless orphan. How fine a change, again, from the brief measure of this artless complaint, to the solemn flow of the lines supposed to be spoken by the descended Jupiter:—

> Poor shadows of Elysium, hence! and rest
> Upon your never-withering banks of flowers:
> Be not with mortal accidents oppressed;
> No care of yours it is; you know, 'tis ours.
> Whom best I love, I cross; to make my gift
> The more delayed, delighted. Be content;
> Your low-laid son our godhead will uplift:
> His comforts thrive, his trials well are spent.
> Our jovial star reigned at his birth, and in
> Our temple was he married. Rise and fade!—
> He shall be lord of lady Imogen,
> And happier much by his affliction made, &c.

And then, again, with what exquisite versatility does this miraculous artist change his hand once more, to give us that gloriously classical description of the deity's appearance, breathing all the sweet sublimity of a Milton, or even of a Sophocles!

> *Sicilius.* He came in thunder; his celestial breath
> Was sulphurous to smell; the holy eagle
> Stooped, as to foot us: his ascension is
> More sweet than our blessed fields; his royal bird
> Prunes the immortal wing, and cloys his beak,
> As when his god is pleased!

Posthumus, however, awakes as from an ordinary dream—

> Poor wretches, that depend
> On greatness' favour, dream as I have done;
> Wake, and find nothing.

Yet he finds the tablet laid upon his breast, foretelling an end to his miseries and prosperity to Britain, but in terms too mysterious for him to unriddle—

> 'Tis still a dream; or else such stuff as madmen
> Tongue and brain not: either both, or nothing:
> Or senseless speaking, or a speaking such
> As sense cannot untie. Be what it is,
> The action of my life is like it, which
> I'll keep, if but for sympathy.

And so he remains in perplexity, mocked by the mere phantom of hope.

We by no means agree with those who are disposed to think that the comic scene with the gaoler, which follows (omitted with the rest in acting,) was introduced by Shakespeare more for the sake of making some "score of barren spectators laugh," than from any real regard to dramatic art and propriety. It would be strange indeed to find him so trifling in the very midst of such intense earnestness! No—Shakespeare knew well that he was but presenting to us the last inevitable phasis of the mind in him who is at once condemned to death and desiring it—that "lightning before death" of which he elsewhere tells us—that careless interval when the man has cheerfully parted with this world, and is ready to "encounter darkness as a bride." The single line of Posthumus to the gaoler, "I am merrier to die than thou art to live," conveys at once the spirit and the vindication of the whole scene.

We are now arrived at a point where it is necessary, before terminating our view of the developement of Posthumus's character, to consider that part of Iachimo's which is unfolded in his remorse and his confession.

Be it well observed, that he is shown to us from the first as a disbeliever in feminine virtue, not like Iago, from an inherent grossness of nature, Caliban-like, rendering him inaccessible to the very idea; but from an experience of the sex, which has been so exclusively vicious, as to work in him a most sincere conviction of the truth of the doctrine which he maintains respecting them. The greatest triumph, as we have already remarked, which the poet gives to the pure radiance of Imogen's beauty, consists in the shock which the very first sight of her gives to this article of faith in the creed of the confirmed voluptuary. The result of his interview uproots it entirely: he is already a convert in theory, although too many motives of self-interest and self-love still urge him to be a sinner in practice. At once, however, he undergoes the bitter internal humiliation of being reduced from the part of a first-rate seducer, to the viler and more pitiable one of a cunning slanderer. We see every reason to presume that, as the terms of his final confession assure us, he had set out for Britain with no predetermination whatever to commit so black a piece of deception, but had unexpectedly found himself driven to it as a last desperate expedient. His conscience, which had rather misgiven him on his first interview with the lady, is much more ill at ease in the stealthy chamber scene; and in the following explanation with Posthumus, with all his consummate self-possession, we yet find there is something that withholds him from averring any *literal* falsehoods, at least, that he can avoid. And when once his vanity and his covetousness are

Digitized by Google

thoroughly gratified by the saving of his property and his reputation, and the winning of the costly jewel, the foulness of his guilt in calumniating such lovely and majestic purity, begins to oppress him, as one who is not by nature insensible to the charms of moral beauty as well as personal. In this frame of mind we find him when, on his re-appearance in Britain with the Roman troops, he is disarmed by Posthumus in disguise—

> The heaviness and guilt within my bosom
> Takes off my manhood: I have belied a lady,
> The princess of this country; and the air on't
> Revengingly enfeebles me.

This prepares us for his behaviour in the scene where, when brought captive before Cymbeline, he is questioned respecting the diamond ring upon his finger,—

> I'm glad to be constrained to utter that
> Which torments me to conceal. By villany
> I got this ring: 'twas Leonatus' jewel,
> Whom thou didst banish; and (which more may grieve
> thee,
> As it doth me,) a nobler sir ne'er lived
> 'Twixt sky and ground.———
> ———That paragon, thy daughter—
> For whom my heart drops blood, and my false spirits
> Quail to remember—Give me leave—I faint.—
> .....
> Upon a time (unhappy was the clock
> That struck the hour!)—it was in Rome (accursed
> The mansion where!)—'twas at a feast (O, would
> Our viands had been poisoned! or, at least,
> Those which I heaved to head!) &c.

The confession that follows, we have already cited. When the criminal, at the end of it, after describing the imposture he had practised upon Leonatus, begins to speak of the passion into which it had thrown him,—

> Whereupon,—
> Methinks, I see him now,—

comes that wonderfully effective dramatic situation, where Posthumus comes forward and discovers himself:—

> Ay, so thou dost,
> Italian fiend! Ah me, most credulous fool,
> Egregious murderer, thief, anything
> That's due to all the villains past, in being,
> To come! O give me cord, or knife, or poison,
> Some upright justicer! Thou, king, send out
> For torturers ingenious: it is I
> That all the abhorred things o' the earth amend
> By being worse than they. I am Posthumus,
> That killed thy daughter;—villain-like, I lie—
> That caused a lesser villain than myself,
> A sacrilegious thief, to do't. The temple
> Of virtue was she—yea, and she herself.—
> Spit, and throw stones, cast mire upon me, set
> The dogs o' the street to bay me: every villain
> Be called Posthumus Leonatus; and
> Be villany less than 'twas!—O Imogen!
> My queen, my life, my wife!—O Imogen,
> Imogen, Imogen!

Nothing can exceed the dramatic beauty of this electric burst of agonizing shame and remorse from the husband's heart, thus taking the place of Iachimo's intended account of the transport of vindictive rage into which he had fallen when first persuaded of his wife's infidelity. The atonement to the injured name of Imogen is now complete, and the catastrophe of the drama fully prepared; but before proceeding to it, we shall trace the rich developement of the character of the heroine herself, through all that romantic variety of fortune and of situation, by which the poet has so fondly delighted to diversify the exhibition of her personal, moral, and intellectual graces.

OUR WEEKLY GOSSIP.

THE Directors of the Liverpool Mechanics' Institution have decided on having a second public Exhibition of objects illustrative of the Fine Arts, National History, Experimental Philosophy, Machinery, Manufactures, &c. These exhibitions have now been held in most of our great towns, and always, it is believed, with the most beneficial effect; and yet nothing of the sort is done for the people in this great overgrown city. It is strange, seeing that London and the suburbs have been broken up into electioneering districts, that the several representatives and candidates for parliamentary honours, do not, as a mere question of cheap popularity, set themselves energetically to work. What so easy, for example, as for the members for Marylebone to form a committee, receive subscriptions—a very moderate sum would be sufficient—hire or borrow, say for two months, at the dead season of July and August, some of the riding-schools, barracks, or other great buildings in their district, and announce, that they will receive for public exhibition, all works of the class and character above referred to? The models, specimens, &c. thus collected might, by arrangement and consent of the parties, be then transferred to Finsbury or the Tower Hamlets, and so pass at little cost all round the metropolis. To many of the contributors, it would be a cheap and profitable advertisement, and to the public—to thousands and tens of thousands of worthy mechanics, and humble people, who cannot afford to throw away a day's wages or more, even for the instruction as well as amusement of their families—a most interesting and beneficial exhibition.

The Duke of Sutherland is, we hear, to preside at the Anniversary Dinner of the Literary Fund Society, which will take place at the Freemasons' Tavern, on Wednesday, the 10th of May; and Lord John Russell, at the Dinner of the Artists' Benevolent Fund, on the 6th of May.

Our countryman, Mr. Senior, has been elected a corresponding member of the Moral and Political Section of the Institute; M. Lainé (Professor of Natural Philosophy at the École Polytechnique), member of the Academy of Sciences, in the section of Geometry; and M. H. Rose, of Berlin, a corresponding member for the section of Chemistry.

The Report of the Directors of "The Booksellers' Provident Institution," read at the Annual Meeting last week, shows that the benefits to be derived from that excellent institution, are beginning to be generally known and appreciated among the trade, for there was a considerable increase in the list of members during the past year. The funded capital already amounts to 11,773*l.* In order to carry out more fully the intention of the projectors, it was proposed by the President, that a separate and distinct fund should be raised, for the purpose of forming a new society, to be called "The Booksellers' Retreat Association," which should have for its object the building of some small habitations in a healthy situation, for the reception of such aged and infirm members, or their widows, as may require a house to live in, in addition to the annuity granted by "The Booksellers' Provident Institution." This was so well responded to by the members present, that a subscription was immediately entered into, the President, Mr. Orme, commencing with 100 guineas, and followed by Mr. Nisbet, Mr. E. Hodgson, Mr. Brown, and Mr. Green, with 50 guineas each, besides others for smaller sums, amounting together to about 500*l.*

The Antarctic voyager, whose letter we had the pleasure to publish (*ante*, p. 212), mentioned, that the Expedition would proceed in August to St. Martin's Cove, near Cape Horn, where it would probably remain for two or three months, then return to the Falkland Islands, and thence proceed homeward or to the South Seas. It now appears, that the Expedition returned to the Falkland Islands on the 13th of November, having completed their various observations, and were still there on the 1st of December, but were to sail on the 6th for the Antarctic Seas. It is a curious coincidence that, as lately mentioned (*ante*, p. 241), Mr. Schomburgk, on his return from his explorations in the interior of Guiana, found, waiting his arrival, a letter informing him, that the gold medal had been awarded to him by the Geographical Society of Paris; so Captain Ross, on his return to the Falkland Islands, had the gratification to find a letter announcing that the gold medal had been awarded to him by the Geographical Society of London.

Those who were pecuniarily affected by, and therefore dissatisfied with, the decisive judgment of Mr. Serjeant Talfourd, respecting the illegality of Art-Unions, have, it appears, taken the opinion of Mr. Kelly, which, as it is understood, differs from that of his learned brother, and is in their favour. We shall not, of course, enter into the discussion (though a lawyer friend at our elbow observes, that it is a suspicious circumstance that the Opinion only, and not the Case submitted to Mr. Kelly, has been made public); but having read over again the passages which we formerly quoted (*ante*, p. 117) from the several Acts of Parliament relating to Lotteries, we will take especial care that no informer shall have it in his power to try the question at our expense.

On the subject of the Homeric Ilium, and the opinion of Dr. Von Eckenbracher, (referred to *ante*, p. 191) we have received the following communication:—

> Edinburgh, 13th March, 1843.
>
> In your number of February 25, I find a paragraph in which you state that Dr. Von Eckenbracher has published an article upon the site of the Homeric Ilium, and that his opinions on this subject seem to differ from those of his predecessors, as he removes Troy from Bunarbaschi (on which site, since the times of Chevalier, it has been supposed to be situated), two miles lower on the plain, to the spot which, up to the present time, has been known by the name of New Ilium. Will you allow me to state, that in 1822 I published a volume, entitled a 'Dissertation on the Topography of the Plain of Troy,' the leading object of which was to demonstrate this very proposition; namely, that Ilium Recens, which was patronized by Alexander the Great and the Romans, occupied the identical site of the Troy of Homer. A copy of the work was sent to Göttingen, and noticed in a German journal there; and six or eight copies were sent to Constantinople, and left with the British Embassy. I have the materials for a new edition ready, and shall probably bring it out before the year closes. CHARLES MACLAREN.

The most important consolidation of the public records, which has yet been effected in the Branch Office at Carlton Ride, was carried into execution last week, by the removal of the records of the late Court of Augmentations, (being the court created to take charge of the plunder which *augmented* Harry the Eighth's revenues,) from the office opposite Saint Margaret's Church, Westminster. For all topographical purposes connected with territorial property, and rights at any time in the possession of monastic establishments, or at any time in the hands of the Crown, since the dissolution of the monasteries, these records are of great value and interest. This collection is also the richest mine of general topographical information, which any class of our public records is able to yield, and still remains almost unworked, except for legal purposes. The collection too is not without its interest in Art, for it contains several hundreds of impressions of Middle Age seals, illustrative of costume, heraldry, architecture &c.; the workmanship of some being ascribed to Holbein. Until these Augmentation office Records were brought within the provisions of the Public Records Act, the access to them was as difficult and costly, as it has since been easy and cheap. Although the chief part of the collection has thus been transferred, some few classes yet remain to be removed, and will continue, as we are informed, in their old repository for a few weeks, until the Ride is ready to receive them.

A work now in course of publication at St. Petersburgh, under the title of 'Portretnaya i Biographitcheskaya Galereya (Portrait and Biographical Gallery), promises to afford much interesting and novel information relative to the literary men and artists of Russia. Hitherto, that department of its national biography has been much neglected: historical and military names constitute the bulk of those in Bantiesh-Kamensky's 'Celebrated Men of Russia.' Of literary names, in that work, the sprinkling is very scanty, and the articles are particularly meagre. Neither is the Russian 'Encyclopædia,' extensive as is its plan, so full in regard to native literary and artistical biography, as could be desired; besides which, it does not give any account at all of living Russians, however eminent they may be, notwithstanding that it contains articles of contemporary biography for every other part of Europe. Sokolov's 'Gallery,' on the contrary, will form a series of portraits and biographical notices, exclusively, of those who have distinguished themselves either in literature or the fine arts, and the majority of whom are still living. The list of persons intended to be included, is one of considerable length, and though few of them are unknown to us by name, we have hitherto, in vain, sought for further information relative to the respective individuals. A work of this kind will tend to make other countries better acquainted with the actual state of Russian literature and art, in regard to the former of which we have just been reproached for our indifference, by Mr. Shaw, in the prefatory remarks accompanying his translation of Marlinsky's 'Amalat Bek,' commenced in the last number of *Blackwood*. He is in error, however, when he supposes that no one in this country had before heard of any of the Russian novelists he mentions, for not only has the tale of 'Amalat Bek' itself been spoken of here, but an analysis of the story both of Bulgarin's 'Dimitri,' and Polevoi's 'Lomonosov,' appeared some years since, in the *Foreign Quarterly*. As to 'Amalat Bek,' which, we should say, is not only the best, but the only one

Digitized by Google

of Marlinsky's tales likely to be palatable to English readers, it will have a fair trial, appearing as it does in a widely circulated periodical. Should it find favour with the English public, it may create a desire to become acquainted with other productions of the literature to which it belongs.

Victor Hugo appears so to have managed or mismanaged matters in respect to his new drama, as to have embroiled himself and others in strange disputes. Last week we noticed the appeal of Mdlle. Maxime to the Cour Royale. Now, the papers bring accounts of a still more extraordinary law-suit. It appears that a literary gentleman presented himself on the morning of the first representation, at the office of the theatre, to take a place for the evening, and was informed that there was no place to let, and that *the whole of the pit was reserved for the author and his friends!* A complaint was immediately lodged, on the grounds that the theatre was a public one, and that the public was entitled to be admitted on payment of the price usually demanded. The Court declared itself to be incompetent to decide on the matter.

A M. Buchon has addressed a letter to the *Journal des Débats*, announcing his discovery of an historical fact which, he says, is unknown even to the learned amongst his countrymen, viz. that the French founded, in 1205, at the close of the fourth Crusade, a powerful feudal principality, in the Morea, Continental Greece, the Cyclades, and the Ionian Islands—"that is to say, within wider limits than those of the existing kingdom of Greece." To perfect his discovery, he has examined archives French and foreign, and sought in the scenes themselves the traces of the alleged domination. Of this journey and researches, he states the results to be—a collection of upwards of 200 unpublished documents, a Narrative of his tour, and a History of the French Principality in the Morea, during the 13th, 14th, and 15th centuries.

Letters from Rome announce the death, in that capital, of the Cardinal Prince Giustininni—from Athens, of the celebrated Colocotroni—from Toulouse, that of Count Joseph de Caraman, Prince de Chimay, whose recent successful search in that town for the burial-place of his illustrious ancestor, Riquet, was mentioned some time since in this paper—and from Paris, of M. Defauconpret, the translator of Scott's novels, in his 75th year.

A Return, giving the annual amount of gold, bank notes, and other valuables contained in letters, either not delivered, or refused and consigned to the Dead Letter Office, since 1837, and another exhibiting the progress of the Money Order department, have recently been presented to the House of Commons. Both show some curious results of the present cheap postage rates. In England, before the reduction of postage, the annual amount of property found in dead letters, was about 443,000*l.* Since the reduction it has only been about 298,000*l.*! The facility of the money order system has, no doubt, had its influences, but something perhaps must be allowed for the system of prepayment. There is now no such temptation to refuse a letter post-free, as formerly existed with an unpaid one, and especially a double letter, which any letter with an inclosure was. Many a money-letter, we have no doubt, was unwittingly refused under the old system. Besides, the apparent increased security, which, considering the increase of letters, is remarkable, may result from the practice, now pretty general, of acknowledging letters, and the general facility of correspondence. The receipt of a money-letter is easily announced. The effect of the adoption of the penny postage on the money order system, appears to have doubled the poundage received immediately. Cheap postage produced a greater effect than the reduction of the poundage, when the latter was reduced from 1*s.* 6*d.* to 6*d.* on sums between 2*l.* and 5*l.*, and from 6*d.* to 3*d.* on sums below 2*l.*, though these reductions advanced the revenue. From that period to the present time, the receipt of poundage on money orders has been rapidly increasing, and it is now about five times as great as before the reduction of postage. In the October quarter of 1839, the poundage received in England was 1,343*l.*; in the April quarter of 1842, it was 7,166*l.* It appears, indeed, from a letter written by one of the Honorary Secretaries of the Parker Society, a copy of which has been communicated to us, that "the collection of the subscriptions from even the most remote districts of the United Kingdom, is so greatly facilitated by means of Post Office orders, that last year more than 2,000*l.*" was thus paid to the Society.

We had great pleasure, on Wednesday morning, in hearing a service by the venerable Thomas Tallis, which was performed with a full assemblage of choristers, at Westminster Abbey. The stores of English music contain little which is more ancient: nothing (thus heard) which is more imposing. We know that antiquarianism may be pushed too far; that a zeal for revival may degenerate into an indiscriminate acceptance of what is precious and what is mean; and that the musician, unbiassed by nationality, must find in this antique work crude harmonies, monotony of colour, and a general want of design. But, all these characteristic features and deficiencies were forgotten, with the lofty vaults above our head, and the dim perspectives stretching hither and thither; while a solemnity of impression remains, beyond the power of any more modern conjurations. It is not desirable, that this music should ever be brought into the concert room: still less that it should be adopted as a model, since those adopting it must forget much that they have learned, ere attempting to write after so obsolete a pattern; but to hear it performed, from time to time, is a treat of the highest order, and we are glad that a disposition exists to keep the memory of it alive.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS is OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1*s.*: Catalogue, 1*s.*

WILLIAM BARNARD, Keeper.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.

Mar. 8.—The President, Mr. Warburton, in the chair.

1. Description of a new form of Encrinite, from the Dudley Limestone, by Mr. J. Chaning Pearce, F.G.S.—The remarkable fossils which form the subject of this paper were communicated to Mr. Pearce by Mr. John Gray, of Dudley. The generic name of *Pseudo-crinites* is proposed for them, and two species are described, both characterized by the arms and fingers being inserted in bands, which commence just above the column, and pass over the plates of the head, to its summit. One species has two, the other four, of these bands of fingers.

2. 'On the Non-locomotive and Locomotive powers of the family *Crinoidea*,' by Mr. J. Pearce.—The author proposes to group the animals of this family under two divisions: 1st. The "Non-locomotive," which, when once attached to any solid substance by their base or foot, were immovably fixed; and 2nd, the "Locomotive," which possessed the power of grasping with the foot any substance, and again relaxing their hold at pleasure. The first he subdivides into solid-footed and root-footed, and the second into branch-footed and sucker-footed. He enumerates examples of each section, and speculates on the habits and structure of the crinoids generally, concluding with a tabular view of the several divisions of the family.

3. 'On a Fossil Pine Forest at Kurrur-kurran, in the inlet of Awaaba, on the Eastern Coast of Australia,' by the Rev. W. B. Clarke.—The inlet of Awaaba occupies a portion of that formation of conglomerate and sandstone, with subordinate beds of lignite, which extends from the Hunter River southwards towards Brisbane water. It is the lignite of this formation which constitutes the so-called Australian coal. On a flat tract of the sandstone, covered by alluvium, the fossil forest described by Mr. Clarke is seen; the stumps and stools of fossilized trees, standing out of their soil, seeming as if the trees of a living forest had all been cut down to a certain level. In the adjoining lake also, to the distance of from 80 to 200 feet from the shore, similar stumps are seen peeping above the surface of the water, like a reef of rocks. The greater part of these stems stand vertically, and many have remains of their roots in the sandstone. The stools on shore stand from two to three feet above the surface of the ground, and are from two to four feet in diameter, but one in the lake is at least four feet above the level of the water, and is five or six feet in diameter. Sections of these stools exhibit the identical appearance of slices of modern pine wood, the rings of growth being as distinctly marked as in recent trees. In several of the stumps, 60 to 120 concentric rings of growth may be counted. Many of the stems have the bark adhering firmly to the trunk, and the bark in one instance was of the thickness of three inches. Its appearance in one or two cases was such as to show that it had been partly torn from the tree while yet standing: as if they had been broken down, and the bark had been rent by the fall. The upper extremities of the fossil stumps present clean horizontal sections; which shows that they were not broken off while recent, since no mode of fracturing recent pine-wood could have occasioned such neat, plane, and parallel sections as the summits of these stumps exhibit. Mr. Clarke enumerates other localities in Australia in which similar fossil forests are to be seen, and observes that it is probable that the bed of sandstone containing trees in a vertical position, which is found nearly at the same level above the sea at Kurrur-kurran, and other places, is the true geological position of that ancient forest, from which the enormous quantities of fragments of wood which occur either spread over the surface, or embedded in the sandstone above and below the lignite, have been derived. He infers from the present position of the fossil trees that the land must have been alternately depressed and elevated.

GEOGRAPHICAL SOCIETY.

Mar. 13.—Sir Charles Malcolm, V.P. in the chair.

1. A letter was read from Mr. Schomburgk, giving an account of his proceedings since his return from Takutu (see *ante*, p. 241).

2. A paper, by Major Sterling, E.I.C.S., stating the writer's opinion, that the desert about Cairo was, in very remote times, thickly wooded; an opinion which the Major endeavours to substantiate by passages from Scripture, and from the abundance of petrified wood that is met with in the valley of the Nile.

3. A paper, by Mr. Higgs, on the progressive rise of the river Thames, as indicated by the necessity for constantly increasing the height of the Thames marsh walls, and by the fact of old causeways, &c. found below the present level of high water in the river, and by other collateral evidence.

4. A letter from Major Rawlinson, on the Comparative Geography of Upper India. As the proofs of identification of sites is drawn from etymologies and comparisons of the statements of ancient authorities, this paper does not admit of being given in an abstracted form, so as to afford any satisfactory evidence.

ASIATIC SOCIETY.

March 11.—Prof. Wilson in the chair. The Secretary laid before the Society an appendix to the paper on the Bhíls, read at the last meeting. One part he read which contained some miscellaneous remarks on the mountaineers of India, by Col. Robertson. The observations of Col. Robertson seem frequently to be at variance with those of Capt. Hunter; but this arises from the circumstance, that the Bhíls of different parts of India are very diverse in their habits and manners, however agreeing in certain peculiarities. Those of Candeish are hard-featured, idle, poorly fed, and scantily clothed; cruel, reckless of life, and revengeful. As a counterpart to these vices, Col. Robertson states, that they are honest; so that in cases where they have left their ancient habitations without paying up their government taxes, they will remit the sum from a distance. Their fidelity may be depended on; and perfect reliance may be placed on their word. They are also kind and affectionate as husbands and fathers. Some of them are Mohammedans, but the majority follow the worship of Brahma.

The Secretary then read a Review of the Buddhistical and Jain literature of India, being a continuation of a paper on the Literature of India generally, by Dr. Stevenson. The Buddhists and Jains have many features in common. Both adopt the same great principles, both use a language not Sanscrit, but closely allied to it, and both vie with the Brahmans in their extravagant pretensions to antiquity; though it is fully recognized, that in India at least, the Brahmanical religion is more ancient than that of Buddha It is true, that the Buddha, who appeared in the

Digitized by Google

sixth century before the Christian era, represented himself as a successor of others who had preached the same doctrines for many ages before; but the Brahmanical traditions contained in the Puranas show the origin of this assumption. Bauddha doctrines, or at least doctrines discordant with the claims of Brahmanism, had been circulated before the sixth century B.C.; and many sages had loudly expressed their intolerance of many Brahmanical rites and articles of faith; but the propagators themselves were of the sacerdotal caste, and the Brahmans were content to allow mere speculations, or even attacks on their doctrines, to pass by without notice, provided no attacks were made on their own temporal pretensions. But the Buddha of the sixth century was not of the sacred caste. He taught men to disregard the distinction of caste altogether; and the benevolence of his practical tenets induced immense numbers to follow his preaching. The Brahmanical superiority was endangered; resistance was felt to be necessary for their self-preservation, and the Buddhists were compelled to separate themselves, and thus to form a distinct body and a new religion, while former followers of similar principles passed merely as slightly differing branches of the old faith. The ancient inscriptions, which are found from Guzerat to Bengal, show that a Buddhist prince, named Piadasi, or Asoka, reigned more than twenty centuries ago over the whole of northern and central India, and that he had diplomatic relations with Ptolemy and Antiochus, the sovereigns of Egypt and Syria. These inscriptions, deciphered by Prinsep, which had long baffled the curiosity of European antiquaries, prove to be edicts forbidding the slaughtering of cattle for victims, which was a common practice of Brahmans in those ages. Buddhistical works are now principally found in Nepal or Ceylon; the former in Sanscrit or Thibetan, the latter in Pali. There can be no doubt, that many were composed in India, but they have disappeared. The sum total of the doctrines have been given in the following stanza:—

> No vice is to be committed;
> Virtue must be perfectly practised;
> Subdue entirely your thoughts,
> This is the doctrine of Buddha.

A short extract was read from the Dulva, a Thibetan work on Bauddha Philosophy. The Mahawanso, translated by the Hon. Mr. Turnour, is a valuable historical document, though it requires much pruning of silly fables, and may be suspected as to matters occurring before the sixth century B.C. The libraries of China, Siam, and other Buddhistical countries, may be searched for remains of Buddhistical literature; and the writings of Rémusat and Hodgson throw some light upon the subject. The Jain literature is chiefly ceremonial. As an example of their style, an extract from the Kalpa Sustra, a digest of great authority in Guzerat, was read, being an exposition of the temporal benefits of religion. The Jains have adopted the rules of caste from the Hindús, though contrary to their principles; but in this they are like many Mohammedans, and even native Christians. The opinion of the most learned Indianists is, that the Jains were originally Buddhists; but that, by their nearer approximation, or outward conformity with Brahmanism, they have escaped that destructive persecution which has utterly rooted Buddhism out of India. A mode of persecution, which still prevails in India, is stated to be, that, when the Jains have built a costly temple to one of their saints, the Brahmans sometimes bring a *linga*, and consecrate the edifice to Mahadeva. The Jains resist; but the Brahmans being more powerful, and more influential with the government, invariably carry their point. Several temples in Guzerat have been obtained in this manner. Dr. Stevenson concludes this part of the subject, by observing, that the most celebrated Sanscrit dictionary—the Amera Cosha—was the work of a Buddhist. The remainder of the paper, on the Mohammedan and modern literature of India, was deferred.

Horticultural Society.—*March* 7.—R. W. Barchard, Esq., in the chair. The Rev. J. Antrobus, W. Brown, and G. Green, Esqrs., and Mr. J. Garraway, were elected Fellows. Mrs. Lawrence exhibited a handsome specimen of *Columnea scandens*, its light green foliage drooping gracefully around the pot, and each shoot bearing at its extremity large light crimson flowers; *Oncidium bifolium*, with a small, chocolate spotted perianth, and a large, bright yellow labellum; *Brassavola glauca*, in excellent health, which appeared to be owing to its being grown in earth instead of upon a block of wood; *Æschynanthus maculatus*, with dark fleshy leaves, amongst which its numerous clusters of scarlet blossoms produced a pretty effect; a species of Hippeastrum, with bright scarlet flowers, having a greenish centre; a large plant of the new *Begonia coccinea*; and the beautiful *Burlingtonia rigida*: a Knightian medal was awarded for the *Columnea*, *Burlingtonia*, and *Begonia*. From W. H. Story, Esq., well-bloomed plants of *Erica Petiveriana bicolor*, having pretty greenish-yellow tubular flowers, with a reddish tinge at the base, and prominent brown stamens; several handsome hybrid Epacrises, one called *coruscans*, with long crimson tubular blossoms; *E. rosea umbrata*, of the same form, but lighter than the preceding; and *E. magniflora*, of a deep rose colour, and remarkable for the freedom with which it blooms: a Banksian medal was awarded for the Epacrises. From Mr. Beck, very healthy and well-bloomed plants of *Cytisus racemosus*, *Leschenaultia formosa*, *Erica transparens*, *bicolor*, and three Cinerarias, all grown in slate pots, affording a further convincing proof that plants of any description may be cultivated in this material. Mr. Gaines exhibited two Camellias (one called Henri Favre), with neatly-cupped petals, of a bright rose colour; the other *C. monstrosa*, red, with a double row of outer petals, and having the centre filled up with smaller petals, of various forms. From Mr. Conway, two plants of *Pelargonium Lanei*, which appears to be a free bloomer, and well suited for early forcing. Messrs. Rollison exhibited the beautiful *Cœlogyne cristata*, with white flowers, having the labellum strongly marked with light yellow: a Banksian medal was awarded. From Sir G. Beaumont, Bart., a fair specimen of the Queen Pine, weighing 3lb. 10oz., sent for the purpose of showing that fruit of this variety may be well swelled in winter, if kept at a low temperature; the plant from which the present fruit was cut having been grown in a house never higher than from 50° to 55° by night, and from 60° to 65° by day, unless under powerful sunshine. Mr. Dredge, of Wallington, exhibited the root of a Pear-tree, which had been taken out of a well; this root was 33 feet long, and resembled a small rope, having only one or two ramifications during its entire length. From Mr. Scott, specimens of cast-iron pipes; these are so constructed that by means of moveable nuts, and screw-pieces cast upon the pipes, a series of pipes can be securely joined together, without soldering or brazing. The same person also exhibited a contrivance, in the form of a slide-expanding and contracting box, to allow for the alternate expansion and contraction of pipes containing steam or hot water. From the garden of the Society were plants of the large and small varieties of *Oncidium ampliatum*, the former bearing a fine spreading panicle of large, bright yellow flowers; *Dendrobium aggregatum*, with a drooping spike of sulphur-coloured flowers, having the centre of the labellum strongly marked with orange; the delicate little *D. secundum*; and *Acacia Riceana*, an elegant species, with drooping branches, loaded with a profusion of light yellow, feathery spikes of flowers.

Linnean Society.—*March* 7.—The Bishop of Norwich in the chair. Messrs. T. C. Janson and W. Solly were elected Fellows. Mr. Westwood presented two curious productions obtained from plants of *Sonneratia acida*. They had been sent by Mr. Templeton, of Ceylon, in which island the Sonneratia grows abundantly. These bodies were spindle-shaped, looking like great Clavarias. In a letter from Mr. Templeton, they were stated to be produced as off-shoots from the roots of the Sonneratia. The end most distant from the root had a distinct bark and pith, whilst that which was near the root sent off several distinct rootlets of its own. The middle, which was very much enlarged, as compared with the two ends, consisted of an exceedingly light, soft, fibrous, woody tissue. On this account it had been used with great success as a lining for insect cases. A continuation of Mr. Griffith's Paper on the developement of the ovulum of *Santalum* was read, and accompanied by drawings illustrative of the author's views.

Institution of Civil Engineers.—*March* 14.—The President in the chair.—The first two papers read were by Mr. M. Rankine. The first described a practical plan of setting out railway curves with precision and dispatch, by a method which depends on the well-known principle, "that the angle subtended at any point of the circumference of a circle, by a given arc of that circle, is equal to half of the angle subtended at the centre by the same arc." The operation of this method was shown to be practically superior, from its correctness and simplicity, to any other now in use among surveyors.—The second paper described an invention by Lieutenant Rankine, for suiting the action of the springs of railway carriages to variable loads: it consists in substituting for the usual shackles or rollers, a small convex plate at each end of the springs, so adjusted, that when the carriage is not loaded it bears on the extreme end, giving the greatest degree of flexibility, but owing to the convexity of the plate, the more the load is increased the nearer does the point of bearing of the plate upon the spring approach to the centre, thus giving it the necessary amount of stiffness to resist the pressure: the effect of the plate being virtually to diminish the length of the spring in proportion to the load, and thus to increase its strength in the inverse ratio of its length, and its stiffness in the inverse ratio of the cube of the same quantity. The experiments and the practical use of this contrivance on the Edinburgh and Dalkeith Railway, proved its utility.

The paper by Mr. Simms, 'On the Application of Horse Power to raising Water,' gave the results arrived at, from the use of nearly a hundred horses, working during stated periods daily, at eleven shafts drawing water by barrels with "gin rolls," from an average depth of 104 feet. The shafts were sunk in order to enable a driftway to be pierced in the direction and at the level of the base of the Saltwood Tunnel on the line of the Dover Railway: it runs through the lower greensand, which was so saturated with water, that it assumed the character of a quicksand, and it became necessary to use the most strenuous efforts to draw off the water, and enable the miners to form the drift, which was intended to operate the natural drainage. The length of time during which horses were employed, enabled Mr. Simms to make extensive experiments, which were carefully tabulated, with all the attendant circumstances, and the result appeared to be, that rejecting all forced work, horses working constantly for three hours raised 32,943 pounds one foot high in a minute: while, if they were forced to work constantly for six hours, they could only raise 24,360 pounds one foot high in a minute. These results differ materially from the data which have been hitherto received, inasmuch as the eight hour experiments of Boulton and Watt give 33,000lb., Tredgold 27,500lb., Sauveur 34,020lb., and Desagulier 44,000lb. Mr. Simms found, that if the horses were worked either a longer time, or at a greater speed, they soon died, but that with an average speed, and frequent relays, they bore their work well. From the regularity and the extent of his experiments he assumed them to be correct, although they differed from those which had hitherto been considered standard authorities on the subject.

Society of Arts.—*March* 8.—W. Tooke, Esq., V.P., in the chair.—His Grace the Duke of Norfolk was elected a Member.

Mr. Blashfield described the new material for tesselated pavements, and explained practically the process of constructing the same. The Roman tesselated pavements, described by Vitruvius, specimens of which are still in the British Museum, are coloured marbles of various kinds, and of different degrees of compactness and durability. Three years ago Mr. Prosser discovered that by subjecting a mixture of pulverized felspar and fine clay to a strong pressure between steel dies, the powder was compressed into about one-fourth of its bulk, and became a compact body, much harder and considerably less porous than the common porcelain. The first application of this discovery was to the manufacture of buttons, which are more durable and less expensive than those in ordinary use. One of the principal uses to which this invention is applied, is that of constructing tesseræ for pavements. The machine for making these tesseræ is very simple; a vertical screw, worked by a horizontal handle, twenty-four inches in length, is furnished with a steel die at the bottom, of the same shape as the intended tesseræ: immedi-

Digitized by Google

ately below this die is a cavity formed in the bed of the machine 1½ inch in depth, and corresponding with the die which works into it. The cavity being filled with the powder, in as dry a state as possible, pressure is applied by turning the handle of the screw rapidly round; and the bulk of powder is thus reduced in thickness from 1½ inch to three tenths of an inch. Each tessera, when formed, is raised from the bottom of the cavity by a moveable bed or die, worked by a vertical rod attached to a treadle. When removed from the press, the tesseræ are placed in an oven to undergo the process of baking. These tesseræ will bear a pressure of forty tons, and have been put to the most severe test in respect to the effect of frost on them, having been immersed in boiling water and then exposed to a temperature of 32°. They may also be exposed to a considerable degree of heat, so that flues may be constructed below the tesselated pavements thus formed without causing any injury to them. Blue and green colouring is effected by metallic oxides in the process of baking, but other colours are mixed up before being submitted to pressure. Compact and durable bricks are also made by a similar process, but subjected, of course, to a much greater pressure, which is effected by the use of the hydraulic press. Slabs of elaborate design, and inlaid with coloured devices, suitable for chimney-pieces, &c., are also made by this process, being submitted to a pressure of 250 tons before baking. The subject was illustrated by specimens; and several tesseræ were made by the machine and distributed among the company.*

Mr. Braithwaite described the process for producing imitations of Carvings, the subjects being illustrated by numerous specimens of mouldings, finials, &c., including a chair of rich design and elaborate workmanship. This invention was first produced in France, but has not been carried out in that country to any great extent. In carving wood, as usually performed, two persons are employed, the one to cut out the intended subject in the rough, the other to finish it. When a particular design is submitted to be prepared by Mr. Braithwaite's process, a mould is made of cast iron of the intended form, which is heated to cherry red, the heated mould being placed ready to receive the oak, chesnut, or other wood to be prepared. The block of wood is rapidly pressed into the mould by means of a lever press, with a power of from ten to thirty tons, according to the depth of cutting, and this is repeated until the full relief is obtained; the wood is then thrown into cold water, and the charred surface is afterwards scraped or brushed off, when the process is completed. After 250 impressions have been taken off, the mould requires chasing; and the whole number of impressions that may be taken from one mould amounts to about from four to five hundred.

March 15.—J. A Yates, Esq., V.P., in the chair.—Twenty-nine members were elected.

Mr. Wishaw read a description of Casella's Improved Pluviameter, or Rain Gauge, which consists of a hollow cylindrical vessel, 23 inches high and 3 inches and seven twelfths in diameter, mounted upon a hollow base, forming the segment of a cone, whose lower diameter is 13 inches, upper diameter 3 inches and seven twelfths, and height 8 inches. This may be filled with dry sand, or other substance, to give steadiness to the apparatus. It is furnished with three pointed legs, for the purpose of fixing it into the ground. At the top of the vertical cylinder is an open basin, of the same form and size as the base, perforated in the bottom with an aperture equal to one twelfth of an inch in diameter, through which the rain collected in the basin descends to the bottom of the cylinder, and the height of the column of water so collected is shown by a graduated glass tube attached to the cylinder, and communicating therewith at bottom. The tube is half an inch in diameter internally, and the graduation of the tube is in inches and tenths of an inch. The collective areas of the cylinder and glass tube being equal to one tenth of the area of the basin at top, a scale is readily formed for ascertaining the depth of rain fallen on the surface of the earth in a given time. The mode of adjusting the pluviameter before using it, is merely to fill the cylinder with water exactly up to zero on the scale.

Mr. J. Smith explained the principles of representing inanimate objects on paper, according to the fine systems of projection now in ordinary use among civil and military engineers, architects, and others, and which are termed orthographic, isometric, military, and perspective projections. The subject was illustrated by Mr. Smith's projective frame, and several models and diagrams.

METEOROLOGICAL SOCIETY.—*March* 14.—(*Anniversary Meeting.*)—Lord R. Grosvenor, President, in the chair.—The Earl Spencer was elected a Member.—The Treasurer read the Report of the Council, from which it appeared, that the Society has now sixty-five contributing Members, fifty-nine Associates in foreign parts, and ten Honorary Members.

The Secretary read two short papers, from J. H. Manerly, Esq.:—1. 'On a Grand Display of Meteors, with an accompanying Aurora Borealis, on the night of August 9, 1842.'—2. 'A Representation of Two Solar Haloes, a large Intersecting Circle, Five Inverted Arches, and Five Parhelia, about the Sun on the 12th of July, 1842.'

MEETINGS FOR THE ENSUING WEEK.

MON. Statistical Society, 8, P.M.
— Society of British Architects, 8.—'Some remarks on the Chapter House of Salisbury Cathedral,' by T. H. Wyatt.—'Some account of a curious double Spiral Staircase at the Church of St. Editha, Tamworth,' by B. Ferrey.
— Royal Academy, 8.—Sculpture.

TUES. Horticultural Society, 3.
— Institution of Civil Engineers, 8.—'Description of the Automaton Balance, invented by W. Cotton, Esq.,' by T. Oldham.—'Description of a Smelting Furnace and new filling Barrow, in use at the Butterley Iron Works,' by S. C. Kreeft.
— Linnean Society, 8.
— Chemical Society, 8.

WED. Geological Society, half-past 8.
— Society of Arts, 8.—Sir F. Desange's 'Improved elastic Machine for sweeping Chimneys,' will be described and illustrated.
— Medico-Botanical Society, 8.

THUR. Royal Society, half-past 8.
— Royal Academy, 8.—Painting.
— Royal Society of Literature, 4.
— Numismatic Society, 7.
— Society of Antiquaries, 8.

FRI. Royal Institution, half-past 8.—Mr. Arundale 'On the Architecture, Sculpture, Painting, and Literature of Ancient Egypt.'
— Philological Society, 8.

MUSIC AND THE DRAMA

HANOVER SQUARE ROOMS.—Mr. BRAHAM will sing in Haydn's Oratorio the CREATION, which will be performed by the MELOPHONIC SOCIETY, on WEDNESDAY EVENING, 22nd of March.—Principals, Miss Cubitt, Miss Ward, Miss A. Williams, Mr. Braham, and Mr. Leffler. Tickets, 3s.; reserved seats, 5s.; may be had at the Hanover Rooms, of the principal Music-sellers, or of the Secretary, T. Savage, 213, Tottenham-court-road.

ANCIENT CONCERTS.—The first Concert for this season was under the direction of H.R.H. the Duke of Cambridge, conducted by Sir H. R. Bishop, and attended by a fuller audience than is usual at the commencement of these aristocratic entertainments. The band and chorus were in good order, though by no means put to the best uses of which they are capable. Sir Henry Bishop's characteristic as a conductor is inertness; he takes all movements in too slow a *tempo*, and makes them yet seem slower by neglect of accent; has little regard to the pertinence of a dotted note (as was instanced in the case of Vinci's 'Vo solcando,' on Wednesday,) and none to any form of expression beyond a bald alternation of *piano* and *forte*. We have never been able to understand how a composer so long connected with the stage, and thence, beyond all other men, necessarily aware of the varieties of musical effect, can systematically neglect such essential matters. The singers were Madame Caradori Allan, Mrs. Alfred Shaw, Miss Birch, and a Mrs. Chatfield. The last lady made a creditable *début*. Her voice is rich, and fairly trained: nor was she to be affrighted out of a very satisfactory composure of style, by the formidable ordeal to which she was subjected; for what can be more trying than to sing before a *coterie* of Directors, not a word of whose criticisms can escape the aspirant, and a public who does not find it *bon ton* to applaud? To these may be added the names of Mr. Hobbs and Mr. Phillips. Could no better tenor singer be found to sing the opening of 'The Messiah,' than the former gentleman? His voice is now unequal to the task. As regards the music selected, the gems of the evening, to us, were, Handel's overture to 'Alcides,' with a minuet and march which might have been written yesterday, and a chorus—'Domine ad adjuvandum'—by Giovanni Porta. This was a Venetian composer, born about the end of the seventeenth century, who, for a while, was music-director to Cardinal Ottoboni, the patron of Corelli, subsequently paid a visit to London, and finished his career as chapel-master to the Elector of Bavaria, in whose service he died in 1740. His name is appended to seventeen operas: some of which must be well worth inquiring after, if the noble composition, produced on Wednesday, be a fair specimen of his genius. We have not heard anything so grand, save from Handel. The opening movement, indeed, bears so close an affinity to the 'Hailstone Chorus,' that we could not help speculating whether the splendid plagiarist, who from an ancient dance tune, could weave the Pastoral Symphony in 'The Messiah,' might not possibly have made its acquaintance: a fugue which follows is little less admirable. How low have the Italians fallen since such music was written, and not by their most famous men!

SACRED HARMONIC SOCIETY.—The Concert yesterday week was one of the most interesting we have ever attended in Exeter Hall. The *programme* was made up of an Anthem by Dr. Crotch, Beethoven's Mass in C major, and the 'Lobgesang' of Mendelssohn, with some recent additions by its composer. It is wise in the Society, from time to time, to attempt such novelties, since their production must satisfy the public, either by enlarging its stores of pleasure, or by convincing it that the most familiar works are the worthiest. It is in right of his 'Palestine' that Dr. Crotch has always been cited as among our classical authors. Yet the reputation of his Oratorio has been maintained as much by the care with which it has been hoarded up, as by intrinsic merit or individuality. In its style, we recognize an attempt to combine the characteristics of Handel and Mozart; but the successful execution of such an idea seems to us impossible. The Anthem performed yesterday week is written in the same mixed manner. The opening chorus is decidedly after the fashion of the modern German Catholic motett writers, with a flow of easy melody, supported by florid orchestral figures; while the final chorus, if anything, is Handelian, in the more ancient and formal motion of its accompaniment. We suppose, too, that the puerile reiterations of the word '*Rejoice*,' at the close, may have been suggested by the "*Alleluia*" of the Messiah, or the repeated "*continually*" in the 'Cherubim and Seraphim' chorus of the Dettingen 'Te Deum.' The work will not bear a second hearing.

The performance of Beethoven's Mass offers occasion for a few words on the expediency of producing any service-music at a concert—on the place of the individual composer among modern mass-writers—and on the executive powers of the Sacred Harmonic Society. It is our judgment that, by transplantation, all service-music loses effect; not merely from a transfer of associations, but because, in its original form, there are pauses between the separate movements, affording the ear time for rest—while, by continuous performance, a heaviness and monotony are stamped on the work, calculated to depreciate its value. Next, as to the place Beethoven should hold among the mass-writers:—less secular, more select, more spiritual than Mozart and Haydn (who have given us 'Kyries,' 'Quoniams,' and 'Donas,' which have all the airy cheerfulness of stage music); more picturesque and inventive than Cherubini and Hummel,—this Mass in C reaches the highest perfection in that composite style of church music, which allows the admixture of orchestral intricacy and vocal grandeur. It is difficult to single out particular portions where all is so high-toned, so melodious, so appropriate, and so original; but we cannot forget the 'Qui tollis,'—the central portion of the 'Credo,' including the 'Et incarnatus' and the 'Et resurrexit'—the entire 'Benedictus,' which, though somewhat of the longest, might, if properly performed, displace the more familiar 'Benedictus' of Mozart's *Requiem* from its high place in English favour—and the exquisitely tranquil and holy close of the entire composition. We have the less pleasant duty of stating that, to those who did not know this admirable work by heart, its effect must have been chaotic and

* We have an article on the subject of Decorative Pavements in type; but the publication of it must be deferred until we have more space at our command. In the mean time, we may announce that Mr. Owen Jones has lately published some *Designs for Mosaic Pavements*.

Digitized by Google

unsatisfactory, owing to bad performance. The organ, which is always to be employed with mistrust in the complicated music of the modern schools,—was never in tune with the orchestra;—from the latter again, two of the *solo* singers were as perseveringly at variance. The band, on no occasion strong enough in its violins, was more than usually tame and wavering. For instance, we listened anxiously for the spirited passages in the 'Credo,' to the words "Cujus regni," or thereabouts; but all the firmness, character, and brilliancy of the phrase, were so entirely inaudible, that a large portion of the audience was probably not aware of their existence. The above drawbacks are calculated to operate unfavourably upon Beethoven's music. Till it be performed with as much spirit and precision as Handel's Oratorios, let it not be judged.

We have left ourselves no room to speak of the performance of Mendelssohn's 'Lobgesang,'—the less familiar work claiming precedence; its beauties, however, were cordially relished, though imperfectly developed. Neither have we room to do more than advert to the Annual Report of the Society, by which, in despite of all rumours, it is proved to be in a thriving condition. Our strictures are an evidence of the sincerity of our good wishes for its permanence and progress.

HER MAJESTY'S THEATRE.—The opening of the Opera season, this day week, was brilliant as regards ballet. A new *divertissement* introduced to us Mdlle. Dumilatre, one of the most promising of the younger race of dancers; "fair to see," as the old ballads have it, and very effective in that floating and poetical style, which Taglioni was the first to introduce, and Duvernay and Carlotta Grisi have since so charmingly adopted. She was ably supported by a numerous *corps* of young ladies, and by poor M. Perrot. His brilliant feats and flights, however,—and never were they more brilliant,—were cut short by a sudden sprain, which compelled him to leave the stage. The music of this *divertissement*, which is long enough to be of some importance, is mean and characterless: yet we hear that its concocter, Signor Pugni, has been intrusted with the new ballet, 'Esmeralda.' After the opera, 'La Tarentule' was revived, with Mdlle. Fanny Elssler as its heroine. Her re-appearance was triumphant, and deservedly so. Not one of the delicacies of her art has been lost by her during her campaign in America—not one point of style is exaggerated: while she appears to us alternately more arch and impassioned in her pantomime, more firm and brilliant in her execution than ever. To speak of the opera is a less agreeable duty. The 'Adelia' of Donizetti,—a feeble and uninteresting passage from French history,—does not contain a single bar of melody or harmony worthy of production. A quadrille tune in the prelude, a morsel of chorus in the first act, and a movement *à due* in the second, are all the passages which recur to us; and none of these rise to mediocrity. Madame Persiani was the heroine, with her voice, alas! in a most unsatisfactory condition; thinner, and more false than usual in its intonation. Her exquisite art in ornament, however, has rarely been shown to greater advantage. Signor Conti was the tenor. From certain prefatory announcements, we hoped for something in his style more pure and manly than has been recently presented to us: but he seems as inferior to Signor Guasco, our last year's tenor, as Signor Guasco is to Rubini. Making allowances for a bad cold, stage-fright, and the other difficulties of a first appearance, the impression remains, that Signor Conti's voice is limited, being only a note and a half, at the utmost, higher than a baritone, as that voice is now understood; and either singularly untoward, or else never properly developed in practice; while his only attempt at style was an adoption of Tamburini's least defensible peculiarity; preposterous roulades by way of cadences; and these were rough and incomplete. No tenor on the English stage dare venture anything so commonplace and so ill-executed. The other parts in this dreary opera were filled by walking gentlemen, of whom it is needless to speak.

COVENT GARDEN.—The revival of 'Oberon,' for Mr. Bunn's benefit, will not add to the reputation of Covent Garden as an operatic theatre: the work being one which, owing to the undramatic nature of its construction, demands every possible scenic aid, and a nicety of execution not attained on Monday evening. Among all the performers engaged, Miss Poole, as *Fatima*, was the only one who had even a partial success. The choruses were coarse, the processions meagre, and the scenery and dresses parcel showy parcel shabby. Of Weber's exquisite music we spoke so fully (*Athen.* No. 704) that we need not again dwell on its beauties. We have rarely seen so mirthful or so discriminating an audience in an English theatre; not a fault was unobserved. After the opera, Mdlle. Fanny Elssler brought the house round into a humour to praise, by her brilliant dancing in Auber's 'Maid of Cashmere,' this being the first time, we believe, that she has performed the character of *La Bayadere* in England.

MISCELLANEA

Paris Academy of Sciences.—Feb. 27.—A voltaic pile of a new form, recently adopted in Germany, the invention of M. Reiset, was exhibited. There are several glass vases, containing diluted nitric acid, in which floats a cylinder of coal. In this cylinder is placed a vase of porous earth, containing sulphuric acid, which has in it a rolled leaf of amalgamated zinc, each leaf being in communication, by a metallic conductor, with the diaphragm of the adjacent vase of coal. The coal cylinders are made of a mixture of bituminous coal and coke, calcined in a mould, and then passed under a lathe, and damped with sugared water, and again calcined. The pile exhibited was composed of forty elements. All the experiments performed with it were satisfactory. The intensity of the current is great, and the expenditure of zinc is small.—A specimen of gilded paper was submitted by M. Annois. The artist has endeavoured to reproduce the effects of the gilding in old manuscripts, and, by a process which he imagines to be the same as that adopted by the artists of former times.—M. Arago announced the order given by the Minister of Marine for the residence of an hydrographical engineer at the Marquesas; and the Academy, appointed a commission, with instructions to provide all the means required to render the decision of the Minister as efficacious as possible.—M. Petit, Director of the Observatory of Toulouse, communicated some observations on a remarkable aërolite which was seen at Toulouse on the 3rd of June last.—M. Fournault laid before the Academy a paper on the causes of the diseases which affect workmen in manufactories, and persons of sedentary occupations, and on the means of prevention. The author states—1. That the chronic diseases observed in manufactories, prisons, penitentiaries, hospitals, and public establishments for education, and in low and damp situations, act principally upon the skin. 2. That ventilation and muscular exercise are the most efficacious means of prevention, and that when the diseases exist the most successful method of treatment is in re-establishing the activity of the functions of the skin, and particularly the promotion of insensible perspiration.—A report was made of the results of the experiments of MM. Dander and Flandin, of the effects of arsenic upon sheep, and the length of time which should be allowed to elapse after the administration of the poison before the animal is used as food. They stated that arsenic is a poison for sheep as well as for dogs and man; but that they may take an infinitely larger dose without danger, and that six weeks should for more perfect security be allowed to elapse after giving the arsenic before they are killed for the market; although MM. Dander and Flandin, and some friends, ate the mutton of a sheep to which a large dose of arsenic had been given 35 days before, without experiencing any inconvenience. Whatever the time may be, however, at least a week should pass during which the urine exhibits no traces of arsenic; for in some cases the animal may appear to be in its normal state, and yet arsenic will be found in the fluid secretions.—*March* 6.—M. Elie de Beaumont read a report on a paper by M. de Castelnau, giving an account of his geological researches in America. M. Liebig, in order to show that he was not in error in his estimate of the component parts of vegetable alimentary substances, laid before the Academy the result of some new and apparently conclusive experiments.—M. Velpeau read a paper on the anatomy, physiology, and pathology, of closed cavities, and on the treatment of the dropsy, of which these cavities may become the seat.

The Earthquake.—The speculations hazarded last week, that Guadaloupe had been the centre of the convulsion, has been already confirmed, and the worst anticipations more than realized. The extent of the mischief is not known, but the most populous city, Pointe-à-Pitre, is entirely destroyed, and, it is believed, that from 1500 to 2000 persons had been either killed or wounded. Of the earthquake, or of the accompanying circumstance, it is only mentioned, and that incidentally, that it lasted about 70 seconds.

Meteorology.—The Madrid journals mention, that at Valencia, on the 1st of March, during a heavy gale of wind, an immense red mass was seen in the horizon, which advanced gradually, and at length covered the whole sky over the city. It then disappeared slowly, leaving the streets covered with a fine red-coloured dust.

Dr. Lepsius and his Party.—Our excellent correspondent, Mr. Wild, has left us but little to glean, from the German papers, respecting Dr. Lepsius and his party; the following, however, from letters in the *Prussian Gazette* is a pleasant and graphic sketch, and may interest our readers:—"We rise early in the morning, and the silent desert soon teems with busy life. While in Europe the whole landscape is buried in darkness, here the first rays of the sun are gilding the tops of the Pyramids, and the golden orb itself soon rises majestically over the eastern mountains. At 9 o'clock, A.M., our workmen come from the neighbouring village, and squat in a circle, waiting for us to fix their respective occupations. The fresh cool breeze of the morning tempts us, likewise, to labour: for at sunrise we have often had only + 2° Reaumur. These clear days are especially bright and cheerful. The desert, broken by wonderful lights and shades, glitters with its strange and varied colours. The beautiful valley of the Nile lies like a velvet carpet of black and green; canals wind through the country like blue threads; villages rise out of the palm groves, and beyond, in the distance, sparkle the white minarets of Cairo: on the top of the hill stands the citadel, which, with every peak and formation of the rock, appears in clear, sharp outline, although tinted by a beautiful violet-coloured vapour; and over all the scene bends the cloudless vault of the pure blue sky. At times, however, we have cold, stormy days, with winds which shake our tents, and sometimes sweep all before them, making us fain to take shelter in a friend's dwelling, in some neighbouring grave. The sunsets are unspeakably beautiful. The western sky is on fire with orange and rosy light, while the mountains glow with a golden purple hue. At this time we all collect in the open air, Germans and Arabians, the latter their day's work done, waiting for their pay. Our nights are such as you in Europe have no conception of. Orion is right over our heads, under him Canopus, unknown to the skies of Europe; the pole star lies close on the horizon, and the bear almost dips into the sea. Of all this which I am describing, you will be better enabled to judge by our great map, prepared on the basis of the excellent chart of Wilkinson, which, however, has been improved by us in many important points. But neither map nor words can give you an adequate idea of the surpassing magnificence of the scene in this kingdom of the dead. It is with the Pyramids as with the Coliseum at Rome: the mind seems incapable of taking in the gigantic whole, and ever beholds them again with renewed wonder. The immense giant blocks of stone are all reduced to the most precise mathematical shape, and thus all the beauty of form and mass impress themselves on the mind together. I had but lately left that wonder of our German architecture, the Cologne Cathedral, and the difference between the two was indeed striking. In both the same mathematical precision of form: in both the same victory of mind over matter. But our German art had clothed the naked outline with a gorgeous robe of ornament and decoration, while these monuments of Egyptian antiquity present themselves to us in the majesty of exquisite but unornamented precision of shape and figure. We are soon about to repair to Fayum, to study the labyrinth and the lake of Mœris, for which Linant, an architect in the service of the Pasha, has made extensive preparations. I have already visited and made out about eighty-two burial-places. The sculpture, in many, is very beautiful, both in high

Digitized by Google

and low relief; but they do not seem at that time to have attained canons of proportion, which we find prevailing afterwards. The pictures on the walls are exceedingly beautiful, representing, frequently, passages in the life of the deceased, and seem intended to present to the eyes of the spectator his wealth in slaves, housee, cattle, &c. I think, that from the information I have obtained concerning the private life of these worthies, I could draw up a history of the court and camp of King Cheops, or Cephren. The finest graves, those hewn out of the rock, are chiefly those of princes, relatives, or prime ministers of the Pharaoh in whose time they lived. Many of the noblest princes seem to have been employed as "architects to his majesty," and superintendents of public buildings. I am now employing from forty to sixty men in disinterring the temple in front of the great Sphinx, part of which I intend to take a plaster cast of for the museum at Berlin. My companions are very industrious, having already drawn, and almost finished, one hundred folio sheets. If we proceed in this way we shall have rich treasures to show on our return."

The Ecclesiologist continues the catalogue of offences against ecclesiastical proprieties. Among the most striking, the following are recorded: the conversion of the Chapel of the Apostles, attached to the old priory of Tynemouth, into a powder magazine!—The font of Beckenham church (Kent) is in the garden of the "Crooked Billet," a public house at Penge Common. The carved bench-ends in the church of St. Mary, Bishops Lydiard, were lately sold to panel a dining room. The granite tower of St. Andrews Plymouth, is undergoing repair with Portland stone *painted* to represent granite, though abundance of the latter material is to be had on the spot,—and so on, the recitals filling about six pages of small print. But we notice these numbers chiefly to acknowledge the efforts which the Society is making, like ourselves, for purifying the unholy state of Westminster Abbey. "There seems," says the *Ecclesiologist*, "to be but one feeling amongst intelligent people, a feeling finding daily utterance in the periodical press, and growing more confirmed by constant repetition in private circles, that the present desecrated condition of the Abbey, with its fees for entrance, its revolting monuments, and its miserable Choir, is a disgraceful contrast to that state in which its liberal founders intended to leave it, and the Church expected from its appointed guardians that it should be preserved."

American Journalism.—A New York paper gives the following statistics with reference to this subject. The number of journals and periodical works published throughout the Union is 1,641, of which 148 appear daily, 1,141, weekly, 125, twice or thrice a week, and 227 at longer intervals. There are 1,552 typographical printing offices in the States, giving occupation to 15,000 or 16,000 workmen; and about 500 great bookbinding establishments.

Silk.—The *Moniteur* publishes some details of experiments made on silk and cotton grown in Algeria. Specimens of the latter, produced in 1841 in the government nursery, were sent to Rouen, and delivered to some of the manufacturers. They had it worked up, and have declared unanimously that its excellence is undeniable, and that it bears a great analogy to the cottons of Pernambuco, Bahia, and Maragnan. Other experiments are at present being proceeded with at Lille and St. Quentin.

An Extraordinary Bar of Iron.—The largest bar of iron ever made has been rolled at the Cyfarthfa ironworks, near Merthyr Tydvil, and is, we are informed, for a house in Holland. It is a cable bolt, 25 feet in length and 6 inches in diameter, and weighs about 2,400lbs. The pile from which it was rolled was about 7 feet long by 12 inches square, and weighed upwards of 2,600lbs. The pile was taken from the heated furnace and put at once into the rolls, just in the same manner as they roll bars of an ordinary size.

To CORRESPONDENTS.—F. S. A.—W. C. B. received.—Verito, the one name includes three provinces; the other fixes the locality to one province.—J. G., we decline, with thanks.—We should have been greatly obliged had the extracts from the letter referred to by "An old Subscriber (Plymouth)" reached us in time; but even he must have sent his name, in confidence.

Erratum.—Page 212, col. 1, line 13, for "bursting" read *trusting* flowers.

G. Berger, Holywell-street; and W. Brittain, Paternoster-row.

CYCLOPÆDIA OF BIBLICAL LITERATURE. By John KITTO, Editor of 'The Pictorial Bible,' assisted by numerous able Scholars and Divines.

Notice to the Trade and Subscribers.

*** The Publishers having made arrangements with Messrs. Dayton & Newman, of New York, to republish this Work in America, have found it necessary to postpone the appearance of the First Part till after the departure of the American steamer (April 4th), the anticipation of the value of the Book being so general in that country, that several houses have expressed a determination to reprint it as soon as they can get possession of the sheets, and thus deprive the Proprietors of any advantage to be derived from the sale of the Book in the United States.

Adam & Charles Black, Edinburgh.

To be completed in 60 vols. royal 8vo., double columns, distinguished by typographical beauty, and at a price varying from 16*s.* to 1*l.* 4*s.* per volume, under the assistance of the most eminent Hellenists of France and Germany.

FIRMIN DIDOT'S GREEK LIBRARY, with Latin Versions and Complete Indexes. The following authors are now published:—Homer and the Cyclic Poets, 1 vol.—Hesiod and the Minor Poets, 1 vol.—Aristophanes and Fragments, 1 vol.—Æschylus and Sophocles, 1 vol.—Lucian, 1 vol.—Polybius, 1 vol.—Thucydides, 1 vol.—Xenophon, 1 vol.—Appian, 1 vol.—Fragments of Historians, 1 vol.—Diodorus Siculus, Vol. I.—Scholia Græca in Aristophanem, 1 vol.—Theophrastus and the Minor Moralists, 1 vol.—Plutarch's Moralia, 2 vols.—Vetus Testamentum, 2 vols.—Novum Testamentum, 1 vol. The most correct editions have been selected as the groundwork of the text, and have been collated with manuscripts in the Royal Library of Paris and in the libraries of the Vatican and Florence. The numerous fragments which have been recovered by the enthusiastic industry of Angelo Mai and others are inserted in this edition, which is distinguished in consequence by important additions, as well as by emendations in the text. Each volume may be had separately, and the complete collection will contain what in other editions would make 400 volumes, and sell at four times the price. London, F. Didot & Co., Amen-corner, Paternoster-row.

Dickinson & Son, 114, New Bond-street.

NEW BARONETAGE.
In 1 vol. price 7s. 6d. fcap. 8vo. with Illustrations drawn by Hermann, and engraved by Armstrong,
THE BARONETAGE of the BRITISH EMPIRE for 1843.
Messrs. CUNNINGHAM & MORTIMER will publish, in a few days, a new Baronetage, differing in arrangement, information, and several other important features, from any other publication on the subject.
For the first time a Baronetage will appear in which a succinct genealogical account will be given of the whole members of the order, chronologically classified under the respective creations—as, 1. Baronets of England. 2. Baronets of Ireland. 3. Baronets of Scotland and Nova Scotia. 4. Baronets of Great Britain; and 5. Baronets of the United Kingdom.
The Families who are Lords of Manors in England and Ireland, and Free Barons in Scotland, will be particularised; and the eminent services for, or remarkable occasions on, which the members receive their baronetcies during the last and present century, will be specified.
This work will also contain an Historical Account of the original Institution of the Baronetage, and of the Rights, Privileges, Immunities, and Precedency vested in it by the Charters of its royal founder.
It will be elegantly illustrated with Engravings of the different Insignia, and with examples of Arms charged with the exterior heraldic ornaments incidental to the order.
Adelaide-street, Trafalgar-square.

ARGUS LIFE ASSURANCE COMPANY,
39, Throgmorton-street, Bank.
Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.
Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.
Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.
In addition to the subscribed Capital of 300,000l. the assured have the security of the Company's Income of nearly 60,000l. per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.
The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.
Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.
In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.
A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.
EDWARD BATES, Resident Director.
A Liberal Commission to Solicitors and Agents.

Directors—Jas. Stuart, Esq. *Chairman.*
Hananel De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£135 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past Two o'clock.

CLIMATE.—Mr. T. WILKINSON KING, induced by the necessity of his own case, and long experience of delicate health, which some time since oblized him to visit the tropics, having been at great pains to arrange a pleasant temperature, with a free circulation of pure air throughout his entire house, which is of ample dimensions, wishes to RECEIVE TWO OR THREE INVALIDS, who would be benefitted by protection from the severities and changeableness of this climate, which is so constantly prejudicial in cases of weak lungs or rheumatic affections, as well as in many other chronic or variable disorders. The above arrangements are designed to obviate the necessity, as well as the distress and mischief, of a journey or sea-voyage, and they are presumed to afford some advantages that cannot be otherwise attained.

Address 38, Bedford-square; or Guy's Hospital.

ECONOMY—IMPORTANT TO HOUSEKEEPERS.

T. WILLIAMS, 11, Charing-cross, begs to call the attention of the Nobility, Gentry, and Public in general, to his extensive STOCK of HOUSEHOLD and STABLE BRUSHES (all made under his own personal inspection); also his superior HAIR, CLOTH, TOOTH, NAIL, and general TOILET BRUSHES, the whole of which he offers at remarkably low prices.—A large assortment of Combs, Perfumery, Sponge, Chamois Leathers, French Sieves, Stove Lustre, &c. &c.—OBSERVE, No. 11, CHARING-CROSS, opposite Spring-gardens.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

OLD ENGLISH or INLAID ORNAMENTAL TILES, for Paving Churches, Halls, Corridors, &c.—WYATT, PARKER & CO. beg to acquaint the Public they have now a large assortment of these beautiful TILES, in imitation of the best ancient examples from the Chapter-house, Westminster, Winchester Cathedral, Romsey Church, Great Malvern, &c. Being made of the famous red Staffordshire clay, they are of a less porous body than the ancient tiles, consequently are more durable, and will bear the roughest usage to which a foot pavement can be subject, and are, therefore, more economical than any of the stones and marbles now in use for similar purposes. The floor of the Temple Church is laid with these tiles. A great variety of other tiles for flooring, and ornamental tiles for the sides of stoves, dairies, baths, &c. Also the plain blue and red Staffordshire tiles for paving schools, areas, &c., to be seen at Wyatt, Parker & Co.'s Wharf, Holland-street, Surrey foot of Blackfriars-bridge.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, 130 B, Oxford-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, Crests, &c. for book plates, in their proper HERALDIC COLOURS, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 7*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their Warehouses,

EGYPTIAN HALL, PICCADILLY, and 122, BISHOPSGATE-STREET WITHIN,

or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.* 12*s.*, and 6*s.* per ream; note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.*, and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large, and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting books, Bibles and Prayers, gold and silver pencil-cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, pateries, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices.

LEA AND PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged goût, pronounce it to be "the only good sauce;" and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietor's stamp over the cork of every bottle.

SILVER SUPERSEDED, and those corrosive and injurious metals, called Nickel and German Silver, supplanted by the introduction of a new, and perfectly matchless ALBATA PLATE. C. WATSON, (late ALDERMAN,) 41 and 42, BARBICAN, aided by a person of Science in the amalgamation of Metals, has succeeded in bringing to Public Notice the most beautiful Article ever yet offered; possessing all the richness of Silver in appearance—with all its durability and hardness—with its perfect sweetness in use—undergoing as it does a Chemical Process, by which all that is nauseous in mixed metals is entirely extracted—resisting all acids—may be cleaned as silver, and is manufactured into every article for the table and sideboard.

	s.	*d.*		*s.*	*d.*
Table Spoons and Forks, per doz.	16	6	Mustard Spoon	0	6
Dessert ditto, ditto	12	6	Tea Spoons, per dozen	5	6
Fish Knives	5	6	Gravy Spoons	2	6
Soup Ladles	6	6	Salt ditto	0	6
Sauce Ladles	1	6	Sugar Tongs	1	0

In order that the Public may not be deceived, C. W. has quoted the price of his *best* Plate; three prices lower may be had of lighter weights.

C. Watson begs the Public will understand that this metal is peculiarly his own, and that silver is not more different from gold, than *his* metal is from all others; the Public will therefore have no difficulty in discovering the animus which directs the virulent attacks made against him, by a party who is daily suffering from the unparalleled success which has marked the progress of his New Plate since its introduction. C. W., unlike this *party*, courts comparison, feeling confident that the result will establish its pre-eminence. Entire services of plate purchased.

TEA TRAYS, and TEA URNS, SOLAR and CANDLE LAMPS, KNIVES, and FORKS, &c.—This house has, for fifty years, possessed an unrivalled celebrity in furnishing hardware. A set of three full-sized Gothic paper trays, 35*s.*; a best Gothic border 30-inch Japan tray, 12*s.*; a dozen ivory table knives, 11*s.*; dessert ditto, 9*s.*; a pair of carvers, 4*s.* 6*d.* A Palmer's Candle Lamp, bronze or lacquered, 9*s.*; a solar ditto, to burn common oil without smoke or smell, 25*s.*; hot water dishes, for venison, steaks, and stews, of all sizes; fenders and fire-irons in great variety; fine steel penknives, 1*s.* each; best ivory-handle razors, 3*s.* 6*d.* per pair.

41 and 42, Barbican, and at 16, Norton Folgate.

DR. GREEN'S SULPHUR, FUME, MEDICATED, and VAPOUR BATHS, 40, Great Marlborough-street.—For more than twenty years Dr. Green's attention has been directed to the remedial agency of baths of different kinds upon the human body; and for the same length of time he has superintended an Establishment for their due and proper administration.

Judiciously employed, Fume and Vapour Baths are beyond all question, invaluable as principal or auxiliary means in the treatment of many kinds of chronic disease, particularly Rheumatism and Rheumatic Gout, Affections of the Skin, and impaired functions of the great Abdominal Viscera.

These Baths are accessible at all hours of the day to the public at large, and to members of the medical profession, with their patients, in cases where it is desirable that the medical attendant should witness and direct the administration of the bath.

CARD-PLATE ENGRAVED TO ANY PATTERN 2*s.*, and 100 Visiting Cards, from plate, 2*s.*; Plate engraved with CREST and Name, 5*s.* Note paper 4*s.*, 6*s.*, 8*s.*, and 10*s.* per ream; letter, 8*s.*, 10*s.*, 12*s.* 6*d.*, and 15*s.* per ream. Any of these papers stamped with Crests, Coronets, or Initials, at 5*s.* per ream, or richly finished in gold, silver, or colours, at 1*s.* 4*d.* per quire: no charge for the die. Wafers from the die, 1*s.* per 100, or 6*s.* 6*d.* per 1,000; high satin palace note paper, five quires, 1*s.* 6*d.*; envelopes, 5*s.*, 7*s.* 6*d.*, and 9*s.* per 1,000, or 1*s.* per dozen stamped; sealing wax from 4*s.* per lb.; best drawing pencils 4*s.* per dozen. An elegant assortment of envelope, blotting, and travelling cases, dispatch and music boxes, scrap and drawing books, albums, Bibles and Prayers, fancy inkstands, pencil cases, pen holders, toilet and scent bottles, wafers, and every article, suitable for presents, lower than any house in the trade. Playing cards 1*s.* 6*d.* per pack, or four packs 5*s.* Newspapers lent to read at 9*d.* per week. CIRCULATING LIBRARY.—Terms: 3*l.* 3*s.* per annum, including all the New Publications and Periodicals, at MARSHALL & CO.'S, Stationers and Engravers, 12, Curzon-street, May-fair, corner of Queen-street. Orders by post punctually attended to.

LOOKING GLASS and PICTURE FRAME MANUFACTORY, 13 and 14, LONG-ACRE.—JAMES RYAN begs to call the attention of those who may favour him with their orders to his splendid Stock of Looking Glass, Picture, and Print Frames, Girandoles, Console Tables, Cornices, Candelabras, Screens, Brackets, and every article connected in the above line, made to any pattern or design, at such prices as will defy competition. Fancy Wood Frames in every variety of pattern, at his Wholesale and Retail Manufactory, 13 and 14, Long-acre.

LOOKING GLASSES, &c.—TO ALL PARTIES FURNISHING.—W. E. GOULD respectfully acquaints his friends and the public, that he has on sale a large assortment of CHIMNEY GLASSES of superior quality, in gilt frames, which for elegance of design and superiority of workmanship, are not to be equalled at moderate prices. Window Cornices from 4*s.* 6*d.* per foot. A variety of Picture Frames; Cheval and Toilet Glasses; Regilding in all its branches. Every article manufactured upon the premises, 19, MOORGATE-STREET, CITY.—A few Second-hand Chimney Glasses for sale.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years: he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.

Yours, &c. JOHN KILVINGTON.

To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.

OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.*, and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 2*s.* ("This is the best book on nervousness we have."—*Prof. S——, Surgeon.*)

ELEVEN CHAPTERS on NERVOUS or MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, knows not 20 uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3.

INFLUENZA, COUGHS, AND COLDS.

SIMCO'S ESSENCE of LINSEED is the most efficacious remedy ever discovered for the relief of persons suffering from Influenza; the two first doses generally arrest the progress of this distressing complaint, and a little perseverance completely removes it. Children's Coughs, as well as those in adults, will be removed by a few doses (frequently by the first), and asthmatic persons, who previously had not been able to lie down in bed, have received the utmost benefit from the use of it. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate-street Without, London, and all Medicine Venders, in bottles at 1*s.* 1½*d.* or 2*s.* 9*d.* each.

ROWLAND'S MACASSAR OIL, under the Special Patronage of Her Most Gracious Majesty, the Royal Family, and the several Courts of Europe.—This Oil has acquired celebrity for its truly extraordinary efficacy and fecundity in nourishing, preserving, and beautifying the Human Hair. It imparts an additional vigour to the roots, together with a glossy brightness, and a beautiful tendency to curl. For inducing an accelerated growth of Whiskers or Moustache, the MACASSAR is unfailing in its stimulative operation. In reference even to the Hair of early childhood, the use of the Oil is found attended with the happiest effects.—Mild, invigorating, stimulative, and purifying, it materially assists in dispelling scurf or dandriff, and renders supererogatory the use of the fine-comb. Price 3*s.* 6*d.*, 7*s.*, Family (equal to four small) 10*s.* 6*d.*, and double that size 21*s.* per Bottle.

CAUTION.—Ask for "ROWLAND'S MACASSAR OIL," and see that those words are on the Wrapper, as much pernicious trash is now offered to the Public as "MACASSAR OIL" by Perfumers of apparent respectability.

Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, and by Chemists and Perfumers.

MR. COLBURN'S NEW PUBLICATIONS.

I.

LIVES OF THE PRINCES OF WALES,

HEIRS TO THE BRITISH THRONE,

FROM THE MOST AUTHENTIC PRIVATE AND PUBLIC SOURCES.

By FOLKESTONE WILLIAMS, Esq.

Author of 'Shakspeare and his Friends,' &c.

In small 8vo. with Portraits and other Illustrations, from Drawings by G. P. HARDING, Esq. F.S.A.

"Although some of the distinguished personages who bore the time-honoured title of Prince of Wales, and succeeded to the British throne, have, as kings, attracted the attention of historians, these writers, whilst tracing the course of events, have never touched, except very slightly, upon the most pleasing portion of regal biography—the personal details; and there is a large mass of historical material in the different public and private libraries in this kingdom, unknown to the general reader, that will assist in completing a series of portraits, which, independently of the extraordinary interest that peculiarly belongs to them, possess other national recommendations in being inseparably connected with such glorious achievements, romantic adventures, and picturesque incidents, as are to be found in no other part of our annals. 'The Lives of the Princes of Wales,' will doubtless, therefore, prove one of the most entertaining, as it must be one of the most truly national works ever published. The first volume contains the LIVES of EDWARD OF CAERNARVON, afterwards King Edward II.; EDWARD OF WINDSOR, afterwards King Edward III.; and EDWARD OF WOODSTOCK, commonly called the Black Prince."

II.

HARGRAVE; OR, THE ADVENTURES OF A MAN OF FASHION.

By MRS. TROLLOPE,

Authoress of 'The Vicar of Wrexhill,' &c. 3 vols. post 8vo.

"Our belief is that, in point of mere popular attraction, this work will surpass all the author's previous productions. The 'adventures' which it relates are so extraordinary in themselves—they bear such strong evidence about them of being founded on fact—they present so singular and fearful an exposure of the dark places that lie beneath the glittering surface of fashionable life—they lead us into so close an intimacy with the motives, movements, and personal character—the 'be-all and the end-all,' which make up the sum and substance of that most brilliant of ephemera, 'a man of fashion;' and, moreover, they do all this with a hand so unsparing in its satire, so unrivalled in its force and spirit, and so infallible in its tact and truth, that high as Mrs. Trollope at present stands in public favour, we have no hesitation in believing that the present work will greatly enlarge her popularity, and thus extend that power which she invariably uses to such admirable purposes."—*Naval and Military Gazette.*

III.

NARRATIVE OF A VOYAGE ROUND THE WORLD,

Performed in HER MAJESTY'S SHIP 'SULPHUR,'

During the Years 1836–1842.

INCLUDING DETAILS OF THE LATE NAVAL OPERATIONS IN CHINA.

By CAPTAIN SIR EDWARD BELCHER, C.B. F.R.A.S. F.G.S. &c., Commander of the Expedition.

UNDER THE AUTHORITY OF THE LORDS COMMISSIONERS OF THE ADMIRALTY.

In 2 vols. 8vo. with upwards of 40 Illustrations, price 36*s.* bound.

"The Voyage Round the World which is here detailed by Sir Edward Belcher, will be received with more curiosity, and read with more interest and information, than any book of travels that has for a long time seen the light; and though from the strictly national and scientific purposes which the expedition had in view, and which the work itself is intended to aid and complete, it can scarcely be expected that the volumes should contain so much of a mere popular character as a book of desultory adventures might do,—on the other hand, the vast extent of the tract passed over, the astonishing number of places visited, and the unequalled interest and curiosity attaching to a large portion of the latter, conspire to render a voyage of this nature superior in its attractions to all other books of travel. There is one feature of the narrative which gives to it a peculiar interest at the present moment,—we allude to the part taken by the *Sulphur* in the Chinese War. The whole of this portion of the work we especially commend to our readers' attention; no less on account of the gallant services performed by Captain Belcher in the Chinese waters, than for the graphic and spirited manner in which they are here related. The work is enriched by a large number of excellent Plates, and by three entirely new Maps, one of them giving the whole route of the Expedition."—*Naval and Military Gazette.*

IV.

HANDLEY CROSS; OR, THE SPA HUNT:

A SPORTING NOVEL.

By the Author of 'Jorrocks' Jaunts and Jollities,' &c. 3 vols.

"We hope we have done enough [says the *Quarterly Review*, at the close of its notice of this work], to bring Jorrocks fairly before the non-sporting part of the public,—the others will not need our recommendation. His historian, it must be obvious, is a writer of no common promise. The easy style in which the author of 'Handley Cross' arranges and draws out his characters, satisfies us that he might, if he pleased, take a high place among our modern novelists. He has a world of knowledge of life and manners beyond what most of these now in vogue can pretend to, and a gentleman-like tone and spirit, perhaps even rarer among them."—*Quarterly Review*, March, 1843.

V.

HISTORY OF THE HOUSE OF COMMONS.

From the Convention Parliament of 1688-9 to the Passing of the Reform Bill in 1832.

By WM. CHARLES TOWNSEND, Esq. M.A.

1 vol. 8vo. with a fine Engraving of the Interior of the House of Commons in 1690, 14*s.* bound.

"This work is intended to give a popular History of the Commons' House of Parliament, and will comprehend the lives of the Speakers, of the Lawyers, Orators, and Statesmen, who have been most distinguished in its annals—a review of the Privileges once enjoyed by Members, and their hard-won right to personal and deliberate freedom—a record of the vindictive powers exercised by the House over its own body and strangers—a narrative of the internal economy of St. Stephen's Chapel—the changes in the habits, manners, and character of the constituency—in the decorum and method of proceedings—in the tone and temper of discussion, and in the progress of intelligence and refinement. It is proposed to unlock the store of light reading, the fund of interest and amusement, which has been concealed from the general gaze in the voluminous Journals, State Trials, Parliamentary Debates, Precedents of Hatsell, and contemporary memoirs and pamphlets. The first volume includes the period from the abdication of James II. to the death of George I., characterised by 'Master Spirits,' critical events, and stirring debate: a monument, however imperfect, to the memory of those patriotic legislators who framed the Bill of Rights—conquered France in her height of pride—established the Union with Scotland—secured the Protestant faith by the Act of Settlement, and with the Septennial Act confirmed the independence of the representatives of the people."

HENRY COLBURN, Publisher, 13, Great Marlborough-street.

☞ *Orders received by all Booksellers.*

London: JAMES HOLMES, 4, Took's Court, Chancery Lane. Published every Saturday, at the ATHENÆUM OFFICE, 14, Wellington-street North, Strand, by JOHN FRANCIS; and sold by all Booksellers and Newsvenders.—Agents: for SCOTLAND, Messrs. Bell & Bradfute, Edinburgh:—for IRELAND, J. Cumming, Dublin.

Digitized by Google

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 804. LONDON, SATURDAY, MARCH 25, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. Baudry, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1l. 2s. the year. To other Countries, the postage in addition. [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

ACADEMICAL DEGREES.—Gentlemen of LITERARY or SCIENTIFIC PURSUITS, MINISTERS, or Others properly qualified, desirous of GRADUATING, may RECEIVE EFFICIENT ASSISTANCE from the Advertiser.—Address (pre-paid), stating qualifications, to M. D., 15, Tottenham-court New-road.

HOFWYL HOUSE, Stamford Hill, Middlesex.—The Educational Plans at this Establishment are founded on the practice of PESTALOZZI, FELLENBERG, and other celebrated Educators. The course of instruction is extensive and profound, embracing the Ancient and Modern Languages, the Mathematical and Physical Sciences, Geography, Astronomy, Chemistry, Drawing, Gymnastics, &c. The Terms for a complete course of instruction in English, with board, &c. are Twenty-four Guineas per annum. French, German, Italian, Greek, and Latin, each Three Guineas extra.

To render the instruction more real and effective, a select library is provided, and an extensive collection of philosophical and chemical apparatus, with cabinets of minerals and shells; a laboratory, bath, workshop, gymnastic apparatus, &c.—Prospectuses may be had of Messrs. Jones & Co. 30, Lower Holborn; or of the Principal, as above.

TO BOOKSELLERS.—W. E. JEANES, BOOKSELLER, EXETER, being at present disengaged, would be glad to undertake the Management of the Business of an OLD and NEW BOOKSELLER, either in TOWN or COUNTRY, and would have no objection to TRAVEL.—Present address, Portugal Hotel, Fleet-street, London.

WANTED, a good clean Copy of the Edition of PAUL KEUTZNER'S TRAVELS, printed at the press of T. E. Williams. Reading, 1807. 4to.—Particulars as to price and condition to be sent (pre-paid) to Messrs. Seacome & Prichard, Booksellers, Chester.

WANTED, as APPRENTICE to a BOOKSELLER, for seven years or less, according to his age, a well-educated YOUTH, who has at least acquired the rudiments of Latin and French, and writes a good hand. He will have an unusual opportunity of acquiring an extensive knowledge of the profession in all its branches, both English and Foreign, wholesale as well as retail. Premium, to reside with the family, 250 guineas; or if boarded and lodged by his friends, 100 guineas.—Address, post paid, to Henry G. Bohn, York-street, Covent-garden.

PUBLIC NOTICE.—ART-UNION OF LONDON.—The Subscribers are respectfully requested to take notice that the ANNUAL GENERAL MEETING, to receive the Report of the Committee, and distribute to the amount subscribed for the purchase of Works of Art, will be held at the THEATRE ROYAL DRURY LANE, (by the kind permission of W. C. Macready, Esq.) on TUESDAY, APRIL 25, at 11 for 12 o'clock precisely. His Royal Highness the DUKE of CAMBRIDGE, President, in the Chair.—Subscribers will be admitted on presentation of the receipt for the current year, at the entrance in Brydges-street. The LISTS WILL BE CLOSED on Friday, the 31st instant. An immediate payment is solicited.
4, Trafalgar-square, Charing-cross.
GEORGE GODWIN, F.R.S. F.S.A.) Honorary
LEWIS POCOCK, F.S.A. } Secretaries.
4, Trafalgar-square, 15th March, 1843.
*** The legality of the Art-Union of London has been fully established by the highest legal authorities.

SOLO SINGING.—To Vocal Amateurs.—It is a very frequent occurrence that Ladies highly musical both in theory and practice sing but indifferently. Madame GOULD PANORMO begs to say she can give the highest testimonials of the success of her mode of instruction, and undertakes to capacitate pupils in this delightful accomplishment in SIX or TWELVE interesting LESSONS, guaranteeing a superior style of articulation, expression, and intonation, in English or Italian; likewise the several classes of Scotch, Irish, and English ballad, bravura, sacred, and sentimental music. She receives Ladies and Junior Pupils at her residence, 5, Piccadilly, on Wednesdays and Saturdays.

EXETER HALL.—Under the Sanction of the Committee of Council on Education.—SINGING, on the METHOD of WILHEM, under the Direction of Mr. JOHN HULLAH.

CLASS No. 24, FOR GENTLEMEN,

Will commence on Wednesday, 29th of March, at half-past Six o'Clock, and meet on Monday, Wednesday, and Friday Evenings.
Terms, 30*s*. for the Course of Sixty Lessons, or 7*s*. per month, (Twelve Lessons.)

CLASS No. 25, FOR LADIES,

Will commence on Wednesday, the 5th of April, at a quarter-past Five o'Clock, and meet on Monday, Wednesday, and Friday Evenings.
Terms, same as Class No. 24.
Each Pupil must be provided either with the Lessons, price 1*s*. 6*d*., or the Manual, price 6*s*., published by Mr. Parker, 445, West Strand.
All Monthly Subscribers are required to make *two* payments in advance.
Tickets may be obtained at Exeter Hall, any Evening, except Saturday, between the hours of Five and Nine.
N.B. No other Singing Classes will be opened this Season.

PRINTERS' PENSION SOCIETY.—The ANNIVERSARY DINNER will take place at the LONDON TAVERN, Bishopsgate-street, on TUESDAY, the 4th of April next, CHARLES DICKENS, Esq. in the Chair.

Stewards.

HARROWING of HELL, a Miracle Play of the Reign of Edward II. Now first published, 8vo. 2*s*.

MERRY TALES of the WISE MEN of GOTHAM. Post 8vo. 1*s*.
J. R. Smith, 4, Old Compton-street, Soho, London.

OLD DIVINITY.

W. POTTER'S MONTHLY LIST of SECOND-HAND BOOKS (Part 68th), chiefly consisting of SCARCE OR INTERESTING DIVINITY; BIOGRAPHY of EMINENT DIVINES; CONTROVERSIAL PIECES on the PROTESTANT and ROMISH FAITHS; WORKS by WRITERS of BOTH CHURCHES; PRODUCTIONS of EMINENT MEN of VARIOUS SECTS; &c. &c.: to which is appended some CURIOUS and UNCOMMON WORKS, from the Library of the late Mr. W. HONE, Author of the 'Every Day Book,' &c., is now ready, and can be had gratis on application at 12, BEAR-STREET, LEICESTER-SQUARE. It will also be found appended to the present Monthly Part of the *Athenæum*.

W. POTTER HAS ALSO ON SALE,

ANNUAL REGISTER (Dodsley's), from the Commencement in 1758 to 1837, with Index. 71 vols. 8vo. half-bound, very neat, 12*l*. 18*s*. 1758-1837

EDINBURGH REVIEW, from the Commencement in 1802 to 1840, and Volume of Index. 71 vols. half-bound russia, 11*l*. 15*s*. 1802-40
*** Both the above sets are fine clean copies, equal to new, being uniformly bound, from Numbers as published, and are not made up with cropped or soiled volumes.

Boccius De Consolatione Philosophiæ, cum Commentario Thomæ de Aquino. First Edition, formerly Prince Talleyrand's copy, since bound in blue morocco extra, with joints, vellum linings, and fly-leaves, gilt edges, &c., by C. Lewis. 5*l*. 5*s*. Norimb. per Ant. Coburgers. 1476
A magnificent and noble specimen of early typography. Indifferent copies have hitherto produced at sales from 6*l*. to 13*l*. 13*s*., for which latter sum a copy was recently sold at Paris.

BOILEAU (Nic.) SES ŒUVRES, avec des Eclaircissemens Historiques. Frontispiece, fine portrait, plates, and smaller engravings by Picart, with an additional set of plates (proof impressions by Cochin) to the Lutrin, inserted. 2 vols. folio, best edition, magnificently bound in red morocco, Harleian style, with a broad border of gold on the sides, and gilt leaves. 2*l*. 15*s*. Amst. 1718

BOLINGBROKE'S (H. St. John) WORKS. Very fine copy. 5 vols. 4to. in russia extra, gilt leaves. 4*l*. 10*s*. 1777

BRANTOME, ŒUVRES DE, considérablement augmentés. An excellent and unmutilated edition. 15 vols. small 8vo. neat, in calf gilt. 2*l*. 18*s*. 1779

DE THOU (Jacques Auguste), HISTOIRE UNIVERSELLE. Fine portrait. 16 vols. 4to. French calf gilt. 4*l*. 14*s*. 6*d*. 1734

JOINVILLE (le Sieur), HISTOIRE DE ST. LOUIS, avec les Annales de son Règne, par Guil. de Nangis; sa Vie et ses Miracles, par le Confesseur de la Reine Marguerite, &c.; avec Glossaire, par Ducange. Folio, large paper, a most beautiful copy, in calf gilt, gilt leaves. 1*l*. 17*s*. A l'Imprimerie Royale. 1761
Joinville's work is a necessary appendage to the Chronicles of Froissart and Monstrelet.

MAURICE'S ANCIENT and MODERN HISTORY of HINDOSTAN, with the SUPPLEMENT. Maps and plates, first impressions. A Presentation Copy. 4 vols. 4to. calf gilt, equal to new. 3*l*. 3*s*. 1795-1802
The publishing price, *unbound*, was Nine Guineas.

OTTLEY'S INQUIRY into the ORIGIN and EARLY HISTORY of ENGRAVING on COPPER and WOOD, with an Account of Engravers and their Works. Numerous plates, 2 vols. 4to. boards. 3*l*. 3*s*. 1816
Published at 8*l*. 8*s*., and the best work on the subject.

PARNASO ESPAÑOL. Coleccion de poesias escogidas de los mas célebres poetas españolas, por Don Juan José Lopez de Sedano. Portraits; rare. 9 vols. in neat Spanish binding, 8vo. 3*l*. 3*s*. Madrid, 1768-78
Cette collection renferme plusieurs compositions des anciens poëtes espagnols, qui n'avaient point encore vu le jour, et qui n'ont jamais été réimprimées depuis. L'éditeur a de plus mis au commencement de chaque tome des notices biographiques fort intéressantes sur les auteurs qu'il renferme, et à la fin des jugemens critiques sur les pièces qu'il publie.

PLATONIS OPERA, Gr. et Lat. à Serrani et Stephani. 3 vols. folio, fine copy in russia gilt, with border of gold on the sides. 4*l*. 4*s*. 1578
"A very magnificent and highly-esteemed edition,—scarcely a typographical error is to be detected: the notes of H. Stephens are very excellent, and are duly appreciated by every scholar." *Mons.*

REGNIER, SATYRS et AUTRES ŒUVRES, avec des Remarques Historiques, Vignettes, &c. par Cochin. Most beautifully printed on a thick paper, every page within a bold border. Folio, an exceeding fine copy, in red morocco, gilt, with gilt leaves. 1*l*. 10*s*. 1733

ROBSON'S SCENERY of the GRAMPIAN MOUNTAINS, illustrated by 41 Engravings. Royal folio, half-bound morocco, 1*l*. 10*s*. (published at 12*l*. 12*s*.) 1819

STARK'S SCENERY of the RIVERS of NORFOLK; with Historical and Geological Descriptions by J. W. Robberds. 4to. a large-paper copy, proof plates on India paper, particularly fine as to impression, now, in cloth, 2*l*. 2*s*.
Original cost, Seven Pounds. 1834 cx.

SWIFT'S (Dean) WORKS, with the Supplement complete, and plates. Edited, with notes, by Dr. Hawkesworth. Printed in a fine large type. 24 vols. 8vo., a fine copy, in bright bound calf gilt. 4*l*. 10*s*. 1768

ZURITA, Añales del Regno de Aragon desde la invasion Arabe á principios del Siglo VIII. hasta el año de 1516. Indice de las cosas mas notables que se hallan en dichos añales. 7 vols. folio, neat. 3*l*. 10*s*. Caragoza, 1610-21
Zurita est estimé comme le meilleur historien espagnol: ses Annales d'Aragon se trouvent rarement complètes; le volume d'index manque souvent.

They will include Portraits of LADY SALE, MAJOR E. POTTINGER, &c., and can be bound up with the published Journal of his Imprisonment. Further particulars will be announced.

DICKINSON & SON, 114, New Bond-street.

NEW BARONETAGE.

This day, price 7*s.* 6*d.* cloth gilt, with Illustrations drawn by Herman, and engraved by Armstrong,

THE

BARONETAGE OF THE BRITISH EMPIRE,

For 1843.

Differing in arrangement, information, and several other important features, from any other publication on the subject.

This work contains a succinct genealogical account of the whole Members of the Order, chronologically classified, under the respective creations—as, I. Baronets of England. II. Baronets of Ireland. III. Baronets of Scotland and Nova Scotia. IV. Baronets of Great Britain. And V. Baronets of the United Kingdom.

The Families who are Lords of Manors in England and Ireland, and Free Barons in Scotland, are particularized; and the eminent services for, or remarkable occasions on, which the Members received their Baronetcies, during the last and present century, are specified.

The work also contains an Historical Account of the original Institution of the Baronetage, and of the Rights, Privileges, Immunities, and Precedency vested in it by the Charters of its Royal Founder.

It is elegantly illustrated with Engravings of the different Insignia, and with examples of Arms charged with the exterior Heraldic Ornaments incidental to the Order.

This day, price 6*s.* cloth,

A HISTORY OF THE MOLLUSCOUS ANIMALS

Nearly ready,

In imperial folio, half-bound russia, price

EIGHT GUINEAS,

THE NATIONAL ATLAS

OF

HISTORICAL, COMMERCIAL, AND POLITICAL

GEOGRAPHY,

CONSTRUCTED FROM THE MOST RECENT AND AUTHENTIC SOURCES,

BY

ALEXANDER K. JOHNSTON, F.R.G.S.

GEOGRAPHER TO THE QUEEN.

ACCOMPANIED BY

MAPS AND ILLUSTRATIONS

OF THE

Physical Geography of the Globe,

PREPARED EXPRESSLY FOR THIS WORK

By DR. HEINRICH BERGHAUS,

Professor of Geography in Berlin;

AND AN

Ethnographic Map of Europe,

BY

DR. GUSTAF KOMBST, F.R.N.S.C. M.H.S.P.S.

In the construction of this work,—the unremitting labour of many years,—the Editor has had two objects in view—first, to exhibit the existing state of Geography, and secondly, to illustrate and popularise by Map delineation some of the most attractive departments of Natural Science. To attain the first object, he has not only availed himself of materials which had accumulated since the publication of any Atlas of similar extent; but with the utmost care he has critically examined the authorities relied on by preceding Geographers, thereby personally pledging himself for the substantial accuracy of the whole work.

In the Section devoted to Physical Geography, the Editor has had the honour of obtaining the assistance of Professor BERGHAUS, of Berlin, whose contributions, founded on the Researches of Baron HUMBOLDT, and other names eminent in scientific inquiry, will be found of much interest and utility. The engraving is executed in the first style of art, and the entire publication is respectfully, but confidently, submitted as adapted in every respect to the present advanced position of Geographical Science.

Edinburgh: JOHN JOHNSTONE, and W. & A. K. JOHNSTON. Glasgow: JAMES LUMSDEN & SON, and R. WEIR. London: SIMPKIN, MARSHALL & Co.; WHITTAKER & Co.; W. SMITH; and R. GROOMBRIDGE. Dublin: JOHN CUMMING.

On the 1st of April will appear, price 3*s.* 6*d.* full coloured, PART I. of a NEW EDITION of

BETTS'S FAMILY ATLAS,

To be completed in FOURTEEN MONTHLY PARTS, each containing Four single or Two double Sheet Maps, and embracing ALL PARTS OF THE KNOWN WORLD.

The Proprietor has much satisfaction in appearing before the Public with a NEW EDITION of a work which has already elicited for him much public and private commendation, and of thus affording (he trusts to many individuals) the opportunity of supplying themselves with a valuable work, at a very reasonable price, and on a plan which is found most convenient by a large portion of the community.

The present Edition will possess the advantage of the introduction of several new and very important Maps, and the whole work having also undergone a thorough revision, every new and important discovery and settlement will be found carefully introduced. The Maps of ENGLAND, WALES, SCOTLAND, and IRELAND, are on an unusually large scale, correctly showing the various lines of RAILROAD, the Turnpike and principal Cross Roads, Rivers, Canals, &c. (that of England and Wales alone embracing no fewer than 8,900 names.) The Maps of the BRITISH COLONIES are also on a large scale; and, as a whole, the Proprietor feels satisfied that the work will be found fully to support the character it has obtained, and he confidently anticipates even a larger share of patronage than on its first appearance. Extracts from a few of the Literary Notices of the former Edition are subjoined:—

"This work is correctly described in its title—it is a GOOD FAMILY ATLAS; compiled with care, executed with great beauty, and sold at a moderate price; and we observe that creditable exertion has been made to bring down the information to the latest moment."—*Athenæum.*

"This is a very elegant and faithful book of maps, the whole of which appear to have been got up with great care, and to be exceedingly accurate: they are printed from steel plates, and are remarkably clear....Mr. Betts deserves the thanks of the public for the manner in which he has executed his labours."—*Times.*

"Independently of these claims to notice, the cheapness of the work, and its elegance of appearance, must insure its popularity."—*Morning Herald.*

"Here the expense of the old and elaborate, as well as the errors of the hasty and superficial, are happily avoided, and the *Family Atlas* is worthy of its name."—*Atlas.*

"The work is a valuable one: we have tested its accuracy in districts as familiar to us as the face of a country possibly can be, and we feel ourselves quite secure in recommending it to all who wish to supply themselves with a *first-rate Atlas.*"—*Conservative Journal.*

Just published, in small folio, price, strongly bound in cloth, 14*s.*, or half-bound in turkey morocco, 16*s.*,

a NEW EDITION of

BETTS'S SCHOOL ATLAS.

This may with safety be recommended as the best School Atlas, at the price, extant; the Maps are on a much larger scale than ordinary, and, for clearness and beauty of execution, cannot be surpassed at any price.

"If beauty of execution, combined with extreme cheapness, can recommend a work of the kind, BETTS'S SCHOOL ATLAS will be certain to have a most extensive circulation."—*Courier.*

BETTS'S NEW MAPS

OF

ENGLAND, SCOTLAND, and IRELAND.

These Maps have been compiled with great care upon the basis of the PARLIAMENTARY RETURNS, of the amount of Population, and annual value of Property, and have the RAILROADS laid down with great accuracy and clearness, and the various stations marked and named; also the Turnpike Roads, Rivers, Canals, &c.

ENGLAND and WALES, measuring 3 ft. by 2 ft. 6 in., mounted on cloth, in a case for the pocket, price 7*s.*
Mounted on roller, ledge, and varnished, 10*s.* 6*d.*

ENGLAND and WALES, measuring 2 ft. 6 in. by 2 ft. 1 in. mounted on cloth, in case for the pocket, price 7*s.* 6*d.*
Mounted on roller, ledge, and varnished, 10*s.* 6*d.*

SCOTLAND, same size as the last, mounted on cloth, in case for the pocket, price 6*s.* 6*d.*
Mounted on roller, ledge, and varnished, 9*s.* 6*d.*

IRELAND, same size as the last, mounted on cloth, in case for the pocket, price 6*s.* 6*d.*
Mounted on roller, ledge, and varnished, 9*s.* 6*d.*

BETTS'S GEOGRAPHICAL SLATES.

Each Slate has TWO OUTLINE MAPS permanently engraved upon it, and is accompanied by Two corresponding KEY MAPS, mounted on a mill-board: size of slate, 13 in. by 11. Price, with Key, 2*s.*

London: JOHN BETTS, 7, Compton-street, Brunswick-square:
SIMPKIN & MARSHALL; WHITTAKER & Co.; HAMILTON & Co.; and J. & R. GROOMBRIDGE.
Liverpool: G. PHILIP.

By SIR HARRIS NICOLAS, K.C.M.G.

Second edition, corrected throughout, fcap. 8vo. with Vignette-title, 6s. cloth.

"We strongly recommend to the historical student the clear and accurate 'Chronology of History,' by Sir Harris Nicolas, which contains all the information that can be practically required."—*Quarterly Review*, March, 1843.

2.

THE STATESMEN OF THE COMMONWEALTH OF ENGLAND;

With an Introductory Treatise on the Popular Progress in English History.

By JOHN FORSTER, Esq. of the Inner Temple.

Five volumes, fcap. 8vo. with original Portraits of Pym, Eliot, Hampden, Cromwell, and an Historical Scene after a Picture by Cattermole, 20s. cloth.

The INTRODUCTORY TREATISE, intended for an Introduction to the Study of the Great Civil War, *separately*, 2s. 6d. sewed.

These five volumes form Mr. Forster's portion of the Lives of Eminent British Statesmen, by Sir James Macintosh, the Right Hon. T. P. Courtenay, and John Forster, Esq. 7 vols. fcap. 8vo. with Vignette-titles, 2l. 2s. cloth.

3.

LIVES OF THE MOST EMINENT FRENCH WRITERS;

Comprising Montaigne—Rabelais—Corneille—Rochefoucauld—Molière—La Fontaine—Pascal—Madame De Sévigné—Boileau—Racine—Fénélon—Voltaire—Rousseau—Condorcet—Mirabeau—Madame Roland—and Madame De Staël.

By MRS. SHELLEY, and others.

2 vols. fcap. 8vo. with Vignette-titles, 12s. cloth.

Also, 3 vols. fcap. 8vo. with Vignette-titles, 18s. cloth.

LIVES OF THE MOST EMINENT LITERARY MEN of ITALY, SPAIN, and PORTUGAL.

By MRS. SHELLEY, SIR JAMES MACKINTOSH, &c.

4.

LIVES OF THE BRITISH ADMIRALS.

With an Introductory View of the Naval History of England.

By ROBERT SOUTHEY, L.L.D.

The Fifth Volume by R. BELL, Esq.

Five volumes, fcap. 8vo. with Vignette-titles, 30s. cloth.

"A valuable national work, essential to every British library."—*Athenæum.*

Also, three volumes, fcap. 8vo. with Vignette-titles, 18s. cloth.

LIVES OF THE MOST EMINENT BRITISH MILITARY COMMANDERS.

By the Rev. G. R. GLEIG.

5.

THE HISTORY OF SPAIN AND PORTUGAL.

By DR. DUNHAM.

Five volumes, fcap. 8vo. with Vignette-titles, 30s. cloth.

"The very best work on the subject with which we are acquainted, either foreign or English."—*Athenæum.*

By the same Author,

HISTORY of the GERMANIC EMPIRE.

3 vols. 18s.

EUROPE during the MIDDLE AGES. 4 vols. 24s.

DENMARK, SWEDEN, and NORWAY. 3 vols. 18s.

POLAND. 1 vol. 6s.

6.

A TREATISE ON THE SILK MANUFACTURE;

Comprising its History, Culture, Manufacture, and Properties.

By G. R. POTTER, Esq.

Superintendent of the Statistical Department of the Board of Trade.

Fcap. 8vo. with Vignette-title, and 39 Wood Engravings, 6s. cl.

"Such a mass of curious and useful information on one subject has rarely been brought together."—*Eclectic Review.*

By the same Author,

A TREATISE ON THE MANUFACTURE of PORCELAIN and GLASS.

Fcap. 8vo. with Vignette-title and 50 Wood Engravings, 6s. cloth.

7.

A TREATISE ON THE MANUFACTURES IN METAL;

Comprising Iron and Steel, Machinery and Manufactures, Tin, Lead, Copper, &c.

By JOHN HOLLAND, Esq.

Three volumes, fcap. 8vo. with Vignette-titles and above 300 Wood Engravings, 18s. cloth.

"We regard this work as one of the most interesting and instructive which has, in modern times, adorned our scientific literature."—*Monthly Review.*

NEW WORKS

PRINTED FOR

LONGMAN, BROWN, GREEN AND LONGMANS.

1.

THE RURAL AND DOMESTIC LIFE OF GERMANY:

With Characteristic Sketches of its chief Cities and Scenery. Collected in a General Tour, and during a Residence in that Country in the Years 1840-41-42.

By WILLIAM HOWITT.

Medium 8vo. with above Fifty Engravings on Wood, 21s. cloth.

Extract from critique in The Allgemeine Zeitung *of Feb. 5, 1843.*

"The descriptions of the peculiarities in the scenery and life are wonderfully exact, and are followed out into the smallest details with a complete mastery over the language.....The author, throughout his work, brings out the points of contrast, and on that account the German gains more knowledge of England from this work than from many others devoted to its description....All that he says about our literature and art [Munich] is well said....Many chapters are quite masterpieces in representation....The whole work is so superior to any similar work from the pen of an Englishman, that the German who cares anything about the opinions of the English (and why should we not feel interested in the opinions of our brethren over the sea?) must be rejoiced at it, and we recommend to our countrymen to read the above-mentioned contrasts of the national peculiarities of both nations, which run through the whole work: many prejudices, under which many well-intentioned Englishmen as well as Germans lie, will be thereby wiped away."

2.

A DICTIONARY, Practical, Theoretical, and Historical, of COMMERCE and COMMERCIAL NAVIGATION.

By J. R. M'CULLOCH, Esq.

New Edition, with Supplement, corrected to September last, with Maps and Plans; 8vo. 2l. 10s. half-bound vellum.

The NEW SUPPLEMENT, containing the New Tariff, and other important articles, *separately*, 5s. sewed.

3.

A DICTIONARY, GEOGRAPHICAL, STATISTICAL, and HISTORICAL, of the various Countries, Places, and principal Natural Objects in the WORLD.

By J. R. M'CULLOCH, Esq.

Two thick vols. 8vo. with Six large important Maps, 4l. cloth.

4.

THE ELEMENTS of MATERIA MEDICA and THERAPEUTICS.

By JONATHAN PEREIRA, M.D. F.R.S. and L.S.

Second Edition, enlarged and improved. Two thick vols. 8vo. with nearly 400 Woodcuts, 50s. cloth.

By the same Author,

A TREATISE on FOOD and DIET,

and the Dietetical Regimen suited for a Disordered State of the Digestive and other Organs. With Formulæ of Dietaries for Prisons, Union Workhouses, and other Public Institutions.

[*Nearly ready*

5.

A DIAMOND LATIN-ENGLISH DICTIONARY.

By the Rev. J. E. RIDDLE, M.A.

Royal 32mo. 4s. bound. [*This day*

By the same Author, Second Edition, corrected and enlarged,

A Complete English-Latin and Latin-English Dictionary.

8vo. 31s. 6d. cloth. *Separately*, the English-Latin part, 10s. 6d.; the Latin-English, 21s. cloth.—Also,

The Young Scholar's English-Latin and Latin-English Dictionary.

Second edition, square 12mo. 12s. bound. *Separately*, the English-Latin part, 5s. 6d.; the Latin-English, 7s. bound.

6.

AN ENGLISH-GREEK LEXICON

for the use of Colleges and Schools.

By the Rev. J. A. GILES, L.L.D.

8vo. 7s. 6d. cloth.

*** The publishers having had frequent applications for the English-Greek part of Dr. Giles's Lexicon separately, have thought it desirable to publish it as a distinct work.

Also, Second Edition, 8vo. 21s. cloth,

Dr. Giles's Greek-English and English-Greek Lexicon.

"A worthy companion to Riddle's Latin Dictionary."—*Athenæum.*

7.

AN INTRODUCTION to the COMPOSITION of LATIN VERSE; containing Rules and Exercises intended to illustrate the Manners, Customs, and Opinions, mentioned by the Roman Poets, and to render familiar the principal Idioms of the Latin Language.

By the late CHRISTOPHER RAPIER, A.B.

Second Edition, carefully revised by THOMAS KERCHEVER ARNOLD, M.A.

12mo. 3s. 6d. cloth.

NEW BOOKS AND NEW EDITIONS

PUBLISHED BY

JOHN W. PARKER, West Strand.

A SYSTEM of LOGIC, Ratiocinative and Inductive; being a Connected View of the Principles of Evidence, and the Methods of Scientific Investigation. In Six Books. By JOHN STUART MILL. 2 vols. 8vo. 30s.

The PHYSIOLOGICAL ANATOMY and PHYSIOLOGY of MAN; with numerous Original Illustrations. By R. B. TODD, M.D. F.R.S.; and W. BOWMAN, F.R.S., of King's College, London. To be completed in Three Parts. Part I., price 7s.

AN INTRODUCTION TO THE STUDY OF

CHEMICAL PHILOSOPHY; being a Preparatory View of the Forces which concur to the production of Chemical Phenomena. By JOHN FREDERICK DANIELL, F.R.S., Prof. of Chemistry in King's College, London. With numerous Illustrations, the Second Edition, revised and much enlarged, 21s.

LIFE AND CORRESPONDENCE OF THE LATE

SIR ASTLEY PASTON COOPER,

Bart. From Documents bequeathed by him for the purpose. By BRANSBY B. COOPER, Esq. F.R.S. 2 vols. 8vo. with Portrait, from the Original Picture by Sir Thomas Lawrence. 21s.

RECOLLECTIONS of SIBERIA, in the Years 1840 and 1841. By C. HERBERT COTTRELL, Esq. 8vo. with Map, 12s.

TRAVELS AND RESEARCHES IN

ASIA MINOR, MESOPOTAMIA, CHALDEA, and ARMENIA. By WILLIAM FRANCIS AINSWORTH, F.G.S. F.R.G.S., in charge of the Expedition sent by the Royal Geographical Society, and the Society for Promoting Christian Knowledge, to the Christian Tribes in Chaldea. 2 vols. with numerous Illustrations, 24s.

A MANUAL of CHRISTIAN ANTIQUITIES; or, an Account of the Constitution, Ministers, Worship, Discipline, and Customs of the Early Church; with an Introduction, containing a complete Chronological Analysis of the Works of the Antenicene Fathers. By the Rev. J. E. RIDDLE, M.A., Author of 'Luther and his Times,' 'First Sundays at Church.' SECOND EDITION, 8vo. 18s.

BIBLE CYCLOPÆDIA, a Comprehensive Digest of the Civil and Natural History, Geography, Statistics, and General Literary Information, connected with the Sacred Writings. Complete in 2 vols. 2l. 10s., illustrated by several Hundred Woodcuts.

The FOURTH VOLUME, 4s. 6d., with Portraits, of

LIVES of EMINENT CHRISTIANS.

By the Rev. R. B. HONE, M.A., Vicar of Hales Owen. Containing Lives of John Bradford, Archbishop Grindal, and Judge Hale.

The FIRST VOLUME contains the Lives of Archbishop Usher, Dr. Hammond, John Evelyn, and Bishop Wilson. The SECOND VOLUME, Bernard Gilpin, Philip de Mornay, Bishop Bedell, and Anthony Horneck. The THIRD VOLUME, Bishop Ridley, Bishop Hall, and Robert Boyle.

A THEORETICAL AND PRACTICAL SYSTEM OF

ARITHMETIC; comprising all the usual Rules, with their Proofs; Scales of Notation; the Construction and Use of Logarithms; Mensuration of Superficies and Solids; Formula for Calculating the Horse-power of Steam-Engines, Water-Wheels, &c., together with much useful Information never before introduced into Treatises on Arithmetic. Designed for the Use of Schools and self-taught Students. By W. H. CRANK, Mathematical Master, St. Mark's College, Chelsea. Strongly bound, 4s.

BY AUTHORITY.

A MANUAL FOR TEACHING

MODEL-DRAWING from SOLID FORMS; the Models founded on those of M. DUPUIS; combined with a POPULAR VIEW OF PERSPECTIVE, and adapted to the Elementary Instruction of Classes in Schools and Public Institutions, as taught under the Sanction of the Committee of Council on Education.

By BUTLER WILLIAMS, C.E. F.G.S., Director of the Drawing Classes at Exeter Hall; Professor of Geodesy in the College for Civil Engineers, and Author of 'Practical Geodesy.' Handsomely printed in 8vo., and illustrated by Shaded Engravings of the Models, and numerous Woodcuts, 15s.

II.

INSTRUCTIONS in DRAWING, for the Use of Elementary Schools, Abridged from the foregoing 'Manual for Teaching Model-Drawing.' By BUTLER WILLIAMS. With numerous Illustrative Woodcuts and Outline Figures of the Models, 3s.

London: JOHN W. PARKER, West Strand.

REVIEWS

Incidents of Travel in Yucatan. By John L. Stephens. 2 vols. Murray.

THE one hundred and twenty engravings which illustrate the wanderings and discoveries of Mr. Stephens, explain, we apprehend, how it happened that Mr. Norman's ramble among the ruined cities of Yucatan [see *Athen.* Nos. 790-1] got the start in publication. Come when he will, however, Mr. Stephens, with his budget of "incidents," is sure to be welcome: and our readers will rejoice to hear, that his light heart, his love of adventure, and his graphic ease of style, have undergone little change, either from time or travel. Here, it is true, he is more matter-of-fact and methodical in his descriptions than on former occasions; but this was inevitable, seeing that he travelled with a specific object, and was neither to be turned aside to the right nor the left, by perils or difficultics—not to be baffled by the encroachments of vegetation, which, thick as the wood in the 'Sleeping Beauty,' shrouds the ruins he has so pleasantly laid open "to common day"—not to be beaten off by the assaults of mosquitos or guarapatas—nay, or even that worse enemy, Fever, which besets the remote fields where he laboured. Ruined cities were his first object: and adventures are but the episodes of his book. We must add, that the value of this, and of its illustrations, is enhanced by the melancholy fortune of the collection of antiquities, which, by the exertions of our author and Mr. Catherwood, was transferred to the United States, and which was there destroyed by conflagration.

Thus much premised, we have only to follow Mr. Stephens with as little digression as possible. The party, consisting of Mr. Stephens, Mr. Catherwood, and Dr. Cabot, who joined them as physician and naturalist, first touched at Merida. Merida was in high festival, for our travellers chanced to arrive there at the close of the *fête* of San Cristoval, when there is a general illumination: the church also, brilliantly illumined, was filled with a crowd of women, dressed in white and decorated with flowers; "rockets, fireworks, drums, and violins, all working away together on the steps," as the congregation streamed out;—and a gigantic illuminated cross, hung across a street, pointing the way, as it seemed, to some further devotional exercise. The crowd, however, stopped short of this holy symbol, and squeezed its way into a house: our curious author of course among the foremost:—

"On each side of the sala was a rude table, occupying its whole length, made of two rough boards, and supporting candles stuck in little tin receivers, about two feet apart. Along the tables were benches of the same rough materials, with men and women, whites, Mestizoes, and Indians, all sitting together, as close as the solidity and resistance of human flesh would permit, and seemingly closer than was sufferable. Every person at the table had before him or her a paper about a foot square, covered with figures in rows, and a small pile of grains of corn, and by its side a thumping stick some eighteen inches long, and one in diameter; while, amid all the noise, hubbub, and confusion, the eyes of all at the tables were bent constantly upon the papers before them. In that hot place, they seemed like a host of necromancers and witches, some of the latter young and extremely pretty, practising the black art. By degrees we were passed out into the corridor, and here we were brought to a dead stand. Within arm's length was an imp of a boy, apparently the ringleader in this nocturnal orgy, who stood on a platform, rattling a bag of balls, and whose unintermitted screeching, singsong cries had throughout risen shrill and distinct above every other sound. At that moment the noise and uproar were carried to the highest. The whole house seemed rising against the boy, and he, single-handed, or rather single-tongued, was doing battle with the whole, sending forth a clear stream of vocal power, which for a while bore its way triumphantly through the whole troubled waters, till, finding himself overpowered by the immense majority, with a tone that set the whole mass in a roar, and showed his democratic principles, he cried out, 'Vox populi est vox Dei!' and submitted. Along the corridor, and in the whole area of the patio, or courtyard, were tables, and benches, and papers, and grains of corn, and ponderous sticks, the same as in the sala, and men and women sitting as close together. The passages were choked up, and over the heads of those sitting at the tables, all within reach were bending their eyes earnestly upon the mysterious papers. They were grayheads, boys and girls, and little children; fathers and mothers; husbands and wives; masters and servants; men high in office, muleteers, and bull-fighters; señoras and señoritas, with jewels around their necks and roses in their hair, and Indian women, worth only the slight covering they had on; beauty and deformity; the best and the vilest in Merida; perhaps, in all, two thousand persons; and this great multitude, many of whom we had seen but a few minutes before on their knees in the church, and among them the fair bevy of girls who had stood by us on the steps, were now assembled in a public gambling-house! a beautiful spectacle for a stranger the first night of his arrival in the capital!"

The next day Mr. Stephens witnessed a bull-fight, took part in the pleasures of the *paseo*, the Meridan Corso, and subsequently in a Meridan concert. For these our readers must consult his book. We, however, whose business it is to record the progress of Art and Science, prefer an account of the first operation for strabismus, performed at Merida, and of the introduction of the wonder-working Daguerréotype, a narrative almost as sprightly as Paul de Kock's imaginary chapter on that engine of modern sorcery in 'La Grande Ville de Paris':—

"Having made trials upon ourselves until we were tired of the subjects, and with satisfactory results, we considered ourselves sufficiently advanced to begin; and as we intended to practise for the love of the art, and not for lucre, we held that we had a right to select our subjects. Accordingly, we had but to signify our wishes, and the next morning put our house in order for the reception of our fair visitors. We cleared everything out of the hammock, took the washhand basin off the chair, and threw odds and ends into one corner; and as the sun was pouring its rays warmly and brightly into our door, it was farther lighted up by the entry of three young ladies, with their respective papas and mammas. We had great difficulty in finding them all seats, and were obliged to put the two mammas into the hammock together. The young ladies were dressed in their prettiest costume, with earrings and chains, and their hair adorned with flowers. All were pretty, and one was much more than pretty; not in the style of Spanish beauty, with dark eyes and hair, but a delicate and dangerous blonde, simple, natural, and unaffected, beautiful without knowing it, and really because she could not help it. Her name, too, was poetry itself. I am bound to single her out, for, late on the evening of our departure from Merida, she sent us a large cake, measuring about three feet in circumference by six inches deep, which, by-the-way, everything being packed up, I smothered into a pair of saddle-bags, and spoiled some of my scanty stock of wearing apparel. The ceremonies of the reception over, we made immediate preparations to begin. Much form and circumstance were necessary in settling preliminaries; and as we were in no hurry to get rid of our subjects, we had more formalities than usual to go through with. Our first subject was the lady of the poetical name. It was necessary to hold a consultation upon her costume, whether the colours were pretty and such as would be brought out well or not; whether a scarf around the neck was advisable; whether the hair was well arranged, the rose becoming, and in the best position; then to change it, and consider the effect of the change, and to say and do many other things which may suggest themselves to the reader's imagination, and all which gave rise to many profound remarks in regard to artistical effect, and occupied much time. The lady being arrayed to the best advantage, it was necessary to sent her with reference to a right adjustment of light and shade; to examine carefully the falling of the light upon her face; then to consult whether it was better to take a front or a side view; to look at the face carefully in both positions; and, finally, it was necessary to secure the head in the right position; that it should be neither too high nor too low; too much on one side nor on the other; and as this required great nicety, it was sometimes actually indispensable to turn the beautiful little head with our own hands, which, however, was a very innocent way of turning a young lady's head. Next it was necessary to get the young lady into focus—that is, to get her into the box, which, in short, means, to get a reflection of her face on the glass in the camera obscura at that one particular point of view which presented it better than any other; and when this was obtained, the miniature likeness of the object was so faithfully reflected, that, as artists carried away by enthusiasm, we were obliged to call in the papas and mammas, who pronounced it beautiful—to which dictum we were in courtesy obliged to respond. The plate was now cleaned, put into the box, and the light shut off. Now came a trying time for the young lady. She must neither open her lips nor roll her eyes for one minute and thirty seconds by the watch. This eternity at length ended, and the plate was taken out. So far our course had been before the wind. Every new formality had but increased our importance in the eyes of our fair visitors and their respectable companions. Mr. Catherwood retired to the adjoining room to put the plate in the mercury bath, while we, not knowing what the result might be, a little fearful, and neither wishing to rob another of the honour he might be justly entitled to, nor to be dragged down by another's failure, thought best to have it distinctly understood that Mr. Catherwood was the maestro, and that we were merely amateurs. * * The result, however, was enough to induce us never again to adopt prudential measures, for the young lady's image was stamped upon the plate, and made a picture which enchanted her and satisfied the critical judgment of her friends and admirers. Our experiments upon the other ladies were equally successful, and the morning glided away in this pleasant occupation. We continued practising a few days longer; and as all our good results were extensively shown, and the poor ones we took care to keep out of sight, our reputation increased, and we had abundance of applications. * * There was one interesting incident connected with our short career of practice. Among the portraits put forth was one of a lady, which came to the knowledge of a gentleman particularly interested in the fair original. This gentleman had never taken any especial notice of us before, but now he called upon us, and very naturally the conversation turned upon that art of which we were then professors. The portrait of this lady was mentioned, and by the time he had finished his third straw cigar, he unburdened himself of the special object of his visit, which was to procure a portrait of her for himself. This seemed natural enough, and we assented, provided he would get her to sit; but he did not wish either her or her friends to know anything about it. This *was* a difficulty. It was not very easy to take it by stealth. However strong an impression a young lady may make by a glance upon some substances, she can do nothing upon a silver plate. Here she requires the aid of iodine, bromine, and mercury. But the young man was fertile in expedients. He said that we could easily make some excuse, promising her something more perfect, and in making two or three impressions, could slip one away for him. This was by no means a bad suggestion, at least, so far as he was concerned, but we had some qualms of conscience. While we were deliberating, a matter was introduced, which, perhaps, lay as near Doctor Cabot's heart as the young lady did that of our friend. That was a pointer or setter dog for hunting, of which the doctor was in great want. The gentleman said he had one—the only one in Merida—and he would give it for the portrait. It was rather an odd proposition, but to offer a dog for his mistress's portrait was very different from offering his mistress's portrait for a dog. It was clear that the young man was in a bad way; he would lay

Digitized by Google

down his life, give up smoking, part with his dog, or commit any other extravagance. The case was touching. The doctor was really interested; and, after all, what harm could it do? The doctor and I went to look at the dog, but it turned out to be a mere pup, entirely unbroken, and what the result might have been I do not know, but all further negotiations were broken off by the result of our out-of-door practice and disgust for the business."

We must now introduce the wonder-working Doctor:—

"Secluded as Merida is, and seldom visited by strangers, the fame of new discoverics in science is slow in reaching it, and the new operation of Mons. Guerin for the cure of strabismus had not been heard of. In private intercourse we had spoken of this operation, and, in order to make it known, and extend its benefits, Doctor Cabot had offered to perform it in Merida. * * But no one cared to be the first, and as the doctor had no sample of his skill with him, no subject offered. We had fixed the day for our departure, and the evening but one before, a direct overture was made to the Doctor to perform the operation. * * At ten o'clock the doctor's subject made his appearance. He was the son of a widow lady of very respectable family, about fourteen years old, but small of stature, and presenting, even to the most casual glance, the stamp of a little gentleman. He had large black eyes, but, unluckily, their expression was very much injured by an inward squint. With the light heart of boyhood, however, he seemed indifferent to his personal appearance, and came, as he said, because his mother told him to do so. His handsome person, and modest and engaging manners, gave us immediately a strong interest in his favour. He was accompanied by the gentleman who had spoken of bringing him, Dr. Bado, a Guatimalian, educated in Paris, the oldest and principal physician of Merida, and by several friends of the family, whom we did not know. Preparations were commenced immediately. The first movement was to bring out a long table near the window, and then to spread upon it a mattress and pillow, and upon these to spread the boy. Until the actual moment of operating, the precise character of this new business had not presented itself to my mind, and altogether it opened by no means so favourably as Daguerreotype practice. Not aiming to be technical, but desiring to give the reader the benefit of such scraps of learning as I pick up in my travels, modern science has discovered that the eye is retained in its orbit by six muscles, which pull it up and down, inward and outward, and that the undue contraction of either of these muscles, produces that obliquity called squinting, which was once supposed to proceed from convulsions in childhood, or other unknown causes. The cure discovered is the cutting of the contracted muscle, by means of which the eye falls immediately into its proper place. This muscle lies under the surface; and, as it is necessary to pass through the membrane of the eye, the cutting cannot be done with a broadaxe or a handsaw. In fact it requires a knowledge of the anatomy of the eye, manual dexterity, fine instruments, and Mr. Catherwood and myself for assistants. Our patient remained perfectly quiet, with his little hands folded across his breast; but while the knife was cutting through the muscle, he gave one groan, so piteous and heart-rending, that it sent into the next room all who were not immediately engaged. But before the sound of the groan had died away, the operation was over, and the boy rose with his eye bleeding, but perfectly straight. A bandage was tied over it, and with a few directions for its treatment, amid the congratulations and praises of all present, and wearing the same smile with which he had entered, the little fellow walked off to his mother. The news of this wonder spread rapidly, and before night Dr. Cabot had numerous and pressing applications, among which was one from a gentleman whom we were all desirous to oblige, and who had this defect in both eyes. On his account we determined to postpone our departure another day; and in furtherance of his original purpose, Dr. Cabot mentioned that he would perform the operation upon all who chose to offer. We certainly took no trouble to spread this notice, but the next morning, when we returned from breakfast, there was a gathering of squint-eyed boys around the door, who, with their friends and backers, made a formidable appearance, and almost obstructed our entrance. As soon as the door opened there was a rush inside; and as some of these slanting eyes might not be able to distinguish between meum and tuum, we were obliged to help their proprietors out into the street again. At ten o'clock the big table was drawn up to the window, and the mattress and pillow were spread upon it. * * The first who presented himself, was a stout lad about nineteen or twenty, whom we had never seen or heard of before. Who he was, or where he came from, we did not know, but he was a bisco of the worst kind, and seemed able-bodied enough to undergo anything in the way of surgery. As soon as the doctor began to cut the muscle, however, our strapping patient gave signs of restlessness, and all at once, with an actual bellow, he jerked his head on one side, carried away the doctor's hook, and shut his eye upon it with a sort of lockjaw grip, as if determined it should never be drawn out. How my hook got out I have no idea, fortunately the doctor let his go, or the lad's eye would have been scratched out. As it was, there he sat with the bandage slipped above one eye, and the other closed upon the hook, the handle of which stood out straight. Probably at that moment he would have been willing to sacrifice pride of personal appearance, keep his squint, and go through life with his eye shut, the hook in it, and the handle sticking out; but the instrument was too valuable to be lost. And it was interesting and instructive to notice the difference between the equanimity of one who had a hook in his eye, and that of lookers-on who had not. All the spectators upbraided him with his cowardice and want of heart, and after a round of reproof to which he could make no answer, he opened his eye and let out the hook. But he made a bad business of it. A few seconds longer, and the operation would have been completed. As it was, the whole work had to be repeated. * * The room was now full of people, and being already disgusted with the practice of surgery, I sincerely hoped that this exhibition would cure all others of a wish to undergo the operation, but a little Mestizo boy, about ten years old, who had been present all the time, crept through the crowd, and reaching the table, squinted up at us without speaking, his criss-cross expression telling us very plainly what he wanted. He had on the usual Mestizo dress of cotton shirt and drawers and straw hat, and seemed so young, simple, and innocent, that we did not consider him capable of judging for himself. We told him he must not be operated on, but he answered, in a decided though modest tone, 'Yo quiero, yo quiero,' 'I wish it, I wish it.' We inquired if there was any one present who had any authority over him, and a man whom we had not noticed before, dressed, like him, in shirt and drawers, stepped forward, and said he was the boy's father; he had brought him there himself on purpose, and begged Doctor Cabot to proceed. By his father's directions, the little fellow attempted to climb up on the table, but his legs were too short, and he had to be lifted up. His eye was bandaged, and his head placed upon the pillow. He folded his hands across his breast, turned his eye, did in all things exactly as he was directed, and in half a minute the operation was finished. I do not believe that he changed his position a hair's breadth, or moved a muscle. It was an extraordinary instance of fortitude. The spectators were all admiration, and amid universal congratulation, he was lifted from the table, his eye bound up, and without a word, but with the spirit of a little hero, he took his father's hand and went away."

Other operations were performed, and with like success: and these occupations, alternated with the study of the ancient history of Yucatan, filled a few days benevolently and profitably; but the encampment at Merida must needs at last be broken up, and after many leave-takings, and a positive refusal on the part of the landlord to receive rent, the luggage was sent forward on the backs of mules and Indians, and the three rode forth, on the 12th of November (1841?) under the best of auspices, the country being now at peace, and no danger to be apprehended from robbers.

Halting successively at Tekoh, an Indian village, with a large church and a convent, where a hospitable and intelligent Cura gave the party welcome assistance, and at Telchaquillo, the first resting-place of any antiquarian consequence, was the hacienda of San Joaquin, on which stand the ruins of Mayapan. Ere reaching this, Mr. Stephens turned aside to examine an immense fossil cave, discovered, so runs the account, by the major-domo of the hacienda, while pursuing some robbers, who had stolen a bull. But our traveller could not delay his visit to Mayapan, having already been beckoned thither (figuratively to speak) by a great mound, sixty feet high and one hundred feet square at the base, which he had seen from the tower of the church of Tekoh. He conceives himself to be the first person who had disturbed the forest round these ruins: as was in some sort proved by the plenteousness of the sculptured stones strewed about the base of the mound and among the woods; remains of kindred statues to those which Bernal Dias found on the coast. Mayapan contains too, a senote, or underground reservoir of water, which was to be explored; and a strange round tower on the summit of a mound, the interior walls of which are covered with stucco, and display the traces of red, yellow, blue, and white paint. Concluding the narrative of his interesting researches in the old style:—

"The interest of our day at Mayapan," says Mr. Stephens, "came near being marred by an unlucky accident. Just as we were leaving the ruins a messenger came to inform us that one of our pistols had shot an Indian. These pistols had never shewn any particular antipathy to Indians, and had never shot one before; but, hurrying back to the hacienda, we found the poor fellow with two of his fingers nearly shot off. The ball had passed through his shirt, making two holes in it, fortunately without hitting his body. The Indians said that the pistol had gone off of itself while they were only looking at it. We felt sure that this was not exactly the case, knowing that pistols are not free agents, and laid the blame upon them; but it was a great satisfaction that the accident was no worse, and also that Doctor Cabot was at hand to dress the wound. The Indian seemed to think less of it than we did."

The next field of discovery was among the ruins of Uxmal: where the party fairly established itself for a considerable period. Mr. Stephens, in arranging his plans, had counted upon escaping the rains which make such places of abode dangerously pestilential—but, this year, unluckily, the dry season had not, as usual, set in with November; the exhalations from the *aguadas* and tanks of water were oppressive; and the grand apartments of the Casa del Gobernador damp to the ague point. Yet in these the party was to sojourn. A fire, of course, was the first thing needful: but, with all his boasted resources, fire is not always a servant within command of civilized man. The leaves and brushwood collected by our travellers, caught fire and blazed, but then went out—a squib, even, failed to do the required feat. At last, all "scraps of paper, and other availables" being entirely exhausted, it occurred to the party to call in the savage science of an Indian boy, whom they had engaged to clear an opening on their threshold by his machete:—

"We intimated to him by signs that we wanted a fire, and, without paying any respect to what we had done, he began in his own way, with a scrap of cotton, which he picked up from the ground, and, lighting it, blew it gently in his folded hands till it was all ignited. He then laid it on the floor, and, throwing aside all the material we had been using, looked around carefully, and gathered up some little sticks, not larger than matches, which he laid against the ignited cotton, with one point on the ground and the other touching the fire. Then kneeling down, he encircled the nascent fire with his two hands, and blew gently on it, with his mouth so close as almost to touch it. A slight smoke rose above the palms of his hands, and in a few minutes he stopped blowing.

Digitized by Google

Placing the little sticks carefully together, so that all their points touched the fire, he went about picking up others a little larger than the first, and laying them in order one by one. With the circumference of his hands a little extended, he again began blowing gently; the smoke rose a little stronger than before. From time to time he gently changed the position of the sticks, and resumed his blowing. At length he stopped, but whether in despair or satisfied with the result seemed doubtful. He had a few little sticks with a languishing fire at one end, which might be extinguished by dropping a few tears over it. We had not only gone beyond this, but had raised a large flame, which had afterward died away. Still there was a steadiness, an assurance in his manner that seemed to say he knew what he was about. At all events, we had nothing to do but watch him. Making a collection of larger sticks, and again arranging them in the same way as before, taking care not to put them so close together as to smother the fire, with a circumference too large for the space of his hands, but of materials so light as easily to be thrown into confusion, he again commenced blowing, so gently as not to disturb a single stick, and yet to the full power that the arrangement would bear. The wood seemed to feel the influence of his cherishing care, and a full body of smoke rose up to gladden us, and bring tears into his eyes. With the same imperturbable industry, unconscious of our admiration, he went on again, having now got up to sticks as large as the finger. These he coaxed along with many tears, and at the next size he saved his own wind and used his petata, or straw hat. A gentle blaze rose in the whole centre of the pile; still he coaxed it along, and by degrees brought on sticks as large as his arm, which by a gentle waving of his hat, in a few minutes were all ignited. Our uncertainty was at an end. The whole pile was in a blaze, and all four of us went busily to work gathering fuel."

It cost the party no less trouble to dispose of the plague of mosquitos; but fire and rest were at last secured; the next thing was food; and after considerable difficulty, a staid Indian woman, aged fifty or thereabouts, named Chaipa Chi, was engaged and set to work:—

"The first essay of Chaipa Chi was in boiling eggs, which, according to the custom of the country, she boiled para beber, or to drink; that is, by breaking a small hole in the shell, into which a stick is inserted to mix together the white and yolk; the egg is to be disposed of through this hole in the primitive way which nature indicates to the new-born babe. This did not suit us, and we wished the process of cooking to be continued a little longer, but Chaipa Chi was impenetrable to hints or signs. We were obliged to stand over her, and, but for the name of the thing, we might as well have cooked them ourselves."

Having thus seen our party decently settled, we shall spare our readers anything like a detailed journal of their proceedings among the ruins of Uxmal—seeing that at every step and stone Mr. Stephens refers to the minute and elaborate illustrations after drawings by Mr. Catherwood. The following discovery, however, though comparatively unimportant, has a touch of the picturesque in it, not to be resisted:—

"In working out the plan on the spot, it was found that the back wall, throughout its whole length of two hundred and seventy feet, was nine feet thick, which was nearly equal to the width of the front apartment. Such thickness was not necessary for the support of the building, and, supposing it might contain some hidden passages, we determined to make a breach through the wall, and to do this in the centre apartment. I must confess that I felt some repugnance to this work of demolition, but one stone had already been picked out by an Indian to serve for mashing maize upon; and as this was likely to be done at any time when another might be wanted, I got over my scruples. Over the cavity left in the mortar by the removal of the stone were two conspicuous marks, which afterward stared us in the face in all the ruined buildings of the country. They were the prints of a red hand with the thumb and fingers extended, not drawn or painted, but stamped by the living hand, the pressure of the palm upon the stone. He who made it had stood before it alive as we did, and pressed his hand, moistened with red paint, hard against the stone. The seams and creases of the palm were clear and distinct in the impression. There was something lifelike about it that waked exciting thoughts, and almost presented the images of the departed inhabitants hovering about the building. And there was one striking feature about these hands; they were exceedingly small. Either of our own spread over and completely hid them; and this was interesting from the fact that we had ourselves remarked, and heard remarked by others, the smallness of the hands and feet as a striking feature in the physical conformation of the Indians at the present day."

By a communication from Mr. Schoolcraft, whose familiarity with the usages of the North American Indians is well known, we find that "the figure of the human hand is used" by the northern aborigines "to denote supplication to the Deity or Great Spirit, and stands in the system of picture writing as the symbol for strength, power, or mastery thus derived"—further, that the "use of the hand is not confined to a single tribe or people." There is food for famous antiquarian speculation, our author obviously thinks, in this coincidence.

An excavation attempted, at Uxmal, by Mr. Stephens was not successful; however, he resolved upon removing thence the richly carved beam of sapote wood, which he had admired so much on his former visit. The removal was easily accomplished; but the relic, as we have already mentioned, was destroyed, by an accidental fire, after its arrival in the United States. A rude circular mound, which was broken into, at the instance of Cura Carillo, yielded a curious double-headed idol, in the form of a cat or lynx; but this was too heavy to be removed.

Having fairly started Mr. Catherwood with his daguerréotype and a cohort of Indians to clear away brush and bush, at his bidding, our lively author started for the fair of Jalacho. Here he found religious ceremonies and gambling-tables side by side, as he had done at Merida, with the never-failing *dessert* of a bull-fight:—

"This over, there was an interval for business, and particularly for visiting the horse-market, or rather a particular section to which dealers sent their horses to be exhibited. I was more interested in this than any other branch of commerce carried on at the fair, as I wished to purchase horses for our journey. There were plenty of them, though, as in all other sections of the country, but few fine ones. Prices varied from ten dollars to two hundred, the value depending, not upon bone, blood, or muscle, but upon training and paces. The young hacienda horses, with nothing but the trot, or trotones, as they were called, were worth from ten dollars to twenty-five, but as they excelled in pace or easiness of movement their value increased. No one pretends to ride a trotting horse in Yucatan, for he who does labours under the imputation of not being able to purchase a pacer. The finest horses in the country in appearance are those imported; but the Yucatan horses, though small, are remarkably hardy, require no care, and endure an extraordinary degree of fatigue. Night came on, and the plaza was alive with people and brilliant with lights. On one side, opposite the church, along the corridors of the houses and in front of them, were rows of tables, with cards and dice, which were very soon crowded with players, whites and Mestizoes; but the great scene of attraction was the gathering of Indians in the centre of the plaza. It was the hour of supper, and the small merchants had abundant custom for their eatables. Turkeys which had stood tied by one leg all day, inviting people to come and eat them, were now ready, of which for a medio two men had a libera allowance; and I remarked, what I had heard of, but had not seen before, that grains of cacao circulated among the Indians as money. Every merchant or vender of eatables, the most of whom were women, had on the table a pile of these grains, which they were constantly counting and exchanging with the Indians. There is no copper money in Yucatan, nor any coin whatever under a medio, or six and a quarter cents, and this deficiency is supplied by these grains of cacao. The medio is divided into twenty parts, generally of five grains each, but the number is increased or decreased according to the quantity of the article in the market, and its real value. As the earnings of the Indians are small, and the articles they purchase are the mere necessaries of life, which are very cheap, these grains of cacao, or fractional parts of a medio, are the coin in most common use among them."

From these pleasures, Mr. Stephens was presently lured away by an invitation to examine some antiquities on the estate of a certain Don Simon not far from Jalacho. These consisted of gigantic blocks which reminded our author of the Copan monuments, but were not, like them, ornamented with carving. The woods and the farms, indeed, seem absolutely sown with the remains of cities and mounds. At another of the stations, which detained our author on his return to the Casa del Gobernador and Chaipa Chi's *tortillas*, he found an arch, plastered and painted in red, green, yellow and blue: the colours quite fresh. But the most eminent and curious "lion" of this strange district is the cave of Maycanú. Many of the other antiquities, described by our tourist, are hardly known in their immediate neighbourhood—the forest year by year enveloping them, as it were, with shadow and secrecy; but the cave in question—called by the Indians Satun Sat, and by Spaniards El Laberinto—has a "marvellous and mystical reputation:" no one seemed willing to enter it, and it had never been fully explored:—

"Several persons had penetrated to some distance with a string held outside, but had turned back, and the universal belief was, that it contained passages without number and without end. * * My retinue consisted of eight men, who considered themselves in my employ, besides three or four supernumeraries, and altogether formed a crowd around the door. Except the mayoral of Uxmal, I had never seen one of them before, and as I considered it important to have a reliable man outside, I stationed him at the door with a ball of twine. I tied one end round my left wrist, and told one of the men to light a torch and follow me, but he refused absolutely, and all the rest, one after the other, did the same. * * I entered with a candle in one hand and a pistol in the other. The entrance faces the west. The mouth was filled up with rubbish, scrambling over which, I stood in a narrow passage or gallery, constructed, like all the apartments above ground, with smooth walls and triangular arched ceiling. This passage was about four feet wide, and seven feet high to the top of the arch. It ran due east, and at the distance of six or eight yards opened into another, or rather was stopped by another crossing it, and running north and south. I took first that on the right hand, running south. At the distance of a few yards, on the right side of the wall, I found a door filled up, and at the distance of thirty-five feet the passage ended, and a door opened at right angles on the left into another gallery running due east. Following this, at the distance of thirteen feet I found another gallery on the left, running north, and beyond it, at the end, still another, also on the left, and running north, four yards long, and then walled up, with only an opening in it about a foot square. Turning back, I entered the gallery which I had passed, and which ran north eight or ten yards; at the end was a doorway on the right, opening into a gallery that ran east. At the end of this were six steps, each one foot high and two wide, leading to another gallery, which ran north twelve yards. At the end there came another gallery on the left, which ran west ten yards, and at the end of this another on the right, running north about sixty feet. This passage was walled up at the north end, and at the distance of five yards from this end another doorway led into a passage running to the east. At the distance of four yards a gallery crossed this at right angles, running north and south, forty-five feet long, and walled up at both ends; and three or four yards farther on another gallery crossed it, also running north and south. This last was walled up at the south, and on the north led to still another gallery,

Digitized by Google

which ran east three yards long. This was stopped by another gallery crossing it, running to the south three yards, when it was walled up, and to the north eight yards, when it turned to the west. * * I was not entirely free from the apprehension of starting some wild animal, and moved slowly and very cautiously. In the mean time, in turning the corners, my twine would be entangled, and the Indians, moved by the probability of getting no pay, entered to clear it, and by degrees all came up with me in a body. I got a glimpse of their torches behind me just as I was turning into a new passage, and at the moment I was startled by a noise which sent me back rather quickly, and completely routed them. It proceeded from a rushing of bats, and, having a sort of horror of these beastly birds, this was an ugly place to meet them in, for the passage was so low, and there was so little room for a flight over head, that in walking upright there was great danger of their striking the face. It was necessary to move with the head bent down, and protecting the lights from the flapping of their wings. Nevertheless, every step was exciting, and called up recollections of the Pyramids and tombs of Egypt, and I could not but believe that these dark and intricate passages would introduce me to some large saloon, or perhaps some royal sepulchre. Belzoni, and the tomb of Cephrenes and its alabaster sarcophagus, were floating through my brain, when all at once I found the passage choked up and effectually stopped. The ceiling had fallen in, crushed by a great mass of superincumbent earth, and farther progress was utterly impossible."

On issuing forth from his disappointing quest, Mr. Stephens, for the first time, perceived that this redoubtable labyrinth was not a maze hewn out in a hill side, but built up in a mound; and thence arose the idea, so tempting to curiosity and enterprise like his, that all the widely-spread and gigantic masses of masonry, which form so magnificent a feature in the antiquities of Central America, may possibly contain secret passages and chambers, waiting the patient labour of some Belzoni to break in and disinter the secret of these structures. In pursuance of this idea, on his return to Uxmal, Mr. Stephens set himself to explore several circular holes opening at different places in the ground. These proved to belong, chimneywise, to small ovens, cisterns, or, what Mr. Stephens thinks more probable still, repositories of grain. In one of them he found a vase of terra cotta, standing on three feet, and coated with enamel, and this was all. Meanwhile, the 'incidents' of antiquarian research at Uxmal were diversified by the maize harvest, and the benevolent deeds of Dr. Cabot, who operated upon some of the Indians needing surgical assistance. These poor people possess the patience of a gentle but somewhat phlegmatic submissiveness. Mr. Stephens witnessed the funeral of an Indian woman, at which her husband officiated as sexton and undertaker without showing any of the emotions that usually belong to a chief mourner. A visit from the Cura Carillo, the padre of Ticul, was an agreeable passage; the more so, as he arrived at the time when our author was "down" with the fever, which, at last, made its mischievous rounds among the party of discoverers. The Cura insisted upon carrying Mr. Stephens back to his own convent to be nursed. In another day or two arrived Dr. Cabot, who was also disabled, and Albino, the travellers' head man. The Cura physicked them by a very simple nostrum—"a decoction of the rind of the sour orange, flavoured with cinnamon and lemon juice," to be administered every two hours. This carried off the fever; but his wisdom could not save the Cura himself. who was subsequently and severely visited by the same scourge.

By way of beguiling the first days of convalescence, and encouraged by the sight of a richly ornamented vase, which was "loaned" him to make a drawing from, Mr. Stephens undertook an excavation at Ticul. After six hours of hard work among the ruins, a skeleton was found in a sitting posture, to the consternation of the assistants.

"The Indians were excited, and conversed in low tones. The cura interpreted what they said; and the burden of it was, 'They are the bones of our kinsman,' and 'What will our kinsman say at our dragging forth his bones?' But for the cura they would have covered them up and left the sepulchre. In collecting the bones, one of the Indians picked up a small white object, which would have escaped any but an Indian's eye. It was made of deer's horn, about two inches long, sharp at the point, with an eye at the other end. They all called it a needle, and the reason of their immediate and unhesitating opinion was the fact that the Indians of the present day use needles of the same material, two of which the cura procured for me on our return to the convent. One of the Indians, who had acquired some confidence by gossiping with the cura, jocosely said that the skeleton was either that of a woman or a tailor."

Not far from the skeleton, in the same sepulchre, a vase of rude pottery was discovered, "resembling very much the *cantaro* used by the Indians—a water jar." Both were carried away by Mr. Stephens, to the great dismay of the simple people who had found them; and who attributed the fever which, as we have said, shortly after overtook the Cura of Ticul, to this sacrilegious transaction. In a few days our traveller was enabled to return to Uxmal, where, to his great comfort, he found Mr. Catherwood still industriously at work, and as yet unvisited by the epidemic. But at last the artist also, stout as he had proved himself, was prostrated by illness; and the end was, that the encampment in the Casa was broken up, Chaipa Chi paid off, (poor woman, she only lived a month after the departure of the Americans!) and the party moved off in search of fresh antiquities:—

"As we descended the steps, Mr. C. suggested that it was New-year's day. It was the first time this fact had presented itself; it called up scenes strikingly contrasted with our own miserable condition, and for the moment we would have been glad to be at home. Our cochés were in readiness at the foot of the terrace, and we crawled in; the Indians raised us upon their shoulders, and we were in motion from Uxmal."

The next city "*tapped*"—to use Horace Walpole's word—by our discoverers, was Mohpat, with an array of terraces, mounds, monuments, and sculptures, accurately described by Mr. Stephens. Thence the party moved on to Kabah, which offered a field for the daguerréotype little less extensive than Uxmal. One building, indeed, seems to surpass, in barbaric richness of ornament, all others in the district. A portion of a façade, delineated by Mr. Catherwood (and the Sun), presents *two stories*, each containing three rows of gigantic masks wearing the hideous semblance of human faces—every inch of which is *tattooed* with rings, foliage, serpents, &c. These "stories" are divided by mathematical borders, alternated with the endless Grecian volute. Kabah, too, yielded another enormous carved beam of sapote wood. But to diversify this *catalogue raisonné*, we will give Mr. Stephens's description of certain relics, a trifle less antique, which he came upon in the village of Nohcahab. Here not only is the church wall battlemented with rows of skulls, but the whole building is decorated with the same grisly ornament:—

"The floor of the church was interspersed with long patches of cement, which covered graves, and near one of the altars was a box with a glass case, within which were the bones of a woman, the wife of a lively old gentleman whom we were in the habit of seeing every day. They were clean and bright, as if polished, with the skull and cross-bones in front, the legs and arms laid on the bottom, and the ribs disposed regularly in order, one above the other, as in life, having been so arranged by the husband himself; a strange attention, as it seemed, to a deceased wife. At the side of the case was a black board, containing a poetical inscription (in Spanish). * * The widowed husband wrote several stanzas more, but could not get them on the black board; and made copies for private distribution, one of which is in my hands. Near this were the bones of a brother of our friend the cura of Ticul and those of a child, and in the choir of the church, in the embrazûre of a large window, were rows of skulls, all labelled on the forehead, and containing startling inscriptions. I took up one, and staring me in the face were the words, 'Soy Pedro Moreno: un Ave Maria y un Padre nuestro por Dios, hermano.' 'I am Peter Moreno: an Ave Maria and Paternoster for God's sake, brother.' Another said, 'I am Apolono Balche: a Paternoster and an Ave Maria for God's sake, brother.' This was an old schoolmaster of the padrecito, who had died but two years before. The padrecito handed me another, which said, 'I am Bartola Arana: a Paternoster,' &c. This was the skull of a Spanish lady whom he had known, young and beautiful, but it could not be distinguished from that of the oldest and ugliest Indian woman. 'I am Anizetta Bib,' was that of a pretty young Indian girl whom he had married, and who died but a year afterward. I took them all up one by one; the padrecito knew them all; one was young, another old; one rich, another poor; one ugly, and another beautiful; but here they were all alike. Every skull bore the name of its owner, and all begged a prayer. One said, 'I am Richard Joseph de la Merced Truxeque and Arana, who died the twenty-ninth of April of the year 1838, I am enjoying the kingdom of God for ever.' This was the skull of a child, which, dying without sin, had ascended to heaven, and needed not the prayers of man. In one corner was a mourning box, painted black, with a white border, containing the skull of an uncle of the padrecito. On it was written in Spanish, 'In this box is enclosed the skull of Friar Vicente Ortigon, who died in the village of Cuhul in the year 1820. I beseech thee, pious and charitable reader, to intercede with God for his soul, repeating an Ave Maria and a Paternoster, that he may be released from purgatory, if he should be there, and may go to enjoy the kingdom of heaven. Whoever the reader may be, God will reward his charity. 26th of July, 1837.' The writing bore the name of Juana Hernandez, the mother of the deceased, an old lady then living in the house of the mother of the padrecito."

Our notice of this work has run to an unusual length; but we hope to be the first, as with Mr. Norman's visit to these interesting ruins, to introduce it to the English public.

The Rise, Progress, and Present State of the Mormons; to which is appended, an Analysis of the Book of Mormon. By H. Caswall, M.A. Rivingtons.

WE were the first to give a detailed account of the impudent imposture of which the present volume is a history [*Athenæum*, No. 701], and our report may be taken as a sufficient analysis of the work before us. It is right, however, to say that Mr. Caswall is a Missouri man, and Professor of Divinity in the Kemper College of that State. These facts may render it necessary to take, *cum grano salis*, so much of his story as depends upon general colouring. We need have little doubt that the conduct of the miserable fanatics was stupid enough, and as ferocious as stupidity commonly is; but in summing up the "great account 'twixt me and vengeance," in striking a balance between fanatical aggression and mob re-action, it is right to remember the relation of the historian to the contending parties. We do not, in so saying, intend to infer that the facts of Mr. Caswall's statement are either knowingly or unknowingly distorted; for, judging by a general acquaintance with human nature, there is nothing in his story that outrages probability: and of local matters we cannot be supposed to know much. But there is a tone of—honest indignation shall we call it

Digitized by Google

—or of sectarian vehemence about the narrative, that casts an air of suspicion on what may be, after all, a tolerably accurate statement.

The position of the Professor, nevertheless, may be fairly supposed to have some positive relation with a proposition which is brought prominently forward; namely, that the rapid propagation of this strange delusion amidst all the light of the nineteenth century, should be attributed to the absence of any "influential church strongly controlling public opinion." What is here meant by an influential church is not left in ambiguity. Episcopacy, says our author, "is unknown in America except in name. The colonists applied for an American bishop, and the mother country declined granting the request." "There was no visible centre of unity; there were no means for the ready removal of abuses; each clergyman acted for himself." After the revolution, the American government had not the power to set up any national form of religious doctrine and worship; and the people came to the conclusion that "any legislation by which Christianity should be distinguished from Mahometism, Paganism, or infidelity, would be contrary to the first principles of American liberty." Bating the unfair innuendo concealed in the last sentence, which, however, falsifies the whole, there is such a portion of truth in the argument as suffices for a one-sided view of the question. It is substantially untrue that American institutions are a correct exponent of the religious earnestness of the people; and the author himself admits that the great source of the popularity enjoyed by the new doctrine, such as it was, rested directly on its being founded on Bible doctrines; and he further allows that it spread here in England, in spite of the most florid church establishment that the world knows. No one will deny that a perfect church, administered by perfect men, would hold a very potent control over the minds of its followers, and prevent gross absurdity from prevailing among a people. But men are not perfect. A comparison, if any be necessary, should not be made between fanaticism and a church acting under a powerful combination of checks, but between fanaticism and the utter prostration of mind, and political slavery, that have prevailed where one church has ruled exclusive and supreme.

This is, however, a question foreign to our pages: what concerns us is, that the advancement of a *non causa* operates to put out of sight the *causa vera*, which is imperfect popular education,—in the remoter parts of the United States an inevitable result of a dispersed population, and at home, a consequence of the utter confusion and ignorance prevailing concerning what education should be. By education our readers know that we do not mean mere parrot work, mere elementary instruction in reading and writing; but education that not only teaches men to think for themselves, but encourages them to do so;—an education which brings a man acquainted with his own nature, wants, and powers, and teaches him to judge of all things on sound principles.

We may freely admit to Mr. Caswall that Mormonism has prevailed chiefly among those sects which were best prepared for its reception, by the entertainment of congenial absurdities; though numerous examples of an opposite description are not wanting. But poverty is not altogether without its influence in multiplying those sects. Hard fare in this world disposes men to seek compensation in a fanatical excitation respecting the other. Many of the English converts were from a class already flying from pressure at home to the wilds of America; and their spiritual and bodily wants centred in the same point. The rich proportionately escape fanaticism, because they have present interests to occupy their thoughts; and minds well stored with information cannot readily fall into that exclusive indulgence in one train of thoughts, which constitutes the fanatical monomania. The general fund of information which is called the common sense of the nation, (of which the poor partake as little as of its pecuniary capital,) is a powerful protector.

Memoirs and Correspondence of Francis Horner, M.P. [Second Notice.]

A modern German writer asserts that the future historians of England will find the best materials for an account of the Regency in political squibs and caricatures. Croker's 'Whig Guide,' Moore's 'Twopenny Post-bag' and 'Satirical Odes,' the unacknowledged sportive effusions of Canning, and other statesmen, afforded some relief to a period distinguished above most others for the dulness both of ministry and parliament. In turning over Mr. Horner's correspondence, the gloomy view which we find him entertaining of the state of the government and the country, is relieved by our recollections of many a clever parody and witty epigram; and we cannot discuss so grave a question as the constitutional powers of a regent, without remembering the description which the Prince is represented as giving of his position in the parody on his letter to the Duke of York:—

> A strait waistcoat on him, and restrictions on me,
> A more limited monarchy could not well be.

Horner and many other constitutional lawyers were surprised and vexed at the part which Lord Erskine took on this great question, and he relates an anecdote which shows that the Prince was not satisfied with the conduct of the ex-Chancellor.—

"The story you heard of Lord Erskine and the Prince had some foundation; but was exaggerated, and the scene was mislaid. There was some argument between them about privilege, at a dinner at the Foundling Hospital, which was magnified by Erskine's enemies into a sharp and angry dispute. But I understand it was at a private dinner that the retort you allude to was made by the Prince, who, when Erskine said the principles he maintained were those which had seated H.R.H.'s family on the throne, said they were principles which would unseat any family from any throne. I have no idea that there is any serious displeasure felt by the Prince against Erskine on this account; though Erskine has not left it to this day for him to prove, that rather than yield his public opinions, he is ready to encounter that displeasure. His opinions upon this occasion are, I think, quite erroneous; his prejudices as a lawyer, perhaps an itch for popular favour, perhaps, too, a dislike of the House of Commons, all conspire to lead him wrong. The House of Commons was not his theatre of glory; he was perpetually losing there the fame he won in Westminster Hall."

The interest of the Regency question has long since passed away; not so that of parliamentary privilege, which at this moment is again placed in issue. In Horner's time, the question was raised by the actions which Sir Francis Burdett brought against the officers of the House of Commons for false imprisonment. Mr. Horner's sketch of the patriotic baronet unites the vividness of cotemporary writing with the sober judgment of history:—

"What a curious scene was exhibited last week in this city; and what would John Wilkes or Cardinal de Retz have said to such a false step as Burdett has made, in failing to appear in the procession prepared for him. He has acted in that a more temperate and peaceable part than I had previously given him credit for; but it is manifest that his conduct is inconsistent with itself, that all he had done before required him to go on, and that he had advanced too far in the popular race to turn back. His popularity is accordingly very much impaired. The agitators and desperate spirits have had it proved to them, that he is not a leader for them and has not mettle enough; and the good-hearted mob have found, to their disappointment, that whether it be want of courage, or too good a taste, he will not always enter into all their noise. The more intelligent of his party must be satisfied, that he is deficient in resolution, and cannot always be depended on. His powers of doing mischief are diminished, therefore, if he ever had any mischievous designs, which I do not believe; and if the public were once satisfied that he is no longer popular with the multitude, and thereby formidable, I think he has qualities that would enable him, in his way, to do good occasionally, and to assist other public men in doing good in theirs. Vain he is, no doubt, and always acting upon the suggestions of others, and those often inferior to himself; but he has a prompt indignation against injustice and oppression, one of the best elements of the passion for liberty; and by great and fortunate labour, he has acquired a talent for speaking in public. I believe he loves his country and the ancient institutions. I think, too, he has considerable candour in judging of the talents as well as motives of other men; but there have been some symptoms of a very pitiful jealousy towards those who have interfered with him in his own line of Westminster popularity. He has rendered himself a remarkable man, though I fear he is not likely to do any great or lasting service to the public: his late transactions have extended his popularity beyond the capital, to which it was confined before; but in the end they have lessened it in the capital."

Horner felt mortified when the resolutions founded on the Bullion Report were rejected in parliament, and the counter resolutions, which have conferred immortality on Vansittart, were adopted in their stead. He describes his feelings in a letter to his father:—

"I have at last got rid of bullion; the country, I fear, will not get rid of the necessity of resuming the question very soon. So far as the mere votes of the House of Commons go, mischief has been done by the parliamentary discussion; for we have concluded by two resolutions, one of which misrepresents, in a very dangerous manner, the prerogative of the King over the standard of money, and the other is a ridiculous evasion of the fact of depreciation. They will probably give birth to a new host of pamphlets. But, in another point of view, the impression made upon the public mind, as to the importance of the question, I believe much good has been done; in the House, it was manifest, that we established unanswerably our conclusions, though the apprehensions naturally excited by such a statement, and magnified by the obscurity in which most persons find themselves upon such a subject, make them dread the effect of confessing its truth. I hear, also, that there has been a considerable change in the sentiments of the city."

The anticipation that the resolutions adopted by parliament would give rise to a host of pamphlets, proved correct; but they likewise produced legions of squibs on the Chancellor's assertion of the union between paper and gold. We remember, even at this distant day, being amused by a remonstrance which Paper, in the character of a faithful wife, addressed to her erratic husband, Gold:—

> Your scampering began
> From the moment Parson Van,
> Poor man, made us *one* in Love's fetter;
> "For better or for worse,"
> Is the usual marriage curse,
> But ours is all "worse" and no "better."
>
> In vain are laws pass'd,
> There's nothing holds you fast,
> Though you know, sweet sovereign, I adore you;
> At the smallest hint in life,
> You forsake your wedded wife,
> As *other* sovereigns did before you.

Horner was very anxious that parliament should interfere to put an end to the trials which arose out of the real or supposed breach of the Convention Act by the Catholic Committee, in Dublin. The curious contrast between the proceedings of the Irish Secretary, Mr. Wellesley Pole, and his brother, Lord Wellington, afforded much amusement to the wits of the day. It was said—

Digitized by Google

See how Wellington fights, and how squabbles his brother!
For Papists the one, and *with* Papists the other;
One crushing Napoleon by taking a city,
While t'other lays waste a whole Cath'lic committee.

Mr. Horner took a graver and juster view of the matter:—

"If the Irish judges support their government, in the construction of the Convention Act, we ought to move for the repeal of so abominable a statute, and in discussing it have no mercy for the judges. If by any unlooked-for turn of patriotism, or fear in the judges, they should construe the act as it seems to me it ought to be, then we shall have a much freer game to play, by an attack upon the administration alone; but, in either event, I feel very anxious that opposition should go resolutely to the attack, without any compromise towards the Regent. It is not unlikely that Parliament will meet before the legal question can be decided at Dublin; in that case, ought we not to act without any delay, assuming our own construction of the act to be clear and indubitable? I have not the least faith in any stories of secret intelligence possessed by government, as to designs on the part of the Catholics; if government is sincere, they may have been frightened by the appearance of a little more eagerness among the Catholics, when they believed the day of emancipation was at last coming on; and the show of a little more determination and system, when they found that day bring them a fresh disappointment. I am much more inclined to believe that Percival and the Archbishop of Canterbury have worked upon Lord Manners,* who is a timid man, and very bigoted. The conduct of the Wellesleys in all this business is very pitiful, for they have no bigotry on the subject."

In the band of political economists, led by Mr. Baring, now Lord Ashburton, to resist the imposition of Corn Laws, Mr. Horner bore a conspicuous part. His speech on the subject, was one of the best delivered on the side of free importation; and his remarks on restriction, in a letter to his friend Murray, contain sound principles, very pointedly expressed:—

"There is certainly no foundation for the distinction with which I am honoured, it seems, at Edinburgh, of being a convert to the Corn Bill. The more I have read upon the subject, and the more I hear upon it, I get more firmly fixed in my original opinion, that nothing should be done; of course it will be carried with a loud clamour, and with much abuse of all *lackland* theorists. It would be as absurd to expect men to be reasonable about corn, as to be reasonable in matters of religion. I do not imagine any new discovery is made about the relation of the price of labour to that of grain, or the effects of scarcity or plenty upon wages. The principles, upon which all such effects must depend, are obvious to every one who understands the operation of demand and supply upon prices; indeed, they are all an application of that single principle. A great many cases are necessary to be put, in order to distinguish the various effects of scarcity or plenty upon wages, according to the nature of the particular employment in which labour is to be paid for; but even when the effects are the most opposite, it is still the operation of the same principle. All this is stated well enough by Adam Smith, towards the end of his chapter on the Wages of Labour. The most important convert the landholders have got, is Malthus, who has now declared himself in favour of their Bill; and, to be sure, there is not a better or more informed judgment, and it is the single authority which staggers me. But those who have looked closely into his philosophy will admit, that there is always a leaning in favour of the efficacy of laws; and his early bias was for corn laws in particular. It was a great effort of candour, in truth, to suspend his decision upon this particular measure so long. I think I could demonstrate, from his own principles of population, that if this measure is effectual at all, it must be attended with great misery among the manufacturing classes, as well as among the labourers in husbandry; and with a violent forced alteration of that proportion, in this country, between agricultural and manufacturing population and capital, which the freedom of both has adjusted, and would continue to maintain, better and more lightly for all the people, than can be effected by all the wisdom of all the squires of the island, with the political arithmeticians to boot."

* Lord Chancellor of Ireland.

As the Corn Laws are, at the present moment, matters of deep interest, we shall make some further extracts from Mr. Horner's reasonings on the subject, contained in a letter addressed to Mr. Malthus:—

"You will think me very hardened, but I must own that my old faith is not shaken by your reasonings; on the contrary, I am even so perverse, as to think I have discovered, among your ingenious deductions respecting rent, some fresh and cogent arguments in favour of a free corn trade for this country; by which I always mean, as free a trade as we can secure by our own good sense, however it may be impaired by the deficiency of our neighbours in that qualification. If the consequence of 'high farming' and curious cultivation be a progressive rise of the price of produce, an importation of partial supplies from countries, which by a ruder agriculture can furnish it cheaper, seems the provision laid by nature for checking too exclusive an employment of capital upon the land least fit for culture. It would be a palpable sacrifice of the end to the means, if, for the sake of extending our most finished husbandry to every sterile ridge that can be forced to yield something, we must impose upon the whole body of the people extravagant prices for the necessaries of life. Nor do I see, upon your peculiar principles, what other result there would be, if Dartmoor and Blackstone Edge were laid out in terraces of garden-ground, but a population always in some peril of being starved, if their rulers will not let them eat the superfluity of their neighbours. ** Speaking from recollection only, I should not say that it is a result to be gathered from the evidence before Parliament, that 'a continuation of low prices would, *in spite of a diminution of rents*, destroy farming capital, and diminish produce.' (p. 5.) The witnesses, who make this prediction, generally at least, if not uniformly, speak upon the supposition of the present rents being still to be paid. I may observe too, that they generally take for granted, which is more fallacious, that with low prices, and continued low prices, all the expences and outgoings of a farm are still to keep at their present rate; and so they prove, demonstrably to their own conviction, that a farmer will never be remunerated if he gets but 8*s.* a bushel for his wheat at market, while he is feeding all his ploughmen, and buying his seeds, and paying all the auxiliary labour of the farm, with wheat at 12*s.* a bushel. ** In considering the influence of a low price of corn upon the condition and comforts of the labourer, you have wholly omitted this consideration, that such a fall will release thousands and tens of thousands from the parochial pauper list, and restore them to the pride of earning their bread by free labour. I could not read without indignation, in the evidence of Mr. Benett, of Pyt House, who seems the very model of a witness for Corn Committees, this cool statement of the rule he makes, and unmakes, for the distribution of rations of provender and fodder among the prædial slaves of a whole district of Wiltshire. It is this audacious and presumptuous spirit of regulating, by the wisdom of country squires, the whole economy and partition of national industry and wealth, that makes me more keenly averse to this Corn Bill of theirs than I should have been in earlier days of our time, when the principles of rational government were more widely understood, and were maintained by stronger hands at the head of affairs. The narrow conceit of managing the happiness of the labouring population, and of directing the application of industry, as well as the competition of the market, works in the present day upon a much larger scale than when it busied itself with the pedlar items of the foreign trade."

The last paragraph may be supposed to have suggested the following lines, addressed, at the time, to Lord King:—

When Rome was uproarious, her knowing patricians
Made "bread and the circus" a cure for each row,
But not so the plan of our noble physicians—
"No bread and the treadmill 's" the regimen now.

So cease, my dear Baron of Ockham your prose,
As I shall my poetry—neither convinces;
And all we have spoken and written but shows,
When you tread on a nobleman's corn, how he winces.

Passing from this "never ending still beginning" discussion, we turn to the portrait which Mr. Horner has given of his contemporary Mr. Whitbread. It is a portrait drawn by one who had a keen insight into character, and who would not allow the partiality of friendship to prevent the harsher lineaments from being faithfully depicted.—

"The event that has most agitated me since I parted from you, is the death of Whitbread, which you mentioned with sentiments that gave me a real pleasure; for I shall ever respect his memory, and with something like affection too, for the large portion of my life which, in a certain sense, I consider as having been passed with him, and for the impression he had made upon me of his being one of the most just, upright, and intrepid of public men. As a statesman, I never regarded him at all; he had no knowledge of men or affairs, to fit him for administration; his education had been very limited, and its defects were not supplied by any experience of real political business: but he must always stand high in the list of that class of public men, the peculiar growth of England and of the House of Commons, who perform great services to their country, and hold a considerable place in the sight of the world, by fearlessly expressing in that assembly the censure that is felt by the public, and by being as it were the organ of that public opinion which, in some measure, keeps our statesmen to their duty. His force of character and ability, seconded by his singular activity, had, in the present absence of all men of genius and ascendency from the House, given him a pre-eminence, which almost marks the last years of Parliament with the stamp of his peculiar manner. His loss will lead to a change of this: in all points of taste and ornament, and in the skill too and prudence of debate, the change may probably be for the better; but it will be long, before the people and the constitution are supplied in the House of Commons with a tribune of the same vigilance, assiduity, perseverance and courage, as Samuel Whitbread. The manner of his death quite overwhelmed me, I could think of nothing else for days together: nor do I remember, in our own time, another catastrophe so morally impressive, as the instantaneous failure of all that constancy, and rectitude, and inflexibility of mind, which seemed possessions that could be lost only with life; yet all the while there was a speck morbid in the body, which rendered them as precarious as life itself."

Mr. Horner's honourable and successful exertions to amend the Irish Grand Jury Laws must ever hold an honoured place in the annals of Ireland. The subject, however, could not be discussed without raising the painful feelings of a heated controversy, which is now nearly forgotten. We turn then to our statesman's view of the policy pursued towards Napoleon. It is contained in a letter addressed to Mr. Hallam; and the name of another great man introduced at the close will sufficiently justify our extending the extract:—

"I fancy you will not agree with me, in being sorry to see, that nothing has been said by any body, upon the bills relating to the prisoner at St. Helena, expressive of a regret that it was cast upon this country to execute so odious a part of the arrangements to which the victory of Waterloo has led. You know all my sentiments about the man, how little I share any of that admiration which his extraordinary fortunes and character have imposed upon some persons, and how much I execrated all along his tyranny and military ambition, and enmity to all civil liberty. At the height of his power, I expressed myself more strongly against him than I should permit myself to do publicly now. In the treatment he has met with, I feel no inclination to deny, that the sparing of his life is an act of humanity, such as is not recorded of any of those former ages in which such characters and events are to be found: yet I cannot but feel, at the same time, that, when a few years more are gone by, and we can all look back upon these transactions from some distance, it will be our regret and mortification that the government of this day could see no safety for Europe against a single man, but in transporting him to a rock in the ocean, and that in leaving him his life, we have taken all that can make life any thing but a torment. I do not mean to make a stronger imputation, than that we

Digitized by Google

have been wanting in magnanimity, where the opportunity was obvious and commanding. But this country has reached too high a station, to be at liberty to miss such opportunities. Our virtues must rise with our fortune, or we shall be thought to have been unworthy of it: a large and secure generosity, is one of the conditions by which we are to hold our greatness. Instead of this, we have treated our captive with the timid severity of a little republic; and have lowered ourselves to the notions of our despot allies, who know nothing of safety but in force and bonds. Perhaps, some years hence, at the point of view which I anticipate, I shall soberly discover all this to be a romance. I can say, without any affectation, that I shall have nothing but pleasure in seeing the glory of the country quite clear of the stain which I think I see upon it at present. Do you hear any thing of Canning's coming into office? I wish he were back in the House of Commons; it would refresh one's mind, to hear something like eloquence again, and to see a man at work, who, with all his faults, owes his means of greatness to his power in that House. His faults, it must be owned, and especially his late errors, are miserable."

Mr. Horner died prematurely, at a time when his services were most wanting and likely to prove of most value. Part of a letter addressed to him by Lord Holland, will show the objects to which, had he been spared, his exertions in parliament would have been directed:—

"I agree with you in most of your points, but not quite in the same degree. Retrenchment and economy, which must include suppression of sinecures in future, and as far as the rights of property (established by legal decision) admit, the reform of those now existing, as well as the reduction of many useless places, miscalled the splendour of the crown, are absolutely necessary to give any party, who wishes to do good, authority and weight with the people. They must go. The community are punished, and severely punished, for their base acquiescence in liberticide wars, by their present distresses. I am not so sorry for that as I ought to be. But let ministers and the court be punished too, and a useful lesson will be inculcated, that rash and unprincipled wars cannot be entered into without (even in the case of success) the people risking their prosperity, ministers their power and influence, and kings and courts a part of their beloved splendour. It is through the unpopularity of the expenditure that we must get at the foreign system of politics, which, in my conscience, I think the cause of it. As to parliamentary reform, the industry of the violent party, and the talents, I must own, of one among them, seem to have made a deep impression; but I do not despair of getting over that difficulty well. There are many of our best friends out of parliament, and many, too, who were not our friends till now, who are anxious to support retrenchment, and to change foreign policy, and to dismiss ministers, and yet, though reformers, are no great sticklers for any very violent reform, and are both disgusted and alarmed at the language of Cobbett, Hunt, and Cochrane. They are, I hear, of their own accord, and without any concert with us, to have a great dinner in Westminster, at which their resolutions will be such as we must all approve; though perhaps, on the subject of sinecures, some of them will be a little more peremptory than we could wish; but the fact is, they are eyesores, neither beautiful to the sight nor useful to the body; while they remain, we can make no progress in courting the community, and they must be lopped off."

We have dwelt with melancholy pleasure on the life of a statesman, whose brief career was marked by consistent advocacy of free and equitable institutions. It has been lamented that he never held such an official position as would have enabled him effectively to develope his principles; "the gates of promotion were shut on him as those of glory opened;"—we have no sympathy with this sorrow; the labours of the wise and good, however ineffective they may appear for a season, are like "the bread cast upon the waters, which will be found after many days." It is instructive to converse in the spirit with such a man as Horner; in these volumes "though dead, he yet speaketh," and even those the most removed from him in political opinions may be profitably informed by his intelligence and warned by his admonitions. We do not anticipate great and immediate popularity for these volumes, but there is much in them which cannot die; "honest opinion, even when mistaken, is predestined to immortality." Horner loved truth for its own sake, and his singleness of affection has met its appropriate reward, not in thunders of applause, not in extravagant eulogy, but in the silent homage of the heart ratified by the mature judgment of the understanding: so true is the declaration of Grattan—"The words of the genuine patriot, as of the inspired prophet, will not die with the holy man, but will survive him to animate, instruct, and guide future generations."

Notes and Reflections, during a Ramble in the East, an Overland Journey from India, Visit to Athens, &c. By C. R. Baynes, Esq. Longman & Co.

This unostentatious book of travels commences with remarks upon the settlements of the Cape of Good Hope, some of which we shall quote, as they appear to have been made by a judicious and inquiring observer. Mr. Baynes paid particular attention to the condition of that part of the Cape population, which has been formed by emigration from England, under the auspices and superintendence of the "Children's Friend Society." From a communication addressed to the author, by the Chairman of the corresponding committee of the above-mentioned Society at the Cape, we take the following testimony to the favourable situation of the class in question:—

"I must declare that my observations have impressed me with a conviction that the emigrant boys are well fed, well clothed, kindly treated, and not overworked; in short, are in every respect far better off than those of their own class in England. The objects of the Society appear to me to have been most fully answered, if they consisted in wishing to remove to a country where honest labour will always insure a decent and comfortable maintenance, a portion of the inhabitants of a land not able to hold out a similar certainty to all its population."

The description given of the lives and manners of the Boers is interesting:—

"In every farm-house the style of living, the hours, and customs, appear nearly, if not entirely, similar; sufficient for the more wealthy, and within the means of the less opulent, but little room is thus afforded for the exercise of that idle vanity of display, which, preferring empty show to solid comfort, is productive of so much misery in our own country. There is scarcely any variety even in the construction of the houses, all have the 'stoep,' or raised foot pavement, running along the front, which is to the Cape Boer what the 'hearth' is to the Englishman: the abode of the penates, the seat of honour of the house. Any disrespect shown to this sacred spot, is much felt by them: any offence or insult is greatly aggravated by the stoep being made the theatre of its perpetration; and I have known considerable irritation caused by a stranger, ignorant of their peculiarity in this matter, inadvertently bringing his horse upon it."

The following is high commendation:—

"The manners of these hospitable and simple people are instinctively and innately polite; with less action than the French, they display more warmth than the English, and never did any class of men make on my mind a more favourable impression, than the Dutch Boers of the Cape colony. Such were my observations, made while passing my time very pleasantly among them, and such I believe is the unvarying tenour of their lives, unless when a birth, marriage, or death disturbs for a while the daily routine of the family, and begets unusual relaxation and festivity; even to the latter event, this term is somewhat applicable, for the custom of the 'funeral feast' still indicates their derivation from the old Germanic root, and carries back the ideas of the Englishman to his Saxon progenitors. Such a life may appear dull, monotonous, and uninteresting to those who have the power of comparing it with the excitements of European society, and the diversified pursuits which are the result of refinement and civilisation: to those who have not, happily for themselves, the means of making this comparison, no such reflections can present themselves, and even if they were aware of all that passes, of all that is to be enjoyed, and all that is to be suffered in the wide world, beyond their own little corner, I believe many of these would be found strong-minded and philosophical enough to decline any change."

Another passage bears witness to the general morality of the Cape Boers, and particularly to their temperance, in which they take an unusual, but it seems a successful, method of training up their children:—

"As far as my opportunities enabled me to judge, I was led to form a very high opinion of the morality of the Cape Boers: better regulated families cannot be; an indecent or profane expression never met my ear, drunkenness I never beheld, respect to parents exists in a degree which, in these days, is not sufficiently common in our own country, and religious worship is invariably attended, even though great difficulties be in the way. It is not unusual for a family to travel in their waggon a journey of from four to five hours to church, and in order to receive the sacrament they will consume a whole week in journeying, greatly of course to their temporal inconvenience and loss. One trait in their character to which I have alluded, the absence of drunkenness, may seem strange in a country abounding with wine. Had I not seen it practised, I should hardly have thought their mode of education in this respect likely to produce the temperate habits which it certainly does. Their plan is simply this, never to tell the children it is wrong to take wine, never to forbid them the use of it; from their infancy they see it all around them, they may help themselves. Some perhaps take a little more than would be good for a continuance. The evil is its own cure; no remark is made, headache and the usual accompaniments of excess are experienced, and it is not repeated: the result is a temperate habit, in the midst of temptation to intemperance."

Mr. Baynes is of opinion that the wine of the Cape is susceptible of a high degree of improvement, so as to constitute a much more valuable branch of trade than it is at present. He also assigns reasons for its present inferiority:—

"It has evidently been the intention of the legislature to patronise this staple commodity of the Cape market. Low duties, however, have not caused the transmission to England of generally good wine, or rather have not caused the production of it, for of course the merchants of Cape Town send the best they can get; and from the wine having a bad name in the English market, much advantage is lost to the colony. That *excellent* wine can be made, I know from pleasant experience. Often have I asked the farmer, 'Why do you not make all your wine like this?' The various reasons alleged in reply generally amounted to an expression of their conviction that it would not pay. I could not find, however, that any had given it a fair trial; nor indeed could any individual farmer do so. As 'Cape wine,' his produce must go into the market; and if he took more than the ordinary care, or employed more than the usual labour in its manufacture, he would fear, and perhaps justly, that the superior quality of his small quantity would not be recognised, nor his wine produce a proportionably higher price. I should think that, in a matter so deeply affecting their mutual interests, the grower and the merchant, through whom the wine passes into the European market, might advantageously co-operate; the native farmer striving to produce a better article, the merchant exerting himself to obtain for it its due place in the market. I am sure a wine might be made fully equal to the marsala, and ordinary sherries now consumed in England, and of course at a greatly inferior price."

The chapters relating to the Cape appear to contain the most valuable of Mr. Baynes' observations, and we therefore do not accompany him further upon his Eastern travels.

On the Value of Annuities and Reversionary Payments. By David Jones. ('Library of Useful Knowledge.')

Of all the works which have ever been published on the subject of life annuities, this is the most extensive in its tables. The three well known works of Morgan, Baily, and Milne contain altogether about 300 octavo pages of tables; the one before us contains 900 pages of more closely printed tables, of which much the greater part are deduced from the Carlisle rate of mortality.

The introductory treatise on life annuities is sound and extensive, and, including 43 pages of tables on annuities *certain*, occupies 234 pages. Its greatest defect is an inconvenient and somewhat difficult notation, but there is nothing about it which a resolute student need fear. Both the great methods of treating the subject are explained: the old one, which proceeds by tables of annuities; and the new one, invented by Mr. Barrett, and improved by Mr. Griffith Davies, which uses the now well known preparatory tables. At the end of the book is an account of the insurance offices, with lists of their premiums (which we have not reckoned in the 900 pages of tables,) and a digest of the principal law cases arising out of contracts of life assurance.

The enormous bulk of tables to which we have alluded, is mainly due to the manner in which the cases involving two lives have been treated. It was usual to give the difference of ages only to every five years, at 3, 4, 5, and 6 per cent. interest. Mr. Jones has given *every* difference of ages, and for the rates of 3, 3½, 4, 4½, 5, and 6 per cent. Again, Barrett's tables have never been printed for two lives till now; but, wherever the common tables are given, in the present work, the corresponding ones in the new method are also given for every difference of ages and for the above rates. It must suffice to say, that in other particulars the tables are as extensive as they should be, to render them suitable prefaces or accompaniments to those on two lives.

In the course of calculating the annuities at 3½ per cent., a curious error was made. In the fundamental tables, from which the joint annuities were calculated, a 6 had been rubbed down by use into a 0; in consequence of which, a serious error was made throughout a great part of the annuities at the above-mentioned rate of interest. The whole of this table has, therefore, been cancelled and reprinted. There is another cancel, which is creditable both to the Society and Mr. Jones. A part of the joint annuities had been calculated from the usual tables, having differences for every five years, by the usual and admitted, but not most correct, mode of interpolation. Some part of the results had been printed and published in the current numbers, when it was found that more correct tables, calculated by the full and accurate method, could be obtained from a friend of the author. The printed part was therefore cancelled, and the more correct results adopted.

We congratulate Mr. Milne, the respected author of the Carlisle Table, (who both foresaw that a new table would be wanted, and made one out of no very great amount of materials, the truth of which experience has confirmed, as far as the middle and higher classes in England are concerned,) on his having lived to see, in the present work, and that of Mr. Sang, which we noticed a few weeks ago, his results made the foundation of an extent of tabular deduction, to which no one, at the time when he published, would have looked forward. The difference between the *matériel* of the two works is, that Mr. Sang, confining himself to 3 per cent. and one life, the current rate of interest and the most common case, has fairly exhausted his subject, and given almost every result which, at that rate of interest, can be asked for. Mr. Jones takes various rates of interest, and two lives as well as one, and has both corrected existing methods, by publishing his joint annuities complete, and has very much reduced the labour of calculation, by annexing Barrett's tables. We will venture to say, that, for some time to come, and as long as the Carlisle Table continues, writers on life annuities will cease to publish tables, and will refer their readers to those of Mr. Jones.

There is one matter on which Mr. Jones has not acted fairly by the memory of Barrett, to whom he and all actuaries are so much indebted, and to whose fame full justice is the least they can pay, in return for the neglect with which he was treated during his life. Mr. Jones says, (p. 117), "Davies' formula is an improved modification of that of Barrett," (which he proceeds to describe). This is the truth: Mr. G. Davies contributed an essential improvement to the symmetry of Barrett's method; he also extended the same principle directly to questions of assurance, as well as to those of annuities, the manner in which Barrett solved questions of the first kind, though easy, being indirect. But, in the preface, Mr. Jones will no longer allow Barrett any place, for he gives the whole to Mr. G. Davies: "In the part which treats of life contingencies, resort has been had to Mr. Griffith Davies's method of constructing tables of the values of annuities, published by him in a small tract in 1825." We are sorry to see that in this tract Barrett's name is not mentioned at all, though his method, with the author's improvements, is explained and exemplified; which looks as if the author did not acknowledge Barrett's priority. Mr. Francis Baily and Mr. Babbage have both done justice to Barrett; and it is idle to suppose that a fact in the history of life tables, as well known as the appendix to Mr. Baily's work, (which now exists both in English and French), can be *cushioned*.

With this one warning to our readers, many of whom may see the preface and use the tables, without looking at page 117, we take our leave of the work before us, giving it as our decided opinion, that if there be any one book in our language or any other, which, by itself, would both train an actuary and enable him to practise his profession, this is the one.

OUR LIBRARY TABLE.

A Theory of the Structure of the Sidereal Heavens, &c. founded on a new Astronomical Doctrine.—Of all new things, new astronomical doctrines are the most likely to be false, unless they come from the hands of those who are both mathematicians and astronomers. The author is no more of a mathematician than this—he finds the amount of the interstices in a vessel filled with balls by pouring water into it. In his astronomy he proceeds as follows: he fills the universe with large spherical systems, and the interstices with smaller systems. As we cannot argue either for or against pure speculation, we stop here, wishing the author had expended his time, money, and very neat copper plates in something more likely to do him and others good.

The Pictorial Museum of Animated Nature, Part II. merits a repetition of the praise we gave to the first Part, although we still find, in the short generic characters, the same unpalatable technicalities. The present Part is occupied by the monkeys, lemurs, squirrels, mice, &c. Many of the figures are excellent, but we protest against the repetition of the same subject, and often on separate pages: there are, for instance, numerous animals figured twice; three figures of the Chacma are given, three of the Alpine Marmot, three of the Marmozet, and four of the Egyptian Jerboa; in almost all of which cases some of the figures are quite caricatures: figures 26, 53, 191, 239, for instance. Who would believe figures 210 and 211, 140 and 141, or 165 and 166, to represent the same animals? Quality, not useless quantity, ought to be the guide, in the selection of the cuts for such a work as this. Figures 243 and 244 are the same drawing reversed! It would also be advisable to introduce the figures representing the same animal on the same page; and, if possible, to add some mark or number to indicate the natural size of the animal represented, or the scale by which its size has been reduced. The space which may be gained by not introducing so many useless cuts, may be taken advantage of to place the figures in an upright position. The book is sufficiently awkward on account of its size, and it becomes more so by having the cuts placed in all directions, as in page 12.

A General History of Animalcules—being Part 1 of a History of Infusoria living and fossil, by Andrew Pritchard, 8vo.—An excellent popular digest of the recent discoveries of Ehrenberg, Meyer, Dujardin, and other continental authors amongst the present existing infusorial zoophytes; the extinct species being reserved for a future portion of the work. To these are added various practical remarks on the best methods of capturing, examining, and preserving these minims of creation, illustrated by plates containing between five and six hundred figures of different species, some of the plates being very beautifully engraved. To the microscopic observer, this cheap little book will be of great service, and will, we trust, be the means of enabling some fortunate member of the Microscopical Society to clear up a few of the singular queries which still exist respecting these creatures.

Jack the Giant Killer, by the Author of 'The Comic Latin Grammar.'—One of the series of 'Comic Nursery Tales'—we are sorry to add, by no means the best. Mr. Leech's giants are ugly rather than terrible—and Jack the redoubtable, looks, if the truth is to be told, like a girl in boy's clothes—rather than the queller of the Gog and Magog of the faëry tales. Neither does the author of 'The Comic Latin Grammar' come up to the author of 'The New Tale of a Tub' in ease and impudence: and without impudence there is no burlesque of the quality here attempted.

List of New Books.—Lectures on Chemistry, illustrated with 106 woodcuts, by Henry M. Noad, 1 vol. 8vo. 12*s.* 6*d.* cl.—Fallacies of the Faculty, by S. Dickson, M.D., People's Edition, royal 8vo. 2*s.* 6*d.* swd.—The Friend of Youth, a Series of Papers on the Duties of Life, by William Mackenzie, 12mo. 5*s.* cl.—The British Minstrel and Musical and Literary Miscellany, Vol. I. royal 8vo. 5*s.* 6*d.* cl.—Incidents of Travel in Yucatan, by John L. The observations of the Barometer (Flint and Crown Glass) are severally corrected for temperature, as also for capillarity.

ROYAL ACADEMY.

Professor Howard's Lectures on Painting.

LECTURE III.—CHIAROSCURO.

In my last lecture, I endeavoured to demonstrate the paramount value of *Design* or *Drawing*, and to impress on the student the necessity of securing as early as possible this only solid foundation of Painting. I remarked that a mere outline or contour, if well studied, may give a characteristic idea of the figure of any object, by showing its general proportions and lateral boundaries; but to convey its anterior appearance—its various projections, planes, and hollows—the contours must be filled up with a scrupulous copy of every gradation of tone observable on its surface, from the highest light, to the deepest shade: this belongs to *Chiaroscuro*, which I proceed to consider as the next great element of our art.

The term Chiaroscuro, in its full sense, includes the whole scheme of lights and darks in a picture, from whatever cause they may proceed. Of these some are the necessary consequences of the reflection of the light, by which they are made visible, and are governed by certain optical laws, which must be implicitly attended to; for a want of truth in those natural effects will scarcely escape detection from the commonest observer. This part of chiaroscuro is naturally comprehended in the drawing or making out of the forms, and constitutes the peculiar process by which the art imparts to her productions an illusive appearance of substance and relief. Thus far it is merely imitative, but in superadding to these lights and darks, which do not necessarily belong to the subject, (such as may result from a light or a dark drapery, or background, a black or white horse, a stormy or bright sky,) and in deciding on the intensity, quantity, and arrangement of these tones, chiaroscuro becomes essentially inventive or *ideal*, and one of the most powerful agents of the painter. Though derived from observation and study of the more striking or agreeable combinations which we see occasionally in nature, the chiaroscuro of a picture is not necessarily referable to any precise natural standard; it affords therefore great scope to the fancy, taste, and science of the artist; it is capable of adding richness, harmony and vigour to his compositions, as well as of investing them with great poetical feeling and character. Chiaroscuro is the quality which more immediately attracts the eye, and at the first glance gives a favourable or unfavourable impression of the work, as well as a hint at the nature of its subject; and hence it is technically called the *effect* of the picture, as distinguished from the design or composition. This may be still farther aided by colour, which is of course included in the idea of a complete picture; yet a number of admirable compositions in chiaroscuro by various masters, as well as the fine works of engraving, show how capable it is of delighting by its own separate power, while colour cannot be employed in painting, without producing a degree of chiaroscuro by its lighter and darker tints. As the principles of an art can only be discovered by investigating the doctrines and practice of those who have most excelled in it, I shall endeavour, after briefly tracing the rise and progress of chiaroscuro, to develope its theory from the examples left us by the most distinguished painters.

It does not appear that the ancients were acquainted with inventive or ideal chiaroscuro as a constituent of our art. On the contrary, it is supposed that harmony in its present extent and compass was unknown to them both in Painting and Music: and there is reason to believe, that as in the latter art they were unconscious of the power of

> Cecilia's mingled world of sound,

they were equally so, in the former, of those splendid combinations of tone and colour we see in Rubens, Correggio, and Rembrandt. It would seem that they were content with a much greater degree of simplicity in both these arts, than is found to satisfy the moderns. At least the few specimens we have left of their painting (which, however, are probably neither of the best masters nor of the best time) evince scarcely any attempt at chiaroscuro, beyond that of the mere light and shade which necessarily arose out of their imitation of illuminated forms. Of their excellence in this respect there can be no doubt; it must have been insured by their profound study of Nature; but there is no proof of their having understood chiaroscuro as an inventive principle and powerful element of the art.

A few circumstances, however, are recorded which indicate that some of their painters were not wholly without a perception of its value. What is related of Pausias, that in painting a sacrifice, he foreshortened the victim, and threw its shade on the crowd, to express its height and length, seems to prove this; and the invention is even an instance of the picturesque, though it may have arisen from accident, rather than from theory. That Apelles was a master of tone, which, as compounded of light and dark, is a property of chiaroscuro, may be inferred from his celebrated work of 'Venus rising from the Sea,' (in which he had succeeded in representing the humidity of her skin,) as well as from his usual method of passing over the whole of his picture with a dark glaze, to veil or reduce the too great fierceness of the colours, and perhaps add to their transparency. I may here observe, that their sculptors also were aware of the beauty arising from tone, which is to be found in the extended half tint or *mépldt* of the finest Greek statues, a breadth of treatment very conspicuous in the flat style of the Panathenaic frieze in the British Museum, as well as many of their earlier gems and relievos. It is needless however to pursue any further inquiry as to the degree of skill which the ancients may have attained in chiaroscuro, or to consider from what cause they never possessed so great a knowledge of harmonious combination as the moderns—curious as the fact may be, that this philosophical and tasteful people should never have discovered a principle so indispensable as it should seem now, to the full developement of the powers of both Painting and Music—whether they had never discovered it, or that they rejected it as undesirable, the revivers of painting, in Italy, could acquire no hint of the value of chiaroscuro from their immediate predecessors the miserable descendants of the ancient Greeks, who supplied them with their first crude notions of art.

Aiming only at a close copy of the objects and effects they saw before them, the Italian artists of the thirteenth and fourteenth centuries were satisfied with a light and shade of the most timid description, relieving their figures chiefly by an opposition of dark coloured draperies to the bright sky, or light stone buildings, which were everywhere presented to their eyes. Giotto, and afterwards Masaccio, seem to have been the first to venture upon introducing a greater breadth and quantity of shadow in their works. But it was reserved for the great philosopher of our art, Leonardo da Vinci, to discover the principle of chiaroscuro, in its fullest meaning, and employ it as a new element in Painting.

The high degree of perfection to which he succeeded in carrying this, in combination with colour, may be seen in his 'Last Supper,' in which the lights and darks are so ingeniously varied and proportioned, in their quantities and shapes, and carried through the picture with such consummate art and apparent ease, that it would well deserve to be studied on this account, even if it were not possessed of those nobler qualities of dramatic conception and expression in which it is pre-eminent. I include not the background, which, by its want of simplicity and the harshness of its parts, considerably injures the effect. As all the copies of this work vary in their backgrounds, the defect may perhaps be attributed rather to the copyists than to Leonardo, and to the depth which the darks have naturally acquired by time; or it may have been adapted to its particular location. But in fact the true nature of backgrounds was not then understood.

An original cartoon of this great artist, which the student may see in the Painting School, is also a powerful example of the value of broad shadows. Nothing of Correggio excels it in this respect, and it deserves to be remarked in this, as in all his works, how much he made his new principle contribute to the exquisite beauty of his female heads. This cartoon may perhaps be one of those which Vasari speaks of, as having filled his countrymen with admiration, attracting them in crowds to his house, by their novelty of effect.

His celebrated 'Battle of the Standard,' engraved by Edelinck, from a drawing by Rubens (the best or only representation we have left of that energetic composition), is a vigorous specimen of chiaroscuro. Where Rubens was so fortunate as to see the original (unless he discovered it in the Louvre or Tuileries) is unknown, but it is obvious that he here found the

Digitized by Google

prototype and all the elements of those noble hunting pieces which he afterwards produced.

It was from Leonardo that Giorgione, Fra Bartolomeo, and afterwards Correggio, derived those principles of relief and breadth of effect which they displayed so happily in their own works.

Fra Bartolomeo had the honour of rescuing Raffaelle from the tameness and insipidity of Pietro Perugino, and imparted to him a perception of the value of extended shade, which he himself had just gained; but his illustrious pupil does not appear to have ever cultivated chiaroscuro as an inventive principle of great importance. Mengs asserts that though he understood it well, as respects imitation, he knew nothing of the *ideal* part, and that when a glimpse of the latter appears in his works, it is accidental, and the result rather of his fine natural taste than of science. I must however observe, that his 'St. Peter released from Prison,' the 'Heliodorus,' and the 'Transfiguration,' are fine examples of depth and relief; and in the cartoon of 'Elymas struck blind' there is a breadth and combination of dark, introduced by the spreading of the shadows of the architecture, and the relief of some heads in the middle group, by the light behind, which seems like an aim, and a successful aim, at inventive chiaroscuro.

In the 'Madonna dello Spasimo' there are also examples of finely conceived light and shadow; in the Magdalen and other of the heads (large engravings of which may be seen in the Library) Raffaelle took care to place his model in such a position towards the light that the shadows might fall upon it so as to preserve the forms as entire as possible, contriving the folds of drapery upon the body or limbs in such a manner as to leave the lights broad and unbroken on the prominences, and throw the shadows into the retiring parts; by which he obtained roundness and mass, and gave to his figures a substance and distinctness that is remarkable even at a distance. The bias of his genius, however, led him to prefer expression to any other quality of the art, and his excellence in that became great in proportion: but Correggio, who had a stronger feeling of the value of chiaroscuro, devoted himself to it with ardour, and gave it perhaps all the perfection of which it is capable in his own class of subjects (which were invariably of a pleasing character), combining it with a more delicate colour, and bringing all the parts of the art into a poetical union, never before accomplished. The predominating principle in all his works, however, was still chiaroscuro. A happier instance of its power, in combination with colour, of adding not only to the beauty, but to the sentiment of a picture, cannot perhaps be found than in his celebrated 'Notte' at Dresden. The light which illumines the scene emanates from the Infant Christ, and is of that silvery hue which belongs to the first dawn of morning: this idea is supported, and as it were explained, by a streak of light in the horizon, indicating the break of day, bringing to mind, as strongly as words could do, the sublime idea of "the day-spring from on high hath visited us." It would be difficult to point out, in the whole range of painting, a more felicitous illustration of a poetical image. Here the two arts successfully reflect their beauties on each other.

The breadth, suavity, and fulness of the chiaroscuro is one of the great charms of Correggio's 'St. Jerome,' at Parma, and is in perfect accordance with the colour, composition, and expression of that fascinating picture. A copy of this celebrated work, by Annibale Carracci, is to be seen in the Bridgewater Gallery, which, however, falls very short of the beauty and perfection of the original. His 'Christ in the Garden,' formerly in the collection of the King of Spain, but now in that of the Duke of Wellington (a repetition of which may be seen in the National Gallery), is another beautiful specimen of the same power and feeling: here, as in most of his works, the chiaroscuro is inventive and poetical. The Saviour is lighted from above: the hovering angel receives his light from Christ; the compactness of the light shows it to be supernatural, and the broad mass of dark background by which it is set off, gives the picture at once brilliance and repose. Correggio was the first who, by collecting a large mass of light in the centre, connecting light with light, and dark with dark masses, losing the outlines, and softening all angles and disagreeable forms into the shadows and negative parts adjoining, obtained that magic and unrivalled union of sweetness, force, repose, and sentiment, which, as Fuseli has said, "affects us like a delicious dream."

Giorgione, according to Vasari, adopted that breadth of oscuro and vigorous relief which distinguish his pictures immediately after seeing the works of Leonardo. Titian and Paolo Veronese probably studied the same principles, but they produced their effects in general more by means of lucid and dark colours, than by masses of positive light or any prolixity of shade.

Titian invariably made his carnations the chief attraction, as affording the best opportunities for displaying that exquisite colour which was his leading aim, and with which he found tender shadows most compatible, making up his darks by low-toned draperies, or backgrounds, ingeniously contrived for the purpose. Paolo Veronese, like Titian, conducted his chiaroscuro chiefly by tones of colour, in an expanded daylight, with little or no shadow; a beautiful instance of which may be seen in his picture of 'Mercury and Herse,' in the Fitzwilliam collection at Cambridge.

Tintoretto, on the contrary, whose mind was of a more impetuous nature, relying less exclusively on colour, employed a greater quantity of oscuro, and fiercer oppositions. As we have no examples by this master of any magnitude or character in England, I would refer the student to Fuseli's vivid description of his great works at Venice, and to prints from him in the Library, for some notion of his power and daring in this branch of the art, in which he eclipsed all the Venetian school. A sketch in the possession of Mr. Rogers, of his celebrated 'St. Mark' (called the miracle of the hammer), although small, is a very striking specimen of vigorous effect, the great mass of figures, which cross the picture in rich and deep-toned draperies, is relieved against almost white buildings; and the light, skimming partially over the groups, just serves to unite them with the background.

On this school I shall have occasion to dwell more in my lecture on Colour. As far as their practice is connected with my present subject, it appears to me, that they have sometimes fallen into spottiness, by making their subdivisions, of light and dark, rather too distinct, and not giving sufficient attention to predominating masses; aiming at brilliance and animation, they have lost, perhaps, somewhat of that repose which is no less necessary. They seem, occasionally, to want a reconciling medium, or atmosphere: the effect of time on their darks may partly account for it. The mean between these opposite qualities was happily adopted by Rubens, whose powerful genius seized at once upon all the principles of his great predecessors, and made them his own. His copies, from the 'Battle of the Standard,' and from the 'Last Supper' of Leonardo, show, that he had well considered and understood their excellence. In his grand hunting pieces, on the plan of the former, the figures, as in their prototype, are often relieved by strong darks from light backgrounds, and derive much of their spirit and vigour from this decided opposition, which accords so well with the energy of the actions and the general character of the composition; but they possess, at the same time, all the breadth and repose which are admissible in subjects intended to rouse and excite the feelings. He studied, too, (with equal penetration and success) the suavity and union of Correggio, and the distinctness of the great masters of the Venetian school, adopting, with that surprising facility which seems never to have failed him in any department of the art, all that would combine with the splendid system which he had so early formed. I shall endeavour to point out what appears to me the principle on which he conducted the chiaroscuro of some of his admirable works.

In his celebrated 'Raising of the Cross,' at Antwerp, he seems to begin from the upper corner of his canvas, on the side on which he supposes the sun to enter, with a broad diffusion of secondary light, into which he gradually weaves more and more half tint as he descends towards the focus of his picture, where his strongest darks and lights are collected in the chief group, the upper part of which joins on to the light above, and the lower unites with an extended series of darks, which, crossing the composition diagonally, counterbalance and give effect to the great mass of light; below this, again, the light is revived with considerable brightness, and acts as a satellite, or secondary mass, on the other side of the picture, in the proportion of about one-third as compared with the quantity above; thus the light streams through, from left to right, gradually sinking into deeper and deeper shade near the centre, from whence it emerges again, and passes out of the picture at the opposite corner. This fine arrangement may be traced in perhaps the majority of his works.

In the 'Taking down from the Cross' (the scene requiring a greater solemnity of effect), his light is more concentrated, and is confined chiefly to the principal figure, and the white drapery in which it is supported; this is carried off by the lights in smaller masses, on the heads and hands of the other figures, and passes out of the picture by an inferior portion of light in the sky: all behind is involved in gloom and mystery. He has made use of the scroll, which bore the inscription, and lies now on the ground to introduce a low whitish tint, which varies the effect ingeniously. The deepest shadows are placed close to the centre, and brought to a focus at the dark elbow of the figure descending, which is vigorously relieved from the highest light. The extremes of his scale are there in immediate contact, and the effect is as powerful as his materials would admit. Almost all his works might be adduced as examples of the consummate science of Rubens in this part of the art, the limits of which he considerably enlarged. In such of his pictures as would allow of it, he frequently adopted black velvet or satin draperies, which act as deep bass notes in the harmony of his effect, increasing his scale in compass and richness. He often made use of this artifice: he was also very fond of introducing a figure in armour in the centre of his picture, in whose polished cuirass he could bring together his strongest touches of light and dark, and by blending his tones together, more than the Venetians, he united softness with vigour in a greater degree, perhaps, than any other painter, if we except Correggio. I cannot help thinking, however, that his system has occasionally led him into mannerism, and too obvious a sacrifice of truth. In his 'Rape of the Sabines,' in the National Gallery, for instance, his darks are chiefly assembled in the lower part of the picture, which are spread by one or two smaller patches on the left above; his aim being evidently to obtain great breadth, by keeping an extended mass of light in the upper part and in the centre. There he has spread his light sky by a white building, and, to increase it still more, has made his shadows on the figures adjoining fainter than can possibly be accounted for; they want middle tint to give them the force which they might be expected to have in the situation they occupy, as compared with the other groups, and consequently look evanescent and unreal. Art is here, perhaps, too palpable. But he seems at all times to have been too well satisfied with the theory he had so happily organized to be very anxious to *hide* its principles. The licence I have adverted to is not, however, apparent in his other pictures in the same collection. His allegorical work, in particular, is a noble specimen of his power in chiaroscuro, as well as in composition and colour. The Dutch and Flemish painters, in their pictures of familiar life, excelled in the management of light and shade, and, according to Reynolds, have shown in this department that consummate skill which entirely "conceals the appearance of art," and he particularly recommended to the young artists a careful study of the works of Jan Stein, Teniers, Ostade, &c. The chiaroscuro to be found in these seems to arise naturally from a mere imitation of the ordinary effects and circumstances of the subjects they chose, skilfully managed. Any *appearance* of *artifice* would have been at variance with their homely character, in which great truth and simplicity, with beauty of execution, were the only charms by which they aimed at captivating the spectator. But in the hand of Rembrandt chiaroscuro, though intimately combined with colour, became the essential predominating quality of his art; he diminished the quantity of light hitherto usually adopted, and confined it more decidedly in one focus, with which he allowed no other light to vie, or interfere in brightness, though he took care that his extended darks should never be empty; these he contrived to vary and enliven by reflected half-tones (which are often the result of merely loading the parts with thicker colour), re-

Digitized by Google

flecting light by substance as well as hue, and thus introduced multiplied details into his shadows with surprising truth and breadth.

Reynolds thinks, that he has sometimes pushed this concentration of effect beyond its proper limits, and that by making his light too solitary, and employing too small a quantity of it, he has given an artificial look to his pictures: this may occasionally be the case in the subjects that he has represented out of doors and illumined by the sun; but in others, which fell in more naturally with his taste for subdued and deep tones, his chiaroscuro seems to be perfect. A beautiful instance of it may be seen in the 'Nativity' in our National Gallery, where the light proceeds from the infant Saviour, on the plan of Correggio's 'Notte,' spreads on the surrounding figures and forms the principle mass; this is supported by a secondary light of a lantern near, and revived by a third light behind. The rays from these are caught in faint echoes by the rafters and other parts of the stable, and are diffused throughout with great ingenuity, truth, and picturesque effect. There is, besides, so much propriety in the characters and expressions of the figures, and such consistency in the whole picture, as prove it to be a work of great intellectual, as well as great imitative power.

Having alluded to Correggio's 'Notte,' I am tempted to bring it again before you for an instant, for the purpose of making a remark on the different modes in which Correggio and Rembrandt have treated this subject, in both of which chiaroscuro has so much influence. In skill and science they are both nearly equal; Rembrandt's *composition* I think preferable, but they differ essentially in *taste*: Rembrandt presents us with the birth of an extraordinary child, it is true; the supernatural light in which he is enveloped, accounts for the awe and worship of the spectators; and from all the surrounding circumstances we cannot mistake the subject of the picture for any other than the 'Nativity:' but we are still chiefly impressed by the truth with which the mean and multiplied details are rendered, and with the technical skill he has displayed; while Correggio, by introducing a group of angels floating in the divine light of the infant Saviour, adoring and rejoicing in the transcendant event which has just taken place, and the daybreak which has burst on the darkness of the world, elevates the mind to the sublimity of his theme.

The students in the Painting School have more than once had an opportunity of examining one of Rembrandt's pictures, 'Joseph and Potiphar's Wife,' to which there is perhaps no specimen in this country superior in brilliance of effect and colour; to say nothing of its great truth, and even refinement, of expression—a quality which it may with truth be asserted, is always found in the genuine works of Rembrandt, however ill-lodged in his homely *dramatis personæ*. His 'Adoration of the Magi,' in the Royal Collection, presents a very remarkable specimen of chiaroscuro, and though perhaps not equal to many other of his works as a whole, has very fine parts, and is interesting, as it strikingly shows the loaded mechanical process by which it is elaborated.

Chiaroscuro, as one of the great powers of Painting, has been more appreciated and cultivated with more success in our own country, than in any of the modern schools. Perhaps the invention of mezzotint engraving and the great perfection to which it has been carried here, may have had some influence in leading to a fuller perception of the efficiency of the principle; but it is to the genius of Reynolds that the English school is indebted for its developement and application. I shall not quote his precepts on this part of the art, because I conclude that every student of this institution is either already acquainted with them or means soon to become so. This great painter has shown in his doctrine, as well as in his practice, that he had made himself master of all the technical systems of the different schools, and was acquainted with every mode of picturesque effect; he cannot, therefore, be too carefully studied. In his own works he has displayed the greatest variety of chiaroscuro; sometimes he made his lights tell in decided masses and agreeable shapes upon low middle-tints, intermixed with the deepest darks. Of this mode, his 'Mrs. Siddons as the Tragic Muse' is a beautiful instance; at other times he adopted the contrary principle, of dark masses on an extended light, always combining them with a rich modulation of half tones, and remarkable breadth. In his 'Infant Hercules,' broad lights, intersected by strong masses of dark, sweeping across the picture diagonally, like Tintoretto, give a most brilliant and powerful character to this the finest of his compositions: the chiaroscuro is like a sudden burst of lightning on the scene. In all his works, the strongest darks are closely opposed to the lights, by which he renders *both* distinct and vigorous, and sustains the low and mellow tones of his colour. He employed with great freedom what are called accidental shadows, wherever he thought they would improve the effect, leaving the spectator to account for them by "passing clouds," or as he best could. Though not the inventor of this convenient licence, which had its origin in the Venetian school, he was the first to bring into practice what seems now to be considered not merely justifiable, but almost indispensable.

To our *staple art*, portrait painting, it is no doubt of the greatest advantage, in affording opportunities of disguising the formalities of dress, or the abrupt and often awkward termination of parts of the figure; in giving agreeable shapes to the lights, and roundness and union to the whole; it may therefore well be allowed in works where so much is gained by it, if not carried to excess. The great object in portraiture being to give value to the head, the rest of the picture is to be rendered subordinate, but agreeable, by every contrivance the artist can have recourse to, consistently with an appearance of truth.

The Venetians rarely attempted to relieve their figures, when dressed in black or dark colours, by backgrounds still darker, but rather by lighter tones, giving them in this manner a distinct and natural character; but Reynolds justly considered strong relief as less desirable than breadth and fulness of effect; and he inculcated the propriety of supporting the strong shadows of foreground objects, by equally strong darks in the background. In consequence of this principle, he frequently made a black coat assume the appearance rather of a grey one, by extreme depth of tone in a curtain or wall behind. The singular beauty of his hues, and the rich colour he introduced in other parts of his picture, enabled him, however, to render this agreeable; but it seems rather a struggle of art with nature, and in other hands is perhaps seldom successful.

In the consideration of this branch of my subject, I must not omit to cite another artist of our school. Lawrence may be said to have extended, varied, and invigorated the treatment of chiaroscuro, and to have wielded it, in all its different modes and characters, with uncommon power. His peculiar brilliance arises from the vivid opposition and broad masses, of his lights and darks (with little intervention of middle tints), and the particular intensity which he contrived to give them; to obtain which he employed the most powerful pigments that chemical science could produce. His white was like snow, and his darks deeper than black; and these were often brought into the fiercest collision, as if with the endeavour to rival light itself, and dazzle the eye of the spectator. Whether this be the legitimate aim of painting, and whether his pictures did not lose somewhat in beauty of tone, while they achieved such uncommon splendour of effect, may admit of a doubt; but to extend the sphere of Art, and show where and how any of its powers may be augmented, is an admitted test of genius: and however the qualities thus practically evolved may afterwards be modified or applied, they may, at least, be considered as valuable landmarks for the guidance of future artists; and he who has raised them is justly entitled to gratitude and admiration.

Were it proper on this occasion to do so, I might here add the names of several living authorities among us, which I am persuaded will naturally occur to my hearers; but I shall rather endeavour to assist the student in further developing the principles I have now laid before him, and their practical application.

The first point which seems necessary in arranging the chiaroscuro of a picture, is to determine the source and nature of the light by which the objects in it are supposed to be illuminated, whether it proceed from the sun, or some artificial cause, and come in from one side, from behind, or in front of the spectator, as these will necessarily influence the situation, direction, and depth of the shadows. These are to be considered as fixed points, on which the ideal part is to be engrafted. And here the necessity will immediately appear for a considerable knowledge of aërial as well as linear perspective, and a familiar acquaintance with the laws of optics, without which the projection of the shadows of objects upon the ground, the deviation occasioned in the progress of these by the interposition of other bodies, and the reflections of the light under various circumstances, can never be truly expressed. The poetical character of the subject will then suggest what additional quantities of light and dark may be desirable to give effect to the whole; which invention, taste, and science must contrive, proportion, and distribute; for every subject requires a particular treatment of chiaroscuro. As the work partakes of the gay or grave, the lively or severe, light or dark should prevail, and be more or less dispersed, concentrated, or opposed. In inventions of a cheerful or joyous nature, a large preponderance of light, and delicate half tint, is desirable, set off by a few darks, as we see in the pictures of Paolo Veronese, Guido, and in some of Rubens'. In those of a grave or pathetic character, the greater portion of the picture should consist of a low half tone, deepening into strong shades, with a small quantity of subdued light. This is deemed the legitimate tone of historical painting, especially of scriptural history, and is conspicuous in the works of Ludovico Carracci, and most of the Bolognese school. When the subject is gloomy, still more dark will be necessary; if terrific, a prolixity of shade, with flashes of vivid light, and little middle-tint, as may be found in the pictures of Guercino, Caravaggio, and Spagnoletto. In works, again, of a magnificent character, the chiaroscuro may be made out more by richness and depth of colour, as we see in those of the Venetians and Rubens. Where vivacity is required, the lights and darks must be detached; where breadth or softness, they must be more blended or diffused. In all cases, a chief and predominant mass of light or dark is essential, which must be modulated through the work; either of these may form the melody or air, and the other the accompaniment. The effect will be more piquant if small quantities of the strongest light and dark be brought up as reserves at those points where sparkle is required; such was often the practice of Titian, who generally spread the light and dark throughout his pictures with an economy that still left him the means of giving additional spirit to the chief point or focus, by a small portion of each, drawn from the extremes of his scale.

In his picture of Venus and the Graces of which Mr. Thompson's copy in the Academy will give the student an opportunity of judging, the strongest touches of both light and dark are brought close together on the wing of Cupid in front, which forms the salient point of the composition; this is the principle of the light and shadow on a bunch of grapes, the favourite system of this great master, and by which he gave a centre to his picture, ensured breadth, roundness, and union of effect, without emptiness. This is also the principle of the chiaroscuro of Correggio and Rubens. Rembrandt is still more spherical and blended, and, for that reason, occasionally appears more artificial. Reynolds, to obtain great force, and support his rich tone of colour, sometimes adopted large masses of midnight shadow, in which, perhaps, the parts are too much sacrificed, and confounded with the background, although no one is more remarkable, in general, for a beautiful modulation of low half tints in his darks. But it is not improbable that the want of a more Academic education may have disposed him to give less value to form, as an element of the art, than it deserves, and always maintains in those higher styles which he so much felt; and his admiration of which is to be found in every page of his writings. After all, if a fine effect can be made out by the natural light and shadow and colour of the subject without obvious contrivances and a display of chiaroscuro, the work will probably be of a higher order; although, as I have said, such aids seem almost indispensable in the treatment of portraits—at any rate, they are chiefly admissible in ornamental works, having, in themselves, a great tendency to undermine sentiment. In avoiding this error, however, Poussin seems to have fallen into the opposite extreme, and to have lost sight of that concentration and subordination which produce unity of

Digitized by Google

effect, an indispensabler equisite in every style. Reynolds remarks that, in this respect, he is just the reverse of Rembrandt, and is as defective in chiaroscuro, as Rembrandt is too artificial and condensed.

The science of chiaroscuro (for so it may be termed in the present state of Painting) has given a new character to Art; and in this country at least has become, not only an essential part of the composition, but almost its distinguishing feature, and the most relished; it is, in fact, the principal ingredient of that quality of Painting called the *picturesque*, on which, I think, it may here be desirable to offer a few observations. The term picturesque, derived from the Italian *pittoresco*, literally signifies, that which is after the manner of a painter, and, therefore, it may be considered a part of my duty to point out what qualities are generally understood to be included in it. The epithet is too vague to admit of any close definition, but it seems to have been founded on the gradual discovery, or perception, that light, dark, and colour, are not only valuable as the necessary instruments of imitation, as the language of the art, but that they have, in themselves, properties so agreeable, that when skilfully adopted, they are capable of communicating interest to the most ordinary objects and circumstances, and of making a picture (in the common acceptation of the word) out of the most trivial, and even repulsive materials, the dregs and refuse of nature. The sun breaking out upon a dunghill, and reflected in a puddle, may furnish a picturesque effect. Rembrandt's 'Kitchen,' among many other of his works, might be cited as an example. The hunting pieces of Rubens, and the celestial light of Correggio's 'Notte,' also belong to it, from their brilliancy of chiaroscuro. The picturesque appears to have been either unknown or disregarded by the ancients, and those masters who preceded Leonardo; and, indeed, the term could hardly have arisen, till after painters had begun to display a degree of mannerism. This first became conspicuous in the works of the *machinisti*, who according to Fuseli, date their origin from Correggio himself. His great works in the Duomo and church of S. Giovanne at Parma, no doubt led the way to those enormous compositions which fill the cupolas, and ceilings of the churches and palaces of Italy. Mengs considers Lanfranco more particularly the inventor of this style, who, he says, copied only the surface of Correggio's art, but did not penetrate its refinement. The distance from which these works were to be viewed, suggested, and almost rendered necessary, violent antitheses of colour and effect, sprawling attitudes, and, in general, a caricature of all the qualities desirable in a legitimate picture; in the midst of which, and at such a height, neither sentiment nor subject could be very distinguishable. Practice on this immense scale soon gave the artists, so employed, extraordinary facility in the arrangement and execution of these often masterly productions, for such may certainly be considered the ceiling of the Barberini Palace, by Pietro da Cortona, the works of Lanfranco and many others; and these brilliant effusions of the practical powers of the art, seemed to have introduced a passion for the new manner of the painters, or the picturesque—in contradistinction to the more pure and sober style of their great predecessors. This epithet, and with it, we must suppose, the qualities it implies, was soon extended to Poetry;—Sculpture and even Architecture began to affect the picturesque; as we see in the fluttering marble draperies, and Rubens-like forms of Bernini, and the architectural extravagancies of Borromini and Juvara. And it is now the great criterion of all that is supposed to be most interesting in landscape scenery. What then are its particular properties, as it belongs to Painting?—a line of demarcation seems to have been recently drawn on the continent, in relation to the Arts, which separates them into the *classical* and the *romantic* styles. The first, which is that of the ancients and the most celebrated moderns, aims at grandeur and symmetry of form, beauty, grace, sublimity, pathos; all that is calculated to excite our best feelings and exercise our noblest faculties—to raise and adorn our nature, avoiding everything mean, sordid, and vulgar. The latter, the romantic, appears to be essentially the same as the picturesque—a sort of chartered libertine, who, abhorring the formal and the classical, courts the wild, the capricious, the strange and accidental; and proud of a looseness and bravura of execution, hardly compatible with purity or correctness, is content with stimulating the fancy, and delighting the sense. Each of these styles has its warm partizans: which of the two is the worthier aim of the art, I need hardly point out; yet it is not to be denied that the picturesque also deserves to be studied in its utmost extent.

That which may be considered the most attractive quality of our Art, which includes the whole of its peculiar and appropriate interest, the means by which its higher aims may be made effective, cannot safely be neglected; nay, something is to be sacrificed to its claims.

Poetry, when combined with Painting, must be of such a kind as will unite freely with its elements, and, if necessary, bow somewhat to its paramount pretensions. As music "when married to immortal verse," though less intellectual than her partner, asserts a similar precedence, and sense is often compelled to give way, in some degree, to sound. In both these instances, Poetry is not in her own dominions, but is acting only as an ally, and sense and intellect must compromise their reciprocal claims as well as they can. Reynolds has justly said, that "perhaps no apology ought to be received for offences committed against the vehicle (whether it be the organ of seeing or hearing) by which our pleasures are conveyed to the mind." And how *much* of the picturesque may, by a great master, be combined even with the sublime, without degrading its elevated character, his admirable picture of Mrs. Siddons practically and strikingly proves.

It is evident, however, from his Discourses, that he conceived the picturesque to belong properly to the *ornamental*, in contradistinction to the great style of Painting, and he objects, on this ground, to a frequent practice of the Venetian school, that of throwing the principal figure into shadow, a circumstance which, I confess, does not appear to me altogether inadmissible in subjects of a high poetical character,—nay, some of these may, perhaps, demand such a mode of treatment, and derive from it particular grandeur; Sir Joshua has himself adopted it in his 'Macbeth' in the witches' cave: it is, of course, generally unfavourable to expression.

If our Art has been losing ground in intellectual dignity since the days of the great triumvirate, Leonardo, M. Angelo and Raffaelle, it has much advanced in the power of chiaroscuro and picturesque effect. Reynolds recommends that we should, in these days, endeavour to soften the severity of the grand style, and, in the instance of Mrs. Siddons, he has done so with a success that puts criticism to silence. It would be a question, however, of some nicety to determine whether many of those celebrated works, which, to modern eyes, may seem deficient in picturesque effect, or, in other words, dry and formal, would, or would not, be improved by a larger portion of its fascinations; and it might be an interesting and not unimproving exercise to take up the cartoons, for instance, and try how far they might be benefited or otherwise by such an admixture. One may conceive that greater breadth and force might be given to some of them without injury; and that neither the composition, style, nor expression, would necessarily suffer by greater truth and harmony in the hues in which they are presented to us. An able and judicious artist might possibly accomplish this, and render them more attractive at the first glance, without interfering with the higher aim of these great works. Such, perhaps, might be the case with 'The Charge to Peter' the 'Ananias,' the 'Paul at Athens' and others, and many of the backgrounds might evidently be simplified with advantage, but a more splendid scale of colour, and an ostentatious or imposing chiaroscuro, like that of Rubens or Rembrandt, would infallibly degrade them to the *ornamental* style, and dispossess them of the dignity and sentiment for which they have hitherto been so generally and justly admired. Perhaps, even the bland union of qualities which we find in Correggio might not improve their character, but rather lower them from the *grand* to the "*pleasing*." I apprehend the 'School of Athens' could admit of such a reformation, only (if at all) in a very limited degree. The figures in this magnificent composition are so numerous, and the subject of so comprehensive a nature, that it seems incapable of being treated with a greater degree of unity than it already possesses; and although the hues and the harmony might be improved, *more* probably would be lost than gained, by any endeavour to give it greater breadth, and still more by the vain attempt to dress it in the qualities of modern painting. It decidedly belongs to the *classical*, of which character it might easily be stripped, but from its very nature it could never be made picturesque.

In fact, the degree in which the master-pieces of that period might be rendered more attractive to the sense, without their losing *caste* as works of mind, would, I think, be comparatively trifling, and the experiment of reforming them one of no *ordinary* difficulty.

I will not pursue these speculations further at present, but conclude with observing, that when this useful, but somewhat insidious ally, picturesque chiaroscuro, does not challenge an undue attention, but is judiciously adapted to the demands of the subject—when it assists the sentiment and purpose, and is in unison with the poetical character of the picture, it may justly claim its share of admiration; but if it usurp anything beyond this, it soon becomes meretricious and degrading; has a tendency to substitute mere stains and blots for design and expression, and to merge the intellectual in the technical capabilities of the art.

DR. SOUTHEY.

THE painful information, incautiously spread abroad by Mrs. Sigourney, and recently noticed in the *Athenæum* (*ante*, p. 139), will have prepared the public to receive, without surprise, almost without regret, an announcement of the death of Dr. Southey. After a long career of literary labour and exertion, "a cloud," as his wife tenderly described it, overshadowed his mind, and from its darkest gloom, as she foreboded, he has passed to the portals of the grave. The historian, the biographer, the poet, one of whom England has so much reason to be proud, is "gathered to his fathers." The simplicity of this scriptural expression is particularly applicable to one to whom what Milton calls beautifully "the charities of life" were especially dear; whose genius may be admired, but whose personal and domestic virtues were an example to all.

Dr. Southey had a manly and affectionate pride in adverting to his parentage. His father was a linen-draper, in Wine Street, Bristol, where his son Robert was born on the 12th of August, 1774. From a memorial, the notes for which were furnished by himself, we learn, that the boy was sent to school when six years of age, to Mr. Foote, a Baptist minister; that he was subsequently taught by a Mr. Flower, at Corston, near Newton St. Loo, and by a Mr. William Williams, "a Welchman, from whom little scholarship was to be got," being subsequently placed at Westminster, in 1788, by his maternal uncle, Mr. Hill, and finally at Baliol College, in 1792, with an idea of his entering the church. But Southey's Oxford career closed in 1794; for his tendency towards Socinian opinions made the plan of life chalked out for him altogether distasteful. In the same year he published his first poems, in conjunction with Mr. Lovell, the friends assuming the names of Moschus and Bion. About that time, too, he took part in the famous Pantisocracy scheme, to which all the eager contributors brought golden theories, but of more tangible coin so little, that the Utopian project was necessarily relinquished. In the November of the following year, 1795, he married Miss Fricker of Bristol, the sister of Mrs. Coleridge. In the winter of the same year, while the author was on his way to Lisbon, 'Joan of Arc' was published. He returned to Bristol in the following summer; in the subsequent year removed to London, and entered Gray's-Inn. He passed part of the years 1800–1 in Portugal; and we find notices of a casual residence in Ireland, (as secretary, we believe, to Mr. Corry or to Mr. Foster), and of his final establishment at Keswick, in the lake country, early in the century. The other events of Dr. Southey's life, apart from the books he wrote and the books he collected,—each an incident to a scholar,—may be recorded in small compass. On the decease of Mr. Pye, in the year 1813, he was appointed Laureate; received his Doctor's degree in the year 1821; and about six years ago, contracted a second marriage with Miss Caroline Bowles, one of the most pathetic and natural among contemporary authoresses. That he was at different times offered

Digitized by Google

a baronetcy and a seat in parliament, are facts well known to his friends; the public can trace the rest of his career in the works which he poured forth, with a versatility, a care, and a felicity unrivalled in these hasty and superficial days.

To give a complete list of his labours is impossible, at a moment's warning. The poems are 'Wat Tyler,' 'Joan of Arc,' 'Thalaba,' 'Metrical Tales,' 'Madoc,' 'The Curse of Kehama,' 'Carmen Triumphale,' 'Roderick,' 'The Vision of Judgment,'—to say nothing of fugitive pieces. The enumeration of these, small as is their bulk among Dr. Southey's literary performances, suggests at once the scholarship and the diligence of their writer; for they range between the remote superstitions of Hindù mythology, the early history of England, France, and the Peninsula, and the great political and historical changes of his own time, in which it was Dr. Southey's fate to participate; for, in the interval between the publication of 'Wat Tyler' and his apotheosis of George the Third, the poet had veered from "liberty and equality" to "right divine." It must be added, that in both extremes of opinion, whether as poet, historian, or critic, Southey was eager, unshrinking, and uncompromising. Yet, in private life, he was kind, gentle, and tolerant; few men have been more beloved by a circle of intimate friends; and literary pursuit and moral worth served with him for a bond of intimacy.

But we are digressing, while the task of enumerating the principal of his prose works is still unperformed. These comprise translations of the poems of the Cid, of Amadis, and Palmerin of England:—Essays, allowing the 'Letters of Espriella,' 'Sir Thomas More's Colloquies,' and the slighter 'Omniana' to bear the name:—Histories, among which are 'The Book of the Church,' the 'History of the Peninsular War,' the 'History of the Brazils':—Criticism, which section, of course, includes his voluminous and important contributions to the *Quarterly Review*,—and Biography. Foremost in this last department we must point to the 'Life of Nelson,' as one of the most popular and perfect specimens of its class which our language possesses, noble in feeling, and faultless in style,—to the 'Life of Wesley,'—the 'Life of Cowper,'—the 'Life of Chatterton,'—and the 'Life of Kirke White, of Nottingham.' The last exhibits our author in one of his most amiable aspects.

We must close this insufficient and hasty sketch, feeling that to do justice to the variety of attainments of its subject is impossible. But, though far from subscribing to the opinions which Dr. Southey advocated so warmly, sometimes so intemperately, we cannot take our last leave of him without offering a tribute to his virtues. He was benevolent, generous, patient, *punctual*;—and how much is comprised in the last epithet, as applied to one in whom premature old age was superinduced by ceaseless labour of hand and brain! As a man, the poets, historians, and biographers of England should long look upon him as a model, and feel that they have lost a teacher as well as a friend.

SIR JOHN ROBISON.

Science and the practical arts have lost an active and zealous friend in Sir John Robison, who died at Edinburgh, on the 7th inst. He had been seriously indisposed for more than a week, and the causes of death were water on the chest and disease of the heart. To his intimate friends it had been well known, that his health was by no means in a satisfactory state, and for the last six months he had been subject to slight attacks of a threatening character.

Those who were acquainted with the energy and activity of Sir John, and his strong and healthful appearance, will be surprised to know that his age was sixty-five; but on the other hand, when it is known that he went out to India at the age of twenty-four, that he remained there until he had acquired a considerable fortune, and that he has now been twenty-eight years engaged in a very active life at home, they will be no less astonished that he could have done so much in so short a time. In India, his mechanical skill was the principal cause of his rapid success. Always devoted to mechanical pursuits, and of a very ingenious and inventive mind, he attracted the attention of the Prince of Nizam, whose artillery he was employed to remodel; and he soon raised it to the standard of European perfection. Success in this undertaking led to the favour of the Court, and he was successively employed in the construction of important engineering works in that country, by which he continued to increase in favour and success, until, in thirteen years, he was able to return home with a respectable fortune, the reward of his energy and mechanical skill.

Next to his own family and personal friends, his loss will be most deeply felt in the Royal Society of Edinburgh, and in the Royal Scottish Society of Arts. Of the former he has for many years been the secretary, and the amount of time and zeal he devoted to its duties, his accurate business habits, and the zealous, affable and disinterested manner in which he discharged its duties, had a great deal to do with the measure of success which attended the meetings of that learned body. His hospitality to foreigners and distinguished scientific strangers was widely known and acknowledged, and the amenities of science were never better or more cheerfully administered. Of the Society of Arts he had been one of the founders, along with Sir David Brewster, and Mr. Tod; he was its President, and one of its very active contributors.

Of his usefulness as a member of the British Association, our own pages bear ample testimony: he was one of its Council, and president of the Mechanical section. He was associated with Mr. Scott Russell in the important researches carried on under the Association; and although his last act at the last meeting of that body was to disclaim his own right to share the merit of those researches, which he stated to have been planned and conducted by his coadjutor, yet the latter gentleman did not fail to acknowledge the valuable assistance he had derived from consulting with Sir John, and to express the great pleasure which he had enjoyed in his hearty and zealous co-operation in all that could promote the objects of their scientific inquiries.

Next to the promotion of the interests of science, his favourite occupation was the pursuit of mechanical amusements. He was an expert turner, possessed a workshop, where he spent much of his time, and bestowed great attention in bringing to perfection various apparatus for constructing screws, turning metals, soldering, filing, and the like; and in several departments was the author of improvements which have incorporated themselves permanently with the arts in this country. Whatever he did, he desired to do in the best possible manner. He built a house, in order that he might improve the system of domestic architecture; and when he had accumulated a sufficient stock of further improvements, he sold it, built another; and it is well known, that in all respects, as regarded arrangement, comfort, beauty, excellent warming, and unparalleled ventilation, no houses were equal to them. His last house was absolutely perfect, and was adopted as a model by Mr. Loudon, who, in one of his late works, had it drawn for him, engraved, and fully described.

Sir John had some peculiarities—and which of us is without them?—but thus much may be said of him, that he was never known to undertake any duty which he did not most zealously discharge; he never slept with an unanswered letter except once, and it made him so miserable, that he awoke at 3 o'clock in the morning, got up and wrote the answer to it. His delight was to seek out talent in others and bring it out into its appropriate sphere of usefulness. He had inherited many of the good qualities of his distinguished father, the late Professor Robison.

RECOLLECTIONS OF THE LATE SIR ROBERT KER PORTER.

[*From a Correspondent.*]

The sight of a Catalogue for the sale of Sir Robert Ker Porter's personal effects, to take place at Christie's Auction Rooms next week, has recalled to our recollection the days of his youth, in this country, when we knew him universally extolled for the diligent application and brilliant results of the variety of talents with which the unsparing hand of Nature appeared to have endowed him. But he bore all with a genuine modesty and unchanged happy companionship with his young compatriots, that will ever endear his name to their remembrance. His destiny was an enterprising, a romantic, and in many respects a splendid one; but in all, he was still the same man, unassuming, amiable, and beloved, and ever supporting, in all the foreign countries to which that destiny led him, and in every station he bore, the legitimate character of an Englishman, by the suavity, firmness, and quiet dignity of his conduct and manners.

His career of life may be divided into three divisions:—The Fine Arts, the Army, and Diplomacy. The first began in his almost infancy, in Scotland, whither his mother, then in her early widowhood, had taken her children for education; and there, when a boy still in petticoats, being one evening at tea in the little parlour of the renowned Flora Macdonald, in Edinburgh, he fixed his eyes on a battle-piece hanging on the opposite side of the room; the heroine observed his speechless admiration; told him it was one of the fierce combats during the memorable year Forty-five, and, taking him near to it, explained all its particulars. From that moment his heart took fire; a pencil and sheet of paper were never out of his hand; and the inspired passion never forsook him.

In the course of a few years Mrs. Porter removed to London, and lost no time in consulting the then President of the Royal Academy, Benjamin West, respecting what might really be the promise of her son's abilities for the art he so delighted in. Mr. West examined the various drawings she had brought as specimens, and, without hesitation, while he held in his hand one, a battle-sketch, pronounced the boy to be a fit disciple for the Royal Academy. "If he live, (said he,) I see, by the spirit of this I hold in my hand, he will be one of us."

He was, consequently, soon admitted into that Academy (then at Somerset House), where, as the essential foundations for a consummate artist, he studied anatomy, and carefully drew, not only from the best antique models, but from the breathing forms of men and women in the Life Academy. There are several books of these Academy studies, done at the time, in Messrs. Christie's catalogue; and also not a few of the aspirant battle-sketches we have spoken of,—the essays of his boyish pencil.

From year to year he progressed on, a zealous student in every point which he thought could reflect light upon his particular bias in the art. He studied History, Heraldry, Fortification ancient and modern, Architecture, and Geographical and Military Surveying; thus, almost unconsciously, fitting himself for all the subsequent changes in the pursuits of his life. And thus he was early prepared for the accomplishment of that great effort of the historical painter's art, which, by one stroke, it may be said, at once established his fame—we mean, 'The Storming of Seringapatam,' the description of which, by the papers, and the lips of some of his military friends who had shared in its perils and its glory, on the instant seized the whole bent of his genius, and, within six weeks after he had listened to its details, he suddenly astonished the people of London, by presenting the whole scene on a spread of canvas of one hundred and twenty feet, in the Great Room at the Lyceum.

Mr. West, who saw this work before it was opened to the public, said to the Royal Academicians, (then assembled at Somerset House, preparing for the Annual Exhibition,) "He had just looked on what he must consider a wonder in the art; a work of such dimensions, finished throughout, in a brevity of time which any other man would demand even to sketch out his design; done by young Ker Porter, hardly then in his twentieth year!"

This picture was successively followed by others nearly as large, all dedicated to similar historical subjects, one of which is still extant in some of the chambers of Guildhall—'The Battle of Agincourt'—which he presented to the City of London, about the time he was meditating to change the pourtraying of military scenes for the actual field itself. And, when preparing for his first expedition, he consigned some of his above-mentioned works to the safeguard of a friend's warehouse in London, and, amongst them, that of 'The Storming of Seringapatam,' where it was, unhappily, destroyed, in a fire that consumed the premises.

There fortunately exists a kind of "living remains" of this picture, in the *original sketches*, done by his own hand, in oils, and from which he painted the one vast panoramic scene, now no more. They are in three compartments, for the convenient disposition

Digitized by Google

of the artist, while painting on so extensive a canvas. They are of moderate dimensions, admirably finished, and are in Messrs. Christie's catalogue.

Similar to them, in size, are not less interesting sketches of battles in Egypt, that of Alexandria, and another of the dying scene of Sir Ralph Abercrombie. The campaign in Portugal, and the Cossack affairs in Russia, also shared his pencil. Indeed, it appears, from the portfolio collection of drawings, presented to us in this schedule of his remains, that whether as a traveller of careful observation, or as an artist, he has left nothing worthy of notice in the countries he visited, without bringing home some interesting memorandum of what he saw.

Even while at the place of his last diplomatic duties, (Caracas, in South America, where he resided sixteen years,) when any hours of relaxation presented themselves, he employed them in drawing views of its adjacent beautiful and magnificent scenery amongst the valleys of the Andes, or in painting pictures consonant to the frame of mind such sublime, and often solemn, subjects produced. Of all these various exercises of his pencil, numerous specimens will soon be before the eyes of his countrymen; and, amongst them, five particularly striking. Four are sacred subjects; beginning with that of 'Christ at the Last Supper, blessing the Cup.' This was the first picture he painted in the Caracas, and he did it to consecrate, to the eyes of the common people in that city, (who, then in their dark bigotry, considered our countrymen as having no connexion with the Christian faith,) a little chapel and cemetery, which he was there establishing for the secure burial of the Protestant dead. The structure was quietly erected, under the sanction he obtained from the Caracas government, and, by the time it was finished, an Act of Toleration was also effected; and the Bishop of Barbadoes being invited over from that island, also by the sanction of the President of the Republic, Sir Robert Ker Porter had the satisfaction of seeing the sacred object he had been working at, during the first five years of his residence, fully completed, in this consecration of a Christian place of sepulture for his countrymen. The picture of the 'Salvator Mundi,' before mentioned, having remained above a year in the little English chapel, and produced the desired impression on the natives of the country, whose minds, by improved systems of education, were gradually becoming enlightened, it was obliged to be taken down, the power of the sun having begun to injure its surface; and Sir Robert replaced it with a tablet, on which he caused the Ten Commandments to be engraved in the native language.

The second picture of this class, is 'Our Saviour blessing the Little Child:' tender, yet brilliant, in its colouring; and the infant has already a holy aspect in its young eyes.

The third, an 'Ecce Homo,' we are told, was the last of all the pictures Sir Robert Ker Porter painted in that country. He finished it only a few months before he came away; and though the preceding two are beautiful in design and execution, this one has a depth of expression, a yielding compassion evinced in the Divine nature, while suffering in the body for the expiation of man's penalty for sin—(for them, for whom, in their then actual deeds of cruelty, His boundless mercy prayed, "Father, forgive them; for they know not what they do,")—which, to our eyes, renders it the most admirable of the three: and it is even the more interesting to us, when we consider it to have been his last.

The limits of these sketching recollections will not allow of our particularizing any more of this posthumous collection of our lamented artist's works. Therefore, we shall only remark, that the memorials he brought to England of his antiquarian researches in the East, are valuable; and curious from their variety; some being of the remotest ages. We can imagine the interest with which he sought these relics, and the enthusiasm with which he gathered them.

That all these richly exercised talents—all this research, and patriotic dedication of its acquirements, are now closed—is a theme of such regret to us, who knew, respected, and loved him, when he lived amongst us, that we hasten to turn from the page that would give any detail of the sudden stroke of death, induced by the severity of a Russian winter last year, acting on a constitution so long accustomed to the warm suns of South America; and which deprived his country, and his friends in all countries, of the services, and the endeared companionship of such a man.

FOREIGN CORRESPONDENCE.

Berlin, Tuesday night, March 14.

As you thought a few hasty remarks, written while the solemn charm of the 'Antigone' was upon me, worth printing, I shall send you an equally hurried report of Gluck's 'Armida,' from which I am just returned, weary and delighted. I regret to think that there is little chance of your hearing this wondrous work in London, and I would fain send home to my dear fatherland a humble tribute of whatever pleasures I have enjoyed out of it.

I had never heard an opera of Gluck's. I had no distinct expectation, no idea of its character, except that it was the perfection of musical declamation;—and, generally, unlike every other. But, first, as to the subject. The Armida of Gluck is not the Armida of Tasso; whatever the *libretto* may say. She is much more a Medea,—a haughty and implacable sorceress, struck by a wrathful deity with a consuming and unrequited passion, against which she vainly struggles. She speaks of her love as a curse, and of its object as an enemy—she tries to pull the barbed and poisoned arrow from her breast, and is filled with rage and shame at her weak and unavailing efforts. She summons to her aid furies and demons, and when by her incantations she has at length subdued Rinaldo to her power, she feels the degradation of such a conquest, the shame of such a love. "He loves me," she says, "but ah! what a love! Can I rejoice at such a victory? Ah, vain conquest; it is but a delusive shadow. Woe is me! His love is not like mine. I invoked the infernal powers to kindle his flame; my spells compelled his soul. Without art, without effort, without a wish, he has enchained my heart with indissoluble bonds. Woe is me,—his love is not like mine."

Such are the auspices under which her love triumphs; such the forebodings by which her triumph is poisoned. The whole conception is essentially tragical, and much more Greek than Italian. *The doom* is ever hovering with its dark wings over the brightest scenes of the piece,—we see their shadow. In Tasso's Armida we forget the enchantress in the woman; we see her gentle, devoted, subdued to her love and her lover. Gluck's Armida is always terrible; terrible in her pride, her vengeance, her love, and her despair. All this one ought to know beforehand: for one feels, before an act is over, that Gluck could not conceive Armida as Tasso conceived her. The grand, the solemn, the majestic, the stately, the strong, are his element, spite of bits of exquisite tenderness and voluptuous beauty. For want of knowing the drama, I felt something like disappointment in the first act. It seemed to me magnificent, but inappropriate music; and that was exactly what I did not expect. The first thing that struck me much, was the incantation in the second scene of the second act,—this is awful and ominous in the extreme. But now comes one of those creations of matchless and faultless beauty, which at once lap the mind in absolute content. One feels that Genius can go no higher, and that for a moment the unquenchable longing of the human heart after beauty and harmony is satisfied.

Rinaldo is discovered walking in Armida's garden. The symphony is of a sweetness of which words can give no idea. You want not to be told that his senses are greeted and taken captive by every enchantment of nature; that the song of birds, the gushing of brooks, the balmy air, the fragrance of flowers, and all the unutterable intoxication of spring, is around him; you *hear* it all. Yes, I mean what I say; you hear the flowers breathe odours, you hear the whole ravishment of the scene; and before the hitherto inflexible hero opens his mouth, you feel that he is lost. Heart of man could not resist the vast weight of beauty and delight which that music describes. Before he takes off his helmet, you fancy the steel must melt or turn soft; and when he resigns himself to slumber, you feel that his fate is as inevitable as that of the frozen traveller who lies down to sleep in polar snows. In short, this instrumental music alone describes more eloquently than any words, far more vividly than even Tasso's, all the sweet poison that lurks in the air of Armida's garden. The chorus that follows, with the distant echoes, is wonderfully beautiful, and only not equal to the symphony. Then comes a scene in which Armida endeavours to murder Rinaldo sleeping,—a fine piece of declamation, of alternate vengeance and relenting. A very fine passage closes the third act. After the Fury she has invoked, and then rejected, pronounces upon her, as a punishment, the curse—heavier than all others—of slighted love, Armida turns, with trembling and almost despairing accents, to the God of Love, for protection against the curse. "Reject not a heart that devotes itself to thee alone." This is wonderfully pathetic. The fifth act opens with a *duo* between Rinaldo and Armida, in the enchanted garden. His armour is laid aside, and he speaks with scorn of his past glory. The recitative part, which is, as usual, long, did not strike me as very expressive; but the *duo* is one of the loveliest things I ever heard. The only objection is, that it is too good. It breathes a noble and lofty tenderness, out of keeping with the story.

Armida now leaves him, desiring her attendants to amuse him in her absence. They dance—but *what* a dance! A minuet, which instantly sets you a thinking who was ever worthy to tread so august a measure. Charles I. of England, the mirror of gentlemen—Maria Theresa, in the pride of her stateliest beauty—Louis XIV. at the height of his glory,—all the types of courtly grace and grandeur, involuntarily, and, I must confess, very incongruously, rise to one's imagination, for *it is a minuet*, and what else can such a minuet call up but Kings and Empresses, haughty and graceful, grave and dignified? But if such images were inconsistent with the story, I take leave to say they were not more so than the short-petticoated nymphs spinning on one toe were with the character of the music. Keeping time is not all; and I am perfectly certain Gluck had other beings and other movements than those I saw in his head, when he wrote that minuet. I shall be asked if I would have the *corps de ballet* dance minuets? Not exactly; but something very different to what they did dance. The air in which Rinaldo dismisses them till Armida's return, has a melancholy beauty, which sounds foreboding. It is like the first moanings of the wind before a storm. Upon this come in Ubaldo and the Danish knight, to rouse Rinaldo to a sense of his degradation and his duty, by a strain of martial grandeur. To them enters Armida, and bursts into the most vehement and passionate compliments, entreaties, and reproaches. Rinaldo is at length moved by her despair. At this moment the adjurations of his companions, "Follow the call of honour," with its trumpet accompaniment, breaks in again like the sound of the Archangel's trump, which none may disobey. You feel that he must go, and he goes. Armida, in a long and passionate recitative, devotes herself to the infernal gods, and is borne off in a chariot drawn by dragons. This will immediately suggest to you a comparison which, most unfortunately for a deserving young actress, was ever recurring to my mind. Who that has seen Pasta in Medea can ever forget her? or can ever hope to see anything that will not be pale and vulgar in the comparison? Who can forget the might and majesty of the woman? the oppressive greatness of her love and her character, which you saw were the cause of her lover's inconstancy and her own woes? If I could call up at will departed things, or such as never existed but in Imagination, one of them certainly would be Pasta in Armida—Pasta, with her Greek dignity, her Italian passion, and with a German knowledge and understanding of the music; but this would be a spectacle for Olympus, and not for our poor world. That she was ever before me, is a sufficient proof of what I have already said as to the character of the heroine—for who could ever think of Tasso's Armida and Pasta as one?

As to the performance—the instrumental part may be dismissed with a word. It was perfect. At least, I can conceive of nothing surpassing it. On the other hand, not one of the singers rose above mediocrity, and this from no want of study or intelligence; but not one of them is endowed with the gifts that are requisite to form a great dramatic singer. Indeed, nothing has surprised me more than the extreme rarity of fine voices in Germany. It seems as if the ears of Germans, so susceptible to some musical de-

Digitized by Google

fects, were indifferent to this. Singers are constantly listened to with patience, and even admiration (when they know how to sing), whose voices are to me a source of positive suffering, and who, I think, would no more dream of becoming public singers elsewhere, than a man with one arm would a pianoforte player. One is not at all aware of the comparative profusion of fine voices in England till one leaves it. I have never heard any approach to such voices as Mrs. Salmon's or Miss Paton's, Miss Stephens's, Miss Novello's, Mrs. Shaw's, or even to those of the hundred and one very bad singers at our theatres. That fresh and liquid warble which one hears so often at home, unaccompanied with either science or expression, I have never heard here. It may be my bad luck; but the voices strike me as generally hard and rough. You will not imagine that I forget the glorious exception formed by Mdlle. Sontag. Mdlle. Marx is a meritorious performer; and if nature seconded her conceptions of the part, she would produce something first-rate. But her powers break down under her whenever she wants to express vehement emotion. The last scene of anguish and despair was well felt; but it was one of those dangerous experiments which nothing but Genius, supported by great corporeal gifts, ought to make. Occasionally she had the air and tone of a scold. Indeed, in the first act, the way in which she shook her fist as she said "she would subdue the rebellious heart of Rinaldo," would, I thought, if the recalcitrant hero had seen it, have had an effect not exactly favourable to her wishes. Still, on the whole, there was intelligence, thought, and feeling, in the performance, and one could only regret that Nature had not done more for one who had done so much for herself. Such representations are respectable, but *entrainement* is out of the question. Madame Fassman played the Fury—her voice, whatever it might have been, is now not agreeable; but her gestures have the *disinvoltura* and confidence of a consciously fine woman, who is pretty sure she cannot go much amiss. Rinaldo was agreeably sung, and insignificant; yet in spite of this utter want of eminent genius or gifts in the performers, one had a constant satisfaction, arising from the conscientious character of the whole. These singers would no more think of introducing roulades or trills—of playing sacrilegious tricks with the immortal *opus* they are employed to represent, than we of altering Milton, and adorning the 'Paradise Lost,' with scraps from Moore and Byron. This profound respect for all the intentions of a great master, this deference to the Inspired, is, I think, more than a compensation for any of the defects I have mentioned. I am convinced that nowhere else could one see such an opera so performed. The extreme want of mental culture in Italian singers generally, their narrow and exclusive nationality as to music, unfit them for all such thoughtful and laborious undertakings. Of English public singers *generally*, it would be absurd to speak in connexion with such a work; you might as well ask them to act the Antigone. And thus we come back to the old and consolatory doctrine of compensations, and of the balance—not of power, but of merit—which patriots will not hear of, but which the experienced and the dispassionate see at every turn, and in every shape.

I have no time for a word more, except to say that the King and Queen, who lose no opportunity of marking their respect for genius, and their sympathy with all endeavours after higher things in art, were present, as well as the Prince and Princess of Prussia, and other royal personages. The house was crowded to excess, with an attentive and delighted audience. I left it with a feeling of deep regret at the thought how long it would probably be before I should hear such a work again. France, England, and Italy united, cannot produce that.

OUR WEEKLY GOSSIP.

In consequence of the death of the Dowager Marchioness of Northampton, the *soirée* of the President of the Royal Society, which was to have been held this evening, will not take place.

The judges to whom is to be intrusted the delicate duty of awarding the premiums for the Cartoons sent in, at the invitation of the Committee for the Promotion of the Fine Arts, have been appointed, and are, Sir Robert Peel, Mr. Rogers, and a third gentleman, whose name we have not heard, as amateurs, and Sir R. Westmacott, Mr. Richard Cook, and Mr. Etty, as artists. Sir M. A. Shee and Sir A. Calcott were asked, but declined,—the latter on the score of ill health.

Periodical literature has recently exhibited a new feature, in frequent articles either purporting to proceed from the pen of medical students, or bearing internal evidence to the same effect. Whoever has paid attention to the subject, must have been less than satisfied with the pervading tone of the majority of these communications. Some by disclosing malpractices in the hospitals; and others by the choice of subject, or the slang and low style of execution, (see an example *ante*, p. 45) lead to conclusions the most unfavourable to the character of medical men, as far at least as the writers in question can be considered as truthful narrators, or as fair representatives of the class to which they belong. How far this may be the case, we do not pretend to declare, but allowing to the fact a *quantum valeat* extension, in that degree it must be taken as indicating something essentially defective in the schools of which such articles can be a result. We are far from believing that the evil extends to all. On the contrary, there is something ennobling in the medical sciences themselves, and the number of well conducted and well informed youths, who pass through the schools of the metropolis, is very considerable: still, if the manners described and the facts related in the papers to which we allude, and have before alluded, be in any degree accordant with truth, the internal arrangements of hospitals and the state of medical tuition require immediate examination and reform. We are not called on at present either to suggest or consider a remedy; but we have little doubt that, even as things are, the influence of dignified and well conducted professors, though exerted merely in the daily intercourse of teaching, might be made effective in improving the tone of morals and manners of the students. With this conviction full in our minds, our attention has been painfully drawn to a lecture by Mr. Guthrie, as reported in the *Medical Times*, in which there was especial reference to the case of the late Mr. Drummond. This report, if trustworthy, will go far to convict that Professor of a coarseness of manner and contempt for the minor courtesies and proprieties of life, that must be anything but edifying to those youths who, by position, (as the grammarians say,) look to him as a standard for imitation. With the Professor's peculiar opinions on insanity, or the logic by which they are maintained, we have nothing at present to do: but throughout the lecture, there runs a vein of blustering irony, a disregard for other men's opinions and feelings, and a contempt for the claims of official station to forbearance, (to say nothing of the coarse and vulgar morality in the opening passage on the influence of pecuniary considerations,) which we would fain believe must have been greatly overcoloured; but which, if faithfully recorded, demand a comment from the well-wishers of the profession. What a strange difference in the tone and temper of this lecture delivered by the ex-President of the College of Surgeons, and of the Lectures delivered at the Royal Academy! When, indeed, we remembered how anxiously excited the public mind had been with reference to the melancholy death of Mr. Drummond—and coupled it with the fact, that Mr. Guthrie was one of the surgeons in attendence upon that gentleman, we were fairly startled at the dull jokes and miserable *un*pleasantries in which the Professor thought it not unbecoming him to indulge in a public lecture.

We may at length announce that the celebrated picture by *Van Eyck* purchased for the National Gallery, will make its public appearance there next week. Having given a full analysis of it when exhibited some time since among the "Ancient Masters," (see No. 714), there is little need to dilate upon its merits again. As, however, by the kindness of the official authorities, we have had an opportunity for minuter inspection than we before enjoyed, another remark or two will, perhaps, not be deemed superfluous. The black-letter inscription on the panel appears now certainly to confirm what we dubiously conjectured,—the date 1434 instead of 1424, and *fecit* instead of *fuit*: it therefore runs thus in painter's Latin—

Johannes de Eyck fecit hic.
1434.

The true date determines this specimen as several years junior to the Chatsworth Van Eyck, dated 1421, and consequently as much less close upon the earliest period assigned to the Invention of Oils. With this fact our previous impression amalgamates well, that the workmanship is a clear departure from *Hubert* Van Eyck's manner (if the distinction taken by connoisseurs be valid), Hubert having died, his tombstone says, according to Van Mander, in 1426. It has a smooth, lucid, crystalline impasto, somewhat like enamel, as though it would break "with a glassy fracture," in geological phrase: and possesses all the concomitant qualities, good and bad, of its style—firmness but hardness of line, purity of tone but no morbidity, exquisite but super-subtle elaboration. It is altogether devoid of that unpleasant *hot* complexion which John Van Eyck's works oftentimes display, v. g., certain at the Bruges Academy. His marvellous power in simple colours evinces itself by the art he has of making *yellow* tell as *gold*—this is true alchemy: ornaments and trinkets from his philosopher's stone of a pencil are lustrous enough to deceive a jeweller without very nice examination. We did not mention before that the mirror introduced to reflect the backs of the two figures, and the front of the chamber, shows likewise *three* other personages, on a most Lilliputian scale, who must be supposed to stand near the spectator's position—a dainty device for representing these separate groups together, yet keeping them separate, and for turning the wings of the scene into centre pieces, yet without concealing the centre! Ten small circular frames which appear capped with convex glasses surround the principal mirror frame, and exhibit so many subjects from the New Testament, the figures being in still more pigmean dimensions, but sufficiently distinguishable through a magnifier. The various traceries, the border-and-scroll work, the enriched minor details, of the room, seem to be daguerréotyped rather than painted, such is their extreme fineness and precision. Verily we might counter-change the terms of Bassanio's ejaculation and cry out—"here the *spider* plays the *painter!*" Under Italian tuition what would all this exuberant invention and labour have produced?—a second Raffael! We have but one further particular to add upon Van Eyck's picture. The lady's embonpoint, however suspicious from its being limited to her waist, we have elsewhere explained as an effect of bizarre costume, and mistaken *grace** bestowed by the artist; since then we directed attention to another example of it in the Strawberry Hill 'Marriage:' (No. 754) but parallel cases abound among the antique Masters, both limners and sculptors—we think one may be seen at Westminster Abbey on the Shrewsbury monument, where the Countess's stomacher projects beyond all decorous proportions, unless her ladyship had died *enceinte*, and was modelled so into the bargain. Six hundred guineas were paid for our Van Eyck—a small price if we consider that such paintings are not to be found quite as often as Murillo's. N.B. It is in almost immaculate condition.—Wilkie's private collection sold last year (No. 758) contained a *Rubens* which we panegyrized not more than it deserved—the original sketch of the large centre-piece at Whitehall: this work also has been bought by Government, very judiciously, save with respect to the time chosen, seeing that what was sold by the auctioneer for eighty guineas, the nation has had to pay the purchaser two hundred pounds for, so soon after. Where were our Committee of Taste? The Sketch is, we repeat, exquisite: its silveriness of tone and indefinable delicacy of handling are in singular contrast with Rubens's coarse and carnal outline.

The unrivalled water-colour copies of the old masters, by the late Mr. F. Wilkin, which were publicly exhibited some five and twenty or more years since, are, we observe, to be disposed of by Messrs. Christie & Manson, on Saturday next. Comparatively few of our readers can remember that exhibition, and it may therefore be worth their while to look in at Messrs. Christie's, and examine, with their own eyes, these interesting works, all executed by a young man scarcely of age. At that time, it is true, our water-colour painters had not wrought up those powerful effects with which we are now familiar; but still, according to our recollection, they were

* It is Hogarth's principle of "the bending line" anticipated, though ill carried into practice.

Digitized by Google

surprising works; and we especially remember among them, Raffaelle's 'St. Catherine,' now in the National Gallery, 'The Salutation,' by Sebastian del Piombo, 'Pan and Syrinx,' by Rubens, 'Portrait of Leo X.,' by Velasquez; others after Titian, Murillo, and Del Sarto, all of the size of the originals, and many exquisite gems on a small scale.

It is announced that Prof. Böttiger, of Frankfort-on-the-Maine, has just discovered a mode of daguerreotyping in colours, as easy and as rapid as the ordinary process. The first complete experiment has been made in a portrait of Alexander von Humboldt, which is described as excellent. As yet he has only succeeded in bringing out three colours, of which the flesh colour is the most perfect.

The ceremony of opening the Thames Tunnel is to take place this day. What an interval of anxiety, of hope, and of despair, since the undertaking was commenced in 1824! nearly twenty years ago.

A few days since, a letter from one of the most enterprising musical publishers in Germany fell under our notice, in which it was laid down as a trade fact, that since the French had begun to think about the Rhine, and the *Zoll-verein* to bind one German state with its neighbour, considerable changes are beginning to develope themselves in the theatrical world. Translated French operas, if not positively at a discount, are ceasing to be the staple fare of the managements; while the compositions of the modern Italians are only upheld by a few of the ambitious singers. In short (so runs the tenor of the letter), "we now look out for operas written by our countrymen." So be it: such a spirit of self-assertion has been long wanting to the musical stage of Germany. But the French manufacturers of musical drama, it would seem, are going a step further, and seeking to propitiate, not merely by taking care of themselves, but by denouncing their neighbours. The master idea of Halévy's 'Charles Six,' just produced at the *Académie Royale*, is based on the vain-glorious *refrain*—

Jamais en France
Jamais l'Anglais ne regnera—

and M. Duprez, at the same moment that he is understood to be bending his indomitable perseverance to master the "*th*'s" and other strange sounds of our barbarous language, prior to conquering a London pit, boxes, and gallery, by singing in English, is exciting the *parterre* of the Rue Lepelletier by the above spirited manifesto. Some timorous souls, it seems, among our neighbours, have gone the length of entreating the interference of the censorship, but the matter has been wisely treated as a joke. To return to serious things, from unsubstantial whimsies,—in spite of the *piquant* nationality aforesaid, and in spite of the efforts of Mesds. Stolz and Dorus Gras, MM. Duprez, Levasseur, Baroilhet, Poultier, and Canaple—a rare assemblage of talent—and in spite of the pompous verses of MM. Delavigne—better poets than usually undertake an opera book—this last work by M. Halévy is pronounced to be a failure by his enemies, and by his friends, a production too profound and elaborate to be appreciated at a first, or even a second hearing. We have never believed that M. Halévy, clever though he be, possesses sufficient original genius to sustain himself as a composer. The success of 'La Juive' was, after all, one of story and pageantry, not music; while 'L'Eclair' (his only other work which has fairly stood the test of time) is repeated occasionally, rather for the sake of the neatness of its scientific and dramatic construction, than because it contains any such felicity of melody, or charm of orchestral colouring, as will long keep alive the genuine French comic operas of Grétry, Boieldieu, and Auber.—At the *fifth concert* of the *Conservatoire*, the *programme* consisted of a symphony by M. Scipion Roussellot, Beethoven's c minor Symphony, some selections from a mass by Haydn, and a violoncello *solo*, by M. Chevillard.—While we are on the subject of music in Paris, we may add a report that the association of the Italians, which has for so many years given the charm of perfect concord to their operatic performances, has been at last broken up; that Mme. Persiani intends returning to Italy; and that it is possible that Signors Lablache and Tamburini may also take engagements elsewhere. This is bad news for the Boulevards.—One line more must be given, to record the success of M. Berlioz and his hyper-fantastic music, in Germany; a fact which tells against the statement before mentioned; for M. Berlioz is as indefeasibly French—and young French, too—as the neo-Christianity of M. Lamennais, or the pseudo-artistic and pseudo-philosophical romance of Madame Dudevant.—At home, there is a prodigious bustle, rather than a healthy stir, in the musical world. While Mr. Macready is preparing to delight the town with Miss Clara Novello and Mrs. A. Shaw in Pacini's 'Saffo,' Mr. Bunn is about to reproduce, after an absence of some sixteen years or thereabouts, none other than Madame Ronzi de Begnis! while an English version of 'I Puritani,' at the Princess's Theatre, is said to be thoroughly successful. The disposition of the public, indicated by all this, ought not to be lost upon our young composers, and still less on our young singers. To say nothing of the impending visit of Madame Thillon, we hear of the possible return from Italy of Miss Delcy, Miss Austin, Miss Edwards, Miss Trotter, &c., but of tenors and basses, thus advantageously trained on a foreign stage, not a word. We are told, however, that Mr. J. Braham, another son of the veteran vocalist, is about to make his *début* as a singer in London. He is said to possess a fine bass voice, and to be a superior musician.

A new tragic opera by Pacini, under the title of 'Maria Tudor,' has been produced at Palermo, and caused a great deal of excitement. It being supposed that the rapturous *Da capo*'s were owing more to the political character of the libretto than the appreciation of the music, the police interfered, and the curtain was dropped suddenly, amidst tremendous uproar, during the third representation.

Early in the week, considerable interest was awakened, by a letter from Sir John Herschel, which appeared in the *Times*, and directed attention to a Comet of enormous magnitude, now in course of progress through our system. The phenomenon was, it has subsequently appeared, observed on board the *Tay*, on her homeward voyage from the West Indies, so early as the 6th inst.; at Nice, on the 12th, by our countryman Mr. Cooper, late member for Sligo; and in Paris, on Friday the 17th. In a letter of the 21st, Sir John Herschel observes,—"Last night being cloudy, the tail of the comet was not visible here. To-night it is very bright: its direction and breadth are as before, but, perhaps, some trifle curved, the convexity being upwards. Be that as it may, the line of the well-defined part, or *axis*, of the tail has evidently advanced northwards." The probability, therefore, is that we shall soon see the head.

BRITISH INSTITUTION, PALL-MALL.

The Gallery for the EXHIBITION and SALE of the Works of BRITISH ARTISTS is OPEN DAILY, from Ten in the Morning till Five in the Evening. Admission, 1s.: Catalogue, 1s.

WILLIAM BARNARD, Keeper.

SOCIETY OF BRITISH ARTISTS,
Suffolk-street, Pall Mall East.

The TWENTIETH ANNUAL EXHIBITION WILL OPEN to the Public on MONDAY NEXT, the 27th instant. Admission, 1s.; Catalogue, 1s. EDWARD HASSELL, Sec.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virtù. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

SCIENTIFIC AND LITERARY

STATISTICAL SOCIETY.

March 15.—The Anniversary Meeting was held this day.—The Marquis of Lansdowne, President, in the chair.—The Annual Report was read, and the following noblemen and gentlemen elected Officers and Members of the Council for the ensuing year:—

President, Lord Ashley, M.P. *Treasurer*, G. R. Porter, Esq., F.R.S. *Honorary Secretaries*, J. Fletcher, Esq., W. A. Guy, Esq., M.D., W. D. Oswald, Esq. *Council*, C. Ansell, Esq., F.R.S, Lord Ashley, M.P., Sir J. P. Boileau, Bart., Rt. Hon. Sturges Bourne, F.R.S., J. Bowring, Esq., L.L.D., M.P., J. Clendinning, Esq., M.D., F.R.S., G. Coode, Esq., Viscount Ebrington, M.P., Rev. E. Wyatt Edgell, W. Farr, Esq., J. Fletcher, Esq., F. H. Goldsmid, Esq., Wm. Aug. Guy, Esq., M.D., H. Hallam, Esq., F.R.S., J. Heywood, Esq., F.R.S., R. Hill, Esq., Sir C. Lemon, Bart., M.P., F.R.S., N. Lister, Esq, M.D., Earl Lovelace, H. Merivale, Esq., Lord Monteagle, W. D. Oswald, Esq., G. R. Porter, Esq., F.R.S., Rev. Whitworth Russell, Viscount Sandon, M.P., Lieut.-Colonel Sykes, F.R.S., T. Tooke, Esq., F.R.S., S. Tremenheere, Esq., Major A. M. Tulloch, J. Whishaw, Esq., J. Wilson, Esq.

March 20.—Sir C. Lemon, Bart., V.P., in the chair.—Three Fellows were elected.

A paper was read by Colonel Sykes, 'The Statistics of Civil Justice under the Presidencies of Bengal, the North-West Provinces, and Madras, and the Criminal Statistics of Bengal and Madras.' It was compiled from official Reports at the East India House, comprising many thousand manuscript pages. Civil justice is administered in the north-west provinces of Bengal, now called the Agra Government, by the following courts:—First, the lowest, which is that of the Moonsiff, or Native Judge, who decides on suits in which Europeans are not parties, the amount in litigation not exceeding 30*l.* The next is that of the Sudder Ameen, the judge being a native, and the maximum amount in litigation being 100*l.* The third court is that of the principal Sudder Ameen, who determines for unlimited amounts, and in appeal cases from the Sudder Ameen, or in cases referred from the District Judges. The District Judges follow, who are Europeans, and take cognizance of original suits and appeals. And the ultimate court, is that of the Sudder Dewanee Adawlut, with appellate jurisdiction only, receiving appeals from the principal Sudder Ameens, and District Judges. All judicial officers, whether European or native, are paid by fixed salaries. Pleadings filed in the Court of Judicature, are upon stamped paper, in lieu of fees, which also extends to bonds, deeds of conveyance, and other instruments executed by individuals. These stamps range in value from three halfpence to 200*l.* In 1840-41, the product of the stamp duties in Bengal and the N.W. provinces, was 3,067,182 rupees. The tables accompanying the paper, extend over a period of four years, from 1836 to 1839, inclusive, and exhibit the operations of the several tribunals in the N.W. provinces, and in Bengal, from which it appears, that in a population of about 32,000,000, there were 236,397 cases disposed of in the N.W. provinces, 29,900 of which were appeals from subordinate courts. The average duration of a suit in the N.W. provinces, was 4 months and 10 days. The following table is curious, as showing the description of original suits.

Years.	Relating to Land.	Relating to Debt.	Relating to Indigo, Sugar, &c.	Relating to Religion, Caste, &c.
1837	10,162	38,320	504	79
1838	11,097	38,773	927	65
1839	10,257	44,067	940	110

The result of the suits was, for the plaintiff 118,558, for the defendant 31,537. The value of property litigated amounted, in 1836, to 1,391,950*l.*, and in 1839, to 2,316,021*l.* The working of the civil courts in Bengal, though not exhibiting exactly the same features as those of the N.W. provinces, yet the difference, in proportion to the population, is so trifling, as not to make it worth while to give abstracts of the tables. The population of Bengal being about 40 millions, and the suits instituted 105,000 annually, the proportion would be nearly 1 suit to 381 persons. The value of property litigated, rose from 2,480,768*l.*, in 1837, to 5,761,061*l.*, in 1839. The criminal statistics of the Madras presidency exhibit the operations of criminal justice under the presidency of Fort St. George, during the two half years from the 1st of July, 1839, to the 30th of June, 1840; from which it appears, that out of a population of about 13,000,000, there was, in the first half-year, 1 conviction to every 609, and in the second, 1 to every 633. 21 persons were executed in the half-year in 1839, and 31 in the half-year in 1840. Similar statistics, during the years 1837 to 1840, were given of the Bengal presidency, comprising a population of about 40 millions, by which it appears, that in 1837, 38,902 persons were convicted, and 1840, 42,785; of whom 37 were executed in 1837, and 27 in 1840; while in England the numbers in those years upon whom sentence of death was passed, were 116 and 77.

A second paper was read, by Professor Guy, of King's College, 'On the Influence of the Seasons and Weather on Sickness and Mortality.'—As this Paper will be presented at the next meeting, in a more complete shape, we defer giving any abstract of it.

MEETINGS FOR THE ENSUING WEEK.

SAT. Asiatic Society, 2, P.M.
— Botanic Society, 4.
MON. Geographical Society, half-past 8.
TUES. Institution of Civil Engineers, 8.—'Experiments made upon Cast and Malleable Iron, at the Milton Iron Works,' by D. Mushet.—'On the supply of Water to Glasgow,' by D. Mackain.
— Zoological Society, 8.—Scientific Business.
WED. Society of Arts, 8.—Mr. Kemp 'On Printing on Warps to produce fabrics termed Clouded or Chiné.'
THUR. Royal Society, half-past 8.
— Society of Antiquaries, 8.
— Chemical Society, 8.—Anniversary.
FRI. Royal Institution, half-past 8.—Mr. Holditch 'On the General Structure and recent improvements of the Organ.'

MUSIC AND THE DRAMA

PHILHARMONIC CONCERTS.—The scheme of the first Concert of this ill-starred Society was, in some respects, so singular as to call for comment. The Directors had set their hearts on Chopin's pianoforte *concerto*, in F minor, to be performed by Madame Dulcken; that lady, however, was unfortunately incapacitated from using her nimble hands at the rehearsal, and, of course, there is no other pianist in London, and no other *concerto* which it would have been possible to substitute! Accordingly, overlooking Mr. Moscheles, Mr. W. S. Bennett, Mr. Edward Schulz, Mr. Edward Roeckel, and others, the Directors had recourse to the shilling promenade concerts, and thence fished out M. Deloffre, the violinist, who having once performed at these meetings, had no claim to such a distinction, and M. Pilet, who, though very clever as a violoncellist, is less acceptable, when executing one of his own shallow *fantasias*, than any of the above-mentioned would have been in interpreting one of the great *concertos* of Mozart, Beethoven, Hummel, or Weber. Then, for the accommodation of Mr. Phillips, who was afterwards to sing in 'Comus' at Drury Lane, Mozart's symphony in G minor, was placed at the close of the first act, and Beethoven's, in D major, at the opening of the second! It is needless to point out how an arrangement so surfeiting to the ear might have been avoided by placing Mr. Phillips earlier in the *programme*, for surely the hackneyed *terzetto*, 'L'usato ardir,' from 'Semiramide,' was not worth retaining. Such blunders in arrangement, unimportant as they may seem, seconding the effect produced by managerial supineness as regards research and rehearsal, weary the audience, and thence thin it year by year. The solitary novelty given on Monday evening was a song from Spohr's 'Fall of Babylon,' in which every phrase, every close, every harmony, and every combination, was an old acquaintance; having been used by the composer some twenty times before. In addition to Mr. Phillips, the singers were Miss Birch, and Miss Hawes, who sung for Mrs. Alfred Shaw. The former executed, with her usual power and skill, the long *scena* from Paer's 'Griselda,' with violin *obligato*. We are never so tempted as while hearing this sort of antiquated and mechanical music, to take up the cause of the modern Italian composers: since anything less dramatic, less original, less expressive, is hardly to be found in the vilified stores of Donizetti or Bellini, while the *cabalettas* of both are more amusing, and better for the purposes of vocal display. We have but to add, that the overtures were Weber's to 'Euryanthe,' which was *encored*, and Winter's to 'Calypso'—that Sir George Smart conducted and Mr. Loder led, and that the orchestra was firm and spirited, though less delicate and expressive in the *andante* of Beethoven's symphony, than a band of such renown ought to be in the year 1843.—It is generally rumoured that an engagement has been entered into with M. Berlioz, to produce and conduct some of his compositions at these Concerts in the course of the season.

MUSIC FOR THE PEOPLE.—*First Choral Meeting, Exeter Hall.*—That the cause of popular music is flourishing was most satisfactorily demonstrated on Wednesday evening. What its friends have now chiefly to fear, are the immoderate expectations of enthusiasts, or of dissentients clothing themselves with ultra-criticism for this particular undertaking, who forget to take into account time, circumstance, and possibility, and expect that an assemblage of people miscellaneously collected, should at once exhibit, in the most trying of all musical positions, a sensitiveness and finish exquisite beyond that which has ever been obtained in England by any similar body of artists who have made the profession their exclusive study. It by no means enters into the plan of the promoters of the popular singing classes, to reject every voice which offers itself because it may be weak or untuneable, a fact to be borne in mind by those who expect a stentorian volume of tone from the twelve hundred executants. But richer and more sonorous the full chord of the four voices could hardly have been: in the upper gallery, especially, the effect was noble. Again, it should be recollected, that, for such a mass of choralists to sing without accompaniment, is one of the most difficult of all musical tasks. We have heard a handful of trained madrigalists, fresh from the Royal Academy, break down as to time, tone, and tune: and have occasion again and again to remark how timid and unsteady that much vaunted body, the *Sacred Harmonic* chorus, becomes, if it have to go only a few bars alone, without violins and violoncellos, and the pedal pipes of the organ, to support and to hearten it up. This much in fairness, not by way of apology, for none was needed. The music selected for Wednesday's performance was a twelvemonth more difficult than that performed at the choral meetings last spring. It comprised a motett by Palestrina, a beautiful canon by Mr. Horsley, admirably executed, which well deserved its *encore*, another motett, by Giovanni Croce, a part song by Moscheles, 'Daybreak,' which was also *encored*, and went steadily though less delicately than is demanded—by a composition so charming but requiring such very high finish,—and a capital song for male voices, being a version of Conradin Kreutzer's merry 'Der Schmidt,' which has thrown many a *Liedertafel* society of Germany into an uproar of jovial enthusiasm. This, too, was repeated. Then we had Ford's madrigal, 'Since first I saw your face,' a few more part-songs, and some hymns, including the fine national tune of Russia, besides a 'Magnificat,' by Dr. Cooke, which was excellently chaunted. All these widely various pieces were sung in the steadiest possible time, (which made itself felt by the positive *sting* of sibillation whenever an *s* occurred), and, some little exception allowed for, well up to pitch. In short, the soundness of the method adopted, and so zealously carried out by Mr. Hullah, can no longer be denied or doubted, and we have but to wish for the prosperity of the undertaking, and once again to counsel all who aid as well as all who judge it, to beware of the unfairness of immoderate expectations.

MISCELLANEA

Travellers' Club, March 21.

Mosaic Pavements.—In the report of the proceedings of the Society of Arts, on the 8th of March, published in the *Athenæum* of the 18th inst., there are some statements which convey an erroneous impression, that the recent revival of Mosaic Pavements in this country was consequent upon Mr. Prosser's ingenious invention of compressing dry powdered clay into moulds. As this is not the fact, I feel assured that you will have the goodness to allow the following statement a place in your journal:—In 1838, a patent was granted to my son, Mr. Alfred Singer, of Vauxhall, conjointly with Mr. Henry Pether, for a new mode of producing tesseræ of pottery and porcelain, and of combining them into slabs for such purposes. The process was first applied to the reproduction of the mosaics of the Alhambra in coloured pottery. In 1840 my friend, Mr. Barry, did me the honour of consulting me about the formation of an ornamental pavement for the saloon of the Reform Club House, and the result was, the production of the Mosaic Pavement which now adorns it. Mr. Blashfield saw it during the process of laying it down, and having previously given his attention to ornamental pavement in scagliola, was struck with its superiority. He made arrangements, therefore, with Mr. Prosser, for a supply of tesseræ of various-coloured clay, similar, even in size, to those of which it was composed, and was about to form slabs and floors of them, when, notice being given him that, by so doing, he was infringing the patent granted to my son and Mr. Pether, he consented to take out a licence under that patent. It will be obvious, therefore, that Mr. Blashfield could not have stated that Mr. Prosser used a "*new material* for Tesselated Pavements," or have intended to convey an impression that the modern mosaic owed its revival to him.

S. W. SINGER.

Lotteries and Little-goes.—We have received a dozen or more letters on this subject; but as we cannot doubt that the subject will be ere long set at rest, we shall not, for the present, do more than record progress. These are the announcements of the past week:—

Second Important Distribution (by Chances) of Twenty-three valuable PAINTINGS, by the following Masters:—Murillo, that famous Picture of the Beggar Boy eating Fruit, from the Collection of General Sebastiani, &c. &c.; by One Thousand Tickets, at Five Shillings each. The Pictures to be viewed at the Treasurer's, —, High Holborn, where Tickets may be had, &c.; Black Horse, Salisbury; Castle Hotel, Southampton; Black Swan Hotel, Winchester; Christopher Inn, Bath; and most of the respectable Stationers; and at Lyons, New Road, Brighton. The Drawing to take place at Six o'Clock in the Evening, by two Boys.

Novelty! An Excellent Public House, situated in Greenwich, to be Disposed of, by a certain number of Subscribers, at the small sum of 1*l.* each Member, to be conducted on the Derby Principle.—The following is the Third of the "Conditions:"—The Winner to pay down the sum of 10*l.*, and the Owner of the House 10*l.*, which sums are to be expended in Refreshments on the day of Drawing.

Earthquakes are either more common, or we are more observant of them than formerly. There has been another in Lancashire, felt pretty generally throughout the county, and as far as Carlisle. The following particulars are from the *Lancaster Guardian*. "The force of the shocks was such that many persons were shaken in their beds, whilst windows and furniture rocked to and fro in every direction, and the very houses trembled to their foundations. The river is likewise reported to have been considerably agitated. Considerable damage has been done amongst the china, glass, and other brittle materials, in many dwellings. The fetters and other prison implements hung up in the gateway tower of the Castle, clanked against each other with great violence." This was on Friday the 10th, and the shock was felt, according to the *Manchester Guardian*, at from *five to three minutes to one o'clock*. There is a probability that its influence reached much farther than anticipated, for the Guernsey Paper of the 13th observes: "A shock of an earthquake was distinctly felt in this island at *a little before one of the clock on the morning of* Friday last. It was accompanied by a noise resembling the rumbling of a carriage. A gentleman residing near Mount Durand states that he distinctly saw the furniture in his bed-room agitated by the shock. The Jersey papers state that the shock was felt in that island nearly at the same time."—Before taking leave of the subject, we may mention that the *Pilote du Calvados* states that several light shocks of an earthquake were felt in the department of the Manche, on the night of the 10th, about half-past twelve.

Railways.—The official Report just published shows a progressive diminution in the number of accidents. The last report contained an analysis of the returns of accidents from the 12th of August, 1840, the date of the passing of the Act for the regulation of railways, to the 1st of January, 1842, from which it appeared that the number of railway accidents of a public nature, attended with personal injury, during the last five months of 1840, amounted to twenty-eight, by which twenty-two deaths and upwards of 131 cases of injury were occasioned; while during the twelve months of 1841, the number of accidents of a similar description amount to 29, with 24 deaths, and 71 cases of injury. During the past year (1842), the number of accidents of this description had been only ten, the number of deaths five, of which only one occurred to a passenger while travelling by a train and observing the proper degree of caution, and the number of cases of injury were only fourteen. These did not include accidents which had happened to individuals owing solely to their own inadvertence and misconduct, nor accidents to servants of the company under circumstances involving no danger to passengers, neither of which could be fairly classed among railway accidents of a public nature. With respect to the comparative safety of railway travelling, a comparison of the number of accidents attended with death or injury to passengers with the number of passengers conveyed by railway during the same period, which appears to have been upwards of 18,000,000, it would seem to indicate that the science of locomotion, as far as the public safety is concerned, has arrived at a very high degree of perfection, seeing that out of more than 18,000,000 passengers conveyed by railway in the course of the year 1842, only one had been killed while riding in the train, and observing the common degree of caution.

TO CORRESPONDENTS.—T. W. received.—The project of R. P. D. is impracticable.—The Author of 'The Scottish Heiress' has been misled by a careless reader, as he will see on referring to the review.

The Publisher of the Athenæum will be happy to buy any of the January Numbers of the Journal.

On the 31st of March, 1843, will be published, 8vo. price 1s. the First Number of a Monthly Periodical, entitled

THE ARTIST'S and AMATEUR'S MAGAZINE; a work devoted to the Interests of the Arts of Design and the Cultivation of Taste.
Edited by E. V. RIPPINGILLE.
The principal object of the projected work is TO OPEN AN EFFICIENT SOURCE OF INFORMATION on the subject of the Fine Arts, Painting, Sculpture, and Architecture, and thus to attempt to reform, cultivate, and refine the public taste.
The means proposed are a varied series of plain and comprehensive Essays given in a popular form, with Diagrams, Illustrations, and original Designs.
Considering the inadequacy of such means of instruction as are at present open to the public, there is abundant reason to hope that the execution of the projected plan will be attended with highly useful and important results.
This work, under the sanction of the more comprehensive title, 'Fine Arts,' will occasionally offer remarks and examples of Poetry, and perhaps Essays and Notices on Music and the Drama, as matters closely allied with the Arts of Design; and it will contain (in parts)—
A Dissertation on the Subject of Taste—An Original Hypothesis of Beauty—An Investigation of the Merits of Ancient and Modern Art—Present Condition of Art, Foreign and Native—Prospects of British Art—Theory and Practice of Art—Application of the Fine to the Useful Arts.
Lighter matter will be added, and will appear under the title of 'Gossipings with a Painter,' which may POSSIBLY embrace some of the topics and occurrences of the day. Also, "A Four Years' Residence in Italy," by the Editor.
It is likewise intended that 'The Artist's and Amateur's Magazine' shall contain epitomized translations from foreign, ancient, and rare works on the subject of Art, such as are inaccessible to the general reader, both from their high price and the languages in which they are written.
*** The Prospectus, detailing the plan of the work, may be obtained GRATIS of all Booksellers.
London: Longman, Brown, Green & Longmans.

MAGAZINE of SCIENCE and SCHOOL of ARTS.—Just published, Part VII. price 7d., of a Re-issue, much improved, of this Popular Scientific Work, consisting of 96 solid pages, 8vo. royal; and containing 30 Articles and Processes connected with the Sciences, Arts, and Manufactures, (several never before published,) illustrated with numerous Explanatory Engravings.—Also, Vol. IV., price 8s.
W. Brittain, 11, Paternoster-row; and all Booksellers.

PROFESSOR BRANDE'S LECTURES—ORGANIC CHEMISTRY; on Saturday April 1 (at the late *Lancet* office, Essex-street), will be published, the FIRST NUMBER (72 Quarto Columns for 4d.) of the NEW VOLUME of

THE MEDICAL TIMES, the Weekly Journal of Medical News, Science, and Literature, and General Advertiser of the Medical Profession; containing the first Lecture of a NEW and COMPLETE COURSE on ORGANIC CHEMISTRY, by PROF. BRANDE, of Her Majesty's Mint, F.R.S., L. & E., Lecturer on Chemistry at Apothecaries' Hall, &c. With a Course of Lectures by C. J. B. Williams, F.R.S.; on the Practice of Medicine, by J. Nottingham, Esq.; on Operative Surgery, by Prof. Serres, on Organic Agency; Clinical Lectures by Mr. Guthrie, &c.; original communications from eminent Surgeons, Physicians and general Practitioners; a condensed periscopic view, weekly, of every new improvement and discovery given in all the foreign and home Journals; fortnightly pencillings of eminent Medical men, by a Physician. Hospital Reports; accounts of all Medical and Scientific Meetings, Medical News, &c. Opinions of the Press:—"Prodigiously improved, and rapidly rising under the new management." *Medico-Chirurgical Review*, June, 1842.—"The best and cheapest of Medical Periodicals." *Weekly Chronicle*, June 4.—"rapidly going a-head of the *Lancet*." *Gloucester Chronicle*.—"Cheapest and, for Medical Men, unquestionably the best." *Watchmen*, December 30.—"We strongly recommend this valuable weekly periodical." *Kilkenny Journal*.—"One of the first scientific publications of the day." *Fermanagh Journal*.—Orders received by all respectable Booksellers and Newsmen, or Post Office orders may be sent to Mr. J. A. Carpal, at the *Medical Times* Office, Essex-street, Strand.

The following Periodical Works, for April, 1843, will be published by Charles Knight & Co.

THE PENNY MAGAZINE, Part XXVII. (New Series,) price 6d.
